THE CENTURY MAGAZINE.

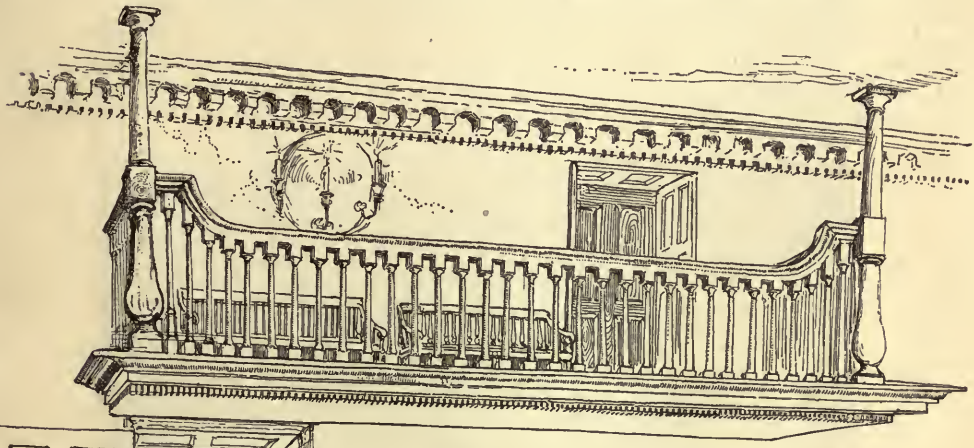
VOL. XXXV. NOVEMBER, 1887. No. 1.

THE HOME AND THE HAUNTS OF WASHINGTON.



MUSIC GALLERY, CLAGETT'S TAVERN, ALEXANDRIA.

IN the quiet grass-grown town of Alexandria, situated upon the lower bank of the Potomac in Virginia, might have been perceived, just before the outbreak of the war between the States, a faint flavor of early colonial days lingering like the scent of rose-leaves in an old-time China jar.

To begin with the streets—what a Tory smack in their names! King, Prince, Duke, Royal, Queen, Princess, Duchess; odd enough in the neighborhood of Mount Vernon, nay, under the very shadow, as it were, of the great dome of the National Capitol! At the time referred to, the greater part of a century's enjoyment of the blessings of political enfranchisement had not deprived some Alexandrians of a certain relish for the affairs of the English Court. They liked to read the "Illustrated London News," and to obtain correct information about the Queen's walks with the youthful Royalties, and the Queen's drives attended by Ladies X, Y, and Z. Had they not been fed upon the traditions of an English ancestry, as upon the toothsome hams, the appetizing roe-herrings, of their famous market-place? The great Georgian era of tea-drinking and tambour, of spangles and snuff-boxes, of high play and hair-powder, represented to them the Golden Age in the fortunes of their families, of which every vestige must be guarded jealously. As children they had stood on tiptoe to study the lineaments of great-grandaunt Betty, hanging in her fly-specked frame somewhere near the ceiling, and had been eager to hear how she had been toasted at Mayfair

supper-tables or had danced the gavotte at a Ranelagh ball. Yonder beetle-browed warrior in a voluminous wig was a general in Queen Anne's time, before he condescended to his present station above the sideboard. The beautiful youth in armor, slender and graceful, with the fiery eyes, fought for King Charles against the Roundheads, never dreaming that he would come across the seas to find his niche in a staid Virginia sitting-room! In this wainscoted parlor, where the light comes through small greenish panes of glass half veiled with ivy branching from stems knit in a fibrous mass upon the outer wall, had great-grandmamma, dressed in her satin paduasoy ("you may see a piece of it upon your Aunt Prunella's pincushion, my dear!" the chronicler would add), her hose with silver clocks, stood to receive General Braddock, on the occasion of his first visit to the town. On the landing of yonder stairway little great-aunt Nancy the shy member of the family, while taking flight to avoid a sudden arrival of guests, had come into violent collision with Colonel Aaron Burr, who met her apologies with a smile and a bow treasured in the stronghold of her maiden heart through many a year to come.

In these echoing rooms had, from time to time, gathered all the celebrities of the day, coming to visit the haunts of Washington and to taste Virginia courtesy. And here, at a much later date, upon the occasion of his second visit to America, in 1824, was domiciled the gallant Lafayette. The tale of a famous reception tendered to that fortunate Frenchman is still told in the town. Escorted by citizens and militiamen, freemasons and revolutionary survivors, the "Nation's Guest" passed over streets strewn with roses by the children of the place, beneath a triumphal arch the like of which in grandeur had never been seen. At the moment when the hero paused beneath the arch, a "real" eagle (politely fur-

"GREAT-GRANDMAMMA STOOD TO RECEIVE GENERAL BRADDOCK."

"AARON BURR, WHO MET HER APOLOGIES WITH A SMILE AND A BOW."

nished for the occasion by the proprietor of a museum) was seen to flap its wings, and heard to utter a scream of victory. This climax, it was afterwards ascertained, was secured by a boy who, at the critical moment, stuck a pin in the bird of liberty. Bands played, flags and handkerchiefs were waved, salutes were fired. In the evening a banquet was held at Clagett's Tavern, followed by a levee. The market-place and many private houses were illuminated. Nothing was heard but honor to Lafayette. The wave of popular enthusiasm, overflowing to the rural districts of the interior, left inscribed upon more than one baptismal register the name and *title* of "Marquis de Lafayette," bestowed in a blaze of patriotic fervor, and in all innocence, upon the latest arrival in the family! At this day "*Marcus* D. Lafayette" remains guilelessly prefixed to not a few Virginia patronymics.

Then it was that Lafayette, before passing southward upon his pious pilgrimage to the tomb of his illustrious brother in arms at Mount Vernon, offered the toast: "The city of Alexandria! May her prosperity and happiness more and more realize the fondest wishes of our venerated Washington."

Even so early in the century the good old town seems to have been overtaken by the spirit of drowsiness from which the march of national progress has not yet aroused her. Long years ago, before the coquetry of fortune began to push poor Alexandria to her place

among the wall-flowers, she had known better days. Founded upon the site of a trading-post by the Washingtons, the Fairfaxes, the Alexanders, and other men of note, many prophecies were made as to her future greatness. By virtue of her natural position, her remarkable river-front, her dignity as one of the leading municipalities in Virginia, her connection with the most prominent families in the State, all eyes were turned upon the favored spot. From countries oversea, many settlers were tempted to cast in their lot with the future metropolis. Merchants of divers nationalities took up their abode and displayed their wares in her aristocratic thoroughfares. Every sign foretold that Alexandria would be quickly and substantially built up. Among the settlers was a company of canny Scotch traders; a band of Jacobite soldiers, scattered after the battle of Culloden, also became her active citizens. Soon, the wharves were crowded with shipping. Many a white-winged messenger sailed down the broad bosom of the Potomac to carry the products of bountiful Virginia to the mother-land, fetching, on the return voyage, bricks with which to construct the substantial mansions of the Alexandrian burghers, as well as carpets, porcelain, furniture, carriages, and wines. Inspired by the continual zeal and wisdom of her foremost citizen, George Washington, the prosperity of Alexandria did not flag until the war of the Revolution. Until Washington, unwilling to be thought influenced in such a matter by his own individual interest, selected the opposite bank of the Potomac as the site of the National Capitol, the little Virginia town had every right to expect the distinction for herself. With this act of characteristic unselfishness on the part of the great Republican, her dream of greatness came abruptly to an end, and at Washington's death her mainspring seemed to snap. What growth there has been since has been like growth in sleep. To visit Alexandria, to-day, is to set a wholesome break upon the rushing wheels of nineteenth-century progress. Around her ancient homes and churches hangs a haze of dignified tradition. The cobblestones of her streets prate of figures famed in history.

CLAGETT'S TAVERN, ALEXANDRIA.

In the treasure-house of the Washington Lodge of Freemasons may be seen many carefully preserved relics of the greatest of Alexandrians; notably, the clock taken from his chamber at Mount Vernon, its hands still pointing to the hour when he breathed his last. Here, also, are displayed portraits of Washington, of Jefferson, of Lafayette, of Thomas, Lord Fairfax, the recluse of Greenway Court—this latter being the only known picture of a most picturesque figure upon the canvas of early Virginian days. Of this venerable lodge, a chapter of exceptional interest to antiquarians might be separately written. Unfortunately,

CHAMBER CLOCK

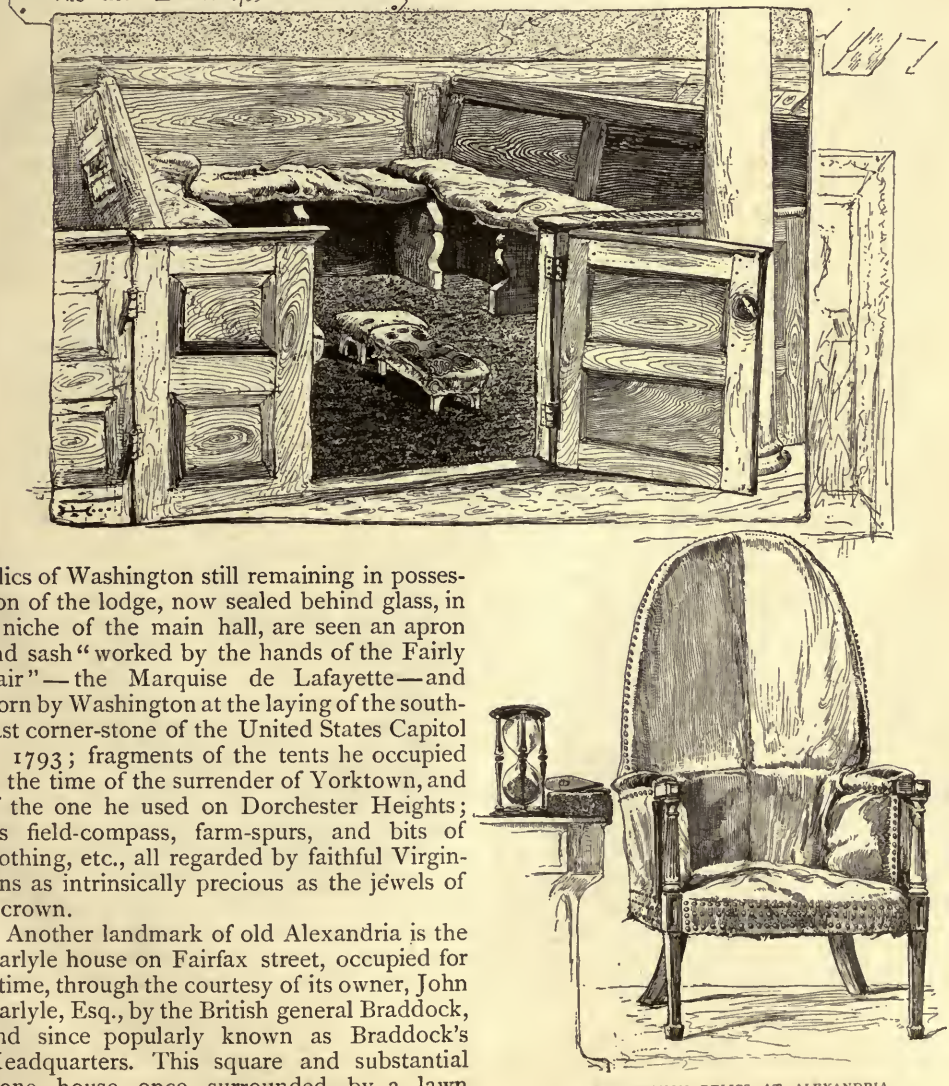
Past Master Gen George WASHINGTON
of Alexandria Washington Lodge №22
Who died Dec 14th 1799 at 10:20 PM.

the museum attached to the lodge and founded in 1811 was after sixty years of existence recently consumed by fire. Among the treasures it contained, then reduced to ashes or scattered to the four winds of heaven, were flags carried by local companies in the war of the Revolution; the flag of Washington's life-guard; a collection of Indian relics of authenticated history; a number of portraits, including one of Martha, wife of Washington, in her girlhood; sundry Washington letters; card-tables and a settee from Mount Vernon; and various objects of minor value. The bier upon which Washington was carried to his tomb, the crape that hung upon the door at Mount Vernon to announce his death, and the military saddle habitually used by the great commander, long carefully enshrined in the museum, also disappeared on the occasion of the fire, but are believed by the authorities to have been stolen. Of the relics of Washington still remaining in possession of the lodge, now sealed behind glass, in a niche of the main hall, are seen an apron and sash "worked by the hands of the Fairly Fair"—the Marquise de Lafayette—and worn by Washington at the laying of the south-east corner-stone of the United States Capitol in 1793; fragments of the tents he occupied at the time of the surrender of Yorktown, and of the one he used on Dorchester Heights; his field-compass, farm-spurs, and bits of clothing, etc., all regarded by faithful Virginians as intrinsically precious as the jewels of a crown.



WASHINGTON RELICS AT ALEXANDRIA.

Another landmark of old Alexandria is the Carlyle house on Fairfax street, occupied for a time, through the courtesy of its owner, John Carlyle, Esq., by the British general Braddock, and since popularly known as Braddock's Headquarters. This square and substantial stone house, once surrounded by a lawn

stretching to the river-bank, is full of associations with the historic past. In its paneled drawing-room, early in April of the year 1755, General Braddock and Admiral Keppel held conference with the executive representatives of various colonies concerning plans for the proposed hostilities of the English against the French and Indian allies along the Ohio and St. Lawrence rivers. There were present five governors:* Dinwiddie of Virginia, De Lancey of New York, Morris of Pennsylvania, Sharpe of Maryland, Shirley of Massachusetts. To meet this honorable council, and to give them the benefit of his knowledge of Indian warfare, Major Washington was summoned from Mount Vernon. In spite of the marked impression made upon the council as a body by the young soldier's wise and moderate opinions, Braddock declined to act upon Washington's advice as to the best method of dealing with the Indians, and the expedition against Fort Duquesne (from which Washington did not withhold his own services as an aid on the staff of the commander) setting forth within the ensuing week, ended shortly in the fierce battle of Monongahela, when Braddock fell, and was buried near the field. It was in this bloody conflict, it may be recalled, that an Indian chief, pointing to Washington, cried to his braves, "Fire at him no more. See ye not that the Great Spirit protects that chief. He cannot die in battle!"

The Carlyle house, where the disastrous campaign was planned, stands to this day, although hemmed in and half lost to sight by the encompassing walls of a hotel. A more pleasant memory of that ancient mansion is of the frequent occasions when Mr. and Mrs. Carlyle received their good friends General and Mrs. Washington, who drove up from Mount Vernon intending to "dine and lie" at Alexandria. The writer retains, together with a bit of puce brocade resplendently flowered in crimson, green, and tarnished silver, representing the glories of "Grandmamma" Carlyle's gown assumed for a birthnight ball, a distinct impression of the scene described by a family chronicler. The group of ladies in the paneled parlor gather, splendid in trains carried over the arm, lappets and pinners of antique mechlin, powdered locks and superincumbent feathers. They laugh and chatter, rally the general as to who shall first claim him as her partner in the dance, and sip their coffee from cups of jasper spode. The general declares that his dancing days are over, but that he must have one minuet with little Sally Fairfax, who is to go to her first ball under her Aunt Carlyle's wing that night. Sally pirouettes, laughs, warns her beloved general that her comrade must be light of foot and tireless, then ends by challenging him to a trial of his skill. Somebody sits down to the spinet, and straightway the quaint measure of the old-time dance is heard. The general lays his hand upon his heart and bows. Sally courtesies demurely, her eyes full of merriment. They dance; the others applaud — suddenly, Mr. Carlyle looks in to tell them that the hour has passed when everybody was expecting the guest of the occasion to make his entry into the rooms. Such is a story those walls, could they but speak, might tell!

All good Americans should have, as all good Alexandrians have, a warm sentiment of reverence for Old Christ Church. Ivy-clad and substantial, it stands, save for the addition of a bell-tower, pretty much as it was finished in 1773, at a cost of many thousands of pounds of tobacco to the pious burghers of the town, under a special contract guaranteeing to them the best of English brick, mortar reversing the proportion of meaner modern days, two-thirds of lime, one-third of sand, with a roof of juniper shingles three-quarters of an inch in thickness. For so our fathers builded better than we know!

Among the first pews of Christ Church sold in perpetuity, was that for which George Washington paid the highest price given. Thereafter, this pew was a constant object of interest to the congregations of the place, as indeed it continues to be, being still carefully preserved, and inscribed with the name of its original owner. A great treat to early Christ Church goers was the arrival of the family from Mount Vernon, sometimes a little delayed beyond the opening of the service by the tenacity of Fairfax county mud. Seated near her husband in the square, high-backed pew was a gentle lady, still styled by the gossips of the congregation "the widow Custis that was." That same year of 1773 was made memorably sad by the death, at sixteen, of the pretty, frail creature the townspeople had been accustomed to see sitting on the front seat of the chariot from Mount Vernon, blushing like a rose in her coal-scuttle bonnet, and like a rose, too, destined to endure but the "space of a morning." Miss Custis, Mrs. Washington's daughter of her first marriage, died in June, 1773, a short time before the marriage of her brother John Parke Custis to Miss Nelly Calvert. When Washington attended service at Christ Church, in the pews around

* "Alexandria has been honored with five governors in consultation; a favorable presage, I hope, not only of the success of this expedition, but of the future greatness of the town; for surely such a meeting must have been occasioned by the commodious and pleasant situation of the place, which prognosticates population, and increase of a flourishing trade."—[*Washington's letter to W. Fairfax*, 23d April, 1755.]

WASHINGTON DANCING THE MINUET WITH SALLY FAIRFAX AT THE CARLYLE HOUSE.

him were gathered the Fairfaxes, Carlyles, Paynes, Alexanders, Herberts, Muirs, Flemings, Ramseys, and others of the gentry of the town. It was the custom of these good neighbors to assemble in the church-yard, after of a parish foundling. Stories are still told of the two female sextons of this church—one Susanna Edwards, and her successor, Mistress Cook. Imagine a congregation of to-day under the rule of an awe-inspiring dame who marches

IN CHRIST CHURCH YARD, ALEXANDRIA.

service, to exchange greetings; and from group to group went Washington, shaking hands and answering inquiries till the patience of his wife and that of the well-bred horses champing at their bits in the street adjoining were alike exhausted. In this quiet spot not a few of the friends then wont to assemble have laid them down to everlasting rest, their names and virtues written upon gray slabs carved with cherub heads and weeping-willows, now blurred with lichen and dark with weather-stains, and thither have their children's children come to sleep beside them. In the days when Christ Church was still subject to the jurisdiction of the Bishop of London, the vestrymen had civil power to levy taxes, to bind out apprentices, to make surveys, to receive fines for broken game-laws. The rector's salary was paid in tobacco, although we find accorded an award of eight pounds (of money, not the staple weed) to one William Shakespeare for his care up and down the tiled aisles, locking the pew-doors upon late arrivals, supplying prayer-books to the non-devotional, and darting looks of ire upon hapless Eutychus!

In walking through the streets of Alexandria, to-day, one sees residences keeping up the traditions of prosperous hospitality. Inclosed within high-walled gardens, where the Southern sun coaxes from mellow soil jasmines yellow and white, roses in prodigal variety, honeysuckle, and all other sweet-smelling things, the owners of these homes dwell year after year unambitious of change, gazing contentedly from afar upon that "microcosm on stilts yclept the great world." It is the business quarters of the town that strike most forcibly the visitor from one of the present centers of American commerce. From this old-time seat of Virginia custom, the "fret and fever of speculation" have forever fled. In the line of warehouses along the wharves, the "quick pulse of

gain" has ceased to beat. The vessels lying at anchor must be haunted by ghostly crews; they give no sign of life. The steamboat that plies her way between Washington and Alexandria seems to approach the wharf cautiously, as if fearing to awake a slumberer. Even the fishing industry — for the beautiful river has not ceased to yield her tribute — appears to move but languidly. All this has its delightful aspect, and he who would view a lotus-eater in his paradise should watch an Alexandria darky, dangling his legs over the worn beams of the dock under pretense of fishing,— listening to the lap of water against the green and shiny piles, and droning away the livelong afternoon until the level sun, which gleams fiery red upon the broken window of the warehouses behind, begins to stir in him vague thoughts of corn pone browning on the cabin hearth at home.

But now to Mount Vernon. To go there in these modern days means to enjoy a jovial semi-picnic excursion aboard a comfortable steamboat, and to pay one's respects to the house and tomb hedged in by regulations, if not, indeed, "personally conducted." She who pens these pages prefers to recall the dear old place as visited in childhood, before the home of Washington had passed from the hands of Washingtons, and before the ties of intimacy linking then neighboring but now scattered Virginia families had become mere matter writ in history.

In the pleasant days so well remembered, the cordial owner of Mount Vernon, Mr. Augustine Washington, had a houseful of boys and girls to make merry on the classic portico, or to race unchecked through the box-walks of the fragrant garden. Our enjoyment of certain summer holidays passed in such butterfly pursuits, varied by accompanying a fatherly old negro to catch crabs upon the river-bank, was unalloyed. Through the mists of memory arises a certain morning spent in castle-building upon a grassy bank overlook-

AFTER THE SERVICE, IN CHRIST CHURCH YARD, ALEXANDRIA.

JOHN WASHINGTON. GEORGE WASHINGTON. BENJAMIN FRANKLIN.
SILHOUETTES INHERITED BY SAMUEL POWELL, ESQ.

ing the mausoleum, where two little girls, one of them the pretty, dark-eyed, roguish Louisa, daughter of the house, lay at full length upon the turf, and reared their unsubstantial palaces as fast and foolishly as tongue could fly. Wearying of this, there were the garden to rifle of its fruit, posies to pick and cast away; and when the ardor of the midday sun drove these spendthrifts of time indoors, it was to visit on tiptoe the darkened glories of parlor and library. We made short work of historical relics and of ancestral reminiscences in general. I remember considering them rather a bore. But the great key of the Bastile hanging in the hall enchained our vagrant fancy in weird fashion. We tried to picture the mob surging like a torrent over the ruins of the ancient stronghold. A few steps brought us beneath the ornate frame surrounding the portrait of Louis XVI., swathed in his purple and loaded down with ermine, and all play and laughter ceased when the story of his awful fate was told by the kindly guardian of our footsteps in those sacred rooms.

The writer was never again at Mount Vernon while it remained in the possession of the Washingtons. She recalls with pleasure being allowed to form one of a party invited to be present on the occasion of the visit of the Prince of Wales, when lovely Harriet Lane, then mistress of the White House, was hostess, and genial Sir Henry Holland went about winning golden opinions from his fellow-guests.

To introduce to my readers the Mount Vernon of olden days, I will use a description made by Washington himself:

"No estate in United America is more pleasantly situated. In a high and healthy country, in a latitude between the extremes of heat and cold, on one of the finest rivers in the world, a river well stocked with various kinds of fish at all seasons of the year, and in the spring with shad, herring, bass, carp, sturgeon, etc., in great abundance. The borders of the estate are washed by more than ten miles of tide-water; several valuable fisheries appertain to it. The whole shore, in fact, is one vast fishery."

A sovereign charm of the place, omitted in this sketch, is the abundance of fine trees crowning the projecting bluff on which the house is built. To increase the numbers and variety of his trees was the constant occupation of Washington's home-life. Each season of the year found him employed in providing for them. On the 10th of January he notes that the white thorn is in berry; on the 20th of the same month he clears the undergrowth from a grove of favorite pines; in March he plants hemlock; in April drills are made for sowing holly-berries.

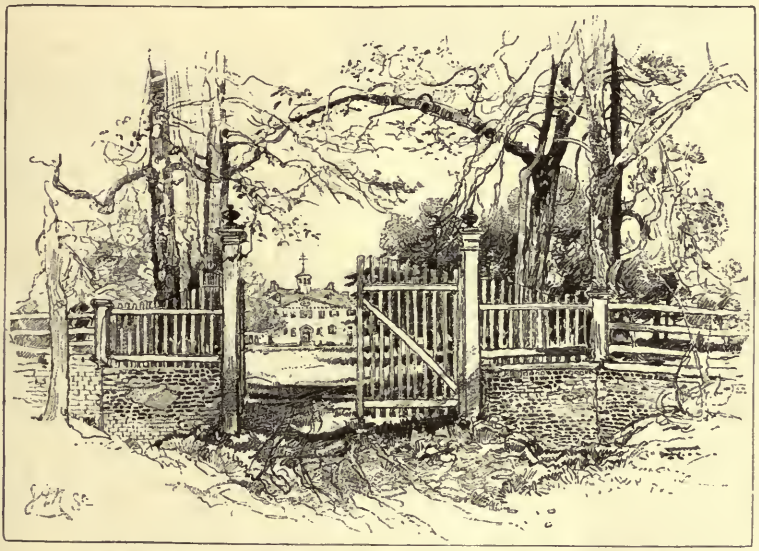
People living in the colder latitudes of the United States have little idea of the exceeding beauty and brilliancy conferred upon a landscape by the holly-tree. In Virginia it grows to a commanding height, expanding into an umbrella of glossy, prickly foliage, thickly studded with bunches of scarlet berries, which, rising against a background of deep blue sky, makes in midwinter a spectacle not to be forgotten.

Again we read, in Washington's journal, of a morning spent in teaching a coral honeysuckle vine to entwine the trunk of some ancient forest monarch; or in planting acorns and buckeye nuts brought from the fatal field of Monongahela, and horse-chestnuts from his early home in Westmoreland. Elsewhere, the grounds of Mount Vernon were clad by Nature in a rich garment of foliage native to the soil. Tulip-poplar, sweet-gum, sassafras, dogwood, oak, mulberry, aspen, ash, locust, and fringe-tree are among the deciduous trees most kindly in their growth in Fairfax county.

About fourteen miles below Alexandria, upon the opposite bank of the Potomac from Mount Vernon, was Belvoir, the estate of Colonel William Fairfax, a Yorkshireman, who, after a youth of wandering and of stout military service for the king, had come to cast his fortunes with the colony. This gentleman had held a variety of civil positions of responsibility in Virginia, and finally succeeded to that of pres-

ident of the council. His establishment was large, and was kept up in the English fashion, with liveried servants, waxed floors, fine equipages, and other indications of Old World ceremony. Around it rallied the gay society of the tide-water region, and there, attracted by the bright eyes of Anne Fairfax, Lawrence Washington, elder brother of George, sought and found his bride. In order that the young wife might not be far removed from her family, Lawrence decided to make their future home on his estate opposite Belvoir. Here he built the original dwelling and laid out the grounds, naming the place Mount Vernon, in honor of Admiral Vernon, under whom he had served with distinction at the siege of Cartagena.

Of Mount Vernon under the régime of Lawrence and Anne his wife, tradition has left little detail. From a number of Fairfax letters recently overlooked, I gather chiefly friendly discussion of the questions of the day, and of domestic gossip, congratulations, condolences, and moral reflections, concluding with the "humble service" of the period. Those were cheerful days at Mount Vernon and Belvoir. The masters ride about their plantations on horseback — Belvoir comprised nearly two thousand acres of land, and Mount Vernon as many more — and they consult about mending the breed of their horses; and a record remains of an occasion when, to make sure of better dogs, they decide to ship a present of turkeys to a friend in England, who in return sends, by "Captain Cooling of the *Elizabeth*," two dogs and one bitch of Sir Edward Filmore's hounds. They exchange grafts of the Golden Pippin, the Nonpareil, the Aromatick, and the Medlar apples. They hunt the fox, and after a hard day in the saddle, drink each other's health and that of his sacred majesty in a "nipperkin" of cognac. Visits between the two places are made with the help of a barge manned by liveried negroes. When the ladies do not meet, the men exchange news of the health of "my dear Dame." By the evening fire, they read letters from a kinswoman in England, daughter of a lord, mother of an earl, who declares herself in "an ill steat of helth," and wishes them "menny happy new years." Or else they wait anxiously for news of Thomas Fairfax, Colonel Fairfax's second son, who is cruising in an English man-of-war seeking encounter with the French off the far Indian coast. They fish, shoot canvas-backs, sail and row canoes upon the placid waters of the Potomac, lying like a sheet of silver between their homes.



THE OLD ENTRANCE TO MOUNT VERNON, USED IN WASHINGTON'S TIME.

Meantime, Lawrence Washington, in common with the rest of the family, began to be troubled about the career of his half-brother George, who was, at fourteen, shy, awkward, and, on the whole, rather a difficult problem for his anxious friends to solve. The Widow Washington, a good sensible woman of the old Virginia type, suggested to her step-son that he might take his father-in-law into his confidence, and "see what could be done for George." Colonel Fairfax sent for the lad to visit him, was pleased with his modest and manly bearing, and agreed with Lawrence that the royal navy was the best direction for George's strong military bent. At this time

THE OLD TOOL-HOUSE ON THE WALL AT MOUNT VERNON.

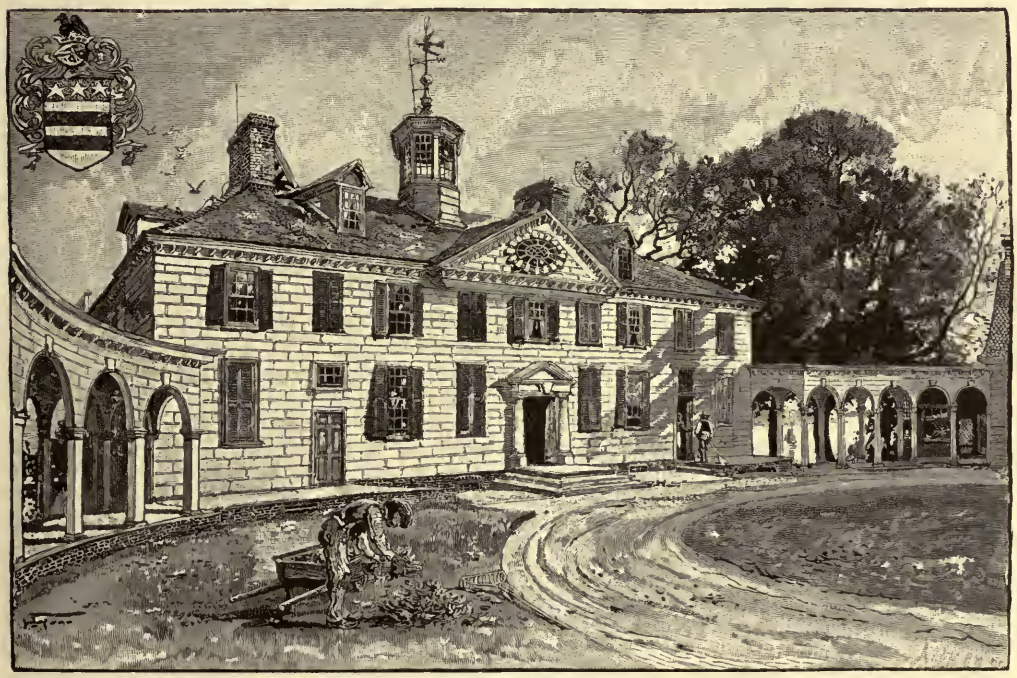
arrived tidings of the death in battle of young Thomas Fairfax, who fell "fighting in his country's cause, on board the *Harwich* ship-of-war, in an engagement with Monsieur Bourdonaye, commander of a French squadron on the Indian coast, the 26th day of June, 1745, in the twenty-first year of his age." It was, no doubt, this sad event that struck terror to the widow's heart, and strengthened her to resist the scheme proposed for her son. Perhaps, also, she was intimidated by a dolorous letter of warning penned to her on this subject by her brother, Mr. Joseph Ball, then residing in London:

"I understand you are advised and have some thoughts of putting your son to sea. I think he had better be put apprentice to a trade, for a common sailor before the mast has by no means the common liberty of the subject, for they will press him from a ship where he has fifty shillings a month and make him take twenty-three, and cut him and beat him like a negro, or rather, like a dog. And as to any considerable promotion in the navy, it is not to be expected, as there are always so many gaping for it here who have influence, and he has none."

The naval scheme was abandoned, and at this critical moment arrived upon the scene of Belvoir and Mount Vernon the person who, of all others, had most potent influence in shaping the future of the patriot. The sixth Lord Fairfax came from England to take up his abode in the Virginian wilds, and, conceiving a warm attachment for young Washington, made him his companion in many a hunting excursion, aiding him with money and with advice, until he was enabled to attain some degree of independence in his favorite occupation of surveying. During the years before his brother Lawrence's death, George resided mainly at Mount Vernon, and upon the wooded hillsides his first sentimental passion was experienced. He sighed for his "lowland beauty," as, in after days in a colder clime, he sighed for charming Mary Phillips. He wrote rhymes, wherein his "poor restless heart, wounded by Cupid's dart," played a prominent part. He went a-courting, as the good Virginia phrase hath it, to the Cary houses at Ceelys and Rich Neck, and at the shrine of that famed colonial belle, Miss Sally, laid the offering of his noble heart and name. Miss Cary refused him, to marry his friend George William Fairfax. Long afterwards, upon her death in Bath, England, her husband's heirs in Virginia found among her papers letters addressed to her by Washington, containing a frank acknowledgment that his disappointment in securing her as his wife had seriously affected the happiness of his life. That these letters should be kept secret in the family inheriting them was decided by its head. For nearly a century they have been handed down, and are here mentioned simply as a side-light thrown on the love-life of Washington at Mount Vernon.

A break in the congenial life on the Potomac plantation was at hand. A note of war was sounded among the British colonists. In Virginia the province was broken up into military districts, and to one of these Washington was appointed adjutant-general with the rank of major. A school-of-arms, officered by Adjutant Muse, Lawrence Washington's old companion of West Indian days, as teacher of manual exercise, and by that roving blade, Jacob Van Braam, as master of fence, was instituted at Mount Vernon for the benefit of the newly appointed officer. At this juncture Lawrence Washington fell ill. For his health's sake the two brothers undertook a voyage to Barbadoes, where George was attacked by small-pox. In 1752 the good and generous Lawrence died, leaving as his heir a puny daughter, whose early demise placed Mount Vernon in the keeping of George Washington. For a time he devoted himself to regulating affairs upon the estate and to caring for the interests of the widow. The year following saw him engaged in the frontier hostilities, where, as he writes, he was "soundly beaten."

In spite of this discouragement, the martial spirit was unsubdued. A day came when the young hero paced unceasingly back and forth beneath the colonnade at Mount Vernon, watching with flushed cheek and kindling eye the passage of war-ships bearing the British troops gathering at Alexandria for a conflict on the border; and then, putting spurs to his hunter, he galloped into the familiar streets of the little town, to find them alive with excitement. Here he met all the pomp and panoply of Old World warfare. His ears were open to the bidding of drum and fife. The grasp of Destiny was upon him, and in spite of the opposition of his mother to his military career, Mount Vernon saw him but rarely, until the close of the long Indian war. When, five years later, Washington returned to his home, his name was in every man's mouth, and the country rang with eulogies of his valor, his modesty, over the anxiety of Fairfax county folk to see the bride, of their visits to Mount Vernon when, in the spring after her marriage, she came to take up her abode there, and of her charming appearance, clad in a long-waisted, square-cut gown of heavy mode, having pearls wrapped in her simply twisted hair, and wearing no ornaments upon her rounded neck and arms. Among the earlier callers came, as a matter of course, the family from Belvoir, including Mistress Sally, wife of the eldest son and whilom love of Washington, together with her pretty sister, to whom Washington from his camp at Raystown, some months before, had penned the playful assurance, "I should think our time more agreeable spent, believe me, in playing a part in Cato, with the company you mention, and myself doubly happy in being the Juba to such a Marcia as you must make." All eyes were



SOUTH FRONT OF MANSION, MOUNT VERNON.

his wisdom, and his patriotism. Happening to stop overnight at the house of Mr. Chamberlayne on the Pamunkey River, he had encountered the fair and gracious lady who became his wife. The alliance thus formed, although not entered into by him with the boyish fervor displayed in his early love-affair, was eminently suitable, and was based upon sincere affection. Neighborhood tradition has transmitted more than one bit of gossip fixed upon the bridegroom, to see how he would bear the embarrassing situation, but his dignity, under the circumstances, and that of Mrs. Washington, were alike admirable. Rumor has handed down a statement, however, given for what it will fetch,— that in time to come Martha Washington never was quite so friendly with Sally Fairfax as her husband continued to be with his early comrade of the Shenandoah forests! Certain

"ON THE FRONT SEAT OF THE CHARIOT."

it is, that Washington's esteem and devotion to his wife were made manifest in ways both great and small ever thereafter. Does he not at the zenith of his fame write to her, "I should enjoy more real happiness in one month with you at home than I have the most distant prospect of finding abroad if my stay were to be seven times seven years"?

In such companionship, surrounded by the dear friends of his boyhood, with health and ample means at his command, Washington passed the serene years preluding a crisis which was to call him into the broadest arena of patriotic action. We may glance here at Mount Vernon as it appeared to the numerous visitors who, including all the potentates of the colony, made continual test of the hospitality of the newly married pair. The house, as altered and improved by Washington, was an unpretending Virginia dwelling, modest enough by comparison with the stately homes of England's great men. At some little distance from the carriage-way facing the western front, the road led through a bit of blossoming woodland, in spring redolent of the odors of wild grape, and blazing with the luster of dogwood, wild azalea and lupine. Thence, the visitor's chariot, or oftener his saddle-horse, passed between porters' lodges built of sun-dried bricks to the portal now familiar to thousands in our land. This approach gave to view a plain two-story house, with peaked roof and cupola, and out-buildings connected with the main structure, after the common Virginia fashion, by an open arcade. (The uses of such covered walks require no explanations to a Southerner, who recalls the many hospitable mansions where from the kitchens situated at a distance from the dwelling a procession of little darkies like an antique frieze was seen to pass and repass, supporting plates of hot batter-cakes, muffins, Sally Lunns, rice waffles, griddle-cakes, love-puffs, beaten biscuit, laplands,— what was there not beside? — in bewildering succession to the tea-table!) The only imposing feature of Mount Vernon architecture was the colonnade, a broad flagged piazza upon the river-front, supporting by slender columns the projecting roof of the house, and forming a pleasant airy retreat from the ardor of the Southern sun. From this point the lawn slopes down to the wooded heights above the landing-place. Here would the guests assemble before dinner was announced. To the ladies were served, by way of an appetizer, trays containing a variety of small choice pickles, made after a famous old receipt. To the gentlemen, the butler handed straw-stemmed glasses of Madeira, imported twice a year with the rest of the household stuff, from London. On this piazza the family commonly sat, Mrs. Washington with her knitting, the others variously occupied, and here the great man walked to and fro, pondering in his maturity over the mighty questions then fomenting between the British ministry and the colonists, as he had in his boyhood strained at the leash that kept him from the frontier war.

An enduring beauty of Mount Vernon were the gardens. Their limits were crowded with old-time flowers growing between hedges of tall box. Calycanthus and althea, snow-ball and mock-orange, were found in the shrubbery; while sago-palm and century plant, lemon-tree and agave, were brought from the glass houses to add dignity to the walks. Washington put into the petty cares for flower and plant the same nicety of judgment and the same zeal that went into affairs of state or camp. He found as much time to bestow upon graft and seedling as upon the larger industries of the plantation.

In the matter of daily occupation a page from Washington's home-life reads pretty much like that of any other Virginia planter of his day. The industries of the servants' quarter embraced every trade necessary to supply their own wants. Not content with

the supervision bestowed by his overseers, Washington rode from field or orchard to mill, to saw-mill, to carpenter's shop, to fishery, to plantation, to stables, etc., extending to each in turn his personal attention. To visit the ailing negroes upon his estate was a duty scrupulously performed; we read in his diary of "Cupid, ill of a pleurisy at Dogue Run quarter," and of "Grig and Lucy nothing better." The greater part of a day is spent in helping Peter, his smith, to make a new plow of his own invention. One Sunday, unable to go to church because the chariot has not returned from Colonel Fairfax's, he is obliged to put to rout a saucy oysterman who "lies at his landing," and "plagues" him by "disorderly behavior." He conditions for a purchase of land from a miserly neighbor; and himself goes into Alexandria to select a keg of butter, "being entirely out of that article." He bottles "thirty-five dozen of cider," and notes a very "great circle around the moon."

When the spring-tides of the Potomac bring herring to their nets, he is with the men, helping to haul in the seine. Whenever the season permits, he hunts with Lord Fairfax, George William Fairfax, Mr. Alexander, and others. Horses, hounds, horns made the Mount Vernon woods resound, and after a day of sport the rough-riding squires put in for dinner at any one of their respective residences which might be most convenient. When the weather is so bad as to keep even the stalwart Washington indoors, he has an opportunity of "posting my books, and putting them in good order,"

PROCESSION OF LITTLE DARKIES LIKE AN ANTIQUE FRIEZE."

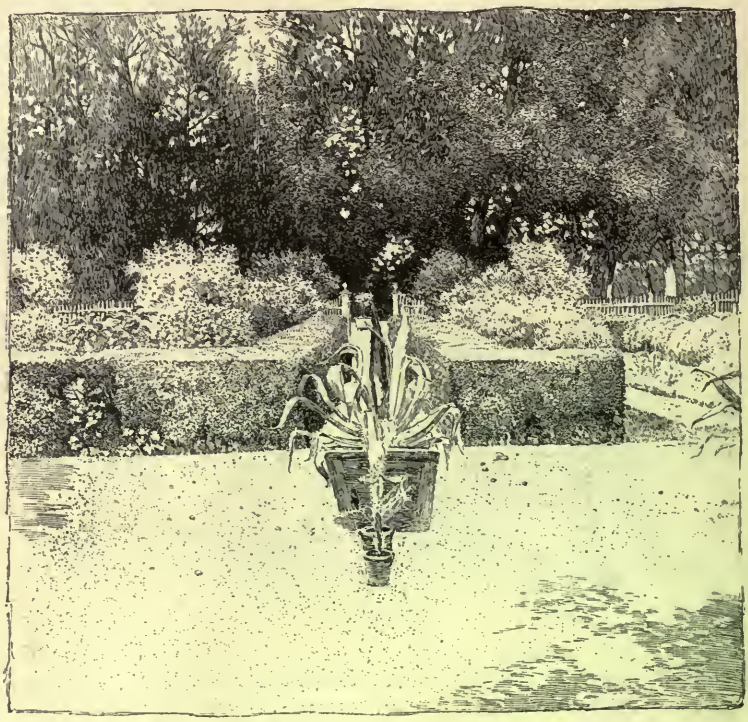
or of preparing orders to his agent in London for the semi-yearly invoice of agricultural implements, harness, livery, equipages, wearing apparel, etc., thought suitable for a gentleman of condition in the Provinces. In ordering clothes for himself, he specifies that he is to have neither lace nor embroidery, since "plain clothes with gold or silver buttons" are "all that he desires." There is in one of his letters an implied complaint against "one Charles Lawrence," who has hitherto made his garments. "Whether it be the fault of the tailor or of the measure sent, I cannot say, but certain it is my clothes have never fitted me well." He is also concerned because a recent invoice contained last year's fashions. For Mrs. Washington and her children no stuffs were too rich and substantial, and the description of those old brocades and tabbinets, lustrings, and gold-wrought gauzes, seems to belong to times remote from the simplicity of later Republican days.

Life at Mount Vernon before the Revolution was, in short, happily uneventful. As Washington himself described it, in a letter to a kinsman then in London:

> "The occurrences of this part of the world are at present scarce worth reciting, for, as we live in a state of peaceful tranquillity ourselves, so we are at very little trouble to inquire after the operations against the Cherokees, who are the only people that disturb the repose of this great continent."

Upon the agreeable phases of Mount Vernon life embodied in Washington's relations with his step-children, I do not purpose here

to touch. We may bridge over those placid years and come to the day in 1775 when fiery-tongued Patrick Henry uttered before the Virginia Convention his impetuous "We must fight!" On the 15th of the succeeding June, Washington was chosen by the Continental Congress to be general and commander-in-chief of the American army. After the last fond days spent in galloping about his happy hunting-grounds, before assuming the charge of a nation, Washington was little more than an occasional guest at Mount Vernon. In a letter dated 1798, he says: "Twenty-five years have passed away since I have considered myself a permanent resident beneath my own roof at Mount Vernon." Although the place was more than once supposed to be in danger from British ships, as the dwelling of the "rebel commander-in-chief," and Mrs. Washington was frequently urged to abandon it, she preferred to remain there until summoned by her chieftain to join him at headquarters. Her ordinary plan was to spend the winters of inaction with her husband, returning to summer at Mount Vernon upon the resumption of spring hostilities. Consider the dreariness of life on a Virginia plantation during those troublous times. For Martha Washington, living remote from her own family, the "cutting stroke" of separation and solitude was enhanced by the breaking of other social ties consequent upon the war. Her nearest neighbors, the family of George William Fairfax (the old colonel having long since died), had removed to live in England, meeting on their voyage up the River Thames the outgoing cargoes of tea that worked such mischief oversea. In the wilderness at Greenway Court, old Lord Fairfax brooded, with the abiding sorrow of an aged man, over the turn affairs were taking. Another intimate friend, the Rev. Brian Fairfax of Towlston, after nights and days of argument against Washington's course in resisting the righteous authority of the Crown, had abandoned himself to dignified seclusion in the confines of his own estate. The relations of these conscientious Tories toward the blazing patriots of that day were strained and painful. The years of the war hung like a pall upon Mount Vernon.



IN THE GARDEN AT MOUNT VERNON.

It was in 1781 that Lund Washington, left in charge of Mount Vernon by his cousin, took alarm at repeated threats against the place, and endeavored to secure the good-will of the commander of a British man-of-war lying in the stream, by going aboard her with a liberal supply of provisions from the farm. This

proceeding, coming to Washington's ears, drew down upon his agent a rebuke stern and uncompromising, with the command rather to let the place be burned and ravaged than tamper with the enemy. The alternative was not again presented, and two years later saw Mount Vernon once more in gala dress, made ready for a three-days visit, at Christmas, of Washington, accompanied by his staff, the Comte de Rochambeau, and General Chastellux. No one who is unfamiliar with the old-style methods of Southern hospitality can realize the amount of cheery labor preluding an event like this. In all Virginia country houses, the preparation of ornamental confectionery devolved upon the ladies of the family. For days before the arrival of guests the entire pantry house must have its sprig of cedar or of holly. The bedrooms, plain but exquisitely neat, were aired and garnished. The beds were made up with linen like that of the inn in Walton's "Angler"—"sheets that-look white and smell of lavender"—and decorated, moreover, with white dimity curtains and counterpanes of home-made knotted-work. Every fire-place was piled high with logs, and was haunted by a small dark personage brandishing a turkey wing, ready, as might be needed, to fan a flame or to sweep away the ashes. Tradition tells how noble Martha Washington, although saddened by the loss of her son two years before, and bearing fresh in memory the bitter privations of the American soldiers, nerved herself to do the honors as a good

THE HALL, MOUNT VERNON.

and store-room staff was in a state of pleasing animation. There were eggs to beat, butter to cream, loaf-sugar to crack, jelly to strain, plum-pudding and black cake to mix, festoons of icing, pink and white, to apply through a paper cone, wonderful paper frills to cut for mighty ham-bones. A score of servants were set to work polishing floors and furniture, brass and crystal. Every candlestick in the housewife upon the occasion of the happy Christmas of 1783. To her, as she confessed, all the prospects of future worldly happiness were "in the still enjoyments of the fireside of Mount Vernon," and her one prayer was that "the general" might be left to grow old with her in solitude and tranquillity. How heartily these sentiments were echoed by Washington himself, may be seen in his let-

ters of the time. "To move gently down the stream of life until I sleep with my fathers," was the aspiration of his heart.

The years of Washington's residence at Mount Vernon immediately after the close of the Revolutionary war, when the old plantation life was as far as possible resumed, were varied by incessant tributes of admiration coming to him from the civilized world at large, and by the continual presence at his home of visitors both great and small. The writer is the owner of a memento of this period, of general interest as indicating the modesty with which Washington shrank from praise of himself. It is a framed mezzotint, under glass, of a full-length portrait by Peel of General Nathaniel Greene of Rhode Island, with an engraved legend naming the artists, and showing it to be "from the original picture in the possession of Mr. Brown, published by him April 22d, 1785, and sold at No. 10, George Yard, Lombard Street, London." It was presented by Washington to Mr. Carlyle; given by him in turn to his daughter, Mrs. Herbert; and by her left to her two maiden daughters. One of these ladies, both of whom died at a good old age in Alexandria, in 1863, remembered a visit to Mount Vernon as a child when she was made to stand upon a tabouret and sing "Ye Dalian God" before General Washington. The picture, together with a quilt fashioned after one of Mrs. Washington's, was bequeathed to the present owner, their grandniece; but the war then preventing her from acquiring immediate possession, the picture was by a relative carried back to Mount Vernon, and there remained for eight years before it finally came to hand in New York, by express, and with the glass broken in transit. An inspection made of the print when the broken glass was removed brought to light the fact that a section cut from the lower margin had been replaced by an inserted piece of Bristol-board on which a text had been engrossed with pen and ink. A strip of paper, yellow with age, covered the inserted card-board, and not only rendered the writing illegible, but so concealed it that only the closest scrutiny could detect the lines at all. When this covering had been carefully cleaned off, the text below was revealed in these words:

THE ENTRANCE TO MOUNT VERNON.

"To his Excellency, General Washington, more exalted in Virtue than in Rank, In Gratitude for his laudable Labours which have been most honorably and successfully exerted in the great cause of Liberty and Mankind, This Print is with the utmost respect presented by Joseph Brown."

THE LINEN-CLOSET AND WINDING-STAIR.

It is evident that Washington, before hanging the picture upon the walls at Mount Vernon, himself pasted the strip of paper over a eulogy the existence of which, discovered thus by accident, had not been suspected by the friend to whom the print had afterwards been given, or by two generations of his descendants.

In 1789 we see Washington again bidding "adieu to Mount Vernon, to private life, and to domestic felicity." The choice of the American people had made him President; and obediently he went forth to receive the highest honors of the nation. During his terms of office, the care of Mount Vernon, although relegated to a trusted manager, was rarely absent from his thoughts. He returned to it finally in 1797, to take up again the scheme of agriculture so often interrupted. This beloved pursuit dividing his interest with the affairs of the new army, gave him pleasure during the brief remainder of his life. It was to a ride around his farm, exposed to the sleet and snow of a raw December day, that the nation owed its mournful loss. A cold taken then, followed by a brief struggle for life, resulted two days later in his death.

That last sad scene in "the chamber" at Mount Vernon! — who can picture it without a sense of personal interest? The simple homely room, looking southward to the Potomac. A wood fire, casting fitful shadows on the wall. Beside the bed, those faithful, silent watchers, — Craik the physician, and Lear the secretary. At the foot of the bed, the brave wife, who looked beyond the present grief to the hour when she might follow him. On the pillow, that still heroic face. Of all the great men this weary world can chronicle, how many

THE SOUTH GATE.

THE NORTH GATE, MOUNT VERNON.

have rendered up accounts as pure as Washington's?

By the side of his own beautiful river, on the spot most dear to him from boyhood, Washington sleeps; and thither, year by year, go the footsteps of thronging pilgrims, eager to offer their tribute of respect.

Constance Cary Harrison.

THE CARLYLE HOUSE, ALEXANDRIA.

MOUNT VERNON AS IT IS.

TIME moves so gently in the quiet old town of Alexandria, that twenty-five years, more or less, does not seem to matter much. While the great cities of the East have been doubling themselves and the cities of the West have grown from mere villages into vast centers of trade and population, the quiet old town has scarcely changed. The colonial flavor still clings to her stately houses and lovely gardens, though it may have been banished from the busier streets, where the necessary buying and selling goes on. The colonial names which testified to the loyalty of the Alexandrians of ante-revolutionary days are still retained by the streets which lie along the river or have their origin there. The shifting of base which came with the revolt of the colonies is well typified in these same streets, where Columbia and Washington cut sharply across King and Queen and the rest of the royal family.

A quiet retrospective air marks the better quarters of the old town, gradually shading down, through shabby gentility and decent poverty, into the squalor and sordid wretchedness which one finds along the river-brink,—dilapidated houses now occupied by the Alexandria darky, dark and filthy junk-shops reeking with vile smells, rotting quays lapped by the quiet waters of the Potomac.

The old Fairfax house on Cameron street, built of brick brought from England by one of the family, stands apparently unchanged since the days of '59, when I knew and loved it well. It shows sign neither of decrepitude nor of restoration, but the Fairfax family — dispersed by the civil war — know it no more.

The Carlyle house is by far the most interesting relic in the town,— with the possible exception of Christ Church, which, however, has a spick-and-span look that makes one hesitate to call it a relic. The Braddock headquarters, as the Carlyle house came to be called, is now incorporated into the hotel once familiarly known as the Mansion House, but rechristened of late years the Braddock House. It stands, doors wide open, upon the grassy court-

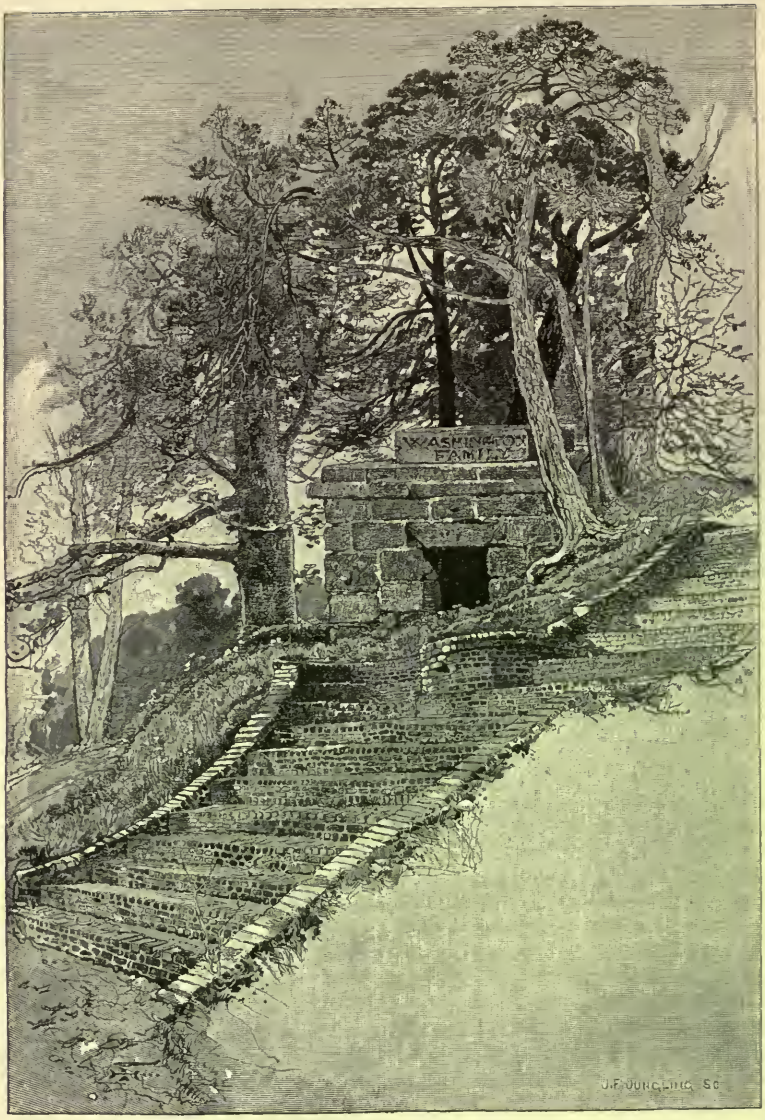
"WHERE THE BRITISH COUNCIL MET."

yard of the hotel, a deserted, dismantled, dilapidated house, the plaster loosened from the ceilings, and the rats its only inhabitants. Some of the rooms are locked, but the most interesting, from its associations, stands open. This is the paneled room where the British council met, with their brave and headstrong martinet of a commander. To this council Braddock summoned young Major Washington, to get from him advice as to his tactics in dealing with the French and Indian allies at Fort Duquesne,— advice fatally neglected, as the world well knows.

The room is quite small; not more than 21 by 16 feet, a casual judgment would give as its proportions. The walls are paneled wood painted a bright blue, with heavy carved frieze, chair board, and moldings over the doors in white. The windows do not come down to the floor, the sill being almost twenty inches above it. In the embrasures of the windows, some ten inches below the sills, are seats, deep and wide enough to accommodate two of the slim figures in fashion among our ancestors of that day. The paneling over the mantel-shelf indicates the presence of a picture or a mirror at some time, and a primitive cupboard stands open opposite the door. The small dimensions of the rooms is a very noticeable feature, both here and at Mount Vernon. We are accustomed to think of these rooms, the scenes of colonial dances and banquets, as being spacious and rather grand, but when one comes to see them, they shrink into insignificance when compared with the rooms in our "seaside cottages" of to-day.

Old Christ Church, around which so many memories cluster, is a solid, humdrum-looking building. It looks old, but not ancient in any degree. It has been in constant use from the days when Washington worshiped there till the present time, and has, therefore, been prevented from falling into dilapidation. Originally the pews were very high, the purpose evidently being to permit the occupants a view of the pulpit only, and so prevent, as far as lay in a wooden barricade, wandering thoughts. Many of the pews were square, with seats around three sides. In 1816 a number of these pews were divided into pews of the ordinary size. Washington's pew is now the only square one left in the church.

The old "wine-glass" pulpit from which Washington was wont to be "instructed" in his duties to God and man, a few years ago was taken away and replaced by a more modern form. What became of it remains an open secret: it is living a divided existence as "me-



THE OLD FAMILY TOMB AT MOUNT VERNON.

mentos" of various sorts and sizes. Whether these were distributed or sold it is difficult to ascertain, as the fact is mentioned only with bated breath, and the details of this piece of vandalism cannot be ascertained. The pulpit was not unfit for use, as far as I could learn, but was displaced as a mere matter of taste or emolument.

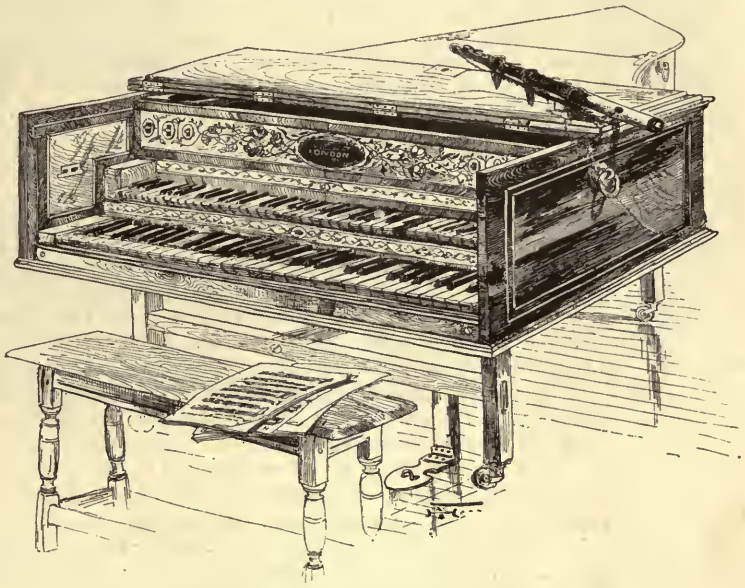
The chancel railing is the same at which Washington knelt to commune; the tablets, with the Lord's prayer and commandments upon them, are also unchanged. The original flagging in the aisles has been overlaid or replaced with wood.

The church stands as squarely and solidly in the midst of its quiet graves as though the passing centuries were of no moment. It has a sunny, open-air, Old World look, such as we see in pictures of quiet village churches in England, and seems to be an integral part of the town, with a well-established right to be there and not an impertinent irrelevancy, as most city church-yards are.

A delightful sail takes the visitor from Alexandria to Mount Vernon. The approach to the place is very fine. From the greenery of the high wooded hills the pillared colonnade and the expanse of front gleam out. The house,

which on nearer view loses somewhat in effect, is from the river very impressive. Its broad portico with pillars reaching to the roof gives an impression of elegance not sustained when one finds that the façade is frame and the pillars wooden.

A short walk up the hill brings one to the hideous brick structure, more like a modern edition of the old-time Virginia spring-house than what it is, the mausoleum of America's greatest citizen. About it are clustered the graves of many members of the family, and in the vault, back of the mausoleum, lie a great many more, with no visible or attainable record of the names or even the number of the occupants, a most singular state of affairs; almost more singular for those times than it would be for these, when the worship of ancestors has assumed vaster proportions though less definition in detail than it had in the simpler days gone by.



WASHINGTON'S FLUTE AND MISS CUSTIS'S HARPSICHORD.

The old tomb, which I remember thirty years ago as an open excavation, and from which I brought away pebbles and wild-flowers, is now inclosed and under lock and key, as everything has to be, to make the incursions of the modern goths and vandals as little mischievous as may be.

The house presents a broad front to the river, and another to the beautiful sweep of level turf between it and the road. This grassy plot is flanked on either side by clumps and irregular groups of shade trees. These are, in their turn, hemmed in by the out-buildings,— offices, stables, laundries, smoke-house, salting-house, and kitchens.

The place, as is well known, has been for a number of years under the control of the Mount Vernon Association, composed of ladies from many, indeed from most, of the older States of the Union. An attempt has been made to fit up the rooms despoiled of their furniture at the sale by its late owner. Different States have assumed the responsibility, through their representatives, by certain rooms. Some of these rooms hold bits of the furniture used in the days of Washington. A spindle-legged side-board newly done up stands in the private dining-room, as it stood in the days when the Washington and Custis family gathered there for meals. The rest of the furniture, though in excellent keeping, is not the same that was used by them. "It is antique, but not original," we were told by the negro man who showed us these rooms. He once "b'longed to de fam'ly," and was born on the place as his father was before him. There was something touching and beautiful in the proud sense of being "one of the family" shown by the servants who still act in the capacity of guides. The "gen'al" probably lives nowhere on earth in such tender remembrance as he does with them. They spoke of him and of Mrs. Washington with a loving and reverent familiarity, in this case only an heirloom, but full of suggestion to those who have known the relation of master and servant in its perfection,— a relation that has died out of the world with the death of "the institution," and was its beautiful and redeeming feature.

In Nellie Custis's music-room stands the harpsichord given her by General Washington as a wedding-present. It is the lineal ancestor of the modern grand piano, but with two banks of keys. The vandals who visited Mount Vernon before the rooms were kept barred, have picked the ivories from every key in the upper bank, as well as all the inlaid brass-work from the frame of the instrument. In most of the rooms some attempt has been made to restore at least the epoch, in the furniture selected; but one — Mrs. Washington's sitting-room—is furnished

with a tawdry set of modern ebonized furniture covered with red and yellow plush. Nothing could be more out of taste, especially in combination with the bar-room window-shade of yellow and pink.

A panel over the mantel-shelf in the west parlors is filled with an old-style oil landscape glazed. It looks as though the trees and mountains of lugubrious hue had been pressed for preservation under the glass. A chair, with green-slatted back and rush seat, is one of the pieces of furniture which came over in the much-packed *Mayflower*. Other pieces of original furniture, a globe, a portrait of Washington by Trumbull, and another by Gilbert Stewart, are standing about the room. Among other things, a white-and-gold sixteenth-century chair from the château at Chavagniac Auvergne, the birthplace of Lafayette, is to be found here. Over the mantel-shelf is the coat of arms of the Washington family, and in the fire-brick at the back of the chimney is a crest and the letters G. W. in relief. The river-room or east parlor has the original writing-desk, clock, and spinning-wheel used by Martha Washington. In the entrance hall still hangs the key of the Bastile as it hung in the days of Washington.

The only objects of interest in the banqueting-hall, which is to be furnished by New York, are the model of the Bastile and the mantel-piece of Carrara and Sienna marble, an ugly, clumsy, but curious architectural structure. The windows in the front of the house are small, with tiny panes, but on the end, in the banqueting-hall, is a triple window, also having small panes; but the middle window is higher than the others and arched, giving quite an unusual and pretty effect.

In the "family kitchen" is a great wide-mouthed fire-place with crane. Here we (my friend, one of "de fam'ly," and myself) were greeted by a handsome mulatto woman, born on the place, who brought forcibly to mind "the days that are no more," with her sweet voice, and gentle ways, and perfect courtesy. A sign upon the door, that milk was sold there for the benefit of the association, made me call for a glass. After I had taken it I asked the price. She said with the most gentle politeness and a suggestion of a courtesy, "Fi' cents a glass, *onless*, ladies, you will kindly accept it from the 'sociation." The whole air of the place has somehow escaped the sordid quality which makes most show-places an offense to the reverent visitor. The attendance, from that of the humblest negro to that of the extremely courteous and obliging superintendent, gives one the impression of being made welcome to a home, rather than that their services were mere perfunctory offices, performed for pay.

Here, there, and everywhere, among the relics of old times, the bulging form and bright blue color of hand-grenades impertinently remind us of the present, and sweep away the gathering illusions.

By far the most interesting relics in the house are those in the sleeping-chambers. "Lafayette's room" has still the original four-poster, with heavy tester and hangings, and the desk and dressing-table, which served the marquis on his visits to the Washington family. In one of the rooms hang two curious old water-colors, which our guide said had been sold when Mr. Augustine Washington disposed of the furniture of the house, but which "were so 'lapidated that they di'n' take 'em away." In this same room hung a tripartite mirror, once the property of Light-horse Harry Lee.

Miss Custis's room had in it a very quaint and beautiful chair which came over with Lord Baltimore, — presented by Miss Harper of Baltimore, into whose hands it had fallen when the furniture was scattered abroad after the sale. The mirror at which sweet Eleanor Custis had made her toilet and the steps by which she climbed into her lofty, curtained bed are still in their old places. In another room is a curious candlestick of Mrs. Washington's, an upright rod supporting a sliding crossbeam, in each end of which is a brass candlestick, the base of which, a tripod, rests upon the floor.

But the interest of the whole house centers in the room where Washington died, — "The gen'al's room, the room I likes de bes' in de house," as the servitor called it, in a tone of genuine and reverent affection. Just where the great man lay a-dying eighty-eight years ago, the bed now stands, and beside it the light stand on which are the rings left by his medicine-glasses, unchanged since that day. The secretary at which he wrote, the hair-covered trunk in which he carried his possessions, the surveyor's tripod he had used, the cloak he threw about his shoulders when he went over the farm, the leathern chair in which he sat, the covering cut away by vandal hands, are all there. There was something, in spite of these few discordant notes, that seemed peculiar to that room. I could not feel that thousands of eyes had looked upon it with idle curiosity, but as though it had been kept sacred all these years, and was yet redolent of the memories which have set it apart forever.

"Many wonders," said our guide, "why Mrs. Wash'n'ton died up in de attic, and not in de gen'al's room. It was de custom in de family to shut up a room for two years after a death had happened in it, an' dis room was shut up. Mrs. Wash'n'ton went up in de attic an' dere she staid for eighteen mu'n's till she died dere. She never had no fire in de winter, an'

ROOM IN WHICH WASHINGTON DIED, MOUNT VERNON.

in de summer it was very hot,— but dere she staid wif only her cat fur comp'ny."

The corner cut off from the lower part of the door he showed us was for the easy egress and ingress of this familiar friend. The attic room is pretty and attractive-looking, but has in it now only one piece of furniture used by Mrs. Washington,— a little three-cornered washstand.

The most interesting feature of the grounds is the beautiful old garden, with its box borders grown now to the proportions of hedges, and filled with pleasant flowers; there was no modern touch about it, nothing to dispel the illusion which had been gathering all day long.

The return trip was no anticlimax, but rounded out the day to perfect fullness. At one place, between two jutting points on opposite banks of the river, Washington, with its Capitol, public buildings, and monuments, passed across the field of vision like a panorama, and was gone.

Sophie Bledsoe Herrick.

REVENGE.

REVENGE is a naked sword —
It has neither hilt nor guard.
Would'st thou wield this brand of the Lord:
Is thy grasp then firm and hard?

But the closer thy clutch of the blade,
The deadlier blow thou would'st deal,
Deeper wound in thy hand is made —
It is *thy* blood reddens the steel.

And when thou hast dealt the blow —
When the blade from thy hand has flown —
Instead of the heart of the foe
Thou may'st find it sheathed in thine own!

Charles Henry Webb.

OUTLINE OF THE BAS-RELIEF OF THE SONS OF PRESCOTT HALL BUTLER.

ALL of us who care for art and to whom beauty is a necessity owe a deep debt of gratitude to that band of artists who, in this latter part of the nineteenth century, have resuscitated for us the dead art of sculpture. Sculpture, which has in other times been one of the first of the arts to develop, has in our time been the latest. Music is the child of our own century; poetry we have had and have; painting, after a long lethargy, was already awakened to new life; but twenty years ago sculpture was, to all seeming, dead. It is true there were a few exceptional talents, such as those of Barye and of Rude, and that Jouffroy had produced one interesting work, "The Secret;" but, broadly speaking, sculpture could not be counted as one of the living arts. That it is now alive again, full of fresh vigor and moving on to the conquest of new realms of beauty for us and those that shall come after us, we owe first of all to Paul Dubois, whose little St. John the Baptist in the Salon of 1863 was indeed as "the voice of one crying in the wilderness," and, after him, to a band of younger men who hailed the advent of the new prophet, and, gathering around him, formed the present French school of sculpture, the third of the three great schools of sculpture that the world has seen.

One of these men we have among us, and to him we owe a special debt in that his work is not only for us in common with the rest of the world, but is *first* for us,— is here in our own country, in the midst of us,— delighting us, and forming the taste of our children.

As the first step in the resuscitation of sculpture was the abandonment of the stilted imitation of third-rate Roman antiques, and the study of the works of the Italian Renaissance, it was a happy coincidence that Augustus St. Gaudens should have had much such an apprenticeship as a Florentine sculptor of the fifteenth century might have had. St. Gaudens's father was of southern France, his mother was Irish. He himself is a New Yorker, well-nigh from birth,— having been brought to this city from Dublin, his birth-place, while yet an infant. He was early apprenticed to a New York cameo-cutter and faithfully served his time, and even during the period of his study in Paris he devoted half his working hours to bread-winning in the exercise of his trade. He attributes much of his success to the habit of faithful labor acquired at this time, and speaks of his apprenticeship as "one of the most fortunate things that ever happened to him." Perhaps one may attribute to it, also, part of that mastery of low-relief which is such a noticeable element in his artistic equipment. In 1868 he went to Paris to begin the serious study of his art, and after working for some time in the *Petite Ecole* entered the studio of Jouffroy in the *Ecole des Beaux Arts*.

This was the year of the Universal Exposition, and in that Exposition he saw the "Florentine Singer" of Paul Dubois, which had received the medal of honor two years before at the Salon. This statue, in which the very spirit of the Renaissance breathed again, must have marked an epoch for him, as it did for modern sculpture.

Many of the brilliant sculptors of to-day were educated in the studio of Jouffroy; Falguière and St. Marceau had left it shortly before St. Gaudens entered it; Mercié was his fellow-student there, and he thus became a part of the young and vigorous movement of contemporary sculpture. He afterwards went to Rome, and finally, returning to this country, was given in a happy hour the commission for the Farragut statue in Madison Square. From the time when that statue was exhibited, in the plaster, at the Salon of 1880, his talent was recognized and his position assured.

The purpose of this article is to attempt some sort of analysis of this talent, and to explain the grounds of admiration for Mr. St. Gaudens's work.

Sculpture, in its primary conception, is the most positive and the most simple of all the arts. Painting deals with the visual aspects of things, with light and color, and with the *appearance* of form. Sculpture deals only with actual form. A statue does not give the visual image of the form of a man; it gives the actual form. It follows from this that sculpture is, in a sense, an easier art than painting. One often sees a mere tyro, who would be altogether lost among the complications and conflicting difficulties of painting, produce, by

PORTRAIT IN BAS-RELIEF OF THE SONS OF PRESCOTT HALL BUTLER.

measurement and the use of the compass, a bust which has a certain approximate truth to the forms of nature. But in this simplicity of the art lies also its real difficulty; for the multifold aims and difficulties of painting are also multifold resources for the artist, and a success in any one direction makes a successful work of art; but the sculptor, who has only one difficulty to contend with, has also only one means with which to succeed. If he fails in form he fails in everything. And form being the most tangible — the most accurately measureable — of all qualities of things that art has to do with, and the least mysterious and elusive, sculpture is of the arts the one most likely to fall into flat commonplace and the

most difficult to keep up in the region of art and out of the region of imitation. Nothing is more tiresome than any sculpture but the best. A painter may be far from possessing the highest genius, yet find in some part of his many-sided art an escape from the commonplace and the real, but a mediocre sculptor is lost. The sculptor must be a genius or a nobody.

Here, then, has been the great problem of the sculptors of all ages, and they have met it in various ways. The noble abstraction of Pheidias degenerated, in the later Greek and Roman work, into a dead conventionality, and, the works of Pheidias being unknown to them, the artists of the Italian Renaissance struck out a new road for themselves and found the means by a vague elusiveness of modeling to express all their new and peculiarly modern interest in individuality of character and the personality of their models without ever falling into the dry literalness of the plaster cast. In the earlier part of this century dead-alive conventionalism was again regnant, and when the sculptors of to-day, following the lead of the painters who had already begun the movement, turned again to the independent study of nature, they naturally reverted to the study of Renaissance models. In the sculpture of the Renaissance only could they find nature represented as she appeared to them. There only could they find the modern man with his pronounced individuality and his special development of character, and there only could they find the means of representing him in their art. And so, jumping over four hundred years, jumping over the inroad of academicism and all the subsequent degradation of art, the best sculpture of to-day is the legitimate successor to that of the fifteenth century,— its successor, not its imitator. The sculptors of to-day are working in the spirit of the Renaissance, but the very essence of that spirit is personality — individualism — independent study. Now, having a general view of the movement of which he is a part, we are prepared to approach the work of St. Gaudens himself, and to search there the qualities of his school and their particular development by his own personality.

The feeling for individuality,— the modern idea that a man is not merely one of a species but is a character,— the caring less for the perfection of a race and more for the man himself as he is, with his faults as well as his merits, is one of the noticeable qualities of Mr. St. Gaudens's work. It is easy to see in his Farragut how he has been penetrated with the personality of his model and has bent himself to its expression. The statue is as living — as *vital* — as one of the Mino da Fiesole's Florentines, who died four hundred years ago, and whom we should be quite prepared to meet in the streets as we come out of the museum where his likeness is preserved. There is no cold conventionalism, neither is there any romanticism or melodrama, but a penetrating imagination which has got at the heart of the man and given him to us "in his habit as he lived," cool, ready, determined, standing firmly, feet apart, upon his swaying deck, a sailor, a gentleman, and a hero. In his Randall statue at Sailors' Snug Harbor, there is much of the same quality, for though, from the lack of authentic portraits this latter was necessarily a pure work of imagination, yet it is none the less a portrait of a man — an individual — if not precisely the Randall whose name it bears. There is nothing of the ideal Greek hero about this rugged block of humanity. This kindly, keen, alert, old man, sharp-eyed, hooked-nosed, firm-mouthed, with a sea breeze in his look, is a modern and an American and, one would say, an old sailor, with crotchets and eccentricities as well as a good head and a good heart.*

Another and a more recent work in the same line of what we may call *ideal portraiture* is the "Deacon Chapin," which is perhaps the finest embodiment of Puritanism in our art. Surely those old searchers for a "liberty of conscience" that should not include the liberty to differ from themselves could not fail to recognize in this swift-striding, stern-looking old man, clasping his Bible as Moses clasped the tables of the law, and holding his peaceful walking-stick with as firm a grip as the handle of a sword — surely they could not fail to recognize in him a man after their own hearts. But he is not merely a Puritan of the Puritans, he is a man also, a rough-hewn piece of humanity enough, with plenty of the old Adam about him; and one feels that so and not otherwise must some veritable old Puritan deacon have looked.

In these statues it is easy, I say, to see the spirit of the Renaissance, but to show the appropriation of Renaissance methods and the rare technical skill with which they are employed in the embodiment of this spirit is a more difficult task, and to attempt it, I wish more especially to draw attention to a class of work which was particularly characteristic of the Italian Renaissance and in the revival of which Mr. St. Gaudens seems to me one of the most successful of modern sculptors. I mean low-relief. Something of what he can do in this way any one may see in the allegorical figures on the base of the Farragut monument, and, I remember, these figures were even more

* I believe that, in point of fact, Randall was not a sailor, but the text refers to the type of the statue rather than to the historic character.

of a revelation to me of his ability than was the statue itself. For the question whether or not a given statue is great and heroic in conception one can only answer to one's self, and one can never be quite sure that the answer is the true one; but the question whether a sculptor has the knowledge and the skill to handle low-relief, that one can quite definitely settle. One can even hope to convince another that his conclusion is correct. I own, myself, to being quite enamored of the charm of Mr. St. Gaudens's reliefs, but I hope that this reason will acquit me of the charge of mere partiality for the graceful above the grand in dwelling on what many would think a minor phase of his work.

The sculptors of the Italian Renaissance may be said, in a sense, almost to have invented low-relief. In the struggle to depict the infinite variety of things that was necessary to their modern nature, and yet to avoid the mere matter-of-fact, which is fatal to art,—in their desire to be real without being realistic,— they naturally turned to a part of their art which is the nearest akin to painting, and they pushed it to a degree of perfection which has never been known before or since. Low-relief does not deal with actual form but with the appearance of form, and the more perfect it is the farther it is apt to be from an actual copying of the forms of nature. The common conception of a medallion is probably that it is half of a head placed upon a flat surface, but this conception is the farthest possible from being the true one. Even the idea that while the projection is much less than in nature the *relations* of projection remain the same, is not much nearer the truth. In good relief work, for instance, the head constantly projects more than the shoulder. The fact is that low-relief is a kind of *drawing* by means of light and shade, the difference between it and any other kind of drawing being that the lights and shadows are produced not by white paper or crayon strokes, but by the falling of the light upon the elevations and depressions of the surface of the relief; and these elevations and depressions are regulated solely by the

THE CHAPIN STATUE, SPRINGFIELD, MASS.

amount of light or shadow which the sculptor desires and are almost arbitrary in their relations to the projection of the model. As the painter concentrates the light and shade upon the head, so does the sculptor, by increasing its pro-

SKETCH OF CHIMNEY-PIECE IN HOUSE OF CORNELIUS VANDERBILT.

jection; as the painter varies the tone of his background, so does the sculptor; by slight undulations which catch the lights and cast pale shadows, vary his: he even uses outline and cuts fine trenches of shadow round the edges of his figures here and there, where greater definition seems desirable. He can produce the effect of distance by flattening his modeling and so reducing both the light and shadow, and he can mark the importance of any part which is most interesting to him by giving it greater relief. His figures now lose themselves utterly in the background and now emerge into sudden crispness of form as may best suit his purpose. His relief is a picture which he fashions with delicate use of light and dark, thinking always of the effect of the whole, and never of the imitation of any one piece of form.

Low-relief is thus an art nearly allied to painting and which deals with aspects rather than with facts, and its exercise calls for the highest powers of perception and execution which the artist possesses. The lower the relief the greater — the more marvelous — the delicacy of modeling required to give the proper relations of light and shadow. It is at the same time, for him who understands it, the most delightful resource against the sculptor's greatest danger, the matter-of-fact. Therefore it has been a favorite art with sculptors, and success in it is one of the best available measures, both of the power and purity of artistic conception, and of the technical ability, of a given sculptor. St. Gaudens's success in it has been very great. Such reliefs as the portrait of a young lady, here given, or that of the two children, must be seen and studied in the originals to be understood, it being impossible for any illustration to give an adequate idea of the sweet fluency of modeling and of the marvelous economy of means (getting with an infinitesimal projection enough variety of shadow to convey a complete impression of nature) which place them among the most remarkable productions of our times. That they are lovely in themselves, full of sweet, pure feeling, of beautiful composition and subtle grace of line, the engravings may indeed help one to see, but the exquisite fineness, which is power, of the workmanship, the beauty of surface, caressed into delicate form, which in a direct light is invisible, nothing but the reliefs themselves can show one. They are masterpieces of skill and knowledge.

So far we have been considering Mr. St. Gaudens's work in professed portraiture, whether in the round or in relief, and have seen in it the two dominating qualities of the Renaissance,—individuality of conception and delicate suavity of modeling. We have now to consider a more purely ideal class of works, such as the caryatides in the house of Cornelius Vanderbilt and the angels of the Morgan monument (so unfortunately destroyed by fire), and to see how in them the same qualities are combined and carried out together. At first sight the caryatides might seem more Greek than Renaissance in feeling. The costume, the large amplitude of form, the dignity and repose of the figures, are very Greek. But one soon sees that there is something there which is other than Greek. The modern mind has been at work, and in these ideal figures there is a vague air of portraiture. If they are not women who *have* lived, they are women who might have lived and have loved and, assuredly, have been loved. Serenely beautiful as they are, one does not feel before them, as before the great Greek statues, the awe and admiration of abstract beauty, but rather the kind of tender personal feeling that the *Femme Inconnue* of the Louvre inspires. They are not goddesses but *women*, alike yet different, each, one feels, with her own character, her own virtues, and, perhaps, her own faults. Here, then, is the note of the Renaissance, the love of individuality, and its complement in the manner of the execution is equally present. These figures are almost entirely detached, and yet in the *paleness* of the modeling and in the avoidance of deep hollows and dark shadows,— the chisel never quite going into the depths of the form, but leaving, as it were, a diaphanous

CARYATID ("AMOR") OF THE C. VANDERBILT CHIMNEY-PIECE.

veil between it and our eyes and a mystery for the imagination to penetrate,— we find even here the principle of low-relief.

We find this principle of low-relief even more readily in the angels of the Morgan tomb, and I think, to go back a little, we can find it even in the Farragut. For, though the ruggedness of the type, the material, and the necessity for distant effect demanded depth of shadow, we find in the very means of getting this shadow the lesson of low-relief that it is the appearance of nature and not the absolute fact that is of importance. The figure was first modeled nude with great care, but, when Mr. St. Gaudens came to put the costume upon it, he found that in order to get the necessary accent he had often to disregard the actual form underneath and to cut folds of drapery deeper than they could possibly go. In order to get the *look* of nature he had to disregard the absolute fact.

I have dwelt at considerable length on the likeness of St. Gaudens's work to that of an epoch which he has deeply studied and deeply loves, because it seemed to me that in that way only I could show its great technical merit; but it by no means follows that his work is not original. On the contrary, he could not show the spirit of the Renaissance if he were not strongly individual. As I have said, the essence of the Renaissance spirit is individuality, and in nothing is St. Gaudens more like the great artists of the fifteenth century than in that he is eminently original and that the personal note is strongly felt in all his work. His figures are such as no other man than himself could have made them; his types of beauty are those that appeal most to his own nature and his own peculiar temperament. This temperament one cannot quite analyze, but one can readily discover one or two elements that enter largely into it. Two of these are virility and purity. The manly directness and straightforward simplicity of such works as the Farragut and the Chapin are among their most readily visible characteristics, and the caryatides or the angels of the Morgan monument are as pure as

ANGEL FOR TOMB OF GOVERNOR E. D. MORGAN.

they are lovely. In the sweet-flowing grace of movement, in the refined beauty of face and form of these angels, all intent upon their celestial harpings, sensuousness never touches the limits of sensuality. They are as pure as a madonna of Fra Angelico's.

The time has not yet come to define the exact place of Augustus St. Gaudens on the roll of the sculptors of our second Renaissance. I have tried to give some notion of his qualities; of his limitations we cannot yet judge. No sculptor can be assigned his definite rank until he has shown what he can do with the nude, and Mr. St. Gaudens has as yet produced no nude figure except the inevitable Indian which is the "youthful sin" of every American sculptor. He is still a young man with a long life of work before him, and he has by no means said his last word. What we may know now is, that he is an artist of intelligence, learning, and imagination, with a great and distinguished talent, who has done much and from whom we may hope for more.*

* When the above article was written Mr. St. Gaudens's Lincoln had not been modeled.—EDITOR.

Kenyon Cox.

SAINT GAUDENS'S LINCOLN.

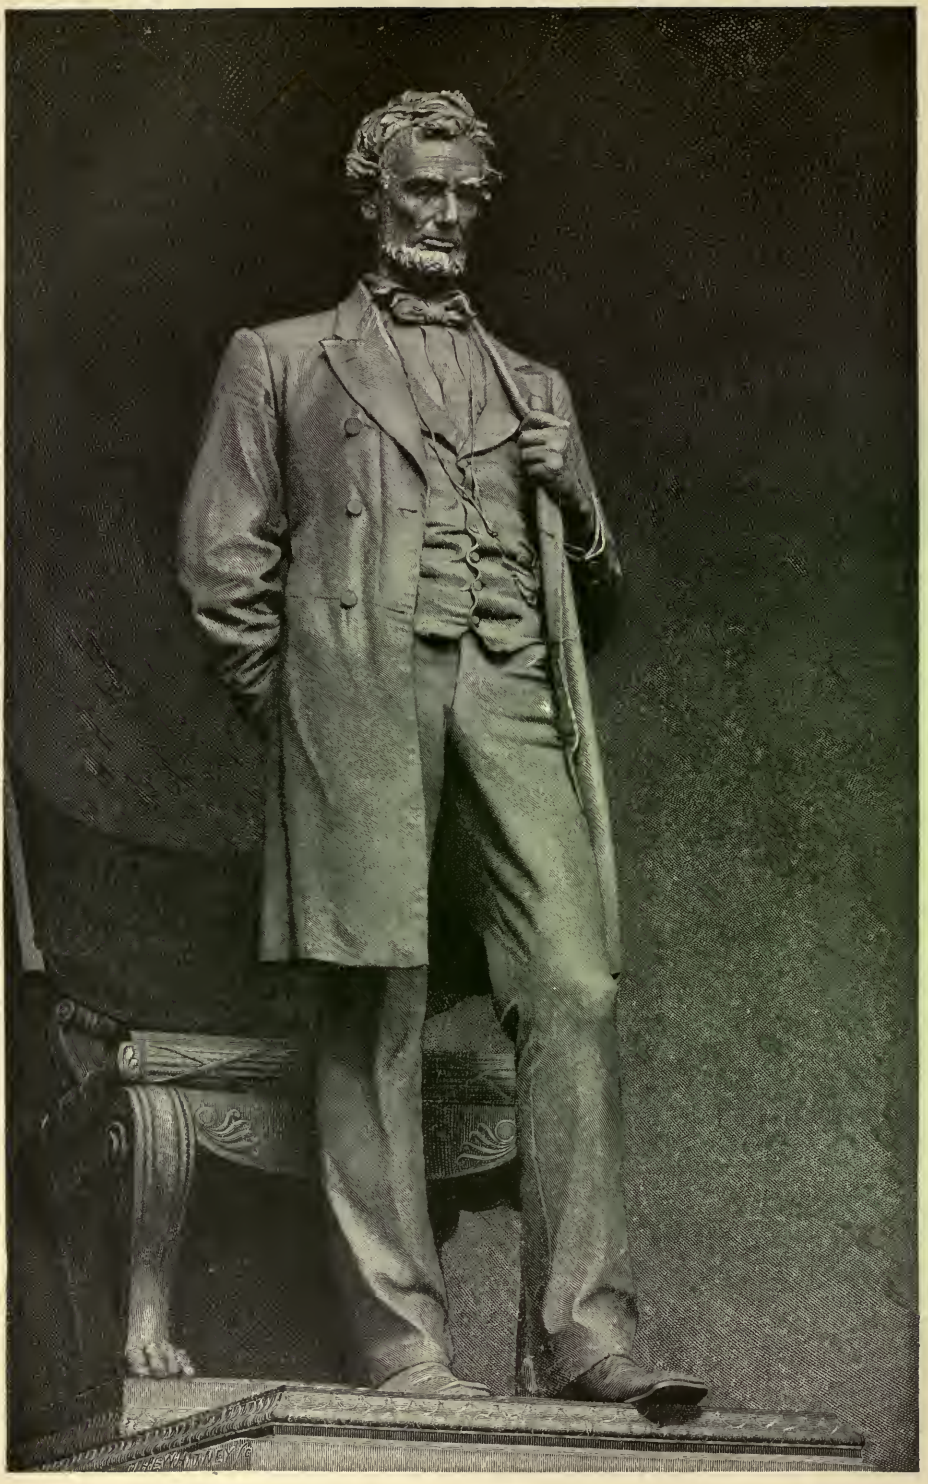
THE Lincoln monument for Chicago is the most important commemorative work that Mr. St. Gaudens has yet produced and may well remain the most important of his life. There could be no nobler task for an American sculptor than the task of representing the greatest of all Americans; and it so chances that the external as well as the intellectual problems it involved were of peculiar interest and difficulty.

To an artist brought up in the belief that only through the representation of purely beautiful forms can a work of sculpture be beautiful as such, Lincoln would, of course, have offered an unsympathetic theme; both in physical structure and in attire he might have seemed almost the embodiment of the sculpturally impossible. But to an artist trained like Mr. St. Gaudens in the gospel of individuality, full of that modern spirit which prizes "character" in a model for portraiture above even beauty itself, no face could have been more inspiring than Lincoln's, while even the difficulties presented by his form and costume could not seem insuperable.

The intellectual problem on the other hand—the primary task of conceiving the soul and potency of the man is so clear and full a way as to make adequate expression possible—had to deal with elements in which force and beauty were equally commingled. A more distinct personality than Lincoln's could not be imagined, nor one in which moral purity and power should be more commensurate with intellectual strength. Here it was the complex richness of his opportunity which made the sculptor's task as difficult as noble. We may truly say that Lincoln was not one great man but many. He was a thinker whose profound imaginings dealt with the deepest, subtilest public problems and a practical man of affairs who controlled a myriad daily details of immediate definite bearing; a leader who guided his people through a terrible crisis, yet an executive who carefully sought out and followed out their own desires; the champion of his country before the world and the father individually of every fellow-countryman who appealed to him; a wonderful orator and a wonderful master of prose expression and of the poetry which may be woven into it; a humorist and yet a philosopher saddened by the ever-present pathos and tragedy of life. His mind seemed a very synonym for practical good sense; yet it was the mind of a poet, a prophet too, and beneath it lay the heart of a child and the tender instincts of a woman. How, we had often asked ourselves, can any artist ever show us such a character? And how can we permit him to dismember it and accept a single part as Lincoln? Yet Mr. St. Gaudens has not dismembered it, and has expressed it for us no less adequately than broadly.

The first question to be decided must have been: Shall the impression to be given base itself primarily upon the man of action or upon the man of affairs? Shall the statue be standing or seated? In the solution of this question we find the most striking originality of the work. The impression given bases itself in equal measure upon the man of action and the man of affairs. Lincoln is standing, but stands in front of a chair from which he has just risen. He is before the people to counsel and direct them, but has just turned from that other phase of his activity in which he was their executive and their protector. Two ideas are thus expressed in the composition, but they are not separately, independently expressed to the detriment of unity. The artist has blended them to the eye as our own thought blends them when we speak of Lincoln. The pose reveals the man of action, but represents a man ready for action, not really engaged in it; and the chair—clearly typical of the Chair of State—reveals his title to act no less than his methods of self-preparation.

We see, therefore, that completeness of expression has been arrived at through a symbolic, idealistic conception. No given moment



STATUE OF ABRAHAM LINCOLN; CHICAGO.

of Lincoln's life is represented, no special branch of his public usefulness or of his intellectual endowment is emphasized,— all are suggested in the symbolic reach of the conception. But the rendering of this conception is realistic in the best sense of the word. The pose is simple, natural, individually characteristic — as far removed from the conventionally dramatic or "sculpturesque" as from the baldly commonplace. Neither physical facts nor facts of costume are palliated or adorned. Even the chair is in general outline such a one as Lincoln might very possibly have used. It is idealized only by its massiveness and its unobtrusive decoration, and the figure is idealized only by refinement and breadth and vigor in treatment. What we see are realities, but we see them suffused with poetic thought and typical explanatory meanings, and ennobled though not altered by the subtile touch of art: and the reposeful composition speaks to us with true dramatic intensity. Examine the figure more narrowly and see how rich it is in significance, how it carries out in every line the fundamental ideas which inspired the composition as a whole. This Lincoln, with his firmly planted feet, his erect body, and his squared shoulders, stands as a man accustomed to face the people and sway them at his will, while the slightly drooped head and the quiet, yet not passive hands express the meditativeness, the self-control, the conscientiousness of the philosopher who reflected well before he spoke, of the moralist who realized to the full the responsibilities of utterance. The dignity of the man and his simplicity; his strength, his inflexibility and his tenderness; his goodness and his courage; his intellectual confidence and his humility of soul; the poetic cast of his thought, the homely vigor of his manner, and the underlying sadness of his spirit,— all these may be read in the wonderfully real yet ideal portrait which the sculptor has created. And they are all so expressed, I repeat, as to reveal not only the man himself but the various directions in which he brought his great qualities to bear.

Having said as much as this, it is almost needless to comment upon the technical merits of the work. No such meaning, no such message could have made itself felt through any but the most accomplished hand. When we find for the first time a portrait which really shows us the inner Lincoln we are not surprised to find it the first one which from a purely sculptural point of view has dealt successfully with his outward aspect. This aspect was impressive, imposing, inspiring, attractive by reason of the spirit which shone through it; and, naturally, an artist who failed to reveal that spirit could make little of the rough yet noble husk which sheathed it. The lesson thus taught is a priceless one. It proves that even the most difficult task of the most "modern" kind is not beyond the power of the sculptor's art to master; but that it can only be mastered when that art signifies intellectual insight and creative force as well as trained perceptions and a skillful hand.

Another valuable lesson may be read in the nature of that originality which I have claimed for the design as a whole. Strange as it may seem, no previous monumental composition had furnished a precedent for this. The world had had seated statues and standing statues in plenty; but a figure thus recently risen from its seat is that rarest of things — a true novelty in art. No novelty in art, however, is entitled to admiration simply as such. On the contrary, it is trebly bound to make manifest intrinsic worth. We cannot but criticise it with senses sharpened by the thought: If the idea is good, would not some great artist long ere this have conceived it and expressed it? The exceptional strength of Mr. St. Gaudens's talent shows not so much in the originality of his fundamental idea as in that treatment of it which has made it seem not merely a right idea but the only one adequate to his purpose. This implies, of course, that originality came not because it was sought as such, but naturally, inevitably, as a result of the conscientious effort to express a clear conception in the clearest and completest way.

In conclusion, it is most interesting to note the close ties which connect so original, individual a work as this with other great works of other kinds. The union of idealistic conception and realistic rendering which it reveals is almost always found when modern art is at its very best. But it also shows a union of perfect repose with strong dramatic significance, and this union is characteristic of classic art when at its best. There as here it is secured by the same expedient,— by the choice of a moment which is not the one of most vigorous action but the one in which such action is imminent.

The statue is of bronze, eleven and a half feet in height. The simple pedestal which supports it stands in the center of a platform some sixty feet in breadth by thirty in depth which is raised a few steps above the surface of a slight elevation near the entrance of Lincoln Park. Around three sides of the platform curves a stone seat upon the back of which one reads the name of Lincoln, with the dates of his birth and death, and upon the ends two characteristic citations from his own utterances. In the architectural portion of his work Mr. St. Gaudens was assisted by Mr. Stanford White, and together they have given us a monument which is the most precious the country yet possesses; which is not only our best likeness of Abraham Lincoln, but our finest work of monumental art.

M. G. van Rensselaer.

THE GRAYSONS.*

A STORY OF ILLINOIS.

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "Roxy," etc.

TURNING THE BIBLE.

I. TURNING THE BIBLE.

THE place of the beginning of this story was a country neighborhood on a shore, if one may call it so, that divided a forest and prairie in central Illinois. The time was nearly a lifetime ago. An orange-colored sun going down behind the thrifty orchard of young apple-trees on John Albaugh's farm, put into shadow the front of a dwelling which had stood in wind and weather long enough to have lost the raw look of newness, and to have its tints so softened that it had become a part of the circumjacent landscape. The phœbe-bird locally known as the pewee, had just finished calling from the top of the large barn, and a belated harvest-fly, or singing locust, as the people call him, was yet filling the warm air with the most summery of all summery notes — notes that seem to be felt as well as heard, pushing one another faster and yet faster

through the quivering atmosphere, and then dying away by degrees into languishing, long-drawn, and at last barely audible vibrations.

Rachel, the daughter of the prosperous owner of the farm, was tying some jasmine vines to the upright posts that supported the roof of a porch, or veranda, that stretched along the entire front of the house. There was that in her fresh calico gown and in her action which gave her the air of one expecting the arrival of guests. She almost always expected company in the evening of a fine day. For the young person whose fortune it is to be by long odds the finest-looking woman in a new country where young men abound, and where women are appreciated at a rate proportioned to their scarcity, knows what it is to be a "reigning belle" indeed. In the vigorous phrase of the country, Rachel was described as "real knock-down handsome;" and, tried by severer standards than those of Illinois, her beauty would have been beyond question. She had the three essentials: eyes that were large and lustrous, a complexion rich and fresh, yet delicately tinted, and features well-balanced and harmonious. Her blonde hair was abundant, and, like everything about her, vital. Her hands and feet were not overlarge, and, fortunately, they were not disproportionately small; but just the hands and feet of a well-developed country girl used to activity and the open air. She was not more than ordinarily clever, but she had a certain passive intelligence. Her voice was not a fine one, nor had her manners any particular charm except that which comes from the repose of one who understands that she is at her best when silent, and who feels herself easily ahead of rivals without making any exertion whatever. Hers was one of those faces the sight of which quickens the pulses even of an old man, and attracts young men with a fascination as irresistible as it is beyond analysis or description. So it happened that many young men were visitors at John Albaugh's hospitable house. Rachel, being chief, could afford to be generous, and where the young men came the young women were prone to come. Thus it happened that Albaugh's was a place of frequent and spontaneous resort for the young people from all the country round.

But it had happened with this much-courted girl, as it has happened to many another like her, that with all the world to choose from, she had tarried single longer than her companions. She was now past twenty-three, in a land where a woman was accounted something of an old maid if unmarried at twenty. Beauties such as she find a certain pleasure in playing with their destiny, as pussy loves the excitement of trifling with the mouse that can hardly escape her in any way. Prey that comes too easily to hand is not highly valued. Every bid for such a woman's hand leads her to raise her estimation of her value and to look for something higher. Rachel's lovers came and went, and married themselves to young women without beauty. Lately, however, Rachel Albaugh's neighbors began to think that she had at length fallen in love "for keeps," as the country phrase expressed it.

"I say, Rache," called her brother Ike, a youth of fifteen, who was just then half-hidden in the boughs of the summer apple-tree by the garden gate, "they 's somebody coming."

"Who is it, Ike?"

"Henry Miller and the two Miller girls."

"Oh! is that all?" said Rachel in a teasing tone.

"Is that *all?*" said Ike. "You don't care for anybody but Tom Grayson these days. I 'll bet you Tom 'll be here to-night."

"What makes you think so?" asked Rachel, trying not to evince any interest in the information.

"Don't you wish you knew?" he answered, glad to repay her teasing in kind.

"Did you see him to-day?"

"Say, Sis," said Ike, affecting to dismiss the subject, "here 's an awful nice apple. Can you ketch?"

Rachel held up her hands to catch the apple, baring her pretty arms by the falling back of her loose sleeves. The mischievous Ike threw a swift ball, and Rachel, holding her hands for it, could not help shrinking as the apple came flying at her. She shut her eyes and ducked her head, and of course the apple went past her, bowling away along the porch and off the other end of it into the grass.

"That 's just like a girl," said Ike. "Here 's a better apple. I won't throw so hard this time." And Rachel caught the large striped apple in her two hands.

"I say, Ike," she said, coaxingly, "where did you see Tom?"

"Oh! I met him over on the big road as I went to mill this morning; he was going home to his mother's, an' he said he was coming over to see you to-night. An' I told him to fetch Barbara, so 's I 'd have somebody to talk to, 'cause you would n't let me get a word in ageways with him. An' Tom laughed an' looked tickled."

"I guess you won't talk much to Barbara while Ginnie Miller 's here," Rachel said; and by this time Henry Miller and his two sisters were nearing the white gate which stood forty feet away from the cool front porch of the house.

"Howdy, Rachel!" said Henry Miller, as he

reached the gate, and "Howdy! Howdy!" came from the two sisters, to which Rachel answered with a cordial "Howdy! Come in!" meant for the three. When they reached the porch, she led the way through the open front door to the "settin' room" of the house, as the living-room was always called in that day. The fire-place looked like an extinct crater; curtains of narrow green slats hung at the windows, and the floor was covered by a new rag-carpet in which was imbedded a whole history of family costume; a patient geologist might have discovered in it traces of each separate garment worn in the past five years by the several members of the Albaugh family. The mantelpiece was commonplace enough, of "poplar" wood — that is, tulip-tree — painted brown. The paint while fresh had been scratched in rhythmical waves with a common coarse comb. This graining was supposed to resemble the grain of some wood yet undiscovered. The table at the side of the room farthest from the door had a cover of thin oilcloth decorated with flowers; most of them done in yellow. A tall wooden clock stood against the wall at the right of the door as you entered, and its slow ticking seemed to make the room cooler. For the rest, there was a black rocking-chair with a curved wooden seat and uncomfortable round slats in the back; there were some rank-and-file chairs besides,— these were black, with yellow stripes; and there was a green settee with three rockers beneath and an arm at each end.

Henry Miller was a square-set young fellow, without a spark of romance in him. He had plowed corn all day, and he would have danced all night had the chance offered, and then followed the plow the next day. His sisters were like him, plain and of a square type that bespoke a certain sort of "Pennsylvania Dutch" ancestry, though the Millers had migrated to Illinois, not from Pennsylvania, but from one of the old German settlements in the valley of Virginia. Ike jumped out of the apple-tree to follow Virginia, the youngest of the Millers, into the house; there was between him and "Ginnie," as she was called, that sort of adolescent attachment, or effervescent reaction, which always appears to the parties involved in it the most serious interest in the universe, and to everybody else something deliciously ridiculous; a sort of burlesque of the follies of people more mature.

This was destined to be one of Rachel's "company evenings"; she had not more than seated the Millers and taken the girls' bonnets to a place of security, when there was a knock on the door-jamb. It was Mely McCord, who had once been a hired help in the Albaugh family. There were even in that day wide differences in wealth and education in Illinois, but class demarcations there were not. Nothing was more natural than that Mely, who had come over from Hubbard township to visit some cousin in the neighborhood, should visit the Albaughs. Mely McCord was a girl — she was always called a girl, though now a little in the past tense — with a stoop in the shoulders, and hair that would have been better if it had been positively and decoratively red. As it was, her head seemed always striving to be red without ever attaining to any purity of color.

Half an hour later, McGill, an Irish bachelor of thirty-five, who, being county clerk, was prudently riding through the country in order to keep up his acquaintance with the voters, hitched his horse at the fence outside of the Albaugh gate, and came in just as Rachel was bringing a candle. Though he had no notion of cumbering himself with a family or with anything else likely to interfere with the freedom or pleasure of "an Irish gentleman," McGill was very fond of playing at gallantry, and he affected a great liking for what he called "faymale beauty," and plumed himself on the impression his own sprucely dressed person and plump face — a little overruddy, especially toward the end of the nose — might make on the sex. He never passed Albaugh's without stopping and enjoying a platonic flirtation with Rachel. George Lockwood arrived at the same time; he was a clerk in Wooden's store, at the county-seat village of Moscow, and he could manage, on his busiest days even, to spend half an hour in selling a spool of cotton thread to Rachel Albaugh. He had now come five miles in the vain hope of finding her alone. The country beauty appreciated the flattery of his long ride, and received his attention with a pleasure undisguised.

But George Lockwood's was no platonic sentiment. He watched intently every motion of Rachel's arms only half-hidden in her open-sleeved dress; even the rustling of the calico of her gown made his heart flutter. He made a shame-faced effort to conceal his agitation; he even tried to devote himself to Mely McCord and the "Miller girls" now and then; but his eyes followed Rachel's tranquil movements, as she amused herself with McGill's bold flatteries, and Lockwood could not help turning himself from side to side in order to keep the ravishing vision in view when he was talking to some one else.

"You had better make the most of your chance, Mr. Lockwood," said pert little Virginia Miller, piqued by his absent-minded pretense of talking with her.

"What do you mean?" he asked.

"Oh, talk to Rachel while you can, for maybe after a while you can't!"

"Why can't I?"

"She 's glad enough to talk to you now, but just you wait till Tom Grayson comes. If he should happen in to-night, what do you think would become of *you?*"

"Maybe I 'm not so dead in love as you think," he answered.

"You? You 're past hope. Your eyes go round the room after her like a sunflower twistin' its neck off to see the sun."

"Pshaw!" said George. "You know better than that."

But Virginia noted with amusement that his smile of affected indifference was rather a forced one, and that he was "swallowing his feelings," as she put it. He took her advice as soon as he dared and crossed to where Rachel was sitting with the back of her chair against the jamb of the mantel-piece. Rachel was smiling a little foolishly at the shameless palaver of McGill, who told her that there was a ravishing perfiction about her faychers that he 'd niver sane surpassed, though he 'd had the exquisite playsure of dancing with many of the most beautiful faymales in Europe. Rachel was a little sick of such unwatered sweetness, and was glad to have George Lockwood interrupt these frank criticisms of an appreciative connoisseur.

"I hear Tom Grayson outside now," said Mely McCord, in a half-whisper to Henry Miller. "George Lockwood won't be nowhere when he gits here"; and Mely's freckled face broke into ripples of delight at the evident annoyance which Lockwood began to show at hearing Grayson's voice on the porch. Tom Grayson was preceded by his sister Barbara, a rather petite figure, brunette in complexion, with a face that was interesting and intelligent, and that had an odd look hard to analyze, but which came perhaps, from a slight lack of symmetry. As a child, she had been called "cunning" in the popular American use of the word when applied to children; that is to say, piquantly interesting; and this characteristic of quaint piquancy of appearance she retained, now that she was a young woman of eighteen. Her brother Tom was a middle-sized, well-proportioned man, about two years older than she, of a fresh, vivacious countenance, and with a be-gone-dull-care look. He had a knack of imparting into any company something of his own cheerful heedlessness, and for this his society was prized. He spoke to everybody right cordially, and shook hands with all the company as though they had been his first cousins, looking in every face without reserve or suspicion, and he was greeted on all hands with a corresponding heartiness. But while Tom saluted everybody, his eye turned toward Rachel, and he made his way as quickly as possible to the farther corner of the room where she was standing talking to George Lockwood. He extended his hand to her with a hearty

"Well, Rache, how are you? It would cure fever and ague to see you;" and then turning to Lockwood he said: "Hello, George! you out here! I would n't 'ave thought there was any other fellow fool enough to ride five miles and back to get a look at Rachel but me." And at that he laughed, not a laugh that had any derision in it, or any defiance, only the outbreaking of animal spirits that were unchecked by foreboding or care.

"I say, George," he went on, "let 's go out and fight a duel and have it over. There 's no chance for any of us here till Rachel's beaux are thinned out a little. If I should get you killed off out of the way, I suppose I should have to take Mr. McGill next."

"No, Tom, it 's not with me you 'd foight, me boy. I 've sane too many handsome girls to fight over them, though I have never sane such transcindent —"

"Ah, hush, now, Mr. McGill," said Rachel.

"Faymale beauty 's always adorned by modesty, Miss Albaugh. I 'll only add, that whoever Miss Rachel stoops to marry" — and McGill laughed a slow, complacent laugh as he put an emphasis on stoops — "I 'll be a thorn in his soide, d' yeh mark that; fer to the day of me death I 'll be her most devoted admirer"; and he made a half-bow at the close of this speech, with a quick recovery, which expressed his sense of the formidable character of his own personal charms.

But if McGill was a connoisseur of beauty he was also a politician too prudent to slight any one. He was soon after this paying the closest heed to Mely McCord's very spontaneous talk. He had selected Mely in order that he might not get a reputation for being "stuck up."

"Tom Grayson a'n't the leas' bit afeerd uh George Lockwood nur nobody else," said Mely rather confidentially to McGill, who stood with hands crossed under the tail of his blue-gray coat. "He all'ays wuz that away; a kind 'v a high-headed, don't-keer sort uv a feller. He 'd better luck out, though. Rache 's one uh them skittish kind uh critters that don't stan' 'thout hitchin', an' weth a halter knot at that. Tom Grayson 's not the fust feller that 's felt shore she wuz his 'n an' then found out kind uh suddently 't 'e wuz n't so almighty shore *arter* all. But, lawsee gracious! Tom Grayson a'n't afeerd uv nuthin', nohow. When the master wuz a-lickin' him wunst, at school, an' gin 'im three cuts, an' then says, says he, 'You may go now,' Tom, he jes lucks at 'im an' says uz peart 's ever you see, says he, 'Gimme another to make it even numbers.'"

"An' how did the master fale about that?" asked McGill, who had been a school-master himself.

"W'y he jes let him have it good an' tight right around his shins. Tom walked off an' never wunst said thank yeh, sir. He didn' wear uz good close in them days 's 'e does now, by a long shot. His mother's farm 's in the timber, an' slow to open; so many stumps and the like; an' 'f 'is uncle down 't Moscow had n't a' tuck him up, he 'd 'a' been a-plowin' in that-air stickey yaller clay 'v Hubbard township yit. But you know *ole* Tom Grayson, his father's brother, seein' 's Tom wuz named for him, an' wuz promisin' like, an' had the gift of the gab, he thought 's how Tom mought make 'n all-fired smart lawyer ur doctor, ur the like; an' seein' 's he had n' got no boy to do choores about, he takes Tom an' sends him to school three winters, an' now I believe he 's put him to readin' law."

"Yis, I know he went into Blackman's office last May," said McGill.

"Ole Tom Grayson 's never done nothin' fer the ole woman nur little Barb'ry, there, an' little Barb'ry 's the very flower of the flock, accordin' to *my* tell," Mely went on. "Mrs. Grayson sticks to the ole farm, yeh know, an' rents one field to pap on the sheers, an' works the rest uv it by hirin'. She sets a mighty sight uv store by Tom. Talks about 'im by the hour. She 'lows he 'll be a-gittin' to Congress nex' thing. But I d' know"— and here Mely shook her head. "High nose stumped his toes," says *I*. "Jes look how he 's a-carryin' on with Rache, now."

"She 's older 'n he is," said the clerk, knowing that even this half unfavorable comment would be a comfort to one so far removed from rivalry with her as Mely.

"Three years ef she 's a day," responded Mely promptly. "Jest look at that Lockwood. He 's like a colt on the outside of a paster fence, now,"—and Mely giggled heartily at Lockwood's evident discomfiture.

In gossip and banter the time went by, until some one proposed to "turn the Bible." I do not know where this form of sortilege originated; it is probably as old as Luther's Bible. One can find it practiced in Germany to-day as it is in various parts of the United States.

"Come, Sophronia, you and me will hold the key," said Lockwood, who was always quick to seize an advantage.

These two, therefore, set themselves to tell the fortunes of the company. The large iron key to the front door and a short, fat little pocket-Bible were the magic implements. The ward end of the key was inserted between the leaves of the Bible at the first chapter of Ruth; the book was closed and a string bound so tightly about it as to hold it firmly to the key. The ring end of the key protruded. This was carefully balanced on the tips of the forefingers of Lockwood and Sophronia Miller, so that the Bible hung between and below their hands. A very slight motion, unconscious and invisible, of either of the supporting fingers would be sufficient to precipitate the Bible and key to the floor.

"Who can say the verse?" asked Lockwood.

"I know it like a book," said Virginia Miller.

"You say it, Ginnie," said her sister, "but whose turn first?"

The two amateur sorcerers, with fingers under the key-ring, sat face to face in the dim light of the candle, their right elbows resting on their knees as they bent forward to hold the Bible between them. The others stood about with countenances expressing curiosity and amusement.

"Rachel first," said Henry Miller; "everybody wants to know who in thunderation Rache *will* marry, ef she ever marries anybody. I don't believe even the Bible can tell that. Turn fer Rachel Albaugh, and let 's see how it comes out. Say the verse, Ginnie."

"Letter A," said Virginia Miller, solemnly; and then she repeated the words like a witch saying a charm:

"'Intreat me not to leave thee, or to return from following after thee: for whither thou goest, I will go; and where thou lodgest, I will lodge: thy people shall be my people, and thy God my God: where thou diest will I die, and there will I be buried.'"

The key did not turn. It was manifest, therefore, that Rachel would never marry any man whose name began with the first letter of the alphabet. The letter B was called, and again the solemn charm was repeated; the company resting breathless to the end. The Bible and key refused to respond for B, or C, or D, or E, or F. But when Ginnie Miller announced "Letter G," it was with a voice that betrayed a consciousness of having reached a critical point in her descent of the alphabet; there was a rustle of expectation in the room, and even McGill, standing meditatively with his hands behind his back, shifted his weight from his left foot to his right so as to have a better view of any antics the Bible might take a notion to perform. Just as Virginia Miller reached the words "and where thou diest will I die," the key slipped off Sophronia's fingers first, and the book fell to the floor.

"G stands for Grayson," said McGill gravely, but he pronounced his "G" so nearly like "J" that a titter went around the room.

"Don't you know better than to spell Grayson with a J, Mr. McGill?" asked Rachel.

McGill did not see the drift of the question, and before he could reply, Lockwood, without looking up, broke in with: "What are you talking about, all of you? It 's not the last name, it 's the given name you go by."

"Oh!" cried Mely McCord, in mild derision, "George begins with G. I did n't think of that."

"Yis," said McGill, reflectively, "that 's a fact; George does begin with Jay too."

"I tell you it 's the last name," said Tom, laughing.

"I tell you it is n't," said Lockwood, doggedly; but Henry Miller, seeing a chance for disagreeable words, made haste to say: "Come, boys, it 's the good-natured one that 'll win. Hang up the Bible once more and let 's see if it 'll drop for Lockwood when it gets to L, or for Tom when we come to T. I don't more than half believe in the thing. It never will turn for me on anything but Q, and they a'n't no girl with Q to her name this side of Jericho except Queen Brooks, an' she lives thirteen miles away an' 's engaged to another feller, and I would n't look at her twiste if she wuz n't, nur she 't me like 's not. Come, Ginnie, gee-up your oxen. Let 's have H."

The Bible refused to turn at H.

"Rachel won't marry you, Henry Miller," said the county clerk.

"No," said Henry, "Rache an' me 's always been first-rate friends, but she knows me too-well to fall in love with me, an' I 'm the only feller in this end of the county that 's never made a fool of myself over Rachel."

Neither would the Bible turn at I, J, or K. But at L it turned.

"Of course it 'll turn at L, when Lockwood 's got hold of the key," said Tom with another laugh. "That 's what he took hold for."

"That 's the same as saying I don't play fair," said Lockwood, with irritation.

"Fair and square a'n't just your way, George. But there 's no use being cross about it."

"Come, boys, if you 're going to quarrel over the Bible you can't have it," said Rachel, who loved tranquillity. "As for me, I 'm going to marry whoever I please, and I won't get married *till* I please, Bible or no Bible"; and she untied the string, put the rusty key in the door, and laid the plump little book in its old place on the mantel-piece, until it should be wanted again for religious disputation or fortune-telling.

Grayson went rattling on with cheerful and good-natured nonsense, but George Lockwood, pushed into the shade by Tom's ready talk and by Rachel's apparent preference for him, was not in a very good humor, and departed early in company with McGill. After all the rest had gone, Barbara Grayson had to remind Tom more than once of the lateness of the hour, for nine o'clock was late in that day.

"Send him home, Rachel," she said, "at half-past nine; he 'll never go while you look good-natured." When, taking her brother by the arm, Barbara led him to the gate, Rachel followed, almost as reluctant to close the evening as Tom himself.

II.

WINNING AND LOSING.

THE next Friday evening Grayson and Lockwood were again brought together; this time in the miscellaneous store of Wooden & Snyder, in which George Lockwood was the only clerk. Here after closing-time the young men of the village were accustomed to gratify their gregarious propensities; this was a club-room, where, amid characteristic odors of brown sugar, plug tobacco, new calico, vinegar, whisky, molasses, and the dressed leather of boots and shoes, social intercourse was carried on by a group seated on the top of nail-kegs, the protruding ends of shoe-boxes, and the counters that stretched around three sides of the room. Here were related again all those stock anecdotes which have come down from an antiquity inconceivably remote, but which in every village are yet told as having happened three or four miles away, and three or four years ago, to the intimate friend of the narrator's uncle. The frequency of such assemblies takes off something of their zest; where everybody knows all his neighbor's history and has heard everybody else's favorite story, a condition of mental equilibrium ensues, and there is no exchange of electricities. The new-comer, or the man who has been away, is a heaven-send in a village; he stirs its stagnant intellect as a fresh breeze, and is for the time the hero of every congregation of idlers.

Such a man on this evening was Dave Sovine, the son of a settler from one of the Channel Islands. Four years ago, when but sixteen years old, Dave had unluckily waked up one summer morning at daybreak. Looking out of the little window in the end of the loft of his father's house, he had contemplated with disgust a large field of Indian corn to be "plowed out" that day under a June sun. So repulsive to his nature was the landscape of young maize and the prospect of toil, that he dressed himself, tied up his spare clothes in a handkerchief, and taking his boots in his hand, descended noiselessly the stairway which was in the outside porch of the house. Once on the ground, he drew on his boots and got away toward the Wabash, where he shipped as cook on a flat-boat bound for New Orleans. No

pursuit or inquiry was made by his family, and the neighbors suspected that his departure was not a source of regret. At Shawneetown the flat-boat was suddenly left without a cook. Dave had been sent up in the town with a little money to lay in supplies of coffee and sugar; instead of coming back, he surreptitiously shipped as cabin-boy on the steamboat *Queen of the West*, which was just leaving the landing, bound also for the "lower country." Sovine had afterward been in the Gulf, he had had adventures in Mexico, and he had contrived to pick up whatever of evil was to be learned in every place he visited. He had now come home ostensibly "to see the folks," but really to gratify his vanity in astonishing his old acquaintances by an admirable proficiency in deviltry. His tales of adventure were strange and exciting, and not likely to shrink in the telling. The youth of Moscow listened with open-mouthed admiration to one who, though born in their village, had seen so much of the world and broken every one of the commandments. For his skill at cards they soon had not only admiration but dread. He had emptied the pockets of his companions by a kind of prestidigitation quite incomprehensible to them. He seemed to play fairly, but there was not a loafer in Moscow who had not become timid about playing with Dave; the long run of luck was ever on his side. It was much more amusing to his companions to hear him, with ugly winks and the complacent airs of a man who feels sure that he had cut his eyeteeth, tell how he had plucked others in gambling than to furnish him with new laurels at their own expense.

On this particular evening Dave Sovine lounged on one of the counters, with a stack of unbleached "domestic" cloth for a bolster, while his bright patent-leather shoes were posed so as to be in plain view. Thus comfortably fixed, he bantered the now wary and rather impecunious "boys" for a game of poker, euchre, seven-up, or anything to pass away the time. George Lockwood, as representing the proprietors of the store, sat on a ledge below the shelves with his feet braced on a box under the counter. He was still smarting from his discomfiture with Rachel Albaugh, and he was also desirous of investigating Dave Sovine's play without risking his own "fips" and "bits" in the game. So, after revolving the matter in his mind as he did every matter, he said to Dave, with a half-sinister smile:

"Tom Grayson 's upstairs in Blackman's office. Maybe you might get up a game with him. He plays a stiff hand, and he a'n't afraid of the Ole Boy at cards, or anything else, for that matter."

"You call him down," said Dave, winking his eye significantly, and involuntarily disclosing a vein of exultant deviltry which made the cool-blooded Lockwood recoil a little; however, George felt that it would be a satisfaction to see Tom's pride reduced.

Lockwood got down off the ledge in a sluggish way, and walked around the end of the counter to the stove-pipe which ran from the box-stove in the store up through the office above.

"I say, Tom!" he called.

"What?" came out of the pipe.

"Dave Sovine says he can beat you at any game you choose. Come down and try him."

Grayson was bending over a law-book with only a tallow candle for light. Studying the law of common carriers was, in his opinion, dull business for a fellow with good red blood in his veins. He heard the murmur of conversation below, and for the last half-hour he had longed to put the book up beside its sheepskin companions on the shelves and join the company in the store. This banter decided him.

"I 'll come down a little minute and try just three games and no more," he said. Then he closed the book with a thump and went down the outside stairway, which was the only means of egress from the law-office, and was let into the back door of the store by George Lockwood. He got an empty soap-box and set it facing the nail-keg on which Dave Sovine had placed himself for the encounter. A half-barrel with a board on top was put between the players, and served for table on which to deal and throw the cards; the candle rested on the rusty box-stove which stood, winter and summer, midway between the counters. Lockwood snuffed the candle and then, with an affectation of overlistlessness, placed himself behind Sovine, so as to command a view of his cards and of all his motions.

Tom had prudence enough to insist on playing for small stakes of a twelve-and-a-half-cent bit at a game; — his purse was not heavy enough for him to venture greater ones. At first the larger number of games fell to Grayson, and his winnings were considerable to one who had never had more than money enough for his bare necessities. He naturally forgot all about the law of common carriers and the limit of three games he had prescribed himself.

Dave cursed his infernal luck, as he called it, and when the twelfth round left Tom about a dollar ahead, he gave the cards a "Virginia poke" whenever it came his turn to cut them; that is to say, he pushed one card out of the middle of the pack, and put it at the back. By this means Dave proposed to "change the luck," as he said; but George Lockwood, who looked over Dave's shoulder, was not for a minute deceived by this manœuvre. He knew that this affectation of a superstition about luck

and the efficiency of poking the cards was only a blind to cover from inexpert eyes the real sleight by which Dave, when he chose, could deal himself strong hands. Even the Virginia poke did not immediately bring a change, and when Tom had won a dozen games more than Dave, and so was a dollar and a half ahead, and had got his pulses well warmed up, Dave manifested great vexation, and asked Grayson to increase the stakes to half a dollar, so as to give him a chance to recover some of his money before it was time to quit. Tom consented to this, and the proportion of winnings passed to the other side of the board. Dave won sometimes two games in three, sometimes three in five, and Tom soon found a serious inroad made in the small fund of thirteen dollars which he had earned by odd jobs writing and even by harder and homelier work. This money had been hoarded toward a new suit of clothes. He began to breathe hard; he put up his hard-earned half-dollars with a trembling hand; and he saw them pass into Sovine's pocket with a bitter regret; he took his few winnings with eagerness. Every lost half-dollar represented a day's work, and after every loss he resolved to venture but one more, if the luck did not change. But how could he endure to quit defeated? He saw before him weeks of regret and self-reproach; he felt a desperate necessity for recovering his ground. As the loss account mounted, his lips grew dry, the veins in his forehead visibly swelled, and the perspiration trickled from his face. He tried to hide his agitation under an affectation of indifference and amusement, but when he essayed to speak careless words for a disguise, his voice was husky and unsteady, and he kept swallowing, with an effort as though something in his throat threatened him with suffocation. Dave noted these signs of distress in his adversary with a sort of luxurious pleasure; he had in him the instincts of a panther, and the suffering inflicted on another gave an additional relish to his victory.

Lockwood watched the play with a sharp curiosity, hoping to penetrate the secret of Sovine's skill. He felt, also, a certain regret, for he had not expected to see Tom quite so severely punished. At length Tom's last dollar was reached; with a flushed face, he held the coin in his trembling hand for a moment, and then he said bravely: "It might as well go with the rest, if I lose this time," and he laid it down as a single stake, hoping that luck would favor him.

When Dave had pocketed this he leaned back and smiled with that sort of ruthless content that a beast of prey feels when he licks his chops after having enjoyed a meal from his lawful prey.

Tom's losses were relatively great; it was a kind of small ruin that had suddenly overtaken him. A month of writing, if he had it to do, would not have replaced the money, nor was his a nature that could easily brook defeat. The very courage and self-reliance that would have stood him in admirable stead in another kind of difficulty, and that in other circumstances would have been accounted a virtue, were a snare to him now.

"Look here, Dave," he said, with a voice choked by mortification, "give me a chance to win a little of that back," and he laid his pocket-knife on the table.

"Tom, you 'd better quit," said three or four voices at once. But Dave rather eagerly laid a half-dollar by Tom's knife and won the knife. He liked this chance to give a certain completeness to the job. Then Tom laid out his silk handkerchief, which he also lost — for the games all went one way now.

"Come, Tom, hold on now," said the chorus.

But Tom was in the torment of perdition. He glared at those who advised him to desist. Then, in a mixture of stupor and desperation, he placed his hat on the board against a dollar and lost that; then he stripped the coat from his back and lost it, and at last his boots went the same way. When these were gone, having nothing further to wager without consigning himself to aboriginal nakedness, he sat in a kind of daze, his eyes looking swollen and bloodshot with excitement.

"Come, Dave," said Lockwood, "give him back his clothes. You 've won enough without taking the clothes off his back."

"That 's all you know about it," said Dave, who noted every token of Tom's suffering as an additional element in his triumph. "That may be your Illinois way, but that is n't the way we play in New Orleans. Winnings is winnings where I learnt the game." And he proceeded to lay Tom's things in a neat pile convenient for transportation.

"Aw! come now, Dave," said one and another, "'t a'n't the fair thing to send a fellow home to his folks barefooted and in his shirt-sleeves."

But Dave smiled in supercilious contempt at this provincial view of things, and cited the usages of the superior circles to which he had gained admission.

Lockwood at length lent Tom the money to redeem his garments, and the necessity which obliged him to borrow from the man who had got him into the scrape was the bitterest of all the bitter elements in Tom's defeat. He went out into the fresh air and walked home mechanically. His dashing, headlong ways had already partly alienated his uncle, and the

only hope of Tom's retaining his assistance long enough to complete his law studies lay in the chance that his relative might fail to hear of this last escapade. It was clear to Tom without much canvassing of the question that he could not borrow from him the money to replace what he had gotten from Lockwood to redeem his clothes. He entered the garden by the back gate, climbed up to the roof of the wood-shed by means of a partition fence, and thence managed to pull himself into the window of his own chamber as stealthily as possible, that his uncle's family might not know that he had come home at half-past twelve. He stood a long while in the breeze at the open window watching the shadows of clouds drift over the moonlit prairie, which stretched away like a shoreless sea from the back of his uncle's house. He could not endure to bring his thoughts all at once to bear on his affairs; he stood there uneasily and watched these flitting black shadows come and go; and he gnashed his teeth with vexation whenever a full sense of his present misery and his future perplexities drifted over him.

He shut the window and went to bed at last, and by the time daylight arrived he had turned over every conceivable expedient. There was nothing for him but to accept the most disagreeable of all of them. He would have to draw on the slender purse of his mother and Barbara, for Lockwood's was a debt that might not be put off, and he could see no present means of earning money. He purposed to make some excuse to go home again on Saturday. It would be dreadful to meet Barbara's reproaches, and to see his mother's troubled face. How often he had planned to be the support of these two, but he seemed doomed to be only a burden; he had dreamed of being a source of pride to them, but again and again he had brought them mortification. Had he been less generous or more callous he would not have minded it so much. But as it was, his intolerable misery drove him to castle-building. He comforted himself with the reflection that he could make it all right with the folks at home when once he should get into practice. Barbara should have an easier time then. How often had he drawn drafts on the imaginary future for consolation!

III. PAYING THE FIDDLER.

"You did n't mean no harm, Tommy," said Mrs. Grayson, "I know you did n't." She was fumbling in the drawer of a clothes-press, built by the side of the chimney in the sitting-room of the Grayson farm-house in Hubbard township. She kept her money in this drawer concealed under a collection of miscellaneous articles.

Tom sat looking out of the window. Ever since his gambling scrape he had imagined his mother's plaintive voice excusing him in this way. It was not the first time that he had had to be pulled out of disasters produced by his own rashness, and it seemed such an unmanly thing for him to come home with his troubles; but he must pay Lockwood quickly, lest any imprudent word of that not very friendly friend should reach his uncle's ears. Nothing but the fear of bringing on them greater evil could have scourged him into facing his mother and sister with the story of his gambling. Once in their presence, his wretched face had made it evident that he was in one of those tight places which were ever recurring in his life. He made a clean breast of it; your dashing, dare-devil fellow has less temptation to lie than the rest of us. And now he had told it all,— he made it a sort of atonement to keep back nothing,— and he sat there looking out of the window at the steady dropping of a summer rain which had pelted him ever since he had set out from Moscow. He looked into the rain and listened to the quivering voice of his disappointed mother as she rummaged her drawer to take enough to meet his debt from the dollars accumulated by her own and Barbara's toil and management — dollars put by as a sinking fund to clear the farm of debt. But most of all he dreaded the time when Barbara should speak. She sat at the other window of the room with her face bent down over her sewing, which was pinned to her dress at the knee. She had listened to his story, but she had not uttered a word, and her silence filled him with foreboding. Tom watched the flock of bedraggled and down-hearted chickens creeping about under the eaves of the porch to escape the rain, and wondered whether it would not be better to kill himself to get rid of himself. His mother fumbled long and irresolutely in the drawer, looking up to talk every now and then, mostly in order to delay as long as possible the painful parting with her savings.

"I know you did n't mean no harm, Tommy; I know you did n't; but it 's awful hard on Barb'ry an' me, partin' with this money. Dave Sovine 's a wicked wretch to bring such trouble on two women like us, that 's had such a hard time to git on, an' nobody left to work the place. Out uv six children, you an' Barb'ry 's all that 's left alive. It 's hard on a woman to be left without her husband, an' all but the two youngest children dead."

Here she stopped ransacking the drawer to wipe her eyes. She gave way to her grief the more easily because she still lacked resolution to devote her earnings to filling up the gap made by Tom's prodigality. And in every trouble her mind reverted involuntarily to the

greater sorrows of her life; all rills of disappointment and all rivers of grief led down to this great sea of her sorrows.

"You 're the only two 't 's left, you two. Ef you 'd just keep out uv bad comp'ny, Tommy. But," she said, recovering herself, "I know you 're feelin' awful bad, an' you 're a good boy only you 're so keerless an' ventersome. You did n't mean no harm, an' you won't do it no more, I know you won't."

By this time Mrs. Grayson's trembling hands, on whose hardened palms and slightly distorted fingers one might have read the history of a lifetime of work and hardship, had drawn out a cotton handkerchief in which were tied up thirty great round cumbersome Spanish and Mexican dollars, with some smaller silver. This she took to a table, where she proceeded slowly to count out for Tom the exact amount he had borrowed to redeem his clothes,—not a four-penny bit more did she spare him.

At this point Barbara began to speak. She raised her face from her work and drew her dark eyes to a sharp focus, as she always did when she was much in earnest.

"It don't matter much about us, Tom," she said, despondently. "Women are made to give up for men, I suppose. I 've made up my mind a'ready to quit the school over at Timber Creek, though I do hate to."

"Yes," said her mother, "an' it 's too bad, fer you did like that new-fangled study of algebray, though I can't see the good of it."

"I don't want to hurt your feelings," Barbara went on, "but maybe it 'll do you good, Tom, to remember that I 've got to give up the school, and it 's my very last chance, and I 've got to spin and knit enough this winter to make up the money you 've thrown away in one night. You would n't make us trouble a-purpose for anything,—I know that. And, any way, we don't care much about ourselves; it don't matter about us. But we do care about you. What 'll happen if you go on in this heels-over-head way? Uncle Tom 'll never stand it, you know, and your only chance 'll be gone. That 's what 'll hurt us all 'round — to give up all for you, and then you make a mess of it — in spite of all we 've done."

"You 're awful hard on me, Barb," said Tom, writhing a little in his chair. "I wish I 'd made an end of myself, as I thought of doing, when I was done playing that night."

"There you are again," said Barbara, "without ever stopping to think. I suppose you think it would have made mother and me feel better about it, for you to kill yourself!"

"Don't be so cuttin' with your tongue, Barb'ry," said her mother; "we can stand it, and poor Tom did n't mean to do it."

"Pshaw!" said Barbara, giving herself a shake of impatience, "what a baby excuse that is for a grown-up man like Tom! Tom 's no fool if he would only think; but he 'll certainly spoil everything before he comes to his senses, and then we 'll all be here in the mud together; — the family 'll be disgraced, and there 'll be no chance of Tom's getting on. What makes me mad is that Tom 'll sit there and let you excuse him by saying that he did n't *mean* any harm, and then he 'll be just as gay as ever by day after to-morrow, and just as ready to run into some new scrape."

"Go on, Barb; that 's hitting the sore spot," said Tom, leaning his head on his hand. "Maybe if you knew all I 've gone through, you 'd let up a little." Tom thought of telling her of the good resolutions he had made, but he had done that on other occasions like this, and he knew that his resolutions were by this time at a heavy discount in the home market. He would like to have told Barbara how he intended to make it all up to them whenever he should get into a lucrative practice, but he dreaded to expose his cherished dreams to the nipping frost of her deadly common sense.

He looked about for a change of subject.

"Where 's Bob McCord?" he asked.

"It was a rainy day, and he 's gone off to the grocery, I guess," said Mrs. Grayson. "I 'm afeard he won't come home in time to cut us wood to do over Sunday."

Tom had intended to ride back to Moscow and pay his debt this very evening. But here was a chance to show some little gratitude — a chance to make a beginning of amendment. He did not want to stay at home, where the faces of his mother and Barbara and the pinching economy of the household arrangements would reproach him, but for this very reason he would remain until the next day; it would be a sort of penance, and any self-imposed suffering was a relief. The main use that men make of penitence and the wearing of sackcloth is to restore the balance of their complacency. Tom announced his intention to see to the Sunday wood himself; putting his uncle's horse in the stable, he went manfully to chopping wood in the rain and attending to everything else that would serve to make his mother and sister more comfortable.

(To be continued.)

Edward Eggleston.

THE LAST APPEAL OF THE RUSSIAN LIBERALS.

AMONG the first questions which arise in the mind of any dispassionate student of contemporary Russian history when he reviews the events of the last twenty years are the following: "What is the real nature and significance of the protest against authority which has recently taken so extreme and violent a form in Russia; what are its original causes, and what are the opinions, hopes, and aims of the party or class which manifests such an unconquerable spirit of rebellion and which acts with such fierce and destructive energy? Is the protesting party or class a homogeneous body, all of whose members are inspired by the same ideas, or is there a difference of opinion among its constituent units as to principles and methods of action? Is what the world calls 'Nihilism' a mere philosophy of negation and destruction, which does not look beyond the overthrow of existing institutions, or has it in view some ideal of social order which it hopes ultimately to realize? If the Nihilists are social reformers sincerely desirous of improving the condition of the people by changing the social and political order of things in the direction of greater freedom, how did it happen that they began their protest at the very time when such changes were being made with great rapidity, and why did they fiercely and vindictively pursue and finally murder Alexander II., the man who was granting, as fast as it seemed prudent or practicable to grant, the very reforms which they themselves demanded? In short, what do the phenomena of contemporary Russian history mean?"

These questions must be answered before any intelligent idea can be formed of the existing situation in Russia, and before any prediction can be made as to the probable outcome of the struggle which is there going on.

It has been my fortune, in the course of the last two years, to make the intimate personal acquaintance of more than five hundred members of this Russian protesting party, including not less than three hundred of the so-called "Nihilists" living in exile at the convict mines and in the penal settlements of Siberia. I can perhaps throw some light, therefore, upon the problems presented by recent Russian history, and answer some of the questions which necessarily suggest themselves to the attentive student of Russian affairs. The subject, however, is one of great extent and complexity, and it is not my purpose in the present paper to even make an attempt to deal with it as a whole. I desire merely to correct some widely prevalent errors and then to present one phase of the Russian protest against authority; namely, the peaceful legal argumentative phase which preceded the appeal to force and out of which ultimately the appeal to force came, as the necessary and inevitable result of the failure of the peaceful protest.

There is a widely prevalent impression in America that the protesting party or class in Russia is essentially homogeneous; that its members are all "Nihilists"; that they prefer violence to any other means of redressing wrongs; that they aim simply at the destruction of existing institutions, and that there is in this so-called "Nihilistic" form of protest against authority something peculiar and mysterious — something which the Occidental mind cannot fully comprehend, owing to its ignorance of the Russian character. This impression, as I hope to show, is almost wholly an erroneous one. In the first place, the protesting party in Russia is not, in any sense of the word, homogeneous. Its members belong to all ranks, classes, and conditions of the Russian people; they hold all sorts of opinions with regard to social and political organization, and the methods by which they propose to improve the existing condition of things extend through all possible gradations — from peaceful remonstrance, in the form of collective petition, to "terroristic" activity, in the shape of bomb-throwing and assassination. The one common bond which unites them is the feeling which they all have that the existing state of affairs has become insupportable and must be changed.

In the second place, there is no protesting party in Russia to which the term "Nihilistic" can be properly applied. This may, perhaps, seem like a paradoxical statement in view of the fact that we have never heard of any other protesting party in Russia; but it is a true statement, nevertheless. There is no party in the empire which deliberately chooses violence and bloodshed as the best possible means of attaining its ends; there is no party which aims merely at the overthrow of existing institutions, and there is no party which preaches or practices a philosophy of negation and destruction. I make these assertions confidently, because my acquaintance with so-called "Nihilists" is probably more extensive and thorough than that of any other foreigner, and I have discussed these questions with them for many hundreds of hours. Liberals, reformers, socialistic theorists, revolutionists, and "ter-

rorists" I have met in all varieties, both in European Russia and among the exiles in Siberia; but a Nihilist in the proper or even in the popular signification of that word — never. Of course, if you use the term "Nihilist," as you would use the term "Know-nothing," merely to denote a certain social or political party and without reference to the original significance of the appellation, you may apply it to any body of men — to the Knights of Labor, for example; but if you use the word with a consciousness of its primary signification, as you would use the word yellow to describe an orange, you cannot properly apply it to any branch of the protesting party in Russia. There is in the empire no party, organization, or body of men to which it is applicable.

The word "Nihilist" was introduced in Russia by Turgenef, who used it in his novel "Fathers and Children" to describe a certain type of character which had then recently made its appearance in the ranks of the rising generation and which he contrasted sharply and effectively with the prevailing types in the generation which was passing from the stage. As applied to Bazaroff, the skeptical, materialistic, iconoclastic surgeon's son in Turgenef's novel, the word "Nihilist" had a natural appropriateness which the Russian public at once recognized. There were differences of opinion as to the question whether any such class as that represented by Bazaroff really existed, but there was no difference of opinion with regard to the appropriateness of the term as applied to that particular character. It was accurately descriptive of the type. The word "Nihilist," however, was soon caught up by the conservatives and by the Government, and was applied indiscriminately by them as an opprobrious and discrediting nickname to all persons who were not satisfied with the existing order of things and who sought, by any active method whatever, to bring about changes in Russian social and political organization. To many of the reformers, iconoclasts, and extreme theorists of that time the term "Nihilist" was perhaps fairly applicable — as it certainly was, for example, to Bakunin and his followers — and by some of them it was even accepted in a spirit of pride and defiance as an appellation which, although a nickname, expressed concisely their opposition to all forms of authority based on force. To the great mass of the Russian malcontents, however, it had then, and has now, no appropriate reference whatever. It would be quite as fair and quite as reasonable to say that the people in the United States who were once called "Know-nothings" were persons who really did not know anything as to say that the people in Russia who are now called "Nihilists" are persons who really do not believe in anything, nor respect anything, nor do anything except destroy. By persistent iteration and reiteration, however, the Russian Government and the Russian conservative class have succeeded in making the world accept this opprobrious nickname as really descriptive of the character and opinions of all their opponents, from the "terrorist" who throws an explosive bomb under the carriage of the Tsar, down to the peaceful and law-abiding member of a provincial assembly who respectfully asks leave to petition the Crown for the redress of grievances. It would be hard to find another instance in history where an incongruous and inappropriate appellation has thus been fastened upon a heterogeneous mass of people to whose beliefs and actions it has no sort of applicability, or a case in which an opprobrious nickname has had so confusing and so misleading an influence upon public opinion throughout the world.

The people most misrepresented and wronged by this nickname are unquestionably the Russian liberals — the members of the protesting party who seek to obtain reforms by peaceable and legal methods. From the point of view of the Government there might perhaps be some propriety in the application of the term "Nihilist" to a conspirator like Nechaief or to a regicide like Ryssakoff; but there can be no possible reason or excuse for calling by that name a professor who opposes the inquisitorial provisions of the new university laws, an editor who disputes the right of the Government to banish a man to Siberia without trial, or a member of a provincial assembly who persuades his fellow-delegates to join in a petition to the Crown asking for a constitution. These people are not "Nihilists," they are not even revolutionists; they are peaceable, law-abiding citizens, who are striving by reasonable methods to secure a better form of government; and yet these men are removed from their official places, silenced by ministerial prohibition, arrested without adequate cause, exiled without a judicial hearing, and finally misrepresented to the world as "Nihilists" and enemies of all social order.*

* It is hardly necessary, perhaps, to say that this is not a vague, general assertion, made at random. I have particularly in mind the case of a well-known professor of the Moscow University whose name I will not give, because he is not yet in exile; the case of Constantine M. Staniukovitch, formerly editor of the Russian magazine "Diello," who is now in exile in the town of Tomsk, Western Siberia; and the case of Ivan I. Petrunkevitch, formerly a justice of the peace and a member of the provincial assembly of Chernigof, who is now in exile in one of the northern provinces of European Russia. They are all moderate liberals, and they have all been punished without a trial or even a hearing.

I do not mean to say that the Government formally and officially brands this class of its opponents with this nickname, or seriously regards it as properly applicable to them. I mean only that the Russian conservative party and the Government press have used the word "Nihilist" so persistently and so indiscriminately to characterize all sorts of malcontents, that the world has come to regard it as more or less descriptive of the whole protesting class, and has lost sight of the radical differences between the various groups of which that class is made up.

It is my purpose in the present paper to briefly describe the attitude taken toward the Government by this peaceable, law-abiding branch of the Russian protesting party, and then to allow the liberal members of that party to express in their own words the opinions which they hold with regard to the existing state of affairs in Russia, and the means which, in their judgment, should be adopted to stop oppression on one side and violent and unnatural forms of protest on the other.

Before proceeding, however, to an examination of the opinions and actions of the Russian liberals, it is necessary to sketch hastily the conditions under which the protesting class came into existence, and the nature of the wrongs and evils against which the protest was made. The sketch must necessarily be a brief and inadequate one, and the reader will, I trust, understand that it does not pretend to cover fully the ground, or even to outline the history of Russia during the period. It is intended merely to suggest the facts which are indispensable to a clear comprehension of the liberal position.

Between the years 1861 and 1866 the Russian Government, doubtless animated by a sincere desire to promote the welfare of the people, undertook a series of sweeping and far-reaching reforms, which included the emancipation of the serfs, the grant of comparative freedom to the press, the reorganization of the courts, and the establishment of a system of local self-government, by means of elective assemblies, or *zemstvos*. If these reforms had been carried out in the liberal spirit in which they were apparently conceived, they would have affected beneficially every department of Russian social and political life; they would have lightened in a hundred ways the burdens which rested upon all classes of citizens; they would have satisfied, temporarily, at least, the growing demand for greater freedom of thought, speech, and action, and would have saved the country from a long, disastrous, and exhausting revolutionary struggle. Unfortunately, however, the Government either lost faith in its own projected reforms, took alarm at the attitude of independence assumed by some of the provincial assemblies, or became seriously apprehensive that the liberal movement, if not checked and repressed, would go beyond the limits marked out for it, and perhaps get entirely beyond control. Instead, therefore, of carrying out its reforms perseveringly and consistently, and with a feeling of confidence in the good sense, patriotism, and self-control of the people, the Government began almost at once to restrict, qualify, and abrogate the rights and privileges which it had just granted. By means of ministerial circulars and secret instructions to provincial governors, it limited freedom of discussion in the provincial assemblies, gagged again the partially enfranchised press, withdrew whole classes of important cases from the jurisdiction of the reorganized courts, restricted the right of private meeting to discuss questions of political economy, arrested persons who assembled for the purpose of considering the problems presented by Russian life under the novel conditions which the reforms had created, and in a hundred ways harried and exasperated the liberal element, which sought merely to do its part in the work of reform, reorganization, and regeneration which the Government itself had undertaken. The result of this reactionary policy was of course intense popular dissatisfaction, which at first manifested itself in outspoken protests, then took the form of determined opposition, and finally ended in open insubordination. This called forth repressive measures of still greater severity, which only increased the feeling of exasperation; and at last the younger and more impulsive members of the liberal party, finding themselves powerless to attain by open and legal methods the objects which they had in view, and believing that the Government had never been sincere in its liberal professions, undertook to act for themselves, and in their own way, by organizing in all of the larger towns secret circles which were called "Circles for Self-Instruction." These were originally little more than associations of ardent young liberals, who met frequently at private houses to talk over their grievances, and discuss methods of improving the condition of the peasants; but they were gradually transformed by repressive measures into secret centers of revolutionary activity.

About this time began that remarkable, impulsive, generous but quixotic liberal crusade which was known as "going to the people." Thousands of educated young men, fired with an ardent desire to do something to atone for the sins of their fathers toward the recently emancipated serfs, and filled with pity for the latter's ignorance and misery, went into the Russian villages, into the suburbs of the great

cities, into factories, into workshops, into all places where the peasants toiled and suffered, and sought, by sympathy, by coöperation, and by personal instruction, to help and elevate the men and women whom their fathers had bought, sold, and flogged. Hundreds of cultivated and refined young women, with that singular capacity for self-sacrifice which is inherent in the Russian character, abandoned their homes and families, put on coarse peasant dress, went into the remotest, loneliest, and dreariest villages of the empire, and, in the capacity of school-teachers, midwives, or nurses, shared the hard, prosaic life of the common people, labored with them, suffered with them, and bore their burdens, merely in order to learn how they could best be helped. Sophia Perofskaya, one of the five regicides who were hanged at St. Petersburg in 1881, began her career with this sort of missionary work; Vera Phillipova, who planned the assassination of General Strelnikof and who died of prison consumption in the fortress of Schlusselburg last year, was another of the heroic young women who thus went "to the people"; Madame Kavalefskaya, who is now serving out a hard-labor sentence in Eastern Siberia, was a teacher in a peasant school; Anna Pavlovna Korba, who is dying by inches at the convict mines of Kara, was a Red Cross nurse, and treasurer of a local benevolent society, before she became a member of the dreaded "Nihilist" Executive Committee; and hundreds of other young women threw themselves with passionate self-abnegation and self-devotion into the work of educating, elevating, and helping the lower classes.

Something analogous to this took place in our own country soon after the close of the civil war, when educated and refined young women from the New England States went south to teach in negro schools; but the movement in the United States never became epidemic, as it did in Russia, nor was it ever characterized by the reckless, heroic self-sacrifice which illumines so many dark pages of Russian history.

Of course the "Circles for Self-Instruction" and the unprecedented movement of the youth of Russia "to the people" did not escape the vigilant attention of the Government. Both were regarded, and perhaps with good reason, as seditious in their character, and steps were at once taken to put a stop to what was believed to be nothing more than a secret revolutionary propaganda. The "Circles for Self-Instruction" were broken up; all persons suspected of disloyalty were put under strict police supervision or banished to distant provinces; educated young men and women found in peasant villages were required to satisfactorily explain their presence there; the more active opponents of the Government were exiled to Siberia by "administrative process," and arrests were made by the hundred in St. Petersburg, Moscow, Kiev, Odessa, and all the large towns of the empire. The feeling of exasperation meanwhile grew more and more intense, and the revolutionary movement more and more formidable, notwithstanding the increasing severity of the Government's repressive measures, until at last the prisons were literally crammed with political offenders, most of them young people from the educated classes. The cruel treatment of these prisoners and of the exiles in Siberia, who were regarded by their fellow-revolutionists as martyrs in the cause of freedom, finally provoked reprisals, and in 1878 General Mezzentsef, the Chief of Gendarmes, was assassinated in the street in St. Petersburg, and General Trepoff, the Chief of Police of that city, was shot by Vera Zassulitch, for ordering the flogging of a political prisoner named Bogoeuboff.

During all this time the Russian liberals, as distinguished from the revolutionists, had been endeavoring to discourage the resort to violence on the one side, and to secure justice, consistency, and adherence to law on the other. Their efforts, however, were not successful in either direction. The revolutionists believed that the time for peaceful remonstrance had passed, and regarded further discussion as useless, while the Government resented the intermediation of the liberals as an impertinence, if not a manifestation of sympathy with the declared enemies of the State.

Such was the situation of affairs in 1878 and 1879, when the first political assassinations announced the adoption by the revolutionary party of the policy of "terror." The liberals, foreseeing that this policy would almost certainly lead sooner or later to the assassination of the Tsar, and believing that the reaction which must follow such a crime would be disastrous, if not fatal, to the cause of liberty, determined to make another effort to obtain from the Government some recognition of the evils and wrongs against which the revolutionists were so fiercely protesting, and some promise of a return to the liberal programme outlined in the reform measures of 1861-1866. In order, however, to make this attempt with any prospect of success, it was manifestly necessary to secure a temporary suspension, at least, of the destructive activity of the extreme revolutionary party. Nothing could be accomplished by peaceful methods if the "terrorists" continued to alarm and exasperate the Government with threats and deeds of murderous violence. In the early part of 1879, therefore, some of the prominent liberals of Chernigof

and Kharkoff, including Professor Gordeënko (the mayor of the latter city) and Mr. Petrunkevitch (the presiding justice of one of the new courts, and a member of the Chernigof provincial assembly), decided to open communications with the "terrorists," urge upon them the dangers of the path on which they had entered, point out to them the calamities which they might bring upon Russia by this desperate, unreasonable, murderous policy, and ascertain upon what conditions they would agree to stop committing acts of violence. In pursuance of this resolution a committee of liberals, representing several of the *zemstvos*, or provincial assemblies, of central and southern Russia, made journeys to various parts of the empire, and had personal interviews with a number of the leaders of the "terroristic" or extreme revolutionary party. The committee said to the latter:

"We believe that we can bring about reforms by peaceable and legal methods, and we desire now to make another attempt to do so, but we shall of course fail if you continue these political murders. Our object in coming to see you is to ask you to suspend your operations for a while and give us an opportunity to act. If we fail to attain our ends by reasonable and peaceful methods, and if you then think that you can accomplish something by your policy of 'terror,' proceed at your own peril; we shall disapprove and deplore your mistaken action, but we shall have nothing more to say; first, however, give us a chance."

The "terrorists" declared that their policy was not one of choice; that the Government had forced them to adopt it by closing to them all other avenues of escape from an absolutely intolerable position. They were willing, however, to listen to reason, and would solemnly promise not to commit any more acts of violence if the Government would even show a disposition to do three things—namely, first, remove the existing restrictions upon freedom of speech and of the press; second, guarantee personal rights against capricious, illegal, irresponsible action on the part of the executive authorities; and, third, allow the people to participate in some way in the national government. These, they said, were the things for which they were fighting, and if they could be satisfied that the Government would grant these demands, they as a party would refrain wholly from acts of violence and "maintain an attitude of expectancy."

The members of the liberal committee returned to their homes and held a consultation with their fellow-delegates as to the best means of carrying their plans into execution. The only basis upon which they could proceed in legal form was that furnished by the *zemstvos*, or provincial assemblies. These were legally authorized bodies, representative of the people and recognized by the Government, and it was decided to have these *zemstvos* adopt and simultaneously forward memorials or petitions to the Crown setting forth the grievances of the people and asking for a constitutional form of government.

The first petition which went in was that of the provincial assembly of Kharkoff, which convened earlier than the others, and therefore took the lead. This address was not as clear in statement nor as definite in its demands as might have been desired, but nevertheless it produced a profound impression. The Minister of the Interior at once sent a circular letter to the Marshals of the Nobility, who presided over the provincial assemblies, directing them not to allow any memorials to be laid before the assemblies without previous submission to them (the marshals) for approval, and not to permit action of any kind upon such petitions as that from the assembly of Kharkoff. The next *zemstvo* to draw up a memorial was that of Chernigof. Its address to the Crown was respectful in form and tone, but extremely bold in expression. It declared that the Government itself was responsible for the revolutionary movement which it asked the people to oppose, because it had never executed faithfully its own laws; that by constantly violating those laws and resorting to administrative force to attain its illegal ends it had destroyed the people's respect for law, and had thus prepared the way for all sorts of anarchistic teaching; that it had not granted a single reform which on the very next day it had not tried to mutilate or nullify by administrative regulations and restrictions; that it had deprived the Russian people of the right to express its opinions, not only through the press and through public meetings, but even through the provincial assemblies; and, finally, that the only way to successfully combat revolution and anarchy was to create new national forms and adopt a constitution which would restrain illegal action not only on the part of individual citizens, but on the part of the Government.

At an informal meeting of all the delegates of the Chernigof provincial assembly this bold address was adopted with only two dissenting votes, and was then given to Mr. Ivan I. Petrunkevitch for formal presentation to the assembly at its regular session on the following day. In the meantime Mr. Petrunkevitch submitted it to the presiding officer for approval as required by the recent ministerial circular. The marshal after reading it said, "I cannot allow you to lay this paper before the assembly."

"Why?" demanded Mr. Petrunkevitch.

"Because it is forbidden."

"Can you show me any law of the empire which forbids a delegate to lay before the as-

sembly of which he is a member a perfectly respectful petition to the Crown?"

"No," replied the marshal, "but I have an order from the Minister of the Interior which has all the force of law so far as I am concerned, and I must obey it."

"If," said Mr. Petrunkevitch, "you cannot show me a law which forbids such action as that which I propose to take, I am acting within my legal rights, and I shall lay this petition before the assembly to-morrow unless I am prevented by force."

"Very well," replied the marshal, "I must then take my measures."

When, on the following morning, Mr. Petrunkevitch went to the assembly hall, he found the public for the first time excluded. There were gendarmes at the door to keep out all persons except delegates, and there were gendarmes in the hall itself. As soon as the assembly had been called to order, several members sprang to their feet and protested against the presence of the gendarmes, which they declared was a menace and an insult to a deliberative assembly. The presiding officer replied that the gendarmes were there by order of the governor. Amid a scene of great excitement and confusion, Mr. Petrunkevitch rose to present the address to the Crown, which had been almost unanimously adopted by the delegates at the informal session of the previous day. The presiding officer refused to allow it to be read or considered, and when Mr. Petrunkevitch persisted in his attempt to obtain formal action upon it, the marshal peremptorily declared the session of the assembly closed, and the hall was cleared by the gendarmes. The delegates, however, prepared copies of their address, and sent them to all the *zemstvos* in the empire, and many other assemblies — eight or ten, if I remember rightly — followed the example set by the *zemstvos* of Chernigof and Kharkoff, by drawing up memorials, and trying to get them acted upon. Their efforts, however, were rendered fruitless by ministerial prohibitions enforced by gendarmes, and on the 14th of April, 1879, this form of agitation was stopped by the attempt of Solivioff to assassinate the Tsar. Another spasm of alarm, reaction, and repression followed; martial law was declared throughout the greater part of European Russia, and executions, arrests, and the indiscriminate exile of all persons who dared to remonstrate or protest, silenced once more the voice of the Russian people. Mr. Petrunkevitch and other members of the provincial assemblies of Chernigof and Kharkoff were arrested and banished by administrative process, and, to adopt the language of the official reports, "order was reëstablished in the disaffected provinces."

Thus ended another attempt of the Russian liberals to put a stop to violence and bloodshed, and to obtain for the people of the empire by peaceable methods the reforms which the whole protesting class demanded. Of the leaders in this temperate, courageous, patriotic movement only two are now living; one of them is in exile and the other is insane.

It is not necessary to pursue the history of the fierce conflict which took place between the "terrorists" on one side and the police and gendarmes on the other in the year 1879 and the first part of the year 1880. The liberals did not participate in that conflict, and only took the field again when on the 25th of February, 1880, the Tsar, finding that repressive measures alone were not adequate to cope with the volcanic social forces which were in operation, appointed a "Supreme Executive Commission" and put at the head of it General Loris Melikoff, an army officer, but a man who was believed to be in sympathy with the law-abiding branch of the protesting party. To Loris Melikoff the liberals determined to make a last appeal, and in March, 1880, twenty-five of the leading citizens of Moscow, including professors in the university, members of the Moscow Bar Association, a number of well-known authors and representative men from the educated classes generally, drew up, signed, and forwarded to the new Dictator of Russia a long and carefully prepared letter, in which they set forth temperately, but with great courage and frankness, their views with regard to the real nature of the evils from which the empire was suffering and the measures which, in their opinion, should be adopted to restore tranquillity to the country. I obtained from one of the signers a copy of that letter. In order to fully appreciate the weight and significance of this document the reader must bear in mind that it is not an editorial from a "Nihilistic" newspaper; it is not an anonymous proclamation intended to excite or encourage rebellion; it is not a letter designed to affect public opinion in any way, at home or abroad. It is a calm, temperate statement of facts and conclusions, written at a most critical moment in the history of Russia, signed by some of the ablest and most patriotic citizens of the empire, and carried personally by one of them to Loris Melikoff, with a request that it be laid before the Tsar. The rest of this article (except the final paragraph) is a translation of the letter:

FROM THE LIBERALS OF MOSCOW TO GENERAL LORIS MELIKOFF, CHIEF OF THE SUPREME EXECUTIVE COMMISSION.

THE unfortunate condition of Russia at the present time is due to the fact that there has arisen in Russian society a party which acts with great irrationality, and is carrying on a contest with the Government in a manner with which right-thinking people, no matter what their position or degree of education, cannot sympathize. This contest, which is seditious in its character, manifests itself in a series of acts of violence directed against the ruling authorities. The question is, How can the evil be remedied?

In order to answer this question it is necessary first to uncover the real causes of the evil. The object of the present letter is to show —

First. That the principal reason for the morbid form which the contest with the Government has taken is the absence in Russia of any opportunity for the free development of public opinion and the free exercise of public activity.

Second. That the evil cannot be eradicated by any sort of repressive measures.

Third. That the present condition of the people, many of whose most urgent needs are wholly unsatisfied, constitutes ample cause for dissatisfaction, and that this dissatisfaction, having no means of free expression, necessarily manifests itself in morbid forms.

Fourth. That the causes which underlie this wide-spread discontent cannot be removed by governmental action alone, but require the friendly coöperation of all the vital forces of society.

I.

THE unnatural form which the contest with the Government has taken is due to the absence of all means for the free and orderly expression of public discontent. Dissatisfaction cannot be expressed through the press, since the press is closely restricted in its comments upon governmental action, and such restriction is enforced by warnings, suspensions, and heavy penalties, in the shape of the interdiction of street sales and the deprivation of the right to print advertisements, which fall upon the periodical press with crushing force. Questions of first-class importance are wholly removed by censorial prohibition from the field of newspaper discussion, and that at the very time when they most occupy public attention. Within the past year the prohibition has been extended even to educational subjects, such as the classical system of instruction and the laws regulating universities.*

Measures as important as university reform are considered secretly and kept concealed from the people. Then there are other subjects which the periodical press is directed to discuss "with especial caution and circumspection,"— a phrase which, in the language of the censors, has almost the force of a complete prohibition. Newspapers are not even allowed to publish facts, if such facts compromise or reflect in any way upon governmental organs. All remember the recent case of the newspaper "Golos," which was severely punished for merely publishing the facts with regard to the illegal imprisonment of certain dissenting prelates.† The press must, therefore, either be silent or hypocritical, or must express itself in the language of allegory — a language which demoralizes literature and which often unnecessarily excites public opinion. If the newspapers discuss governmental measures within the narrow limits to which they are confined, their readers seek for hidden meaning and unexpressed opinion between the lines. If, on the other hand, a newspaper praises the Government, it is not believed, because the commendation is regarded as hypocritical. Perfect freedom of speech is the privilege of the representatives of extreme opinions only, and we find it on the one side, for example, in the "Moscow Gazette" and kindred organs, and on the other, in the "underground" press.

Another reason for the development of "underground" activity may be found in the en-

* It may seem strange to the American reader that the Russian Government should prohibit the discussion of such questions as "Scientific *vs.* Classical Education"; but it must be remembered that scientific training, to use the language of the Russian censors, "excites the mind,"— that is, leads the student to think, question, and experiment,— while the study of the dead languages does not have that pernicious tendency to so great an extent. The classical system of instruction is therefore favored by the Government, and the advocacy of any other system is forbidden. Herbert Spencer's "Education," and "The Culture demanded by Modern Life," by the late E. L. Youmans, have been withdrawn from all the Russian public libraries and placed on the Index Expurgatorius.—G. K.

† A correspondent of the "Golos" at Suzdal, in the province of Vladimir, discovered that in the prison connected with the monastery at that place there were confined two bishops and an archbishop of the dissenting sect known as the "Starovertsi," or Old Believers. One of the bishops had been in solitary confinement in this monasterial prison 17 years, the other 22 years, and the archbishop 26 years. The "Golos," in commenting editorially upon its correspondent's letter, suggested that these prelates had probably been put in prison for some sectarian obstinacy and had then been entirely forgotten. For publishing this letter and commenting upon it, the "Golos" was deprived for a month of the right to print advertisements.— G. K.

forced silence of public assemblies. The cases of the provincial assemblies of Pultava, Chernigof, and other provinces in 1879 show that the voices of the representatives of the people are stifled even when they are responding in accordance with their best judgment to the call of the Government.* The latter withholds its confidence more and more from the provincial assemblies and bestows it more and more upon bureaucratic institutions — submitting, for example, to the Provincial Councils for Peasant Affairs [a body of *chinovniks* † appointed by the Crown] cases and questions which it formerly referred to the *zemstvos* [representative bodies elected by the people]. The Government creates cantonal and provincial delegates, and at the same time has so little confidence in these representatives of the people that it puts them under the supervision and control of a presiding officer not by themselves chosen; and having imposed upon them such a presiding officer, in the person of a Marshal of the Nobility, the Government strives to turn the latter into a mere *chinovnik*. Many of these marshals serve only in order to obtain rank or for the sake of an administrative career.

The Government often treats with contemptuous neglect statements and petitions from sources fully competent to make them, and listens unwillingly to the representatives even of the most legitimate interests. There may be found in the reports of any provincial administration ‡ records of innumerable petitions sent by the assembly to the Government, which not only have never been granted, but have never even been answered. The voice of the press is treated with equal if not greater contempt. The newspapers and magazines have had occasion of late to discuss almost every question which relates to the administration of the internal affairs of the empire, and with regard to such questions have expressed definite opinions based upon precise scientific data, but very little respect has been paid to their conclusions. A recent illustration of this fact is furnished by the railroad tax. When, in the latter part of 1878, it was first proposed, the organs of the press almost without exception pointed out and pertinaciously insisted upon its inadequacy and its burdensome character. The tax was nevertheless imposed, only to justify the predictions which had been made with regard to it. The Government in general pays too little attention to the investigation of subjects which require exact scientific research. This is particularly the case with regard to questions of economic and financial legislation, which are least of all susceptible to bureaucratic methods of treatment.

The result of the state of things above set forth is the creation of an impression that the Government does not wish to listen to the voice of the people; that it will not tolerate criticism, however just, of its mistakes and failures; that it despises the opinions of competent advisers, and that it has in view peculiar objects not related in any way to the necessities of the people. There is undoubtedly at the present time a wide-spread belief in the existence of an antagonism between the people and the organs of government. Upon this point cultivated society is in remarkable accord with the common people. The peasant reveres the Tsar as he reveres God, but he has no confidence in the *chinovniks*, who, as he naïvely expresses it, "get around the Tsar." In like manner the educated classes of society, while they preserve their deep veneration for their monarch, discern, in a bureaucratic mechanism, isolated from the people, the root of the existing evils. There is in this respect a complete lack of faith in the Government, and faith can never be restored while the Administration manifests neither adequate knowledge nor moral force nor conformity to any ideal. The weakness of the Government is apparent to society, and it is an added cause of irritation, because there is nothing which provokes and humiliates people more than to feel that they are in subjection to persons who can inspire neither respect nor trust. It makes no difference, under such circumstances, what means official power may take to establish its authority; its efforts will result only in exasperation. It does not help matters when the organs of the Government say, as they are inclined to say, that an attack upon them is an attack upon the Imperial power. The sophistry of such a method of dealing with the question is apparent even to the simplest intelligence, and it only intensifies the existing resentment.

The forcible repression of discontent is injurious in another way. The impossibility of speaking out frankly compels people to keep their ideas to themselves, to cherish and nurse them in secret, and to regard complacently even illegal methods of putting them into practice. Thus is created one of the most important of the conditions upon which the spread of sedition depends; namely, the weakening of the loyalty of those who, under other circumstances, would regard sedition with abhorrence.

There are in organized society self-reliant

* The reference is to the attempt of the provincial assemblies to obtain reforms by means of petitions to the Crown.— G. K.

† A *chinovnik* is any officer of the civil service.—G. K.

‡ The permanent executive bureau which attends to the official business of a provincial assembly and keeps its records.— G. K.

opinions which strive for free expression, and an accumulated fund of energy which seeks a field for activity. The more rigorously these impulses are repressed in their legal form, the sooner they will take on a form which is not legal; the more apparent will become the lack of harmony between the strivings of society and the working methods of the ruling power; and the more general and emphatic, and consequently the more infectious, will become the illegal protest. When society has no means of making known and discussing peaceably and publicly its wants and its necessities, the more energetic members of that society will throw themselves passionately into secret activity, and lose gradually the habit of trying to obtain their ends by reasonable methods. The characteristics which at first mark only the more hot-headed members of society will at last become common to people of a very different class, simply because the latter have no field in which to cultivate better qualities.

II.

At the present time, there is a prevalent opinion that the existing evils can be eradicated only by repressive measures. Many people believe that, before anything else is thought of, attention should be concentrated upon methods of repression, and that, when such methods shall have attained the results expected from them, it will be time enough to proceed with the further development of Russian social life. But the evils cannot be remedied by repressive measures; and that is not all — repressive measures not only do not cure the evils which exist, but they create new evils, because they are inevitably accompanied by administrative license.* It might be possible, under given conditions, for people to reconcile themselves to the uncontrolled exercise of power by the higher authorities; but license above creates license below. Every official — *ispravnik*, *stanavoi*, *uriadnik* or gendarme† — has his own idea of saving the country, and upon the strength of it he sets himself above all laws and institutions. The Government thus tears down with one hand what it builds up with the other, and finally undermines all respect for authority, by establishing the conviction in the minds of the people that authority does not propose to be bound by any fixed and definite rules of procedure. License, furthermore, threatens an extraordinary widening of the circle of persons to be proceeded against. It opens the way for a general application of the rule that "he who is not for us is against us" — a rule which, when applied by the Government, is particularly dangerous, because it declares persons to be enemies of the country who are in reality peaceable and useful citizens, but who simply do not agree in all respects with the Administration.

Everybody is well aware of the shadow which has recently been cast, without any serious reason, upon some of the best elements of our society. A crusade has been declared against the educated class, and in this movement the Government itself is not altogether guiltless. It seems to be forgotten that the educated class upon which a brand is thus set is a product of Russian history; that the Government itself, since the time of Peter the Great, has been creating this unfortunate class, and that now, whatever may be its character, it embodies all the self-conscious intellectual faculties of the Russian people. Those who seek to crush these intellectual faculties rely upon the support of excited passion, forgetting that passion is a double-edged blade, which, when it has been raised and turned in one direction, cannot be restrained if, under the influence of an unforeseen impulse, it takes another. Education, — the self-conscious thinking power, — on the other hand, is the best possible support of order. It must be remembered, furthermore, that by encouraging passion, instead of intelligent reflection, administrative license strikes down the sense of lawfulness which in Russia is imperfectly developed at best. License also brings the organs of authority into collision with one another, and such collisions are extremely injurious to the processes of healthy national life. Nothing but the supremacy of law can regulate and discipline and bring into agreement with one another the organs of administrative authority.

But aside from all this, repression cannot kill human thought. Convincing proof of this fact is furnished by the last reign (1825 to 1855) as well as by more recent years. The idea of popular representation, for example, has recently taken enormous strides forward and has made its way even into the wilderness of the provinces, notwithstanding the fact that public discussion or consideration of that idea has been absolutely forbidden. In the absence of a free press there arises another medium of intercommunication in the shape of the oral transmission of ideas from mouth to mouth. Examples of the wide extension in this way of religious heresies are too well known to need reference,

* The Russian word *proizvol*, which I have here translated "license," has no precise equivalent in English. It means action upon personal impulse — action which is not controlled by law, nor by any standard of duty or obligation external to the actor. The word "license" is intended to have this signification wherever it occurs in the present paper. — G. K.

† These words cannot be translated into English. An *ispravnik* is a sort of local governor; *stanavois* and *uriadniks* are officers of the local rural police.

and precisely the same thing takes place in the sphere of politics. When the human mind is subjected to oppression, it becomes peculiarly acute and receptive, catching quickly at the slightest hint and attaching significance to things which under other circumstances it would pass without attention. It is this which gives so much weight to the utterances of the "underground" press. Everybody knows how quickly the newspaper "Kolokol" and other similar publications lost their influence when Russian periodicals were given even comparative freedom of speech.*

In the present unfortunate state of affairs repression is incapable of attaining even the immediate results which are expected from it, because it cannot find objects upon which to exert itself. There can be no war unless there is an enemy in the field. In a situation like the present one, opposition to the Government does not manifest itself exclusively through the actions of a few known individuals; it hovers in the air, and lurks in the hearts of a multitude of people. Severe measures may crush a few of the Government's prominent opponents, but in their places discontent sets forth new champions.

Finally, repression, by keeping the country in a state of constant alarm with warnings of impending danger and with extraordinary and ever-changing methods of prevention, diverts attention from the real necessities of the time and baffles all attempts to anticipate the future. The country lives only from day to day, when it ought to proceed at once and with vigor to its work. Whether, therefore, we regard repression as a necessary and normal feature of national life or merely as a temporary expedient useful in periods of agitation, we find that it is powerless to attain the results that are expected from it.

III.

THE most marked feature of the present situation in Russia is extreme dissatisfaction in urgent need of free expression. Educated society as a whole, irrespective of rank, position, or opinions, is intensely dissatisfied, and out of that dissatisfaction arises the existing agitation.

First. The first and most important of society's unsatisfied demands is the demand for an opportunity to act. This demand even a constantly growing bureaucracy has been unable to silence. It has been encouraged and stimulated by the intellectual movement which began in the last century and which has continued in this; and as early as the beginning of the present reign there had already taken form in literature and in society an ideal of national life which demanded realization. That ideal was founded upon the inviolability of personal rights, freedom of thought, freedom of speech, and a system of government by which these things should be guaranteed. The reforms of the first half of the present reign gave completeness and permanence to this ideal and threw upon it the light of approval from above. At the same time, those reforms created social conditions which were so entirely new that the necessity for new national institutions to correspond with them became a necessity no longer theoretical but practical. The old mechanism of government proved to be incapable of directing the new and complex forces which were in operation. Only by the free and independent efforts of society itself could they be regulated and controlled. The striving of the people for an opportunity to act — to take part in the control of the national life — has therefore become a phenomenon which the ruling power must take into account. Unfortunately, however, it is a phenomenon which the Administration regards with hostility. At the very moment when society is aroused both by the nature of its own reflections and by the circumstances of the time and seeks to participate in the life of the State, the Administration throws obstacles in its way. If the ruling mechanism in its present form excludes from direct participation in the government a majority of those who have the first right and the strongest desire to take part in it, then that mechanism stands in need of reformation. Instead, however, of reforming it, the Government is striving to crush and strangle the very institutions intended to bring about such reformation.†

The Russian people are becoming more and more impressed with the conviction that an empire so extensive and a social life so complicated as ours cannot be managed exclusively by *chinovniks*. The provincial assemblies are educating year after year a larger and larger number of men who are capable of taking part in political life, and yet these assemblies are constantly and systematically repressed. Their legislation is subjected to the censorship of the provincial governors; their right to impose taxes for their own needs is restricted; they assemble under presiding officers whose disciplinary power is increased; their right to manage their own schools is denied; their recommendations and petitions are wholly unheeded; jurisdiction over all important questions is taken away from them and given to administrative bureaus, and the provincial governors are allowed to pass judgment upon

* The "Kolokol," or "Bell," was a radical journal published fortnightly in London by Herzen.— G. K.

† The *zemstvos*, or provisional and cantonal assemblies.— G. K.

the character of officials duly elected by popular vote. As a consequence of all this, there is great danger that the provincial assemblies, which should be the independent organs of local self-government, will be transformed into mere subordinate bureaus of the local administration. This system of forcible repression cannot crush the desire of the people for independent political activity, but it is quite enough to produce chronic dissatisfaction and to put the Administration in the attitude of serving the interests of a bureaucracy rather than the interests of the people.

Second. Another demand of society which at the present time is even less satisfied than the desire for political activity is the demand for personal security. The indispensable conditions upon which the very existence of modern society depends are free courts, freedom from arrest and search without proper precautions and safeguards, responsibility of officials for illegal detention and imprisonment, and the due observance of all the legal formalities of public and controversial trial in cases involving the infliction of punishment. In administrative limitations of judicial procedure, whatever be their nature, society cannot acquiesce. Administrative interference always creates license; it shows that the ruling power is not willing to submit to the laws which it has itself ordained, and that it seeks an opportunity to attack both the freedom of the courts and the rights of the persons with whom it is dealing. Such administrative interference, whatever may be its motives, cannot justify itself in the eyes of the people, and only serves to weaken the authority of the ruling power.

The importance of the first stage of judicial procedure in Russia is destroyed by the lack of independent examining magistrates. The law providing that judges shall not be removed from office is deprived of all its virtue by the practice of transferring them to distant posts or promoting them without reason. How little faith there is in the existing method of selecting judges, and how carelessly vacancies are filled by appointment, is shown by the fact that not long ago in Moscow people went to court as they would go to the theater, to be amused by the ignorance and clownishness of an associate judge, who had been appointed by the Minister of Justice instead of another candidate recommended by the court itself. People who take a superficial view of life are amused by such things; the more serious members of society are deeply pained by them; but in both classes there is a consequent loss of respect for the Government. Great numbers of cases are removed entirely from the jurisdiction even of such imperfect courts as we have. In the almost unlimited province of political crime, where the features which distinguish the permissible from the forbidden are so changeable and so difficult of definition, and where, consequently, personal liberty should be surrounded by the greatest possible safeguards, there exists a state of things which is in violation of all the Russian people's ideas of judicial procedure, and in flagrant violation of the most elementary principles of justice. A robber or a murderer cannot be searched nor arrested without a warrant from an official who must answer for his acts upon complaint of the sufferer; but in cases involving political crime an entirely different order of things prevails. For the past ten years the police, upon trivial suspicion or upon a false accusation, have been allowed to break into houses, force their way into the sphere of private life, read private letters, throw the accused into prison, keep them there for months, and finally subject them to an inquisitorial examination without even informing them definitely of the nature of the charges made against them. Many persons arrested in this way by mistake, or under misapprehension, have lived through this experience and have afterward returned to their homes. In the eyes of certain people and of the Government these sufferers are not men justified by the courts and reëstablished in their rights in the face of the world; they are dangerous members of society marked with the brand of disloyalty. In the eyes of other people they are innocent martyrs, or even heroes. It often happens that the lives of such persons are wrecked forever. The dead secrecy of political trials, in contrast with the publicity of ordinary jurisprudence; the unlimited exercise of power by the secret prosecutors, in contrast with the strictly enforced legality of every step in ordinary judicial procedure, are undermining in society the sense of lawfulness, and adding fuel to the fire of exasperation which burns in the hearts not only of the persons who have the misfortune to be prosecuted for political offenses, but of a much wider circle of people. In the absence of any legislation defining political crime and limiting the power of the institutions which deal with it, not a single person belonging to the educated class can regard himself as safe from political prosecution, and consequently not one can escape from the ever-present, humiliating, and exasperating consciousness that he is entirely without rights.

Still more out of harmony with the views of the people is the system of administrative exile and banishment without examination or trial, which has been practiced upon a more extensive scale within the past five years than ever before. While the spirit of the law and the first principles of justice forbid the in-

fliction of punishment without previous trial, hundreds and perhaps thousands of persons annually are subjected to the severest punishment that can be inflicted upon an educated man; namely, banishment from home and friends, and that by a mere administrative order based upon nothing. Persons exiled in this way have no means of knowing how long their punishment will continue. They are deprived even of the consolation which every common criminal has in knowing definitely the length of time he is to suffer. Moreover, the friends of a political exile have no means of knowing the nature of the offense with which he is charged; often he himself does not know; but they both have a right to suppose that the accusation cannot be proved, since if it could be the accused would be duly indicted and tried by a court. At the time when the law relating to administrative exile was promulgated, it was explained as an unusual measure of clemency, intended to lighten the punishment of young and misguided offenders by substituting banishment to distant provinces for the much severer penalties which would be inflicted by the courts if the accused should be brought to formal trial. When, however, the Moscow Assembly of Nobles asked that every person sentenced to exile should be given the right to demand a judicial investigation of his case, no attention whatever was paid to its petition.

Third. There is in the present condition of the courts and of local self-government another cause of irritation, arising out of the grievously illogical and inconsistent policy of the Government itself. In the early part of the present reign the political ideal of the Russian people was approved not only by the highest authorities of the State, but by the supreme ruler of the empire. At the very first step, however, toward the realization of that ideal, the Administration manifested a lack of confidence in the forces of society. Immediately after the promulgation of such laws, for example, as the act providing for the organization of cantonal and provincial assemblies [*Zemskoe Polozhenia*] and the act reforming the courts [*Sudebni Ustavi*], there began a series of withdrawals and restrictions. All the limitations of the powers of the provincial assemblies which have before been enumerated; the peculiar method of dealing with political offenses; the system of administrative exile; the denial in certain cases of the right of trial by jury, and the relegation of political offenses to specially organized courts,— all these were in the nature of withdrawals or restrictions of rights and privileges once granted. These recisions began almost as soon as the new laws went into operation, and they were made in a delicately graded series, which can hardly be regarded as accidental. Take, for example, the series of steps by which we have come, from the order of things established by the new court laws, to the present method of conducting political trials. In the beginning the courts acted independently, and had exclusive jurisdiction; then the officers of the Third Section were appointed assistants of the courts; then the balance of power was transferred from the courts to the Third Section; and finally, all authority and responsibility were concentrated in the hands of the gendarmes. These and other similar facts show what attitude the Government took toward reform. They compelled society to stand forth in defense of the institutions which it held dear, and thus in the very beginning created an abnormal situation. The Government and the people, instead of coöperating fraternally in the work of reform, took an attitude of hostility toward each other. For this the people are often blamed, and to a certain extent they are perhaps blameworthy; but those who condemn the people forget that in a country where the Government is all-powerful the Government should show most self-possession.

Fourth. That which happened to representative institutions and to the courts happened also to the press, and perhaps even in a worse form. The law of 1865 gave to our press certain rights by abolishing in specified cases preliminary censorial supervision, and by giving to the courts jurisdiction of cases where the freedom of the press was abused; but that law was soon made a dead letter by a whole series of restrictive measures. The existing system of censorial supervision which rests upon administrative discretion has one capital defect, and that is its failure to furnish any rule definitely fixing beforehand the cases in which and the extent to which an offending publication shall be proscribed. Of this defect the censors themselves complain, since they sometimes receive at the same time one reprimand for allowing the publication of books and articles manifestly innocent and another for not allowing the publication of books and articles which are as manifestly mischievous. Society is irritated by still another injustice. It often happens that even the withdrawal of a question by censorial prohibition from the field of literary discussion does not prevent the writers on one side [the Government side] from setting forth their opinions and sharply attacking their adversaries, while the latter, silenced by the prohibition, cannot reply even to the extent of explaining more clearly their own position. An illustration of this is furnished by the question of classical instruction in our schools. Restrictions of the press and limitations of free speech in general might have some

raison d'être in a country where the governing power felt itself to be weak in comparison with the people; but it is well known that in Russia the power of the Government is enormous. Limitations of the right of free speech merely weaken that power. If the Government fears publicity, then it must have something to conceal from the people; — such is the inevitable conclusion to be drawn from the present condition of the press.

The need of free speech is never so deeply felt as in periods of discontent; and even apart from discontent, that need in Russian society is extremely urgent. The Russian people are passing through an important crisis in their history — a crisis which is economic, social, and political. Nothing but the free interchange of ideas can lessen the difficulties and embarrassments of this transition period. When in dealing with such difficulties and embarrassments the Government adopts a course which society does not approve, the press is the only medium through which the consequent alarm and excitement can be tranquilized. By refusing to listen to frankly expressed opinions, the Government not only gives another proof of its want of confidence in its own power, but deprives itself of an important means of knowing with whom it has to deal. There may exist in the social organism needs and forces of which the Government is entirely ignorant and by which it is liable at any moment to be taken unawares. Of this the present state of things is a proof. The Administration up to this very hour has not been able to find out definitely who the enemies of social order are, and it is doubtful whether it even knows their working methods, because by withdrawing the light of publicity it has enshrouded such methods in an atmosphere of secrecy and obscurity. In the absence of free speech the enemies of the Government must remain unknown even to society itself. The unsatisfied demand of the people for freedom of speech is one of the chief sources of the existing discontent. Every educated man, by virtue of a law of his intellectual being, seeks to exchange ideas with others — to convince or be convinced. Conflict is the natural state of an idea, and it cannot be suppressed without a suppression of thought itself. Limiting the freedom of discussion does not weaken the energy of thought, it intensifies and concentrates it; and if there is no opportunity for an intellectual conflict, there arises a conflict which is social and political.

IV.

THE discontent which pervades Russian society, and which is the result of the mistaken policy of the Government in dealing with internal affairs, can be removed only by measures in which society shall take part. The Government cannot accomplish the desired result alone. A mere cursory glance at the state of the country is enough to convince one that it is time to call into action all Russia's healthy powers. The demands of the empire are constantly increasing. The imperial budget has more than doubled in the last twenty years, and would have been still larger than it is if the satisfaction of important imperial needs had not been postponed. The last war necessitated an extraordinary expenditure, a large part of which has not even yet been permanently covered. It is absolutely impossible for the country, under the present revenue system, to sustain even for a few years the enormous and constantly increasing burden of imperial taxation. Although new issues of paper money and the temporary stimulation of business which followed the war have enabled the Government during the past two years to strike a balance without a deficit, that favorable result cannot be counted upon in future, nor even in the current fiscal year. It is plain to every one, and was long ago admitted by the Government, that Russia's internal revenue system stands in need of a reform — not a reform confined to the working-over of certain old taxes and the invention of a few new ones, but a systematic and fundamental reform of our whole system, with capital changes in the distribution of the burdens of taxation among the several classes of the people. Even this is not enough. No possible reform in the revenue system will be of any avail unless there is an increase in the people's wealth and producing power. All persons who have had an opportunity to observe closely the domestic life of our provinces agree in declaring that the people are constantly growing poorer instead of richer. At this very moment a third of the empire is suffering from insufficient food, and in some places there is actual famine. In southern Russia the grain beetle threatens renewed desolation,* and in a whole series of provinces diphtheria and other epidemic diseases are raging unchecked.†

Our manufacturing industries, in the opinion of competent judges, are beginning to decline, and there is a prospect in the near future of another crisis. In foreign trade the competition of the United States closes to us every year more and more of our markets. Everywhere in all departments of economic life there is a morbid feeling of shaken confidence which saps the productive power of the coun-

* The damage caused by the grain beetle in 1878 exceeded 15,000,000 roubles.— G. K.

† Forty thousand persons had died of diphtheria in the two provinces of Kharkoff and Pultava.— G. K.

try. This feeling is not a mere transitory impression; it is a well-founded consciousness of the fact that our ruling mechanism does not answer to the mutability and the increasing complexity of a great empire's demands. Now, as in "the good old times," the central Government jealously excludes the people from participation in the national life and takes upon itself the difficult task of thinking and acting for them. This task was hard enough even when the life of the people went on in the long-established patriarchal way to which both society and the Government were accustomed, but that order of things has undergone in recent years more vital changes than perhaps ever came to a similar system in any country in the course of a single generation. The emancipation of the serfs has completely and radically transformed the whole economic life of the agricultural peasants and the landed proprietors as well as their relations to each other. Artificial methods of swift intercommunication and transportation have altered the time-honored routes and methods of trade and production, have created new industries and destroyed old ones, and have put the fortunes of whole provinces in the hands of the railroad authorities. Banks and financial institutions of various kinds have sprung up in great numbers and have bound widely separated regions together with meshes of mutual obligation and indebtedness. These changes, complicated and supplemented by others like them, have created everywhere a thousand questions and necessities which previously did not exist, and have so interwoven the interests of separate localities that delay or error in the settlement of a question at one point has a direct influence upon the fortunes of other places often very remote. Every local necessity or calamity, whether it be a drought, the grain beetle, the disorganization of a railroad, an epidemic disease, pleuro-pneumonia among cattle, or industrial stagnation, exerts, without losing its local significance, a wide-spread influence upon the well-being of the empire as a whole.

In an economic life thus complicated, one central administration, even though it possess superhuman wisdom and energy, cannot possibly deal with the innumerable questions and problems which, in the absence of popular self-government, necessarily devolve upon it. Whole classes of wants and demands either remain entirely unsatisfied, are inadequately appeased by methods which take no account of local interests, or are met by a series of unsystematic and mutually contradictory measures. Each of these ways of dealing with such wants and demands undermines respect for authority and inspires painful distrust.

The only way to extricate the country from its present position is to summon an independent parliament [*Sobrania*] consisting of representatives of the *zemstvos;* to give that parliament a share in the control of the national life, and to securely guarantee personal rights, freedom of thought, and freedom of speech. Such freedom will call into action the best capabilities of the people, will rouse the slumbering life of the nation, and will develop the abundant productive resources of the country. Liberty will do more than the severest repressive measures to crush anarchistic parties hostile to the State. Free discussion will show the error of their theories, and the substitution of vigorous healthful activity for epidemic discontent in the life of the people will deprive them of the field in which they carry on their propaganda.

The Russians are as fit for free institutions as the Bulgarians are, and they feel deep humiliation at being kept so long under guardianship. The desire for such institutions, although forced into concealment, and half stifled by repressive measures, finds expression, nevertheless, in the *zemstvos*, in the assemblies of the nobles, and in the press. The granting of such institutions, and the calling together of a representative body to preside over them, will give to the nation renewed strength, and renewed faith in the Government and in its own future. When the people of Russia made themselves ready for the recent war, it was with an instinctive feeling that in the great work of freeing kindred nations there was the promise of freedom for themselves. Are such expectations, hopes, and promises never to be realized?

THE above temperate, patriotic, and courageous address was laid before the Tsar, and he acted upon it; but, unfortunately, his action came too late. On the 12th of March, 1881, he signed a proclamation announcing to the people his intention to summon a national assembly and to grant a constitutional form of government. On the very next day, before this proclamation had been made public, he was assassinated.

George Kennan.

THE PRESIDENT-ELECT AT SPRINGFIELD.

ABRAHAM LINCOLN: A HISTORY.*

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE MONTGOMERY CONFEDERACY.

FOLLOWING the successive ordinances of secession passed by the cotton-States, their delegations withdrew one by one from Congress. In this final step their senators and members adopted no concerted method, but went according to individual convenience or caprice; some making the briefest announcement of their withdrawal, others delivering addresses of considerable length. These parting declarations contain nothing of historical interest. They are a mere repetition of what they had said many times over in debate: complaints of Northern aggression and allegations of Northern hostility; they failed to make any statement or acknowledgment of the aggressions and hostility on the part of the South against the North. The ceremony of withdrawal, therefore, was formal and perfunctory; pre-announced and recognized as a foregone conclusion, it attracted little attention from Congress or the public. Only two cases were exceptional,—that of Mr. Bouligny, a representative from Louisiana, who, as already mentioned, remained loyal to the Union and retained his seat in the House; and that of Senator Wigfall of Texas, who, radically and outspokenly disloyal, yet kept his seat in the Senate, not only through the remainder of Mr. Buchanan's term, but even during the special session assembled, according to custom, to confirm the nominations made by President Lincoln immediately after his inauguration.

One of the remarkable coincidences of the secession conspiracy is, that on the same day which witnessed the meeting of a peace convention in Washington city to deceive and confuse further the public opinion of the North with discussion of an impossible compromise, the delegates of the seceded States convened at Montgomery, Alabama, to consolidate rebellion and prepare for armed resistance. It is not impossible that this was a piece of strategy, purposely designed by the secession leaders; for the Washington peace conference, despite its constant avowals of a desire to promote union, was originated and managed by the little clique of Virginia conspirators whose every act, if not preconceived, at least resulted in treasonable duplicity.

The secession conventions of the cotton-States had appointed delegates equal in number to their former senators and representatives in Congress. These met in Montgomery, Alabama, on the 4th day of February, 1861, to form a Southern Confederacy. The Washington caucus, it will be remembered, suggested the 15th of the month. But such had been the success, or, rather, the want of opposition to the movement, that it was probably considered advisable to hasten the programme, and instead of only having preliminary secession complete by the 4th of March, to finish the whole structure of an independent government before the inauguration of President Lincoln. Thus far Mr. Buchanan had not offered the slightest impediment to the insurrection; it might reasonably be inferred that this inaction on his part would continue to the end of his term. Mr. Lincoln would be powerless until officially invested with the executive duties, and thus the formal organization of a Southern Confederacy could proceed at convenient leisure and in perfect immunity from disturbance.

The meeting at Montgomery had its immediate origin in the resolutions of a committee of the Mississippi Legislature, adopted January 29th; and it is another evidence of the secret and swift concert of secession leaders, that in six days thereafter the delegates of South Carolina, Georgia, Alabama, Mississippi, Louisiana, and Florida were assembled for conference. The delegates from Texas joined them later on. An organization was effected by choosing Howell Cobb chairman, and the body called itself a Provisional Congress, though it was merely a revolutionary council, invested with no direct representation of the people, but appointed by the secession conventions. Its reactionary spirit was shown in returning to the antiquated and centralizing mode of voting by States. This same rule under the old Congress of the Confederation had produced nothing but delay and impotence, and earned deserved contempt; and these

HOWELL COBB, PRESIDENT OF THE FIRST CONFEDERATE CONGRESS. (FROM A PHOTOGRAPH LENT BY GENERAL MARCUS J. WRIGHT.)

identical delegates, after incorporating the rule in their provisional scheme of government, immediately rejected it when framing their permanent one. We may infer that they employed it at the moment, because it was admirably suited to the use of cliques and the purposes of intrigue. Very little more than half the delegates of four States could carry a measure, and the minority of total membership could exercise full power of legislation. A project of government was perfected on February 8th, and the name of the "Confederate States of America" was adopted.

This first project was provisional only, to serve for one year; and the Provisional Congress retained the legislative power for the same period. The temporary continuance of certain United States laws and officials was provided for. On the following day (February 9th) it elected Jefferson Davis of Mississippi President and Alexander H. Stephens of Georgia Vice-President of the new Confederacy. The body then set itself more seriously at work to prepare a permanent constitution which should go into effect a year later. This labor it completed and adopted on the 11th of March. In this permanent constitution, as in the provisional one, they adhered closely to the letter and spirit of the Constitution of the United States, making few changes other than those which the pretensions and designs of the rebellion made essential.

"The new constitution professed to be established by 'each State acting in its sovereign and independent character,' instead of simply by 'we the people.' It provided that in newly acquired territory 'the institution of negro slavery, as it now exists in the Confederate States, shall be recognized and protected by Congress and by the Territorial Government'; also for the right of transit and sojourn for 'slaves and other property,' and the right to

reclaim 'slaves and other persons' to service or labor. It did not, as consistency required, provide for the right of secession, or deny the right of coercion; on the contrary, all its implications were against the former and in favor of the latter; for it declared itself to be the supreme law of the land, binding on the judges in every State. It provided for the punishment of treason; and declared that no State should enter into any treaty, alliance, or confederation, grant letters of marque and reprisal, coin money, lay duties, keep troops or ships of war in time of peace, make any compact with another State or with a foreign power;—a sweeping practical negation of the whole heretical dogma of State supremacy upon which they had built their revolt."*

Stephens, being a member of the Congress, was sworn into office as Vice-President, February 10th. Davis, with becoming modesty, remained absent during the election; being sent for, he arrived and was formally inaugurated on February 18th. His inaugural address presents few salient points. In later times he has disavowed the fiery and belligerent harangues the newspapers reported him to have made on his way to assume his new duties. Perhaps the most important announcement of his inaugural was the opinion that the new Confederacy might welcome the border slave-States; "but beyond this," he continued, "if I mistake not the judgment and will of the people, a reunion with the States from which we have separated is neither practicable nor desirable."

Superficially, it appeared that the new government had been agreed upon among the leaders, with unusual harmony and unanimity; and such is the impression conveyed in the books written long years after by the two principal chiefs. But plausible reports have come down by tradition, that no previous legislative body had ever developed an equal amount of jealousy and bitterness to that which manifested itself in the Provisional Congress; that there were more candidates for President than States in the Confederacy, Georgia alone having furnished four aspirants, and that the rivalry between Toombs and Cobb in fact brought about the selection of Davis, who had openly expressed his preference for the post of General-in-Chief of the future rebel armies. Cobb might indeed dispute the prize of leadership with Davis, and especially with Toombs, who was, of all the candidates, least suited for such a task. It was Cobb who was the master spirit of secession intrigue in Buchanan's Cabinet; it was Cobb who carried the wavering Georgia convention into secession; it was Cobb who reappeared as the dominating power in the Montgomery Congress. Practically, it was Cobb who by recent secret manipulations had made the Confederacy possible, and erected the Confederate constitution. He might without vanity aspire to become its chief officer; yet with a truer recognition of the fitness of things, the choice of the delegates fell upon Davis, who, for a longer period and with deeper representative characteristics, had been the real embodiment and head of the conspiracy.

Jefferson Davis was born in Christian (afterwards Todd) county, Kentucky, June 3d, 1808. Soon afterwards his father removed to Mississippi; but the boy was sent to complete the education begun by home and academic studies, to Transylvania University, where he remained till the age of sixteen. Appointed in that year a cadet at the Military Academy at West Point, he received the thorough training of that institution, graduating in June, 1828; he was then attached to the army, and served as a lieutenant of infantry in the Black Hawk war and other campaigns against the Indians. He resigned his military commission in 1835, having attained the grade of first lieutenant of dragoons. Returning to Mississippi, he secluded himself in plantation life, devoting his time largely to political studies calculated to qualify him for a public career. In 1843 he launched himself on the tide of Mississippi politics, by a speech in the Democratic State convention, which attracted considerable notice. From the very first he became a central party figure in his State, was made a presidential elector in 1844, and chosen a representative in Congress in 1845. When the Mexican war broke out, Davis's military training and experience naturally carried him into the campaign as colonel of a volunteer regiment called the Mississippi Rifles; and he rendered valuable service and won deserved distinction in the storming of Monterey and the battle of Buena Vista. Returned from the war, the governor of Mississippi appointed him to the United States Senate to fill a vacancy. When the next legislature met, it confirmed the governor's choice by electing him for the remainder of the term; and a subsequent legislature reëlected him for the full term succeeding.

From the beginning to the end of his public career Davis posed as a disciple of Calhoun and an advocate of the extreme doctrine of State-rights. His maiden speech in the Mississippi convention of 1843 was to recommend Calhoun as an alternative presidential candidate; his parting address on leaving the Senate in 1861 drew a contrast between Calhoun as the advocate of nullification, and himself as the advanced defender of secession. So also, when President Polk offered him the commis-

* Nicolay, "The Outbreak of Rebellion."

sion of brigadier-general of volunteers, to reward his military service in Mexico, the Quixotism which was a marked feature of Davis's character moved him to employ the incident for the ostentatious championship of State-rights. He declined the offer, his biographer says, "on the ground that no such commission could be conferred by Federal authority, either by appointment of the President or by act of Congress."

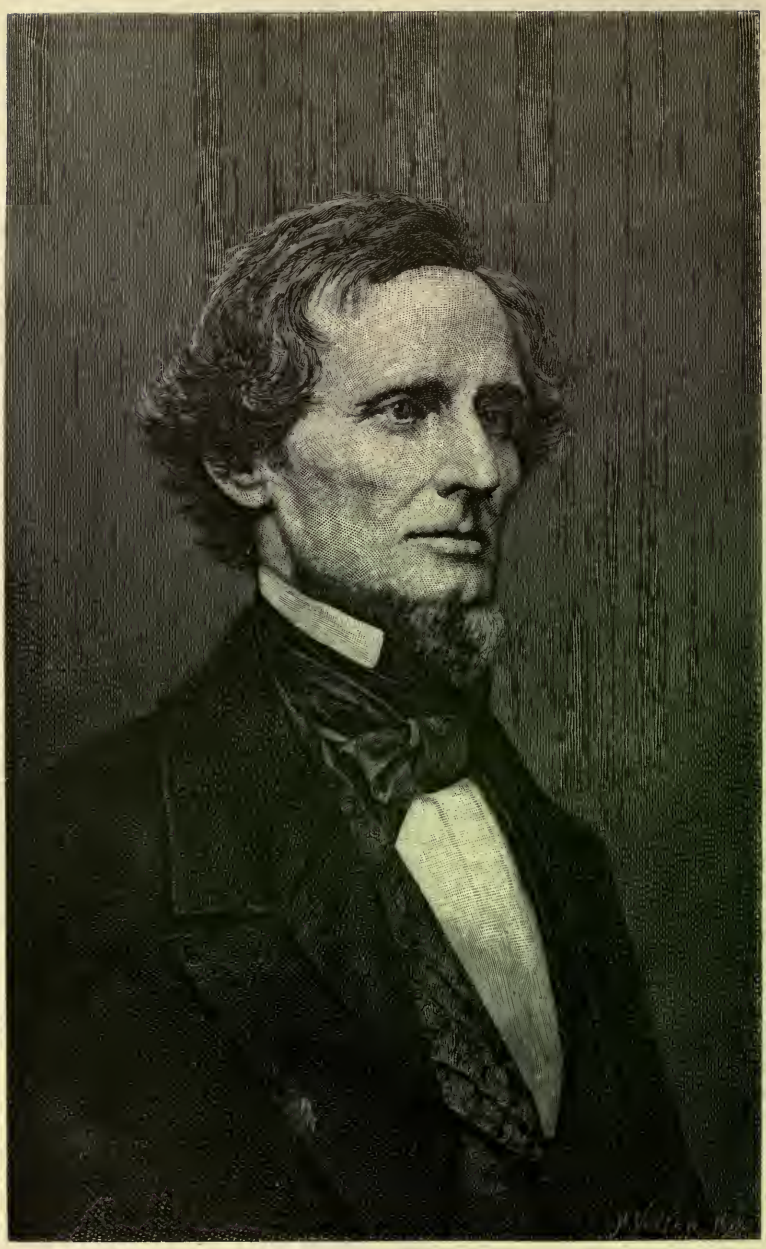
His next State-rights exploit occurred in 1851. A strong party in Mississippi, violently opposing the compromise measures of 1850, organized a resistance movement in that State, and undertook upon that issue to elect General Quitman governor in 1851. A preliminary election, however, in the month of September, showed them to be some seven thousand votes in the minority; whereupon Quitman withdrew from the contest. Jefferson Davis immediately resigned his full term in the United States Senate and took up the canvass for governor of Mississippi, which Quitman had ingloriously abandoned. Davis's short campaign was brilliant but unsuccessful; he was beaten about one thousand votes by Hon. Henry S. Foote, the Union candidate, who had also resigned the remainder of his senatorship to make the contest.

The defeat appeared to have a salutary influence upon Davis's politics, but it proved transient. In the presidential campaign of 1852 a forlorn-hope of the State-rights fanatics nominated Quitman for President. Davis, with a wiser calculation, forsook his reckless friends and supported Pierce; and for this adhesion Pierce gave him a seat in his Cabinet as Secretary of War. The history of the Kansas trouble shows how faithful he was in this position to pro-slavery interests; and when Buchanan succeeded, he again became a senator for Mississippi, and assumed the leadership of the ultra-Democrats. Years afterwards he explained that in abandoning for a while his extreme course, he was conforming his actions to the decision which Mississippi pronounced in 1851 in favor of the Union. "His opinions," he said, "the result of deliberate convictions, he had no power to change." When, therefore, he entered the Cabinet of President Pierce in 1853 as Secretary of War, and when again on the accession of President Buchanan the Legislature of Mississippi returned him to the Senate, he was by his own declaration, and by the evidence of his subsequent words and deeds, only an acting Unionist, who at heart cherished the belief of Federal usurpation, and hoped and labored for the hour of confederated State resistance.

It may not be without interest to call attention at this point to a few coincidences in the careers of Jefferson Davis and Abraham Lincoln. They were both born in Kentucky — Davis in the south-western, Lincoln near the central part of the State. They were both near the same age, Davis being less than nine months the elder. Both were taken in their early years from their birthplaces — Davis's parents emigrating south to Mississippi, Lincoln's north to Indiana and Illinois. Both were soldiers in the Black Hawk war — Davis as lieutenant of Regulars, Lincoln as captain of Volunteers. Both were candidates for presidential elector in 1844. Both were soon elected to Congress — Davis in 1845, Lincoln in 1846. Both were successful politicians and popular orators. Both were instinctively studious, introspective, self-contained. Both rose to distinction through the advocacy of an abstract political idea. Both became the chiefs of rival sections in a great civil war.

These are the only points of resemblance, and the contrasts running through their lives are bold and radical. It is unnecessary to present them in detail; they are comprehended and expressed in their opposing leaderships. If chance or fate had guided their parents to exchange their routes of emigration from Kentucky; if Lincoln had grown up on a Southern cotton plantation, and Davis had split rails to fence a Northern farm; if the tall Illinois pioneer had studied trigonometry at West Point, and the pale Mississippi student had steered a flat-boat to New Orleans, education might have modified but would not have essentially changed either. Lincoln would never have become a political dogmatist, an apostle of slavery, a leader of rebellion; Davis could never have become the champion of a universal humanity, the author of a decree of emancipation, the martyr to liberty. Their natures were antipodal, and it is perhaps by contemplating the contrast that the character of Davis may be best understood.

His dominant mental traits were subtlety and will. His nature was one of reserve and pride. His biographers give us no glimpse of his private life. They show us little sympathy of companionship, or sunshine of genial humor. Houston is reported to have said of him that he was "as ambitious as Lucifer and as cold as a lizard." His fancy lived in a world of masters and slaves. His education taught him nothing but the law of subordination and the authority of command. A Democrat by party name, he was an aristocrat in feeling and practice. He was a type of the highest Southern culture and most exclusive Southern caste. His social ideas were of the past. In political theory he was a sophist, and not a logician. With him, "consent of the governed" in a State was truth; "consent of the gov-



JEFFERSON DAVIS, PRESIDENT OF THE CONFEDERATE STATES OF AMERICA. (FROM A PHOTOGRAPH BY BRADY.)

erned" in a Territory was error. "Rebellion" in a State must be obeyed; "rebellion" in a Territory "must be crushed." Constitutional forms in Kansas in the interest of slavery were sacred law; constitutional forms in the Union in the interest of freedom were flagrant usurpation. The majority in a State was enthroned freedom; a majority in the nation was insufferable despotism. But even his central dogma became pliant before considerations of self-interest. In his own State, a majority of seven thousand against Quitman in September he treated as a dangerous political heresy to be overthrown by his personal championship. A majority of one thousand against himself in November he affected to regard as a command to stultify his own opinions. His beliefs were at war with the most essential principles of American government. He denied the truth of the Declaration of Independence, denied

the right of the majority to rule, denied the supremacy of the national Constitution. His narrowness was of that type which craved the exclusion of Northern teachers and the official censorship of school-books to keep out "Abolition poison." It was in perfect keeping with his character, and in perfect illustration of the paradoxical theories of his followers, that, holding the lash over fifty or a hundred slaves, or exercising an inflexible military dictatorship over nine millions of "his people," he could declaim in fervid oratory against the despotism of a majority.

One of his most salient traits was the endeavor to maintain a double position on the question of disunion. His leadership of the "resistance" party in Mississippi in 1850–51 gave him a conspicuous starting-point as an instigator of sedition, and while laboring then and afterwards to unite the South in extreme political demands, and in armed preparation for war against the Union if those demands were not complied with, he as constantly declared that he was no disunionist. Of course he could do this only by setting at defiance the plainest meaning of words and the clearest significance of acts. As the slavery contest drew to its culmination, his recklessness of assertion and antagonism of declaration on these points reached an extreme entitling them to be classed among the curiosities of abnormal mental phenomena. As a blind man may not be held responsible for his description of a painting, or a deaf-mute be expected to repeat accurately the airs of an opera, so we can only explain Jefferson Davis's vehement denial of the charge of hypocrisy and conspiracy through a whole decade, by the supposition that he was incapable of understanding the accepted meaning of such words as "patriotism," "loyalty" "allegiance," "faith," "honor," and "duty." On no other hypothesis can we credit the honesty of convictions and sincerity of expression of sentiments so diametrically opposed as the following which occur in the same speech:

"Neither in that year [1852], nor in any other, have I ever advocated a dissolution of the Union, or a separation of the State of Mississippi from the Union, except as the last alternative, and have not considered the remedies which lie within that extreme as exhausted, or ever been entirely hopeless of their success. I hold now, as announced on former occasions, that whilst occupying a seat in the Senate, I am bound to maintain the Government of the Constitution, and in no manner to work for its destruction; that the obligation of the oath of office, Mississippi's honor and my own, require that, as a Senator of the United States, there should be no want of loyalty to the Constitutional Union. . . .

"Whether by the House [of Representatives] or by the people, if an Abolitionist be chosen President of the United States, you will have presented to you the question of whether you will permit the Government to pass into the hands of your avowed and implacable enemies. Without pausing for your answer, I will state my own position to be that such a result would be a species of revolution by which the purposes of the Government would be destroyed, and the observance of its mere forms entitled to no respect. In that event, in such manner as should be most expedient, I should deem it your duty to provide for your safety outside of a Union with those who have already shown the will, and would have acquired the power, to deprive you of your birthright and reduce you to worse than the colonial dependence of your fathers. . . . As when I had the privilege of addressing the Legislature a year ago, so now do I urge you to the needful preparation to meet whatever contingency may befall us. The maintenance of our rights against a hostile power is a physical problem and cannot be solved by mere resolutions. Not doubtful of what the heart will prompt, it is not the less proper that due provision should be made for physical necessities. Why should not the State have an armory for the repair of arms, for the alteration of old models so as to make them conform to the improved weapons of the present day, and for the manufacture on a limited scale of new arms, including cannon and carriages; the casting of shot and shells, and the preparation of fixed ammunition?"*

That man is not to be envied whose reason can be quieted by a casuistry capable of discovering consistency between these and analogous propositions. From declarations of this quality he could prove his record black or white, as occasion demanded, and, in face of direct threats of secession in Mississippi, deny in the United States Senate, without wincing, that he had avowed disunion sentiments.

It will not be amiss to invite the reader to a pen-picture of the man as he appeared in the Senate (May 8th, 1860) shortly before he led the South, with open eyes, into that drama of disaster, suffering, and blood of which he was the fatal inspiration:

"The crowd in the galleries give a buzz of relief, and everybody tells his right-hand man, 'Here he comes; that 's Jeff Davis.' And can it be possible that he proposes to make a speech? You are surprised to see him walking. Why, that is the face of a corpse, the form of a skeleton. Look at the haggard, sunken, weary eye, the thin, white wrinkled lips clasped close upon the teeth in anguish. That is the mouth of a brave but impatient sufferer. See the ghastly white, hollow, bitterly puckered cheek, the high, sharp cheek-bone, the pale brow full of fine wrinkles, the grizzly hair, prematurely gray; and see the thin, bloodless, bony, nervous hands! He deposits his documents upon his desk, and sinks into his chair as if incapable of rising. In a few minutes the Vice-President gives his desk a blow with his ivory hammer, calls for profound order, and states 'that the senator from Mississippi' has the floor. Davis rises with a smile. His speech was closely reasoned, and his words were well chosen. Once in a while he pleases his hearers by a happy period; but it was painfully evident that he was ill."

Montgomery having witnessed the glories of such an inauguration pageant as could be extemporized, Davis proceeded to the appointment of his Cabinet. Toombs of Georgia was made Secretary of State; Memminger of South Carolina Secretary of the Treasury; Walker

*Jefferson Davis, speech at Jackson, Mississippi, Nov. 11th, 1858. In "Daily Mississippian," Nov. 15th, 1858.

of Alabama Secretary of War; Mallory of Florida Secretary of the Navy; Reagan of Texas Postmaster-General; and Benjamin of Louisiana Attorney-General. Various acts of the Provisional Congress authorized the new Executive to continue the organization of the provisional government of the Confederate States. A regular army of about 10,000 men was ordered to be established; a navy of 10 steam gun-boats authorized to be constructed or purchased; 100,000 volunteers for 12 months authorized to be enlisted, and existing State troops to be received into the provisional army. A loan of $15,000,000 was authorized, and an export duty on cotton of ⅛ cent per pound levied, to pay principal and interest. Among the first executive acts, Davis assumed control of military operations in the several seceded States; and his Secretary of War (March 9th) made a requisition for 11,000 volunteers, for contingent service at Charleston, Pensacola, and other points. Agents were dispatched to Europe to purchase material of war; and to obtain if possible a recognition of the Confederate States by foreign powers. As a matter of the greatest immediate necessity, a commission of three persons was appointed to proceed to Washington, to bring about the peaceful acquiescence of the United States in the dismemberment of the Union.

THE CONSTITUTIONAL AMENDMENT.

The disunion conspirators had good reason to show symptoms of dismay at the Cabinet régime to which Mr. Buchanan yielded direction and authority in the last days of the year 1860. Hitherto, not alone in shaping a policy of non-coercion and preventing reenforcements, but in numerous minor matters as well, had the complicity of Cobb, Floyd, and Thompson enabled them to turn the varied agencies of the Government against its own life. Under the new dispensation these practices instantly came to an end. For the moment Mr. Buchanan was in a patriotic mood, and at the urgent solicitation of Black, Holt, and Stanton yielded his consent to a number of measures he had for two months persistently neglected. For the first time since his arrival in Washington, General Scott was permitted to notify commanders of forts and garrisons to be on the alert against surprise; and though this admonition came too late to inspirit and reassure many a wavering officer, it had the direct effect of saving one of the most important military posts on the gulf. Reënforcements were resolved upon. The policy of defending the national capital was discussed and adopted. At least one member of the Cabinet placed himself in confidential communication with leading Republicans and unionists in Congress, and counsel and warning in behalf of the Government were freely interchanged and faithfully observed. Preëminent in his opportunities and services at this critical juncture was the new Secretary of War, Joseph Holt, of Kentucky. He had been a life-long Democrat and a stubborn partisan; but above everything else he was a patriot. Under his administration the War Department was no longer a bureau of insurrection.

The Cabinet régime consisted mainly of the combined will and energy of four leading members,—Black, Secretary of State; Dix, Secretary of the Treasury; Holt, Secretary of War; and Stanton, Attorney-General. Neither their relation to the President nor to each other can be very clearly made out. Their loyal activity was still occasionally hampered by Buchanan's stubbornness and timidity. On some points they appear to have had very different views, but the daily stress and danger in which they moved compelled mutual tolerance and tacit cooperation. They had indeed one common bond of union. Now that the conspiracy was so fully revealed they battled against it manfully, not with any proximate hope of crushing it, but to tide over the peril to the end of the presidential term, to be able to lay down their responsibilities with honor. Their services in detail cannot be here recorded, but the principal duty which they successfully performed, the protection of the national capital, needs special mention.

In the early days of January, 1861, Washington city was the natural focus of the secession excitement pervading the South; and the capital seemed to lean towards the prevailing mania. Seditious harangues in Congress were applauded from well-filled galleries, and society feasted and flattered the most daring fire-eaters. So strong was this Southern drift of local sentiment that the Federal city began to be confidently looked upon by the conspirators as the prospective capital of a Southern Confederacy. Nothing seemed wanting to the early consummation of such a scheme but the secession of Virginia and Maryland, of which the signs were becoming only too abundant. Reasoning from this to plausible consequences, the coolest heads began to fear a popular outbreak to seize upon the buildings and archives of the Government; and as a final result forcibly to prevent the inauguration of the President-elect.

Buchanan affected not to share these apprehensions. Nevertheless he acknowledged his duty and purpose to preserve the peace, and authorized the necessary precautions. On the 9th of January, therefore, Colonel Charles P. Stone, chosen for that duty by General Scott, submitted a memorandum in which he sketched a plan for the defense of

Washington, which was adopted, and under which Colonel Stone was appointed inspector-general and ordered to organize and drill the militia of the District of Columbia. This duty he faithfully discharged, and on the 5th of February reported the existence of some thirteen volunteer companies, constituting a total of 925 men, "which can be at once called into service"; adding also, "the number of volunteers for service can be doubled within seven days with proper facilities." Not underrating either the moral or military aid of raw levies of militia, General Scott was nevertheless too old a soldier to rely exclusively upon them in an emergency. He therefore obtained consent to concentrate at the capital available regular forces to the number of eight companies, a total of about 480 men.

Stanton, appointed Attorney-General on the 20th of December, was, with his ardent and positive nature, one of the most energetic and uncompromising unionists in the Cabinet. For him, the expulsion of Floyd, the reënforcement of Sumter, and the other military precautions hastily ordered, were not yet sufficient. Chafing under the President's painful tardiness, he turned to Congress as a means for exposing and thwarting the intrigues of the conspirators. Sacrificing his party attachments to the paramount demands of national safety, he placed himself in confidential correspondence with Republican leaders in that body, giving and receiving advice as to the best means of preserving the Government.

On the 8th of January Mr. Buchanan transmitted to Congress a special message on the state of the Union, discussing also the rumors of hostile designs against the capital. The Republicans in the House of Representatives seized the occasion to secure the appointment of a Committee of Investigation, of which Mr. Howard, of Michigan, was made chairman. He has left us an interesting account of its origin and purpose:

"That committee was raised at the request of loyal members of the Cabinet. The resolutions came from them, and were placed in my hands with a request that I should offer them and thus become, if they should pass, chairman of the committee. At first I refused to assume so fearful a responsibility. But being urged to do so by members and senators, I at last consented, on condition that the Speaker would allow me to nominate two members of the committee. I selected Mr. Dawes, of Massachusetts, and Mr. Reynolds, of New York. Mr. Reynolds was elected as a Democrat, but he was true as steel, and a good lawyer. I do not know that Mr. Stanton wrote the resolutions creating the committee. I did not see him write them. I never heard him say he wrote them. It would be easier, however, to persuade me that Mr. Jefferson did not write the Declaration of Independence than that Mr. Stanton did not write those resolutions."

With this committee Mr. Stanton and perhaps other members of the Cabinet continued to correspond confidentially and coöperate. This has been characterized as disrespect and treachery to their chief; but in the face of Mr. Buchanan's repeated neglect and avowed impotence to resist open insurrection, discriminating history will applaud the act. The committee found no substantial proof of an organized plot to seize the capital; nevertheless its investigation and report quieted the apprehensions of the timid, at the same time that they afforded a warning to mischief-makers that the authorities were on the alert and would make such an enterprise extremely hazardous.

While the Howard Committee was yet pursuing its inquiry, and as the day for counting the presidential vote approached, General Scott requested permission from the Secretary of War to bring several additional companies of regulars from Fortress Monroe, to be replaced by recruits. This would augment his regulars to some seven hundred men, which, with the police and militia, he deemed sufficient for all contingencies. Before the day arrived a confidential arrangement of signals was communicated to the officers, the regular troops being placed under command of Colonel Harvey Brown. General instructions were issued in strict confidence, and to officers alone. The militia was charged with the care of the various bridges of the Potomac; the regulars were stationed at convenient points in the city.

Happily no alarm occurred. On the 13th of February an unusually large and brilliant throng filled the galleries of the House of Representatives to witness the proceedings of the presidential count. Vice-President Breckinridge, one of the defeated candidates, presided over the joint convention of the two Houses. Senator Douglas, another, was on the floor, and moved to dispense with certain tedious routine. The sealed returns of the electoral votes, cast by the chosen colleges of the several States on the 5th of December, were opened and registered. The tellers officially declared the result already known, viz.: that Lincoln had received 180 votes; Breckinridge, 72; Bell, 39; Douglas, 12. Vice-President Breckinridge thereupon announced that "Abraham Lincoln, of Illinois, having received a majority of the whole number of electoral votes, is elected President of the United States for four years commencing the 4th of March, 1861."

To comprehend more clearly the transactions growing out of the event, it is necessary to repeat that immediately after the beginning of the Cabinet régime it was resolved to send reënforcements to Fort Sumter. The first arrangement was to dispatch them in the sloop-of-war *Brooklyn;* but owing to certain difficulties and objections which presented

themselves, General Scott decided to send two hundred recruits with supplies from New York in the merchant steamer *Star of the West*, hoping she might enter the harbor and effect their landing at the fort without suspicion of her real errand. But, among others, Secretary Thompson, who was still a member of Buchanan's Cabinet, sent the Charleston conspirators notice of her coming. When on the morning of January 9th about daylight the *Star of the West* attempted her entrance, she was fired upon from a battery which had been erected since New Year's Day under the order of Governor Pickens; and, though the vessel suffered no serious injury, the apparent danger caused the officers to desist from their attempt and turn and run the vessel out of the harbor.

The whole occurrence came upon Major Anderson unexpectedly; and before he could well comprehend the design or decide to encourage or assist the ship with the guns of Fort Sumter, she had retreated, and the opportunity was gone. But the insult to the national flag roused his anger, and he demanded an apology from Governor Pickens for the hostile act. So far from retracting or apologizing, however, the governor boldly avowed and sustained his conduct; and Major Anderson, instead of making good the threat which accompanied his demand, proposed as an alternative to "refer the whole matter to my Government." With great tact Governor Pickens at the same time made use of the occasion to send Attorney-General Hayne, of South Carolina, to President Buchanan, bearing a new written demand (the third one made by the State), for the possession of the forts in Charleston Harbor; and the two messengers arrived in Washington on the 13th of January. But the central cabal at Washington, which in its caucus resolutions of January 5th had issued orders for immediate secession, seeing the danger and complication likely to arise from this headlong separate action of South Carolina's governor, now took possession of Hayne and his mission. By a skillful device of dilatory diplomacy they kept open the question of the demand Hayne had been instructed to make, and thereby prolonged the military truce at Charleston which it involved, until the 6th of February following, when Secretary of War Holt officially wrote the President's refusal of the governor's demand. The advantage of this course to the conspirators became quickly apparent. Between the 12th of January and the 6th of February the insurrection at Charleston worked day and night in building batteries and preparing men and material to attack Sumter. In other States the processes of secession, seizure, drill, equipment, and organization had also been going on with similar activity. Receiving no effective discouragement or check, the various elements of rebellion had finally united in a provisional congress at Montgomery, which two days later (February 8th) perfected a provisional government for the rebellion.

As part of the same intrigue another incident, which for convenience may be called the Fort Pickens truce, must also be mentioned. One of the most important naval and military stations of the United States was that at Pensacola, Florida. Near it on the mainland were Fort Barrancas and Fort McRae, and on Santa Rosa Island, immediately opposite, Fort Pickens, a powerful work, built for a war garrison of 1260 men, but now entirely empty. Lieutenant Slemmer held military command with a garrison of only forty-six men, in Fort Barrancas. When on January 3d General Scott under the Cabinet régime admonished him to prevent the seizure of these forts by surprise, Slemmer repeated the strategy of Anderson, spiking the guns and destroying the powder in Barrancas and McRae, and transferring his command, increased by thirty ordinary seamen from the Navy Yard, with all available supplies, to Fort Pickens, on the 9th, 10th, and 11th of January. Lieutenant Slemmer was not a moment too quick. The Florida convention passed an ordinance of secession on the 10th, and two days afterwards a regiment of Florida and Alabama rebels appeared and took possession of the Navy Yard and the two abandoned forts. A considerable rebel force was within a short time concentrated to attempt the capture of Fort Pickens, but in the mean time sundry ships of war had been ordered there by the Government. On January 21st the *Brooklyn*, with a company of regular artillery under Captain Vodges, was dispatched thither as a further reënforcement to the fort. The rebels now perceiving that this preponderance of military strength might enable the Government to recapture the Navy Yard, the central cabal at Washington resorted to an intrigue to paralyze it. They proposed that "no attack would be made on the fort if its present status should be suffered to remain," thus beguiling President Buchanan into a new truce. A joint order was thereupon issued by the Secretaries of War and the Navy, January 29th, that Captain Vodges's artillery company should not be landed from the *Brooklyn* "unless said fort shall be attacked or preparations made for its attack." The advantages of this stipulation were all on the side of the insurrection, and its existence proved a most mischievous complication, and caused perilous delay when the new Lincoln Administration began its dealings with the rebellion.

Want of space forbids us to review the

debates and proceedings of Congress during the winter of 1860–61 further than to note the complete failure of the projects of compromise which were originated in and out of it, and brought to its attention. The Senate Committee of Thirteen ended by reporting an irreconcilable disagreement. The various propositions which were apparently adopted by the House Committee of Thirty-three proved to be nothing but the resolves of the several minority factions of that committee, and commanded no united support when reported to the House. The Peace Conference terminated its labors by certain recommendations receiving only a minority vote of that body, and Congress, to which these recommendations were sent, would have nothing to do with them. So also certain other propositions of adjustment offered in Congress, known as the "Crittenden Compromise," failed equally of acceptance.

Nevertheless these many efforts were not entirely barren of result. At a point where it was least expected, they contributed to the adoption by Congress of a measure of adjustment which might have restored harmony to the country if the rebellion of the cotton-States had not been originated and controlled by a conspiracy bent upon revolution as its prime and ultimate object. It is a noteworthy fact that just at the dawn of the civil war through which slavery rushed to a swift self-destruction, that institution received the largest recognition and concession ever given it in American legislation.

The report of the Committee of Thirty-three was made about the middle of January, but at that time none of its six propositions or recommendations commanded the attention of the House. The secession stage of the revolution was just culminating. All was excitement and surprise over the ordinances of the cotton-States and the seizure, without actual collision or bloodshed, of the several Southern forts and arsenals. The retirement of the Southern members of Congress, and the meeting of the revolutionary leaders, to unite and construct their provisional government at Montgomery, prolonged what was to the public a succession of dramatic and spectacular incidents resembling the movements of a political campaign, rather than the serious progress of a piece of orderly business-like statesmanship. The North could not yet believe that the designs of the cotton-State hotspurs were so desperate.

The more conservative Congressmen from the North and from the border States still hoped that good might come if an effort of conciliation and compromise were once more renewed. Accordingly, near the close of the session (February 27th, 1861), Mr. Corwin, chairman of the House Committee of Thirty-three, brought forward one of the propositions which had been reported more than a month before from his committee. The original report proposed in substance an amendment of the Constitution providing that any constitutional interference with slavery must originate with the slave-States, and have the unanimous assent of all the States to become valid. Mr. Corwin by an amendment changed the phraseology and purport to the following:

"Article 13. No amendment shall be made to the Constitution which will authorize or give to Congress the power to abolish or interfere within any State with the domestic institutions thereof, including that of persons held to labor or service by the laws of said State."

This amendment was adopted by the House on February 28th, yeas 133, nays 65. The Senate also passed it during the night preceding the 4th of March, though in the journals of Congress it appears dated as of March 2d. The variation is explained by the fact that the legislative day of the journals frequently runs through two or more calendar days. In that body the vote was, yeas 24, nays 12, and it was approved by President Buchanan probably only an hour or two before the inauguration of his successor.

Mr. Lincoln alluded to this amendment in his inaugural address, reciting its substance and giving it his unreserved approval. "I understand," he said, "a proposed amendment to the Constitution — which amendment, however, I have not seen — has passed Congress, to the effect that the Federal Government shall never interfere with the domestic institutions of the States, including that of persons held to service. To avoid misconstruction of what I have said, I depart from my purpose not to speak of particular amendments so far as to say that, holding such a provision to now be implied constitutional law, I have no objection to its being made express and irrevocable." The new Lincoln Administration soon after transmitted this Joint Resolution to the several States to receive their official action. But nothing came of it. The South gave no response to the overture for peace, and in the North it was lost sight of amid the overshadowing events that immediately preceded the outbreak of hostilities.

It was at this point that the South committed its great political blunder. There is little doubt that in the prevailing anxiety for compromise this constitutional amendment might have been ratified by the necessary three-fourths of the States. Had the Southern leaders been sincere in their professed apprehensions for the security of their slave property and polity in their own States, here was an effectual and practically a perpetual guaranty, offered in good faith as such. Their neglect and rejection of it shows that it was not dread

of ultimate abolition, but chagrin and a species of gambler's desperation at the present and prospective loss of political domination for which they rushed headlong into revolution.

THE PRESIDENT-ELECT.

Among the first congratulations which poured in upon Mr. Lincoln was a terse greeting from Governor Chase, dated November 7th, that admirably expressed the prevalent feeling.

"You are President-elect. I congratulate you and thank God. The great object of my wishes and labors for nineteen years is accomplished in the overthrow of the slave power. The space is now clear for the establishment of the policy of Freedom on safe and firm grounds. The lead is yours. The responsibility is vast. May God strengthen you for your great duties." *

Day after day confirmed the completeness of the Republican victory, and two weeks after election the city of Springfield was in all the blaze and glory of a great celebration to signalize the result. Projected merely as a local jubilee, it called to the city crowds of rejoicing strangers. Though he had not said a public word during the campaign, Mr. Lincoln could not on this occasion refuse the sound of his voice to the huge torch-light procession, and the crowds of his neighbors and friends whose shouts called him to the door of his modest home. It was not the voice of partisan exultation, however, but of patriotic liberality.

"Friends and fellow-citizens," said he, "please excuse me on this occasion from making a speech. I thank you in common with all those who have thought fit by their votes to indorse the Republican cause. I rejoice with you in the success which has thus far attended that cause. Yet in all our rejoicings, let us neither express nor cherish any hard feelings toward any citizen who by his vote has differed with us. Let us at all times remember that all American citizens are brothers of a common country, and should dwell together in the bonds of fraternal feeling."

We will perceive hereafter how in this simple utterance of his opening presidential career he struck the keynote of blended firmness and charity, which was to become the characteristic of his Administration.

For some months Springfield now became the Mecca of American politics. Transient travelers and casual visitors tarried for a few hours to shake hands with the newly chosen chief; correspondents of leading newspapers established temporary headquarters from which to send their readers pen-pictures of his personal appearance, his daily habits, his home and public surroundings, and to catch the flying and often contradictory rumors of his probable intentions. Artists came to paint his portrait, ambitious politicians to note new party currents, and veteran statesmen to urge the adoption of favorite theories or the advancement of faithful adherents.

To all outside appearance Lincoln remained unchanged. In the unpretending two-story frame house which constituted his home, his daily routine continued as before, except that his door was oftener opened to welcome the curious visitor or to shelter the confidential discussion of ominous occurrences in national affairs. His daily public occupation was still to proceed to the governor's office in the State-house, to receive the cordial and entirely unceremonious greetings of high or low,— whosoever chose to enter at the open door,— and in the interim to keep himself informed, by means of the daily-increasing budget of letters and newspapers, of the events of the country at large, and to give directions to his private secretary as to what replies should be made to important communications. Beyond the arrival of distinguished visitors, there was in all this no sign of elevation or rulership; he was still the same kind neighbor and genial companion, who, whether on the street, in his office, or at his fireside, had for every one he met the same familiar nod or smile or cheering word,— the same bearing which for a quarter of a century had made his name a household synonym of manly affection, virtue, and honor.

Under this quiet exterior and commonplace routine he was, however, already undergoing most anxious and harassing labors. Day by day the horizon of politics gathered gloom,— there were signs of disunion in the South, of discord in Congress, of weakness in Mr. Buchanan's administration. The theory of secession became the theme of every newspaper and the staple question of his daily visitors. Even upon theories Lincoln maintained a prudent reserve. Nevertheless his qualified comments to friends were prompt and clear. "My own impression is," said he (November 15th), "leaving myself room to modify the opinion if upon a further investigation I should see fit to do so, that this Government possesses both the authority and the power to maintain its own integrity. That, however, is not the ugly point of this matter. The ugly point is the necessity of keeping the Government together by force, as ours should be a government of fraternity." Later (December 13th) he formulated his opinion a little more in detail. "The very existence," said he, "of a general and national government implies the legal power, right, and duty of maintaining its own integrity. This, if not expressed, is at least implied in the Constitution. The right of a State to secede is not an open or debatable question. It was fully discussed in Jackson's

* Chase to Lincoln, Nov. 17th, 1860. Warden, "Life of Chase," p. 364.

time, and denied not only by him, but by the vote of Congress. It is the duty of a President to execute the laws and maintain the existing Government. He cannot entertain any proposition for dissolution or dismemberment. He was not elected for any such purpose. As a matter of theoretical speculation it is probably true, that if the people, with whom the whole question rests, should become tired of the present government, they may change it in the manner prescribed by the Constitution."*

The secrets of the incipient rebellion, and the treachery and conspiracy of a portion of Mr. Buchanan's Cabinet, which have been already so fully laid bare from data only since become accessible, neither Mr. Lincoln nor any one save the actors themselves had then any means of knowing. But in addition to other current sources of information the confidential letters of Captain Abner Doubleday, second in command at Fort Moultrie, written to the captain's brother in New York, were, so long as mail communication remained, forwarded to the President-elect, giving him an inside view of matters at that critical post.

Most important, however, in its influence, and most valuable in its possible as well as actual consequences, were the correspondence and unity of patriotic confidence which established themselves at an early day between Mr. Lincoln and General Scott. The general was evidently somewhat proud of his famous "Views," written to President Buchanan under date of October 29th, 1860, as a political suggestion. He transmitted a copy of the same to the President-elect, as he had done to many other gentlemen of prominence. A brief acknowledgment was written in reply (November 9th):

"Mr. Lincoln tenders his sincere thanks to General Scott for the copy of his 'views, etc.,' which is received; and especially for this renewed manifestation of his patriotic purposes as a citizen, connected as it is with his high official position and most distinguished character as a military captain."†

The delicate compliment and dignified reserve made their impression on the old hero. Called to Washington about the middle of December, and smarting under the neglect of Secretary Floyd and the discouraging indifference of President Buchanan, his hopes turned toward the elect of the people at Springfield.

It was at this juncture (December 17th) that a personal and political friend of long standing called upon the general, and in a confidential but frank interview learned from his own lips the alarming dangers of the Government,—the neglect of the Administration to send reënforcements, the defenseless situation of Fort Moultrie, and that Sumter, the key of Charleston Harbor, lay at the mercy of the mob.

"None of his suggestions or recommendations have been acted upon, and of course he is powerless to do anything further, but his heart is sound and true. 'I wish to God,' said he, 'that Mr. Lincoln was in office.' He continued, 'I do not know him, but I believe him a true, honest, and conservative man.' Then he asked earnestly, 'Mr. Washburne, is he a *firm* man?' I answered that I had known you long and well and that you would discharge your duty, and your whole duty, in the sight of the furnace seven times heated. He then said resolutely and hopefully, 'All is not lost.'"‡

In response to this patriotic expression of the general, the return mail carried back the following letter from Lincoln to Washburne:

"SPRINGFIELD, ILL., Dec. 21st, 1860.

"HON. E. B. WASHBURNE.

"MY DEAR SIR: Last night I received your letter giving an account of your interview with General Scott, and for which I thank you. Please present my respects to the general, and tell him, confidentially, I shall be obliged to him to be as well prepared as he can to either *hold* or *retake* the forts, as the case may require, at and after the inauguration.

"Yours as ever, A. LINCOLN."‖

A little later Mr. Lincoln again sent messages of esteem and confidence to the general by Senators Cameron and Baker, who made visits to Springfield.

"I have seen General Scott," writes Cameron in reply (January 3d), "who bids me say he will be glad to act under your orders in all ways to preserve the Union. He says Mr. Buchanan at last has called on him to see that order shall be preserved at the inauguration, in this District; that for this purpose he has ordered here two companies of flying artillery, and that he will organize the militia and have himself sworn in as a constable. The old warrior is roused, and he will be equal to the occasion."§

This statement was repeated in an autograph note from the general himself on the following day:

"Lieutenant-General Scott is highly gratified with the favorable opinion entertained of him by the President-elect as he learns through Senators Baker and Cameron, also personal friends of General S., who is happy to reciprocate his highest respect and esteem. The President-elect may rely with confidence on General S.'s utmost exertions in the service of his country (the Union) both before and after the approaching inauguration."

The general then mentions in detail the measures just taken, under the reorganized Cabinet and the accession of Mr. Holt, to countermand the shipment of the Pittsburg guns, to send reënforcements to Fort Jefferson, and to secure the safety of Washington for the presidential count and the approaching inauguration.¶

"Permit me," wrote Mr. Lincoln in reply, January 11th, "to renew to you the assurance of my high

appreciation of the many past services you have rendered the Union, and my deep gratification at this evidence of your present active exertions to maintain the integrity and honor of the nation." *

The President-elect was further gratified to receive about the same time from the veteran General Wool a letter of noble and uncompromising loyalty.

"Many thanks," he wrote in reply, January 14th, "for your patriotic and generous letter of the 11th instant. As to how far the military force of the Government may become necessary to the preservation of the Union, and more particularly how that force can best be directed to the object, I must chiefly rely upon General Scott and yourself. It affords me the profoundest satisfaction to know, that with both of you judgment and feeling go heartily with your sense of professional and official duty to the work." †

Meanwhile trusty friends in Washington, both in and out of Congress, had kept Lincoln informed by letter of public events occurring there, so far as they were permitted to come to the knowledge of Republicans: how the Cabinet divided, how the message was scouted, the bold utterances of treason, the growing apprehensions of the public. But general opinion was still in a hopeful mood.

"Mr. Mann," wrote one, "who stated that he knew you personally, requested me to say that he had seen the Union dissolved twice — once when Southern members of Congress refused for three days to occupy their seats — and that it all ended in smoke. He did not appear the least alarmed about the secession movement, but others, particularly Thurlow Weed and Horace Greeley, expressed great anxiety." ‡

These were influential names, and it may be well to cite their own words. "I am anticipating troubles," wrote Mr. Weed, December 2d, "not generally apprehended by our friends. I want the North to be sure she is right and then to go ahead." || Some days later he wrote further:

"In consultation yesterday with several friends, it was thought best to invite the governors of several States to meet in this city on Thursday of next week, so that, if possible, there should be harmony of views and action between them. It occurred to me that you should be apprised of this movement. Of course it is to be quiet and confidential. I have been acting without knowledge of your views, upon vital questions. But I find it safe to trust the head and heart when both are under the guidance of right motives. I do not want you to be saddled with the responsibilities of the Government before you take the helm. On the question of preserving the Union, I am unwilling to see a *united* South and a *divided* North. Nor is such an alternative necessary. With wisdom and prudence we can unite the North in upholding the supremacy of the Constitution and Laws, and thus united, your Administration will have its foundation upon a rock. . . ." §

To this Mr. Lincoln replied as follows:

"SPRINGFIELD, ILL., December 17th, 1860.

"MY DEAR SIR: Yours of the 11th was received two days ago. Should the convocation of governors of which you speak seem desirous to know my views on the present aspect of things, tell them you judge from my speeches that I will be inflexible on the territorial question; that I probably think either the Missouri line extended, or Douglas's and Eli Thayer's popular sovereignty, would lose us everything we gain by the election; that filibustering for all south of us, and making slave-States of it would follow, in spite of us, in either case; also that I probably think all opposition, real and apparent, to the fugitive-slave clause of the Constitution ought to be withdrawn.

"I believe you can pretend to find but little, if anything, in my speeches, about secession. But my opinion is, that no State can in any way lawfully get out of the Union without the consent of the others; and that it is the duty of the President and other government functionaries to run the machine as it is.

"Truly yours, A. LINCOLN." ¶

Mr. Greeley not only had similar fears, but, what was much worse, by his editorials in the "Tribune" encouraged the South to hope for peaceable disunion. He wrote (November 30th):

"Webster and Marshall and Story have reasoned well; the Federal flag represents a government, not a mere league; we are in many respects one nation from the St. John to the Rio Grande; but the genius of our institutions is essentially Republican and averse to the employment of military force to fasten one section of our Confederacy to the other. If eight States, having five millions of people, choose to separate from us, they cannot be permanently withheld from so doing by Federal cannon." **

"There is a pretty general belief here that the cotton-States will go out of the Union," wrote a correspondent from Washington. "One South Carolina member is sorry for the condition of things in his State — is at heart opposed to disunion; but I will not mention his name lest it should by some means get into the newspapers. Orr was forced into the secession movement against his will. This I have from good authority, and yet the statement may be a mistake. It is hard to get at the exact truth." ††

From another Mr. Lincoln received information as to the course of his party friends: "A good feeling prevails among Republican senators. The impression with all, unless there be one exception, is, that Republicans have no concessions to make or compromises to offer, and that it is impolitic even to discuss making them. . . . I was a little surprised that the House voted to raise a committee on the state of the Union. . . . Inactivity and a kind spirit is, it seems to me, all that is left for us to do, till the 4th of March." ‡‡

HON. E. B. WASHBURNE. (FROM A PHOTOGRAPH BY BRADY.)

"I have never in my life," wrote Mr. Corwin, chairman of the Committee of Thirty-three (December 10th), "seen my country in such a dangerous position. I look upon it with great alarm, but I am resolved not to be paralyzed by dismay. Our safety can only be insured by looking the danger full in the face and acting with calm dignity in such way as [that] if possible we may ride out the storm."*

These few extracts out of a multitude must suffice to indicate the current and character of the reports which reached Mr. Lincoln from various quarters. The hopes of the more sanguine were, unfortunately, not realized. The timid grew more despondent, the traitors bolder, and the crisis almost became a panic. Business men and capitalists of the Eastern States were beginning to exert a pressure for concessions to avert civil war, under which stanch Republicans were on the point of giving way. The border States, through their presses and their public men, implored a compromise, but the entreaty was uniformly directed to the Republicans to make concessions, and more often to justify than to denounce disunion. Some of the conspirators themselves adroitly encouraged this effort to demoralize the North by a pretense of contrition. "South Carolina, I suppose," wrote a friend to Mr. Lincoln, "will try on her secession project. Perhaps some of the cotton-States will follow. Their number will not be large. Indeed I know that some of the heretofore most rabid secessionists now tremble before the brink on which they stand. They would retreat without trying the experiment if they had not kindled a fire at home which is beyond their control. This, in substance, Jefferson Davis stated to Fitch no longer ago than yesterday."† The profession did not well accord with the signing of the conspirator's secession address by that senator only three days before. "I listened yesterday to Mr. Crittenden's speech," wrote another friend, "in support of his proposed compromise. In my opinion he is one of the most patriotic and at the same time mischievous of the Southern senators. . . . After Mr. Crittenden, Mr. Johnson of Tennessee took the floor. . . . His simple declaration that the supposed wrongs must be settled inside of the Union is worth a hundred-fold more than all the patriotic wailing of the antediluvian Crittendens."‡

There were plenty of correspondents to announce and describe the present and impending dangers, but none to furnish a solution of the national difficulty. There was no end of wild suggestion, and that too from prominent men ordinarily capable of giving counsel. One, as we have seen, was for accepting disunion. Another thought a letter or proclamation from the President-elect would still the storm. A third wanted him to drop down into Washington "with a carpet-sack." A fourth advised him to march to the capital with a hundred thousand "wide-awakes." Still a fifth proposed he should create a diversion by the purchase of Cuba.

It was a providential blessing that in such a crisis the President-elect was a man of unfailing common sense and complete self-control. He watched the rising clouds of insurrection; he noted the anxious warnings of his friends. He was neither buoyed up by reckless hopes, nor cast down by exaggerated fears. He bided his time, grasped at no rash counsels or experiments, uttered neither premature cry of alarm nor boast of overweening confidence. He resisted pressing solicitations to change his position, to explain his intention, to offer, either for himself or the great national majority which chose him, any apology for his or their high prerogative exercised in his election.

It must not, however, be inferred from the foregoing that Mr. Lincoln shut himself up in total silence. To discreet friends, as well as to honorable opponents, under the seal of con-

*Corwin to Lincoln, Dec. 10th, 1860. Unpublished MS.
†Fogg to Lincoln, Dec. 17th, 1860. Unpublished MS.
‡Williams to Lincoln, Dec. 19th, 1860. Unpublished MS.

fidence, he was always free to repeat his well-formed convictions, and even in some degree to foreshadow his probable course. It is gratifying to note in this connection, especially since it evinces his acute judgment of human nature, that in few instances was such confidence violated during the whole period of his candidacy and official life. By unnoticed beginnings he easily and naturally assumed the leadership of his party in the personal interviews and private correspondence following the election, called out by the manifestations of Southern discontent. He was never obtrusive nor dictatorial; but in a suggestion to one, a hint to another, a friendly explanation or admonition to a third, he soon gave direction, unity, and confidence to his adherents.

Mr. Bryant, for instance, was strongly opposed to Mr. Seward's going into the Cabinet. Lincoln wrote him a few lines in explanation, which brought back the following qualified acquiescence:

"I have this moment received your note. Nothing could be more fair or more satisfactory than the principle you lay down in regard to the formation of your council of official advisers. I shall always be convinced that whatever selection you make it will be made conscientiously." *

Mr. Greeley was, as we have seen, indulging in damaging vagaries about peaceable secession, and to him Lincoln sent a word of friendly caution. Greeley wrote a statement of his views in reply, but substantially yielded the point. He said a State could no more secede at pleasure from the Union than a stave could secede from a cask. That if eight or ten contiguous States sought to leave, he should say, "There 's the door — go!" But,

"if the seceding State or States go to fighting and defying the laws, the Union being yet undissolved save by their own say-so, I guess they will have to be made to behave themselves. . . . I fear nothing, care for nothing, but another disgraceful back-down of the free States. That is the only real danger. Let the Union slide — it may be reconstructed; let Presidents be assassinated, we can elect more; let the Republicans be defeated and crushed, we shall rise again. But another nasty compromise, whereby everything is conceded and nothing secured, will so thoroughly disgrace and humiliate us that we can never again raise our heads, and this country becomes a second edition of the Barbary States, as they were sixty years ago. 'Take any form but that.'" †

† Greeley to Lincoln, Dec. 22d, 1860. Unpublished MS.

‡ Lincoln to Kellogg, Dec. 11th, 1860. Unpublished MS.

It would have been well had his advice been followed. Under the pressure of the disunionists and of the border-State men, Kellogg's firmness gave way, and he announced his willingness to recede from the Republican declarations. The change effected nothing but the sacrifice of his own consistency. He lost his friends and gained no followers. His concession was spurned by the disunionists; and being a large and corpulent man, the wits of the day made themselves merry by dubbing his apostacy the "Mammoth Cave."

THURLOW WEED. (FROM A PHOTOGRAPH BY BRADY.)

On this point Lincoln's note had reassured his shrinking faith. The "Tribune" announced that Mr. Lincoln had no thought of concessions, and thenceforward that powerful journal took a more healthy and hopeful tone.

Hon. William Kellogg, the Illinois representative on the Committee of Thirty-three, wrote to him for instructions as to the course he should pursue. Under date of December 11th Mr. Lincoln replied to him as follows:

"Entertain no proposition for a compromise in regard to the extension of slavery. The instant you do they have us under again: all our labor is lost, and sooner or later must be done over. Douglas is sure to be again trying to bring in his 'Popular Sovereignty.' Have none of it. The tug has to come, and better now than later. You know I think the fugitive-slave clause of the Constitution ought to be enforced — to put it in its mildest form, ought not to be resisted." ‡

Some weeks later Kellogg visited Lincoln to urge his views of compromise on the President-elect. As a result of that visit Lincoln wrote the following letter to Seward on February 1st:

"On the 21st ult. Hon. W. Kellogg, a Republican member of Congress of this State, whom you probably know, was here in a good deal of anxiety for our friends to go in the way of compromise on the now vexed question. While he was with me I received a dispatch from Senator Trumbull, at Washington, al-

luding to the same question and telling me to await letters. I therefore told Mr. Kellogg that when I should receive these letters, posting me as to the state of affairs at Washington, I would write you, requesting you to let him see my letter. To my surprise, when the letters mentioned by Judge Trumbull came they made no allusion to the 'vexed question.' This baffled me so much that I was near not writing you at all, in compliance with what I had said to Judge Kellogg. I say now, however, as I have all the while said, that on the territorial question — that is, the question of extending slavery under the national auspices — I am inflexible. I am for no compromise which assists or permits the extension of the institution on soil owned by the nation. And any trick by which the nation is to acquire territory, and then allow some local authority to spread slavery, is as obnoxious as any other. I take it that to effect some such result as this, and to put us again on the high road to a slave empire, is the object of all these proposed compromises. I am against it. As to fugitive slaves, District of Columbia, slave-trade among the slave-States, and whatever springs of necessity from the fact that the institution is amongst us, I care but little, so that what is done be comely and not altogether outrageous. Nor do I care about New Mexico, if further extension were hedged against." *

We shall describe somewhat in detail the formation of Lincoln's Cabinet, and will only mention here that on December 13th he began that work by tendering the post of Secretary of State to Mr. Seward, which offer was accepted December 28th. The correspondence between these eminent men affords an interesting view of the beginnings of the new administration.

"Mr. Weed finding it not inconvenient to go West," wrote Seward, December 16th, "I have had some conversation with him concerning the condition and the prospect of public affairs, and he will be able to inform you of my present unsettled view of the subject upon which you so kindly wrote me a few days ago. I shall remain at home until his return, and shall then in further conference with him have the advantage of a knowledge of the effect of public events certain to occur this week." †

Weed went to Springfield and had several interviews with the President-elect. There is no record of these conferences; but it is likely that Mr. Weed urged on those occasions, as he did on all others, the utmost forbearance, conciliation, and concession to the South. To employ his favorite formula, he wanted Republicans "to meet secession as patriots and not as partisans." The sentiment and the alliteration were both pleasing; but Lincoln, trained in almost life-long debate with Douglas, the most subtle juggler in words ever known to American politics, was not a man to deal in vague phrases. He told Mr. Weed just what he would concede and just how far he would conciliate — drew him a sharp and definite line to show where partisanship ends and where patriotism begins. When Mr. Weed returned he bore with him the written statement of Lincoln; what he believed, and was determined to assert and maintain on pending and probable issues.

Mr. Seward's letter of December 26th, to Lincoln, gives us the sequel of this visit.

"I had only the opportunity for conferring with Mr. Weed which was afforded by our journeying together on the railroad from Syracuse to Albany.

"He gave me verbally the substance of the suggestion you prepared for the consideration of the Republican members, but not the written proposition. This morning I received the latter from him, and also information for the first time of your expectation that I would write to you concerning the temper of parties and the public here.

"I met on Monday my Republican associates on the Committee of Thirteen, and afterwards the whole committee. With the unanimous consent of our section I offered three propositions which seemed to me to cover the ground of the suggestion made by you through Mr. Weed as I understood it.

"*First.* That the Constitution should never be altered so as to authorize Congress to abolish or interfere with slavery in the States. This was accepted.

"*Second.* That the fugitive-slave law should be amended by granting a jury trial to the fugitive. This in opposition to our votes was amended so as to give the jury in the State from which the fugitive fled, and so amended was voted down by our own votes. The committee had already agreed to Mr. Crittenden's amendment concerning the fees of the commissioner, making them the same when the fugitive is returned to slavery as when he is discharged.

"Our *Third* resolution was that Congress recommend to all the States to revise their legislation concerning persons recently resident in other States and to repeal all such laws which contravene the Constitution of the United States, or any law of Congress passed in pursuance thereof. This was rejected by the pro-slavery vote of the committee.

"To-day we have had another meeting. I offered, with the concurrence of my political associates, a fourth proposition, viz.: That Congress should pass a law to punish invasions of our States and conspiracies to effect such invasions, but the latter only in the State and district where the acts of such complicity were committed. This by the votes of our opponents was amended so as practically to carry out Mr. Douglas's suggestion of last winter for the revival of the old Sedition law of John Adams's time, and then was rejected by our own votes.

"This evening the Republican members of the committee with Judge Trumbull and Mr. Fessenden met at my house to consider your written suggestion and determine whether it shall be offered. While we think the ground has been already covered, we find that in the form you give it, it would divide our friends not only in the Committee but in Congress; a portion being unwilling to give up their old opinion that the duty of executing the constitutional provisions concerning fugitives from service belongs to the States, and not at all to Congress. But we shall confer and act as wisely as we can.

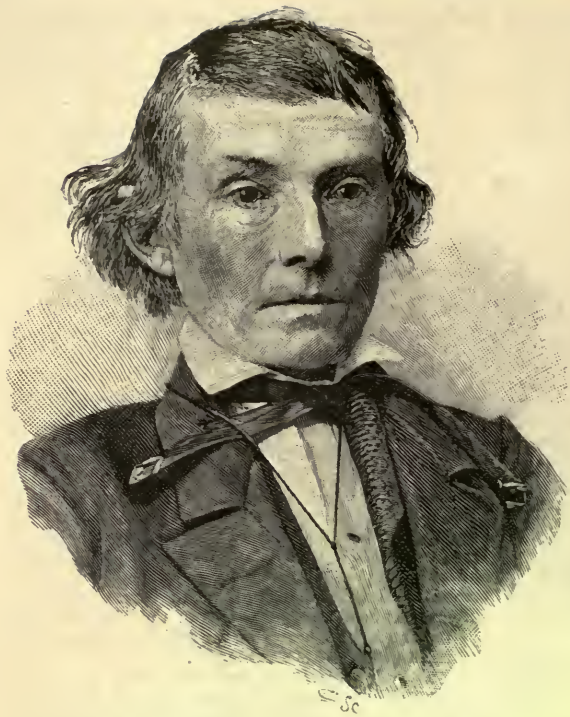
"Thus far I have reported only our action on the subject of your suggestion. I proceed now to tell you what I think of the temper of the parties and of the public here.

"South Carolina has already taken her attitude of defiance. Georgia, Alabama, Mississippi, and Louisiana are pushed on towards the same attitude. I think that they could not be arrested even if we should offer all you suggest and with it the restoration of the Missouri Compromise line. But persons acting for those States intimate that they might be so arrested because they think that the Republicans are not going to concede the restoration of that line.

"The action of the border States is uncertain. Sym-

* Lincoln to Seward, Feb. 1st, 1860. Unpublished MS.

† Seward to Lincoln, Dec. 16th, 1860. Unpublished MS.



ALEXANDER H. STEPHENS. (FROM A PHOTOGRAPH BY BRADY.)

pathy there is strong with the cotton-States, while prudence and patriotism dictate adhesion to the Union. Nothing could *certainly* restrain them but the adoption of Mr. Crittenden's compromise, and I do not see the slightest indication of its adoption on the Republican side of Congress. The members stand nearly or quite as firm against it as the country is. Under these circumstances, time and accident, it seems to me, must determine the course of the border States.

"Probably all the debate and conferences we have hitherto had will sink out of the public mind within a week or two, when the Republican members shall have refused to surrender at discretion to the State of South Carolina. New and exciting subjects will enter into the agitation and control results.

"Thus I have said all that I am able to say of the temper of parties and of the public. I add, very respectfully, my own opinion on the probable future.

"The United States of America, their Constitution, their capital, their organization in all its departments, and with all its military and naval forces, will stand and pass without resistance into your hands. There will be several, perhaps all, of the slave-States standing in a contumacious attitude on the 4th of March. Sedition will be growing weaker and loyalty stronger every day from the acts of secession as they occur." *

But now the crisis in the affairs of the Government was approaching. It is already foreshadowed in Mr. Seward's letter of December 28th. "There is a feverish excitement here," writes he, "which awakens all kinds of apprehensions of popular disturbance and disorders connected with your assumption of the government." And he suggests that Mr. Lincoln should prepare to come to Washington a week earlier than is usual on such occasions; prefacing the advice, however, with the statement, "I do not entertain these apprehensions myself." But by the day following he becomes convinced of the danger.

"At length I have gotten a position," writes he, December 29th, "in which I can see what is going on in the councils of the President. It pains me to learn that things there are even worse than is understood. The President is debating day and night on the question whether he shall not recall Major Anderson and surrender Fort Sumter and go on arming the South. A plot is forming to seize the capital on or before the 4th of March, and this too has its accomplices in the public councils. I could tell you more particularly than I dare write, but you must not imagine that I am giving you suspicions and rumors. Believe me that I know what I write. In point of fact, the responsibilities of your administration must begin before the time arrives." †

Mr. Seward then advises that the President should arrive earlier, that he appoint his Secretaries of War, Navy, and Treasury, and that they come to Washington as soon as possible.

The events of a day or two, however, dissipated the apparent magnitude of the crisis. Buchanan's council broke up, Floyd retired in disgrace, the Cabinet was reorganized; Holt was made Secretary of War, and the immediate plots of the conspirators were exposed and for a season baffled.

STEPHENS'S SPEECH AND CORRESPONDENCE WITH LINCOLN.

FOLLOWING the lead of South Carolina, the governor of Georgia began the secession movement in that State almost immediately after the presidential election, by such public declarations and acts as fell within the scope of his personal influence and official authority. Georgia had, however, given a heavy vote for Douglas, and her people were imbued with a strong feeling of conditional unionism. An opposition to hasty secession at once developed itself of so formidable a character that all the influence and cunning of the secessionists were needed to push their movement to success. The ablest men in the State hurried to Milledgeville and met in a sort of battle-royal of speech-making and wire-pulling. The Legislature was the target, and its action or non-action upon military appropriations and a convention bill the result to be affected. Senator Toombs and others made speeches to promote

*Seward to Lincoln, Dec. 26, 1860. Unpublished MS.

†Seward to Lincoln, Dec. 29, 1860. Unpublished MS.

secession; and in reply to these Alexander H. Stephens addressed the Legislature by special invitation on the 14th of November. It was the greatest effort of his life, and takes rank as the ablest speech made by a Southerner in opposition to disunion. The occasion appears to have been one of great excitement. Toombs sat on the platform beside the speaker, and interlarded the address with his cynical interrogatories and comments, which Stephens met in every instance with successful repartee.

The speaker declared that to secede in consequence of Lincoln's election was to break the Constitution, and show bad faith. "We went into the election with this people," said he. "The result was different from what we wished; but the election has been constitutionally held." Mr. Lincoln could do the South no harm against an adverse House and Senate. This government, with all its defects, came nearer the object of all good governments than any other on the face of the earth. One by one he refuted the charges and complaints which had been advanced by Toombs, and warned his hearers against the perils of sudden disunion. Liberty once lost might never be restored. Georgia had grown great, rich, and intelligent in the Union.

"I look upon this country, with our institutions," continued he, "as the Eden of the world, the Paradise of the Universe. It may be that out of it we may become greater and more prosperous; but I am candid and sincere in telling you that I fear if we yield to passion, and without sufficient cause shall take that step, instead of becoming greater, or more peaceful, prosperous, and happy — instead of becoming gods we will become demons, and at no distant day commence cutting one another's throats."

The speech created an immense sensation throughout the South, and but for an artful trick of the secessionists would have arrested and changed the immediate tide of secession in Georgia. Seeing that the underlying Union feeling was about to endanger their scheme of revolt, through a defection or hesitation on the part of the Empire State of the South, they devised an adroit plea to appropriate its whole force to further their own plans. They persistently urged that "we can make better terms out of the Union than in it." Mr. Stephens himself has explained the misrepresentation and its result. "Two-thirds at least of those who voted for the ordinance of secession did so, I have but little doubt, with a view to a more certain re-formation of the Union."*

To understand this statement more thoroughly, it must be added that Mr. Stephens's great Union speech was also enthusiastically hailed by the North as a sign of firm allegiance. But that part of the country totally misapprehended its spirit and object. With all his eloquently asserted devotion to the Union, he was a pro-slavery man of the most ultra type. He defended the institution upon the "higher-law" doctrine. "If slavery," said he, "as it exists with us is not best for the African, constituted and made as he is, if it does not best promote his welfare and happiness, socially, morally, and politically, as well as that of his master, it ought to be abolished."† He believed slavery should be protected in the Territories by Federal law. He did not go quite to the extent of advocating a revival of the African slave-trade; but went so far as to suggest that without such a reopening the South could not maintain her coveted balance of power. "If the policy of this country," said he, "settled in its early history, of prohibiting further importations or immigrations of this class of population, is to be adhered to, the race of competition between us and our brethren of the North in the colonization of new States, which heretofore has been so well maintained by us, will soon have to be abandoned."‡

So again, while he asserted that the South had lost nothing, but gained much through the slavery agitation, and while he maintained that she was menaced by no danger, he had been for nearly ten years a conditional disunionist. During the agitation of 1850, a convention of Georgia passed certain resolutions, known as the "Georgia platform." The resolutions declared the acceptance of the Compromise of 1850 as a "permanent adjustment"; and then went on to threaten disunion in case that adjustment were violated.§ This "Georgia platform" was Mr. Stephens's rallying-ground and stronghold; latterly he had extended it by including personal liberty bills as a cause of disunion. He loved the Union, but he held the Union secondary to the Georgia platform; and he opposed secession because he thought it a departure from this platform. "Not only a departure from the Georgia platform," said

*Stephens, "War Between the States," Vol. II., p. 321.

†Stephens, Farewell Speech, Augusta, Ga., July 2d, 1859. Cleveland, "Life of Stephens," p. 650.

‡Ibid., p. 647.

§"*Fourth.* That the State of Georgia, in the judgment of this convention, will, and ought to resist, even (as a last resort) to a disruption of every tie which binds her to the Union, any future act of Congress abolishing slavery in the District of Columbia, without the consent and petition of the slave-holders thereof, or any act abolishing slavery in places within the slave-holding States, purchased by the United States for the erection of forts, magazines, arsenals, dock-yards, navy-yards, and other like purposes; or in any act suppressing the slave-trade between slave-holding States; or in any refusal to admit as a State any territory applying, because of the existence of slavery therein; or in any act prohibiting the introduction of slaves into the territories of Utah and New Mexico; or in any act repealing or materially modifying the laws now in force for the recovery of fugitive slaves."— [Stephens, "War Between the States," Vol. II., p. 676.]

he, "and from the long-established principles of the national Democratic party, but an entire change of position of the entire South, of all parties, not of all individuals, in relation to the power and jurisdiction of the Federal Government over the subject of African slavery."* Still further: when the disruption of the Charleston convention paralyzed the Democratic party, Mr. Stephens lost heart. He thought the times out of joint. He saw no further prospect of doing good. The popular fever must run its course. If disunion came he avowed he would yield to the misfortune. His destiny, he said, lay with Georgia and the South.† It will appear from this that if Mr. Stephens was not a flexible reasoner, he was a most unsafe political mentor. Yet, out of this lethargy of conviction and will came the splendid outburst of patriotic eloquence and Union argument of his Milledgeville speech; only to be marred, however, at its close by renewed adhesion to the Georgia platform, and a new subserviency to the "will of Georgia."

The newspapers brought the report of Mr. Stephens's speech to Springfield, the home of Mr. Lincoln, as well as to all other Northern cities, and the President-elect read its stirring periods with something of the general hope that a gleam of light was shining upon dark places. Like other men in the North, he had no means of knowing the eccentricities of Mr. Stephens's principles and policy, and therefore probably shared the general error of overvaluing his expressions of attachment to the Union. He had personally known him as fellow-congressman and a fellow-whig in 1847–9; they had become co-laborers in their advocacy of the nomination and election of General Taylor to the presidency, and through these associations contracted a warm social and political friendship.

It was, therefore, most natural that, upon reading his reported speech Mr. Lincoln addressed a note of a few lines to Mr. Stephens, asking him for a revised copy; and that this note led to a short but most interesting correspondence.

Mr. Stephens replied courteously, saying that his speech had not been revised by him; that while the newspaper report contained several verbal inaccuracies, its main points were sufficiently clear for all practical purposes. The note closed with the following sentence: "The country is certainly in great peril, and no man ever had heavier or greater responsibilities resting upon him than you have in the present momentous crisis." The phrase seemed to open the way to a confidential interchange of thought; and a few days afterwards Mr. Lincoln wrote the following frank letter:

"*For your own eye only.*

"SPRINGFIELD, ILL., Dec. 22d, 1860.

"HON. A. H. STEPHENS.

"MY DEAR SIR: Your obliging answer to my short note is just received, and for which please accept my thanks. I fully appreciate the present peril the country is in, and the weight of responsibility on me. Do the people of the South really entertain fears that a Republican administration would, directly or indirectly, interfere with the slaves, or with them about the slaves? If they do, I wish to answer you, as once a friend, and still, I hope, not an enemy, that there is no cause for such fears. The South would be in no more danger in this respect than it was in the time of Washington. I suppose, however, this does not meet the case. You think slavery is right and ought to be extended, while we think it is wrong and ought to be restricted. That, I suppose, is the rub. It certainly is the only substantial difference between us. Yours very truly,

"A. LINCOLN."‡

With equal frankness Mr. Stephens, under date of December 30th, wrote back a long reply, which is conspicuous for its candid admissions. Premising that though differing from him politically he was not Mr. Lincoln's enemy, Mr. Stephens proceeds as follows:

"I will also add that in my judgment the people of the South do not entertain any fears that a Republican administration, or at least the one about to be inaugurated, would attempt to interfere directly and immediately with slavery in the States. Their apprehension and disquietude do not spring from that source. They do not arise from the fact of the known antislavery opinions of the President-elect. Washington, Jefferson, and other Presidents are generally admitted to have been antislavery in sentiment. But in those days antislavery did not enter as an element into party organizations. . . . But now this subject, which is confessedly on all sides outside of the constitutional action of the Government so far as the States are concerned, is made the central idea in the platform of principles announced by the triumphant party. The leading object seems to be simply, and wantonly, if you please, to put the institutions of nearly half the States under the ban of public opinion and national condemnation. This, upon general principles, is quite enough of itself to arouse a spirit not only of general indignation, but of revolt on the part of the proscribed. . . . We at the South do think African slavery, as it exists with us, both morally and politically right. This opinion is formed upon the inferiority of the black race; you, however, and perhaps a majority of the North, think it wrong. Admit the difference of opinion. The same difference of opinion existed to a more general extent amongst those who formed the Constitution when it was made and adopted. The changes have been mainly to our side. As parties were not formed on this difference of opinion then, why should they be now? The same difference would, of course, exist in the supposed case of religion. When parties, or combinations of men, therefore, so form themselves, must it not be assumed to arise not from reason or any sense of justice, but from fanaticism? The motive can spring from no other source, and when men come under the influence of fanaticism, there is no telling where their impulses or passions may drive them. This is what creates our

* Stephens, Augusta Speech, Sept. 1st, 1860. Cleveland, p. 692.

† Stephens to Landrum, July 1st, 1860. Cleveland, p. 672.

‡ Stephens, "War Between the States," Vol. II., p. 266.

discontent and apprehension. . . . Conciliation and harmony, in my judgment, can never be established by force. Nor can the Union, under the Constitution, be maintained by force. The Union was formed by the consent of Independent Sovereign States. Ultimate sovereignty still resides with them separately, which can be resumed, and will be, if their safety, tranquillity, and security in their judgment require it. Under our system, as I view it, there is no rightful power in the general government to coerce a State in case any one of them should throw herself upon her reserved rights, and resume the full exercise of her sovereign powers. Force may perpetuate a Union — that depends upon the contingencies of war. But such a Union would not be the Union of the Constitution: it would be nothing short of a consolidated despotism." *

Mr. Lincoln could not, of course, enter upon a further discussion of the topics raised, and made no reply to Mr. Stephens's letter. The correspondence is noteworthy as showing how both writers agreed perfectly upon the actual and underlying cause of the political crisis,— *viz.*, that the South believed slavery to be right and ought to be extended, while the North believed it was wrong and ought to be restricted. It was a conflict of public opinion. Such conflicts have come in all times, in all nations, and under all forms of government. They have sprung from every passion of the human soul, ambition, avarice, the generous affection of kindred nations, and the deadly hatred of religious fanaticism. But, admitting the existence of such a conflict of opinion, the true and legitimate inquiry arises, Was it a proper cause of war?

History must answer this question unhesitatingly and emphatically in the negative. In ages happily passed, the anger of a king, the caprice of a mistress, or the ambition of a minister has often deluged a nation in blood. But in our day the conscience of civilization demands that the sword shall only defend the life of governments, or the life, liberty, and property of their subjects. It has ordained that written constitutions should decide claims of rulers and rights of citizens. Casuistry the most adroit could not prove the right of the free States to expel the slave-States for believing the institution of slavery to be a substantial blessing; equally absurd was the doctrine that the slave-States had a right to destroy the Union by secession because the free States thought slavery a moral, social, and political evil. Upon this question, as upon all others, public opinion was the arbiter appointed by the Constitution and laws. Upon this question the lawful and constitutional verdict had been pronounced by the election of Lincoln; and the proper duty of the South under the circumstances had been admirably stated by Mr. Stephens himself in his Milledgeville speech: "In my judgment the election of no man constitutionally chosen to that high office, is sufficient cause for any State to separate from the Union. It ought to stand by and aid still in maintaining the Constitution of the country." †

Mr. Stephens's letter utterly ignored the existence of the pro-slavery sentiment in the South, which had for six years been united and unceasing in party affiliation and action; that this party action had wrought the repeal of the Missouri Compromise in violation of plighted political faith, and generous comity between sections. Moreover that antislavery opinions had there been not only under ban of public sentiment, but had notoriously for years been visited with mob violence, and been made the subject of prohibitory penal statutes. The experiment of a sentimental union dreamed by Stephens and others had been fully tried in the compromise of 1850, and first and flagrantly violated by the South herself, under party coalition, against every appeal and protest.

QUESTIONS AND ANSWERS.

One of the vexatious duties of Lincoln was to answer the importunings of a class of sincere, intelligent, but timid men, alarmed by the signs of disunion, who besought him to make some public statement or declaration to quiet the South. Requests of this character were not confined to one party, but came from all; the more considerable numbers being from Republicans and from Southern unionists or followers of Bell and Everett. The great bulk of these letters were, of course, never answered; but occasionally one was received from a man of such standing and influence that to ignore it would not only seem ungracious, but might subject the President-elect to more serious misrepresentation than it had already been his lot to endure. Both to show a prominent phase of current politics and his manner of dealing with it, several replies of this class are laid before the reader.

Thus, for instance, he wrote, confidentially, to Mr. William S. Speer, a citizen of Tennessee, under date of October 23d:

"I appreciate your motive when you suggest the propriety of my writing for the public something disclaiming all intention to interfere with slaves or slavery in the States; but in my judgment it would do no good. I have already done this many, many times; and it is in print, and open to all who will read. Those who will not read or heed what I have already publicly said would not read or heed a repetition of it. 'If they hear not Moses and the prophets, neither will they be persuaded though one rose from the dead.'" ‡

Among the political newspapers of the West, none had for many years taken a higher rank or wielded a greater influence than the "Louisville Journal." It had in a manner been Mr. Lincoln's primer in politics in those early days

* Stephens, "War Between the States," Vol. II., pp. 267–70.

† Cleveland, p. 696.

‡ Lincoln to Speer, Oct. 23d, 1860. Unpublished MS.

when he labored through Blackstone, or even farther back when he was yet struggling with Kirkham's grammar on the shady knolls of New Salem. Compared with these rocks and pitfalls of letters, the anecdotes, the wit, the epigrammatic arguments of the "Louisville Journal" were a very garden of delight, not only to Lincoln, but to the crude yet knowledge-hungry intellects of the whole Mississippi Valley. In time the "Journal" became a great luminary, and the name of its witty editor a household word. For long years it was a beacon and watchtower of the Whig party; then the Pandora's box of the Nebraska bill was opened; and when finally in the extraordinary campaign of 1860 Lincoln read this once-favorite sheet, it was to find himself the victim of its satire and depreciation. Victory, however, is a sovereign balm for detraction; and it must have been easy for him to forgive his old friend George D. Prentice when the latter wrote him (October 26th): "There is evidently a very strong probability of your being elected to the presidency by the popular vote." Expressing the "strongest" confidence in both his "personal and political integrity," he suggests that in the event of his election he should publish a letter setting forth his conservative views and intentions, "to assure all good citizens of the South and to take from the disunionists every excuse or pretext for treason." *

To this appeal Mr. Lincoln prepared a reply, October 29th, though it was not then sent.

"Your suggestion," wrote he, "that I in a certain event shall write a letter setting forth my conservative views and intentions, is certainly a very worthy one. But would it do any good? If I were to labor a month, I could not express my conservative views and intentions more clearly and strongly than they are expressed in our platform and in my many speeches already in print and before the public. And yet even you, who do occasionally speak of me in terms of personal kindness, give no prominence to these oft-repeated expressions of conservative views and intentions, but busy yourself with appeals to all conservative men to vote for Douglas,— to vote any way which can possibly defeat me,— thus impressing your readers that you think I am the very worst man living. If what I have already said has failed to convince you, no repetition of it would convince you. The writing of your letter, now before me, gives assurance that you would publish such a letter from me as you suggest; but, till now, what reason had I to suppose the 'Louisville Journal,' even, would publish a repetition of that which is already at its command, and which it does not press upon the public attention? And now, my friend,— for such I esteem you personally,— do not misunderstand me. I have not decided that I will not do substantially what you suggest. I will not forbear from doing so merely on punctilio and pluck. If I do finally abstain, it will be because of apprehension that it would do harm. For the good men of the South — and I regard the majority of them as such — I have no objection to repeat seventy and seven times. But I have bad men also to deal with, both North and South; men who are eager for something new upon which to base new misrepresentations; men who would like to frighten me, or at least to fix upon me the character of timidity and cowardice. They would seize upon almost any letter I could write as being an 'awful coming down.' I intend keeping my eye upon these gentlemen, and to not unnecessarily put any weapons in their hands." †

This letter was withheld till after election. On the 16th of November he wrote a letter of very similar purport to Mr. N. Paschal, editor of the "Missouri Republican."

"I could say nothing which I have not already said, and which is in print, and accessible to the public. Please pardon me for suggesting that if the papers like yours, which heretofore have persistently garbled and misrepresented what I have said, will now fully and fairly place it before their readers, there can be no further misunderstanding. I beg you to believe me sincere, when I declare I do not say this in a spirit of complaint or resentment; but that I urge it as the true cure for any real uneasiness in the country, that my course may be other than conservative. The Republican newspapers now and for some time past are and have been republishing copious extracts from my many published speeches, which would at once reach the whole public if your class of papers would also publish them. I am not at liberty to shift my ground — that is out of the question. If I thought a repetition would do any good I would make it. But in my judgment it would do positive harm. The secessionists *per se*, believing they had alarmed me, would clamor all the louder." ‡

With solicitations of this nature coming in part from his political friends, Mr. Lincoln was not only as firm and decided, but more emphatic and unsparing in criticism. On November 5th, the day before the presidential election, there arrived at Springfield, and called upon the President-elect, a gentleman from New England of some prominence in political and official life, who brought and presented letters of this same tenor from a considerable number of citizens representing business, commercial, and manufacturing industries of that region. He was one of those keen, incisive talkers who went direct to the heart of his mission.

"I have called to see," he said, "if the alarms of many persons in New England engaged in commerce and manufactures cannot by some means be relieved. I am myself largely interested in manufactures. Our trade has fallen off, our workmen are idle, we get no orders from the South, and with the increasing chances of civil war, bankruptcy and ruin stare us in the face."

Something in the persistence and manner of his interlocutor, something in the tone of the letters presented, and still more in the character of the signers, quickly irritated Lincoln to a warmth of retort he seldom reached until after long provocation. He divined at once the mercenary nature of the appeal about to be tried on him, and it roused him to repel the pressure. His visitor closed by asking some

* Prentice to Lincoln, Oct. 26th, 1860. Unpublished MS.

‡ Lincoln to Paschal, Nov. 16th, 1860. Unpublished MS.

conservative promise "to reassure the men honestly alarmed."

"There are no such men," bluntly replied Lincoln. "This is the same old trick by which the South breaks down every Northern victory. Even if I were personally willing to barter away the moral principle involved in this contest for the commercial gain of a new submission to the South, I would go to Washington without the countenance of the men who supported me and were my friends before the election; I would be as powerless as a block of buckeye wood."

The man still insisted, and Lincoln continued:

"The honest men (you are talking of honest men) will look at our platform and what I have said. There they will find everything I could now say, or which they would ask me to say. All I could add would be but repetition. Having told them all these things ten times already, would they believe the eleventh declaration? Let us be practical. There are many general terms afloat, such as 'conservatism,' 'enforcement of the irrepressible conflict at the point of the bayonet,' 'hostility to the South,' etc., all of which mean nothing without definition. What then could I say to allay their fears, if they will not define what particular act or acts they fear from me or my friends?"

At this stage of the conversation his visitor, who with true military foresight had provided a reserve, handed him an additional letter numerously signed, asking if he did not there recognize names that were a power.

"Yes," retorted Lincoln sharply, glancing at the document, "I recognize them as a set of liars and knaves who signed that statement about Seward last year."

The visitor was taken aback at this familiarity with the local politics of his State, but rallied and insisted that there were also other names on the list. Lincoln now looked through the paper more carefully, his warmth meanwhile cooling down a little.

"Well," answered he, laughing, "after reading it, it is about as I expected to find it. It annoyed me to hear that gang of men called respectable. Their conduct a year ago was a disgrace to any civilized citizen."

Here his visitor suggested that the South was making armed preparations.

"The North," answered Lincoln, "does not fear invasion from the slave-States, and we of the North certainly have no desire, and never had, to invade the South. They have talked about what they intend to do in the event of a Black Republican victory, until they have convinced themselves there is really no courage left in the North."

GEORGE D. PRENTICE. (FROM A PHOTOGRAPH BY BRADY.)

"Have we backed this time?" interrupted the visitor.

"That is just what I am pressed to do now," replied Lincoln. "If I shall begin to yield to these threats, if I begin dallying with them, the men who have elected me (if I shall be elected) would give me up before my election, and the South, seeing it, would deliberately kick me out. If my friends should desire me to repeat anything I have before said, I should have no objection to do so. If they required me to say something I had not yet said, I would either do so or get out of the way. If I should be elected, the first duty to the country would be to stand by the men who elected me."*

Still, from time to time the point was pressed upon him from other influential quarters. Mr. Raymond, editor of the "New York Times," joined in urging it. Lincoln, on November 28th, answered him confidentially as follows:

"Yours of the 14th was received in due course. I have delayed so long to answer it, because my reasons for not coming before the public in any form just now had substantially appeared in your paper (the 'Times'), and hence I feared they were not deemed sufficient by you, else you would not have written me as you did. I now think we have a demonstration in favor of my view. On the 20th instant Senator Trumbull made a short speech, which I suppose you have both seen and approved. Has a single newspaper, heretofore against us, urged that speech upon its readers with a purpose to quiet public anxiety? Not one, so far as I know. On the contrary, the 'Boston Courier' and its class hold me responsible for that speech, and endeavor to inflame the North with the belief that it foreshadows an abandonment of Republican ground by the incoming administration; while the 'Washington Constitution' and its class hold the same speech up to the South as an open declaration of war against them. This is just as I expected, and just what would happen

* Nicolay, Manuscript memoranda.

with any declaration I could make. These political fiends are not half sick enough yet. Party malice, and not public good, possesses them entirely. 'They seek a sign, and no sign shall be given them.' At least such is my present feeling and purpose."*

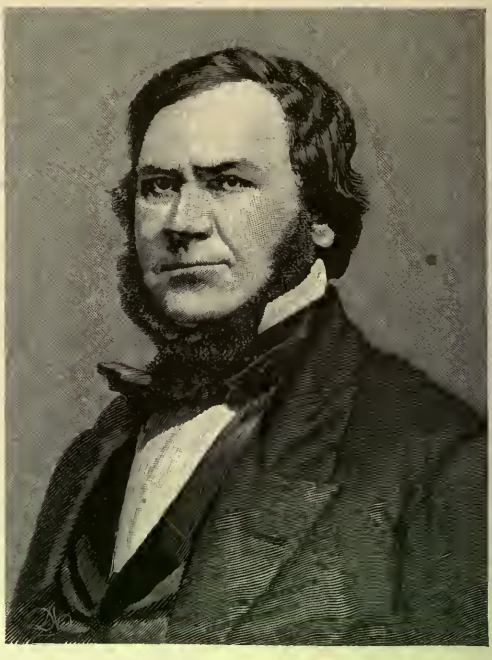
And in this purpose he remained steadfast to the end, though put to yet more trying tests. It has already been mentioned, that with the opening of Congress, and the formation of the Senate Committee of Thirteen and the House Committee of Thirty-three, certain conservative men from the border slave-States endeavored to gain control of the political situation by forming a neutral or mediating party between the disunionists and the Republicans. Their policy was an utter mistake; for, while reprobating present dismemberment, their attitude on the slavery question indicated clearly enough that, if clung to, it would inevitably drive them to the extreme plans of the cotton-States. Some of these would-be "neutral" States eventually went that direful road; and those which did not were saved only by the restraint of the Union army. But for the present their leaders were sincerely patriotic. From one of the most prominent of these, Hon. John A. Gilmer of North Carolina, to whom Lincoln afterwards made a tender of a Cabinet appointment, he received an inquiry, dated December 10th, concerning his opinions on several points of the slavery controversy, saying:

"I am not without hope that a clear and definite exposition of your views on the questions mentioned may go far to quiet, if not satisfy, all reasonable minds that on most of them it will become plain that there is much more misunderstanding than difference, and that the balance are so much more abstract than practical."†

However difficult to resist this appeal, so influential, so respectful, so promising, the President-elect felt himself bound to adhere to his policy of refusing any public utterance, for reasons which he set forth at some length in a confidential answer, written December 15th.

"I am greatly disinclined," said he, "to write a letter on the subject embraced in yours; and I would not do so, even privately as I do, were it not that I fear you might misconstrue my silence. Is it desired that I shall shift the ground upon which I have been elected? I cannot do it. You need only to acquaint yourself with that ground, and press it on the attention of the South. It is all in print and easy of access. May I be pardoned if I ask whether even you have ever attempted to procure the reading of the Republican platform, or my speeches, by the Southern people? If not, what reason have I to expect that any additional production of mine would meet a better fate? It would make me appear as if I repented for the crime of having been elected and was anxious to apologize and beg forgiveness. To so represent me would be the principal use made of any letter I might now thrust upon the public. My old record cannot be so used; and that is precisely the reason that some new declaration is so much sought.

* Lincoln to Raymond, Nov. 28th, 1860. Unpublished MS.



JOHN A. GILMER. (FROM A PHOTOGRAPH BY BRADY.)

"Now, my dear sir, be assured I am not questioning your candor; I am only pointing out, that while a new letter would hurt the cause which I think a just one, you can quite as well effect every patriotic object with the old record. Carefully read pages 18, 19, 74, 75, 88, 89, and 267 of the volume of Joint Debates between Senator Douglas and myself with the Republican Platform adopted at Chicago, and all your questions will be substantially answered. I have no thought of recommending the abolition of slavery in the District of Columbia, nor the slave-trade among the slave-States, even on the conditions indicated; and if I were to make such recommendation, it is quite clear Congress would not follow it.

"As to employing slaves in arsenals and dockyards, it is a thing I never thought of in my life, to my recollection, till I saw your letter; and I may say of it precisely as I have said of the two points above.

"As to the use of patronage in the slave-States, where there are few or no Republicans. I do not expect to inquire for the politics of the appointee, or whether he does or not own slaves. I intend in that matter to accommodate the people in the several localities, if they themselves will allow me to accommodate them. In one word, I never have been, am not now, and probably never shall be in a mood of harassing the people either North or South.

"On the territorial question I am inflexible, as you see my position in the book. On that there is a difference between you and us; and it is the only substantial difference. You think slavery is right and ought to be extended; we think it is a wrong and ought to be restricted. For this neither has any just occasion to be angry with the other.

"As to the State laws, mentioned in your sixth question, I really know very little of them. I never have read one. If any of them are in conflict with the fugitive-slave clause, or any other part of the Constitution, I certainly shall be glad of their repeal; but I

† Gilmer to Lincoln, Dec. 10th, 1860. Unpublished MS.

could hardly be justified, as a citizen of Illinois, or as President of the United States, to recommend the repeal of a statute of Vermont or South Carolina." *

We have given samples of these solicitations coming from Republicans, from Douglas Democrats, and from the adherents of Bell; the following, coming from the fourth political school, will perhaps be found of equal if not greater interest. Its origin is given in the words of the principal actor, General Duff Green, who, in a letter some three years afterwards, thus described it:

"In December, 1860, at the request of the President of the United States, I went to Springfield to see Mr. Lincoln and urge him to go to Washington and exert his influence in aid of the adjustment of the questions then pending between the North and the South. I was authorized by Mr. Buchanan to say to him that if he came he would be received and treated with the courtesy due to the President-elect. I saw Mr. Lincoln at his own house, and did urge the necessity of his going to Washington and uniting his efforts in behalf of peace, telling him that in my opinion he alone could prevent a civil war, and that if he did not go, upon his conscience must rest the blood that would be shed." †

Whether this proposition came by authority or not, Lincoln could not publicly either question the truth of the envoy or the motive of the mission. In either case the appeal was most adroitly laid. Of course it was impossible to accept or even to entertain it; on the other hand, a simple refusal might be made the basis of very serious misrepresentation. He therefore wrote the following reply:

"SPRINGFIELD, ILL., Dec. 28th, 1860.

"GEN. DUFF GREEN.

"MY DEAR SIR: I do not desire any amendment of the Constitution. Recognizing, however, that questions of such amendment rightfully belong to the American people, I should not feel justified nor inclined to withhold from them if I could a fair opportunity of expressing their will thereon through either of the modes prescribed in the instrument.

"In addition I declare that the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of powers on which the perfection and endurance of our political fabric depend; and I denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as the gravest of crimes.

"I am greatly averse to writing anything for the public at this time; and I consent to the publication of this only upon the condition that six of the twelve United States senators for the States of Georgia, Alabama, Mississippi, Louisiana, Florida, and Texas shall sign their names to what is written on this sheet below my name, and allow the whole to be published together.

"Yours truly,

"A. LINCOLN.

"We recommend to the people of the States we represent respectively, to suspend all action for dismemberment of the Union, at least until some act deemed to be violative of our rights shall be done by the incoming administration." ‡

This letter Lincoln transmitted to Senator Trumbull at Washington, with the following direction:

"General Duff Green is out here endeavoring to draw a letter out of me. I have written one which herewith I inclose to you, and which I believe could not be used to our disadvantage. Still, if on consultation with our discreet friends you conclude that it may do us harm, do not deliver it. You need not mention that the second clause of the letter is copied from the Chicago Platform. If, on consultation, our friends, including yourself, think it can do no harm, keep a copy and deliver the letter to General Green." §

While the fact is not definitely known, it is probable that this letter was delivered. Nothing further came of Duff Green's mission except a letter from himself in the "New York Herald" mentioning his visit and its failure, in the vaguest generalities. His whole aim had been to induce Lincoln tacitly to assume responsibility for the Southern revolt; and when the latter by his skillful answer pointed out the real conspirators, they were no longer anxious to have a publication made.

The whole attitude and issue of the controversy was so tersely summed up by Lincoln in a confidential letter to a Republican friend, under date of January 11th, 1861, that we cannot forbear citing it in conclusion:

"Yours of the 6th is received. I answer it only because I fear you would misconstrue my silence. What is our present condition? We have just carried an election on principles fairly stated to the people. Now we are told in advance the Government shall be broken up unless we surrender to those we have beaten, before we take the offices. In this they are either attempting to play upon us or they are in dead earnest. Either way, if we surrender, it is the end of us, and of the Government. They will repeat the experiment upon us *ad libitum*. A year will not pass till we shall have to take Cuba as a condition upon which they will stay in the Union. They now have the Constitution under which we have lived over seventy years, and acts of Congress of their own framing, with no prospect of their being changed; and they can never have a more shallow pretext for breaking up the Government, or extorting a compromise, than now. There is in my judgment but one compromise which would really settle the slavery question, and that would be a prohibition against acquiring any more territory." ‖

THE POT-HUNTER.

AU LARGE.*

BY GEORGE W. CABLE,

Author of "Old Creole Days," "The Grandissimes," "Grande Pointe," etc.

I. THE POT-HUNTER.

THE sun was just rising, as a man stepped from his slender dug-out and drew half its length out upon the oozy bank of a pretty bayou. Before him, as he turned away from the water, a small gray railway platform and frame station-house, drowsing on long legs in the mud and water, were still veiled in the translucent shade of the deep cypress swamp whose long moss drapings almost overhung them on the side next the brightening dawn. The solemn gray festoons did overhang the farthest two or three of a few flimsy wooden houses and a saw-mill with its lumber, logs, and sawdust, its cold furnace and idle engine.

As with gun and game this man mounted by a short, rude ladder to firmer footing on the platform, a negro, who sat fishing for his breakfast on the bank a few yards up the stream where it bent from the north and west, slowly lifted his eyes, noted that the other was a white man, an Acadian, and brought his gaze back again to hook and line.

He had made out these facts by the man's shape and dress, for the face was in shade. The day, I say, was still in its genesis. The waters that slid so languidly between the two silent men as not to crook one line of the station-house's image inverted in their clear dark depths, had not yet caught a beam upon their whitest water-lily, nor yet upon their tallest bulrush; but the tops of the giant cypresses were green and luminous, and as the Acadian glanced abroad westward, in the open sky far out over the vast marshy breadths of the "shaking prairie,"* two still clouds, whose under surfaces were yet dusky and pink, sparkled on their seaward edges like a frosted fleece. You could not have told whether the Acadian saw the black man or not. His dog, soiled and wet, stood beside his knee, pricked his ears for a moment at sight of the negro, and then dropped them.

It was September. The comfortable air could only near by be seen to stir the tops of the high reeds whose crowding myriads stretched away south, west, and north, an open sea of green, its immense distances relieved here and there by strips of swamp forest tinged with their peculiar purple haze. Eastward the railroad's long causeway and telegraph poles narrowed on the view through its wide, axe-hewn lane in the overtowering swamp. New Orleans, sixty miles or more away, was in that direction. Westward, rails, causeway, and telegraph tapered away again across the illimitable hidden quicksands of the "trembling prairie" till the green disguise of reeds and rushes closed in upon the attenuated line, and only a small notch in a far strip of woods showed where it still led on toward Texas. Behind the Acadian the smoke of woman's early industry began to curl from two or three low chimneys.

But his eye lingered in the north. He stood with his dog curled at his feet beside a bunch of egrets,—killed for their plumage,—the butt of his long fowling-piece resting on the platform, and the arm half-outstretched whose hand grasped the barrels near the muzzle. The hand, toil-hardened and weather-browned, showed, withal, antiquity of race. His feet were in rough muddy brogans, but even so they were smallish and shapely. His garments were coarse, but there were no tatters anywhere. He wore a wide Campeachy hat. His brown hair was too long, but it was fine. His eyes, too, were brown, and, between brief moments of alertness, sedate. Sun and wind had darkened his face, and his pale brown beard curled meager and untrimmed on a cheek and chin that in forty years had never felt a razor.

Some miles away in the direction in which he was looking the broadening sunlight had struck and brightened a single red lug-sail that, for all the eye could see, was coming across the green land on a dry keel. But the bayou, hidden in the tall rushes, was its highway; for suddenly the canvas was black as it turned its shady side, and soon was red again as another change of direction caught the sunbeams upon its tense width and showed that, with much more wind out there than it would

* The "shaking prairie," "trembling prairie," or "*prairie tremblante*," is low, level, treeless delta land, having a top soil of vegetable mold overlying immense beds of quicksand.

find by and by in here under the lee of the swamp, it was following the unseen meanderings of the stream. Presently it reached a more open space where a stretch of the water lay shining in the distant view. Here the boat itself came into sight, showed its bunch of some half-dozen passengers for a minute or two, and vanished again, leaving only its slanting red sail skimming nautilus-like over the vast breezy expanse.

Yet more than two hours later the boat's one blue-shirted, barefoot Sicilian sailor in red worsted cap had with one oar at the stern just turned her drifting form into the glassy calm by the railway station, tossed her anchor ashore, and was still busy with small matters of boat-keeping, while his five passengers clambered to the platform.

The place showed somewhat more movement now. The negro had long ago wound his line upon its crooked pole, gathered up his stiffened fishes from the bank, thrust them into the pockets of his shamelessly ragged trousers, and was gone to his hut in the underbrush. But the few amphibious households round about were passing out and in at the half-idle tasks of their slow daily life, and a young white man was bustling around, now into the station and now out again upon the platform, with authority in his frown and a pencil and two matches behind his ear. It was Monday. Two or three shabby negroes with broad, collapsed, glazed leather traveling-bags of the old carpet-sack pattern dragged their formless feet about, waiting to take the train for the next station to hire out there as rice harvesters, and one, with his back turned, leaned motionless against an open window gazing in upon the ticking telegraph instruments. A black woman in blue cotton gown, red-and-yellow Madras turban, and some sportsman's cast-off hunting-shoes, minus the shoe-strings, crouched against the wall. Beside her stood her shapely mulatto daughter, with head-covering of white cotton cloth, in which female instinct had discovered the lines of grace and disposed them after the folds of the Egyptian fellah head-dress. A portly white man, with decided polish in his commanding air, evidently a sugar-planter from the Mississippi "coast" ten miles northward, moved about in spurred boots, and put personal questions to the negroes, calling them "boys," and the mulattress, "girl."

The pot-hunter was still among them; or, rather, he had drawn apart from the rest and stood at the platform's far end, leaning on his gun, an innocent, wild-animal look in his restless eyes, and a slumberous agility revealed in his strong, supple loins. The station-agent went to him and with abrupt questions and assertions, to which the man replied in low, grave monosyllables, bought his game,— as he might have done two hours before, but — an Acadian can wait. There was some trouble to make exact change, and the agent, saying "Hold on, I 'll fix it," went into the station just as the group from the Sicilian's boat reached the platform. The agent came bustling out again with his eyes on his palm, counting small silver.

"Here!" But he spoke to the empty air. He glanced about with an offended frown.

"Achille!" There was no reply. He turned to one of the negroes: "Where 's that 'Cajun?" Nobody knew. Down where his canoe had lain tiny rillets of muddy water were still running into its imprint left in the mire; but canoe, dog, and man had vanished into the rank undergrowth of the swamp.

II. CLAUDE.

Of the party that had come in the Sicilian's boat four were men and one a young woman. She was pretty; so pretty, and of such restful sweetness of countenance, that the homespun garb, the brand-new creaking gaiters, and a hat that I dare not describe were nothing against her. Her large, soft, dark eyes, more sweetly but not less plainly than the attire, confessed her a denizen of the woods.

Not so the man who seemed to be her husband. His dress was rustic enough; and yet you would have seen at once that it was not the outward circumstance, but an inward singularity, that had made him and must always keep him a stranger to the ordinary ways of men. There was an emotional exaltation in his face as he hastily led his companions with military directness to the ticket window. Two others of the men were evidently father and son, the son barely twenty years of age, the parent certainly not twice as old; and the last of the group was a strong, sluggish man of years somewhat near, but under, fifty.

They bought but one ticket; but, as one may say, they all bought it, the youngest extricating its price with difficulty from the knotted corner of his red handkerchief, and the long, thin hand of the leader making the purchase, while the eyes of the others followed every movement with unconscious absorption.

The same unemotional attentiveness was in their forms as their slow feet drifted here and there always after the one leader, their eyes on his demonstrative hands, and their ears drinking in his discourse. He showed them the rails of the track, how smooth they were, how they rested on their cross-ties, and how they were spiked in place always the same

width apart. They crowded close about him at the telegraph window while he interpreted with unconscious originality the wonders of electricity. Their eyes rose slowly from the window up and out along the ascending wires to where they mounted the poles and eastward and westward leaped away sinking and rising from insulator to insulator. One of the party pointed at these green dots of glass and murmured a question, and the leader's wife laid her small hand softly upon his arm to check the energy of his utterance as he said, audibly to all on the platform, and with a strong French accent:

"They?—are there lest the heat of the telegraph fluid inflame the post-es!" He laid his own hand tenderly upon his wife's in response to its warning pressure, yet turned to the sugar-planter and asked:

"Sir, pardon; do I not explain truly?"

The planter, with restrained smile, was about to reply, when some one called, "There she comes!" and every eye was turned to the east.

"Truly!" exclaimed the inquirer, in a voice made rich with emotion. "Truly, she comes! She comes! The iron horse, though they call him 'she'!" He turned to the planter—"Ah! sir, why say they thus many or thus many horse-power, when truly"—his finger-tip pattered upon his temple—"truly it is mind-power!"

The planter, smiling decorously, turned away, and the speaker looked again down the long vacant track to where the small dark focus of every one's attention was growing on the sight. He spoke again, in lower voice but with larger emotion.

"Mind-power! thought-power! knowledge-power! learning and thinking power!" He caught his wife's arm. "See! see, Sidonie, my dear! See her enhancing in magnitude so fastly approaching!" As he spoke a puff of white vapor lifted from the object and spread out against the blue, the sunbeams turned it to silver and pearl, and a moment later came the far-away, long, wild scream of the locomotive.

"Retire!" exclaimed the husband, drawing back all his gazing companions at once. "Retire! retire! the whisttel is to signify warning to retire from too close the edge of the galérie! There! rest at this point. 'T is far enough. Now, each and all resolve to stand and shrink not whilst that iron mare, eating coal, drinking hot water, and spitting fire, shall seem, but falsely, threatening to come on the platform. Ah! Claude!" he cried to the youngest of the group, "now shall you behold what I have told you—that vast am-azement of civilize-ation anni-*high*-lating space and also time at the tune of twenty miles the hour!" He wheeled upon the planter—"Sir, do I exaggerate?"

"Forty miles," replied the planter; "sometimes fifty."

"Friends,—confirmated! more than twicefold confirmated. Forty, sometimes fifty! Thou heardest it, Maximian Roussel! Not from me, but from the gentleman himself! Forty, sometimes fifty! Such the march, the forward march of civilize-ation!"

His words were cut short by the unearthly neigh of the engine. Sidonie smote herself backward against her husband.

"Nay, Sidonie, fear thou nothing! Remember, dear Sidonie, thy promise of self-control! Stand boldly still, St. Pierre; both father and son stand." The speaker was unheard. Hissing, clanging, thundering, and shaking the earth, the engine and train loomed up to the platform and stopped.

"Come!" cried Bonaventure Deschamps, "lose no moment, dear friends. Tide and time—even less the railroad—wait for nobody. Claude, remember; give your ticket of passage to none save the conductor only. 'T is print' in letter' of gold on front his cap—'Conductor'—Stop! he is here—Sir, this young man, inexperienced, is taking passage for—"

"Shoot him aboard," replied a uniformed man, and walked on without a pause. Claude moved toward the train. Bonaventure seized him by both arms.

"Claude St. Pierre! Claude, my boy; pride of Grande Pointe, second only with Sidonie, farewell!"

Tears leaped into the eyes of both. Bonaventure snatched Claude to his arms and kissed him. It was less than nothing to him that every eye on and off the train was on them. He relaxed his grasp. "Sidonie! tell him farewell!—ah! nay! shake not hands only! Kiss her, Claude! Kiss him, my own Sidonie, kiss him farewell!"

It was done. Claude blushed red, and Sidonie stepped back, wiping her eyes. Maximian moved into the void and smiling gave his hand to the young adventurer.

"Adjieu, Claude." He waved a hand awkwardly. "Teck care you'seff," and dropped the hand audibly against his thigh.

Claude's eye sought his father. St. Pierre pressed forward, laid his right hand upon his son's shoulder, and gazed into his face. His voice was low and husky. He smiled.

"Claude,"—tears rose in his eyes, but he swallowed them down,—"Claude,—my baby,"—and the flood came. The engine bell rang. The conductor gave the warning word, the youth leaped upon his father's neck, St. Pierre thrust him off, caught his two cheeks between fluttering palms and kissed him vio-

lently, the train moved, the young man leaped aboard, the blue uniforms disappeared, save one on the rear platform, the bell ceased, the gliding mass shrunk and dwindled away, the rails clicked more and more softly, the tearful group drew closer together as they gazed after the now unheard train, it melted to a point and disappeared, the stillness of forest and prairie fell again upon the place, the soaring sun shone down, and Claude St. Pierre was gone to seek his fortune.

III. THE TAVERN FIRESIDE.

I CALL to mind a certain wild, dark night in November. St. Pierre lay under his palmetto thatch in the forest behind Grande Pointe and could not sleep for listening to the wind and wondering where his son was, in that wild Texas norther. On the Mississippi a steamer, upward bound, that had whistled to land at Belmont, or Belle Alliance plantation, seemed to be staying there afraid to venture away. Miles southward beyond the river and the lands on that side, Lake des Allemands was combing with the tempest and hissing with the rain. Still farther away, on the little bayou and at the railway station in the edge of the swamp that we already know, and westward over the prairie where Claude had vanished into the world, all life was hidden and mute. And farther still, leagues and leagues away, the mad tempest was riding the white-caps in Berwick's Bay and Grande Lake, and yet beyond, beyond New Iberia, and up by Carancro, and around again by St. Martinville, Breaux Bridge, Grand Coteau, and Opelousas, and down once more across the prairies of Vermillion, the marshes about Côte Blanche Bay, and the islands in the Gulf, it came bounding, screaming, and buffeting. And all the way across that open sweep from Mermentau to Côte Gelée it was tearing the rain to mist and freezing it wherever it fell, only lulling and warming a little about Joseph Jefferson's Island, as if that prank were too mean a trick to play upon his orange-groves.

In Vermillionville the wind came around every corner piercing and pinching to the bone. The walking was slippery; and though it was still early bed-time and the ruddy lamplight filled the wet panes of some window every here and there, scarce a soul was stirring without, on horse or afoot, to be guided by its kindly glow.

At the corner of two streets quite away from the court-house square, a white frame tavern, with a wooden Greek porch filling its whole two-story front and a balcony built within the porch at the second story windows in oddest fashion, was glowing with hospitable firelight. It was not nearly the largest inn of the place, nor the oldest, nor the newest, nor the most accessible. There was no clink of glass there. Yet in this, only third year of its present management, it was the place where those who knew best always put up.

Around the waiting-room fire this evening sat a goodly semicircle of men,— commercial travelers. Some of them were quite dry and comfortable and wore an air of superior fortune over others whose shoes and lower garments sent out more or less steam and odor toward the open fire-place. Several were smoking. One who neither smoked nor steamed stood with his back to the fire and the skirts of his coat lifted forward on his wrists. He was a rather short, slight, nervy man, about thirty years of age, with a wide pink baldness running so far back from his prominent temples and forehead that when he tipped his face toward the blue joists overhead, enjoying the fatigue of a well-filled day, his polished skull sent back the firelight brilliantly. There was a light skirmish of conversation going on in which he took no part. No one seemed really acquainted with another. Presently a man sitting next on the left of him put away a quill toothpick in his watch-pocket, looked up into the face of the standing man, and said, with a faint smile:

"That job 's done!"

With friendly gravity the other looked down and replied, "I never use a quill toothpick."

"Yes," said the one who sat, "it 's bad. Still, I do it."

"Nothing," continued the other,—"nothing harder than a sharpened white-pine match should ever go between the teeth. Brush thoroughly but not violently once or twice daily with a moderately stiff brush dipped in soft water into which has been dropped a few drops of the tincture of myrrh. A brush of badger's hair is best. If tartar accumulates, have it removed by a dentist. Do not bite thread or crack nuts with the teeth, or use the teeth for other purposes than those for which nature designed them." He bent toward his hearer with a smile of irresistible sweetness, drew his lips away from his gums, snapped his teeth together loudly twice or thrice, and smiled again, modestly. The other man sought defense in buoyancy of manner.

"Right you are!" he chirruped. He reached up to his adviser's blue-and-crimson neck-scarf and laid his finger and thumb upon a large, solitary pear-shaped pearl. "You 're like me; you believe in the real thing."

"I do," said the pearl's owner; "and I like people that like the real thing. A pearl of the first water *is* real. There 's no sham there; no deception — except the iridescence, which is,

as you doubtless know, an optical illusion attributable to the intervention of rays of light reflected from microscopic corrugations of the nacrous surface. But for that our eye is to blame, not the pearl. See?"

The seated man did not reply; but another man on the speaker's right, a large man, widest at the waist, leaned across the arm of his chair to scrutinize the jewel. Its owner turned his throat for the inspection, despite a certain grumness and crocodilian aggressiveness in the man's interest.

"I like a diamond, myself," said the new on-looker, dropped back in his chair, and met the eyes of the pearl's owner with a heavy glance.

"Tastes differ," kindly responded the wearer of the pearl. "Are you acquainted with the language of gems?"

The big-waisted man gave a negative grunt and spat bravely into the fire. "Did n't know gems could talk," he said.

"They do not talk, they speak," responded their serene interpreter. The company in general noticed that, with all his amiability of tone and manner, his mild eyes held the big-waisted man with an uncomfortable steadiness. "They speak not to the ear, but to the eye and to the thought:

> "'Thought is deeper than all speech;
> Feeling deeper than all thought;
> Souls to souls can never teach
> What unto themselves was taught.'"

The speaker's victim writhed, but the riveted gaze and an uplifted finger pinioned him. "You should know — every one should know — the language of gems. There is a language of flowers:

> "'To me the humblest flower that blows can give
> Thoughts that too often lie too deep for tears.'

But the language of gems is as much more important than that of flowers as the imperishable gem is itself more enduring than the withering, the evanescent blossom. A gentleman may not with safety present to a lady a gem of whose accompanying sentiment he is ignorant. But with the language of gems understood between them, how could a sentiment be more exquisitely or more acceptably expressed than by the gift of a costly gem uttering that sentiment with an unspoken eloquence! Did you but know the language of gems your choice would not be the diamond. 'Diamond me no diamonds,' emblems of pride —

> "'Pride in their port, defiance in their eye,
> I see the lords of humankind pass by.'

"Your choice would have been the pearl, symbol of modest loveliness.

> "'Full many a gem of purest ray serene
> The dark, unfathomed caves of ocean bear'—
> 'Orient pearls at random strung'—
> 'Fold, little trembler, thy fluttering wing,
> Freely partake of love's fathomless spring.
> So hallowed thy presence, the spirit within
> Hath whispered, "the angels protect thee from sin."'"

The speaker ceased, with his glance hovering caressingly over the little trembler with fluttering wing, that is, the big-waisted man. The company sat in listening expectancy, and the big-waisted man, whose eyes had long ago sought refuge in the fire, lifted them and said, satirically, "Go on," at the same time trying to buy his way out with a smile.

"It 's your turn," quickly responded the jewel's owner, with something droll in his manner that made the company laugh at the other's expense. The big-waisted man kindled, then smiled again, and said:

"Was that emblem of modest loveliness give' to your symbolically, or did you present it to yourself?"

"I took it for a debt," replied the wearer, bowing joyously.

"Ah!" said the other. "Well, I s'pose it was either that or her furniture?"

"Thanks, yes." There was a pause, and then the pearl's owner spoke on. "Strange fact. That was years ago. And yet —" he fondled his gem with thumb and finger and tender glance — "you 're the first man I 've met to whom I could sincerely and symbolically present it, and you don't want it. I 'm sorry."

"I see," said the big-waisted man, glaring at him.

"So do I," responded the pearl's owner. A smile went round, and the company sat looking into the fire. Outside the wind growled and scolded, shook and slapped the house, and thrashed it with the rain. A man sitting against the chimney said:

"If this storm keeps on six hours longer I reduce my estimate of the cotton crop sixty-five thousand bales." But no one responded; and as the importance died out of his face he dropped his gaze into the fire with a pretense of deep meditation. Presently another, a good-looking young fellow, said:

"Well, gents, I never cared much for jewelry. But I like a nice scarf-pin; it 's nobby. And I like a handsome seal-ring." He drew one from a rather chubby finger, and passed it to his next neighbor, following it with his eyes, and adding: "That 's said to be a real intaglio. But — now, one thing I don't like, that 's to see a lady wear a quantity of diamond rings outside of her glove, and heavy gold chains, and —" He was interrupted. A long man, with legs stiffened out to the fire, lifted a

cigar between two fingers, sent a soft jet of smoke into the air, and began monotonously:

"'Chains on a Southern woman? Chains?'

I know the lady that wrote that piece." He suddenly gathered himself up for some large effort. "I can't recite it as she used to, but—". And to the joy of all he was interrupted.

"Gentlemen," said one, throwing a cigarette stump into the fire, "that brings up the subject of the war. By the by, do you know what that war cost the Government of the United States?" He glanced from one to another until his eye reached the wearer of the pearl, who stood, now, with the jewel glistening in the firelight, and who promptly said:

"Yes; how much?"

"Well," said the first questioner with sudden caution, "I may be mistaken, but I 've heard that it cost six — I think they say six — billion dollars. Did n't it?"

"It did," replied the other, with a smile of friendly commendation; "it cost six billion, one hundred and eighty-nine million, nine hundred and twenty-nine thousand, nine hundred and eight dollars. The largest item is interest: one billion, seven hundred and one million, two hundred and fifty-six thousand, one hundred and ninety-eight dollars, forty-two cents. The next largest, the pay of troops; the next, clothing the army. If there 's any item of the war's expenses you would like to know, ask me. Capturing president Confederate States — ninety-seven thousand and thirty-one dollars, three cents." The speaker's manner grew almost gay. The other smiled defensively and responded:

"You 've got a good memory for sta-stistics. I have n't; and yet I always did like sta-stistics. I 'm no sta-stitian, and yet if I had the time sta-stistics would be my favorite study; I s'pose it 's yours."

The wearer of the pearl shook his head. "No. But I like it. I like the style of mind that likes it." The two bowed with playful graciousness to each other. "Yes, I do. And I 've studied it, some little. I can tell you the best time of every celebrated trotter in this country; the quickest trip a steamer ever made between Queenstown and New York, New York and Queenstown, New Orleans and New York; the greatest speed ever made on a railroad or by a yacht, pedestrian, carrier-pigeon, or defaulting cashier; the rate of postage to every foreign country; the excess of women over men in every State of the Union so afflicted — or blessed, according to how you look at it; the numbers of volumes in each of the world's ten largest libraries; the salary of every officer of the United States Government; the average duration of life in a man, elephant, lion, horse, anaconda, tortoise, camel, rabbit, ass, etcetera, etcetera; the age of every crowned head in Europe; each State's legal and commercial rate of interest; and how long it takes a healthy boy to digest apples, baked beans, cabbage, dates, eggs, fish, green corn, h, i, j, k, l-m-n-o-p, quinces, rice, shrimps, tripe, veal, yams, and anything you can cook commencing with z. It 's a fascinating study. But it 's not my favorite.

"'The proper study of mankind is man.'

. . . . . .

Sole judge of truth, in endless error hurled,
The glory, jest, and riddle of the world!'

"I love to study human nature. That 's my favorite study! The art of reading the inner human nature by the outer aspect is of immeasurable interest and boundless practical value, and the man who can practice it skillfully and apply it sagaciously is on the high road to fortune, and why? Because to know it thoroughly is to know whom to trust and how far; to select wisely a friend, a confidant, a partner in any enterprise; to shun the untrustworthy, to anticipate and turn to our personal advantage the merits, faults, and deficiencies of all, and to evolve from their character such practical results as we may choose for our own ends; but a thorough knowledge is attained only by incessant observation and long practice; like music, it demands a special talent possessed by different individuals in variable quantity or not at all. You, gentlemen, all are, what I am not, commercial tourists. Before you I must be modest. You, each of you, have been chosen from surrounding hundreds or thousands for your superior ability, natural or acquired, to scan the human face and form and know whereof you see. I look you in the eye — you look me in the eye — for the eye, though it does not tell all, tells much — it is the key of character — it has been called the mirror of the soul —

"'And looks commercing with the skies,
Thy rapt soul sitting in thine eyes.'

And so looking you read me. You say to yourself, 'There 's a man with no concealments, yet who speaks not till he 's spoken to; knows when to stop, and stops.' You note my pale eyebrows, my slightly prominent and pointed chin, somewhat oversized mouth; small, well-spread ears, faintly aquiline nose; fine, thin, blonde hair, a depression in the skull where the bump of self-conceit ought to be, and you say, 'A man that knows his talents without being vain of them; who not only minds his own business, but loves it, and who in that business, be it buggy-whips or be it washine, or be it something far nobler,'— which, let me

say modestly, it is,—'simply goes head and stays there.' Yes, sirs, if I say that reading the human countenance is one of my accomplishments, I am diffidently mindful that in this company, I, myself, am read, perused; no other probably so well read — I mean so exhaustively perused. For there is one thing about me, gentlemen, if you 'll allow me to say it, I 'm short meter, large print, and open to the public seven days in the week. And yet you probably all made one mistake about me: you take me for the alumni of some university. Not so. I 'm a self-made man. I made myself; and considering that I 'm the first man I ever made, I think — pardon the seeming egotism — I think I 've done well. A few years ago there dwelt in humble obscurity among the granite hills of New England, earning his bread by the sweat of his brow upon his father's farm, a youth to fortune and to fame unknown. But one day a voice within him said, 'Tarbox,'— George W.,— namesake of the man who never told a lie,—'do you want to succeed in life? Then leave the production of tobacco and cider to unambitious age and find that business wherein you can always give a man ten times as much for his dollar as his dollar is worth.' The meaning was plain, and from that time forth young Tarbox aspired to become a book-agent. 'T was not long ere he, like

"'Young Harry Bluff, left his friends and his home,
And his dear native land, o'er the wide world to roam.'

Books became his line, and full soon he was the head of the line. And why? Was it because in the first short twelve months of his career he sold, delivered, and got the money for, 5107 copies of 'Mend-me-at-Home'? No. Was it, then, because three years later he sold in one year, with no other assistance than a man to drive the horse and wagon, hold the blackboard, and hand out the books, 10,003 copies of 'Rapid 'Rithmetic'? It was not. Was it, then, because in 1878, reading aright the public mind, he said to his publishers, whose confidence in him was unbounded, 'It ain't "Mend-me-at-Home" the people want most, nor "Rapid 'Rithmetic," nor "Heal Thyself," nor "I meet the Emergency," nor the "Bouquet of Poetry and Song." What they want is all these in one.' 'Abridged?' said the publishers. 'Enlarged!' said young Tarbox,— 'enlarged and copiously illustrated, complete in one volume, price, cloth, three dollars, sheep four, half morocco, gilt edges, five; real value to the subscriber, two hundred and fifty; title, "The Album of Universal Information; author, G. W. Tarbox; editor, G. W. T.; agent for the United States, the Canadas, and Mexico, G. W. Tarbox," that is to say, myself.' That, gentlemen, is the reason I stand at the head of my line; not merely because on every copy sold I make an author's as well as a solicitor's margin; but because, being the author, I know whereof I sell. A man that 's got my book has got a college education; and when a man taps me,— for, gentlemen, I never spout until I 'm tapped,— and information bursts from me like water from a street hydrant, and he comes to find out that everything I tell is in that wonderful book, and that everything that is in that wonderful book I can tell, he wants to own a copy; and when I tell him I can't spare my sample copy, but I 'll take his subscription, he smiles gratefully—"

A cold, wet blast, rushing into the room from the hall, betrayed the opening of the front door. The door was shut again, and a well-formed, muscular young man who had entered stood in the parlor doorway lifting his hat from his head, shaking the rain from it, and looking at it with amused diffidence. Mr. Tarbox turned about once more with his back to the fire, gave the figure a quick glance of scrutiny, then a second and longer one, and then dropped his eyes to the floor. The big-waisted man shifted his chair, tipped it back, and said:

"He smiles gratefully, you say?"

"Yes."

"And subscribes?"

"If he 's got any sense." Mr. Tarbox replied in a preoccupied tone, his eyes on the young man who still stood in the door. This person must have reached the house in some covered conveyance. Even his boot-tops were dry or nearly so. He was rather pleasing to see; of good stature, his clothing cheap. A dark-blue flannel sack of the ready-made sort hung on him not too well. Light as the garment was, he showed no sign that he felt the penetrating cold out of which he had just come. His throat and beardless face had the good brown of outdoor life, his broad chest strained the two buttons of his sack, his head was well-poised, his feet were shapely, and but for somewhat too much roundness about the shoulder-blades, noticeable in the side view as he carefully stood a long, queer package that was not buggy-whips against the hat-rack, it would have been fair to pronounce him an athlete.

The eyes of the fireside group were turned toward him; but not upon him. They rested on a girl of sixteen who had come down the hall and was standing before the new-comer just beyond the door. The registry-book was just there on a desk in the hall. She stood with a freshly dipped pen in her hand, ignoring the gaze from the fireside with a faintly overdone calmness of face. The new guest came forward and, in a manner that showed

slender acquaintance with the operation, slowly registered his name and address.

He did it with such painstaking, that, upside down as the writing was, she read it as he wrote. As the Christian name appeared, her perfunctory glance became attention. As the surname followed, the attention became interest and recognition. And as the address was added, Mr. Tarbox detected pleasure dancing behind the long fringe of her discreet eyes, and marked their stolen glance of quick inspection upon the short, dark locks and strong young form still bent over the last strokes of the writing. But when he straightened up, carefully shut the book, and fixed his brown eyes upon hers in guileless expectation of instructions, he saw nothing to indicate that he was not the entire stranger that she was to him.

"You done had sopper?" she asked. The uncommon kindness of such a question at such an hour of a tavern's evening was lost on the young man's obvious inexperience, and as one schooled to the haphazard of forest and field he merely replied:

"Naw, I didn' had any."

The girl turned — what a wealth of black hair she had! — and disappeared as she moved away along the hall. Her voice was heard: "Mamma?" Then there was a silence of an unheard consultation. The young man moved a step or two into the parlor and returned toward the door as a light double foot-fall approached again down the hall and the girl appeared once more, somewhat preceded by a small, tired-looking, pretty woman some thirty-five years of age, of slow, self-contained movement and clear, meditative eyes.

But the guest, too, had been reënforced. A man had come silently from the fireside, taken his hand, and now, near the doorway, was softly shaking it and smiling. Surprise, pleasure, and reverential regard were mingled in the young man's face, and his open mouth was gasping —

"Mister Tarbox!"

"Claude St. Pierre, after six years, I 'm glad to see you. Madame, take good care of Claude. No fear but she will, my boy; if anybody in Louisiana knows how to take care of a traveler, it's Madame Beausoleil." He smiled for all. The daughter's large black eyes danced, but the mother asked Claude, with unmoved countenance and soft tone:

"You are Claude St. Pierre? — from Gran' Point'?"

"Yass."

"Dass lately since you left yondah?"

"About two month'."

"Bonaventure Deschamps — he was well?"

"Yass." Claude's eyes were full of a glad surprise and asked a question that his lips did not dare to venture upon. Madame Beausoleil read it, and she said:

"We was raise' together, Bonaventure and me." She waved her hand toward her daughter. "He teach her to read. Seet down to the fire; we make you some sopper."

IV. MARGUERITE.

Out in the kitchen, while the coffee was dripping and the ham and eggs frying, the mother was very silent, and the daughter said little, but followed her now and then with furtive liftings of her young black eyes. Marguerite remembered Bonaventure Deschamps well and lovingly. For years she had seen the letters that at long intervals came from him at Grande Pointe to her mother here. In almost every one of them she had read high praises of Claude. He had grown, thus, to be the hero of her imagination. She had wondered if it could ever happen that he would come within her sight, and if so, when, where, how. And now, here at a time of all times when it would have seemed least possible, he had, as it were, rained down.

She wondered to-night, with more definiteness of thought than ever before, what were the deep feelings which her reticent little mother — Marguerite was an inch the taller — kept hid in that dear breast. Rarely had emotion moved it. She remembered its terrible heavings at the time of her father's death, and the later silent downpour of tears when her only sister and brother were taken in one day. Since then, those eyes had rarely been wet; yet more than once or twice she had seen tears in them when they were reading a letter from Grande Pointe. Had her mother ever had something more than a sister's love for Bonaventure? Had Bonaventure loved her? And when? Before her marriage, or after her widowhood?

The only answer that came to her as she now stood, knife in hand, by the griddle was a roar of laughter that found its way through the hall, the dining-room, and two closed doors from the men about the waiting-room fireside. That was the third time she had heard it. What could have put them so soon into such gay mood? Could it be Claude? Somehow she hoped it was not. Her mother reminded her that the batter-cakes would burn. She quickly turned them. The laugh came again. When by and by she went to bid Claude to his repast, the laughter, as she reached the door of the waiting-room, burst upon her as the storm would have done had she opened the front door. It came from all but Claude and Mr. Tarbox. Claude sat with a knee in his hands, smiling. The semicircle had widened

out from the fire, and in the midst Mr. Tarbox stood telling a story, of which Grande Pointe was the scene, Bonaventure Deschamps the hero, a school examination the circumstance, and he, G. W., the accidental arbiter of destinies that hung upon its results. The big-waisted man had retired for the night, and half an eye could see that the story-teller had captivated the whole remaining audience. He was just at the end as Marguerite reappeared at the door. The laugh suddenly ceased, and then all rose: it was high bed-time.

"And did they get married?" asked one. Three or four gathered close to hear the answer.

"Who; Sidonie and Bonaventure? Yes. I did n't stay to see. I went away into Mississippi, Tennessee, and Alabama, and just only a few weeks ago took a notion to try this Attakapas and Opelousas region. But that 's what Claude tells me to-night — married more than five years ago. Claude, your supper wants you. Want me to go out and sit with you? Oh, no trouble! not the slightest! It will make me feel as if I was nearer to Bonaventure."

And so the group about Claude's late supper numbered four. And because each had known Bonaventure, though each in a very different way from any other, they were four friends when Claude had demolished the ham and eggs, the strong black coffee, and the griddle-cakes and sirop-de-battarie.

At the top of the hall stairway, as Mr. Tarbox was on his way to bed, one of the dispersed fireside circle stopped him, saying:

"That 's an awful good story!"

"I would n't try a poor one on you."

"Oh! — but really, now, in good earnest, it is good. It 's good in more ways than one. Now, you know, that man, hid away there in the swamp at Grandè Pointe, he little thinks that six or eight men away off here in Vermillionville are going to bed to-night better men — that 's it, sir — yes, sir, that 's it — yes, sir! — better men — just for having heard of him!"

Mr. Tarbox smiled with affectionate approval and began to move away; but the other put out a hand —

"Say, look here; I 'm going away on that two o'clock train to-night. I want that book of yours. And I don't want to subscribe and wait. I want the book now. That 's my way. I 'm just that kind of a man; I 'm the nowest man you ever met up with. That book 's just the kind of thing for a man like me who ain't got no time to go exhaustively delving and investigating and researching into things, and yet has got to keep as sharp as a brier."

Mr. Tarbox, on looking into his baggage, found he could oblige this person. Before night fell again he had done virtually the same thing, one by one, for all the rest. By that time they were all gone; but Mr. Tarbox made Vermillionville his base of operations for several days.

Claude also tarried. For reasons presently to appear, the "ladies' parlor," a small room behind the waiting-room, with just one door, which let into the hall at its inner end, was given up to his use; and of evenings not only Mr. Tarbox, but Marguerite and her mother as well, met with him, gathering familiarly about a lamp that other male lodgers were not invited to hover around.

The group was not idle. Mr. Tarbox held big hanks of blue and yellow yarn, which Zoséphine wound off into balls. A square table quite filled the center of the room. There was a confusion of objects on it, and now on one side and now on another Claude leaned over it and slowly toiled, from morning until evening alone, and in the evening with these three about him; Marguerite, with her sewing dropped upon the floor, watching his work with an interest almost wholly silent, only making now and then a murmured comment, her eyes passing at intervals from his preoccupied eyes to his hands, and her hand now and then guessing and supplying his want as he looked for one thing or another that had got out of sight. What was he doing?

As to Marguerite, more than he was aware of. Zoséphine Beausoleil saw, and was already casting about somewhat anxiously in her mind to think what, if anything, ought to be done about it. She saw her child's sewing lie forgotten on the floor, and the eyes that should have been following the needle, fixed often on the absorbed, unconscious, boyish-manly face so near by. She saw them scanning the bent brows, the smooth, bronzed cheek, the purposeful mouth, and the unusual length of dark eyelashes that gave its charm to the whole face; and she saw them quickly withdrawn whenever the face with those lashes was lifted and an unsuspecting smile of young companionship broke slowly about the relaxing lips and the soft, deep-curtained eyes. No; Claude little knew what he was doing. Neither did Marguerite. But, aside from her, what was his occupation? I will explain.

About five weeks earlier than this a passenger on an eastward bound train of Morgan's Louisiana and Texas railway stood at the rear door of the last coach, eying critically the track as it glided swiftly from under the train and shrank perpetually into the west. The coach was nearly empty. No one was near him save the brakeman, and by and by he took his attention from the track and let it rest on this person. There he found a singular attraction. Had he seen that face before,

or why did it provoke vague reminiscences of great cypresses overhead, and deep-shaded leafy distances with bayous winding out of sight through them, and canebrakes impenetrable to the eye, and axe-strokes — heard but unseen — slashing through them only a few feet away? Suddenly he knew.

"Was n't it your father," he said, "who was my guide up Bayou des Acadiens and Blind River the time I made the survey in that big swamp north of Grande Pointe? Is n't your name Claude St. Pierre?" And presently they were acquainted.

"You know I took a great fancy to your father. And you 've been clear through the arithmetic twice? Why, see here; you 're just the sort of man I — Look here; don't you want to learn to be a surveyor?" The questioner saw that same ambition that had pleased him so in the father leap for joy in the son's eyes.

An agreement was quickly reached. The surveyor wandered into another coach, and nothing more passed between them that day save one matter, which, though trivial, has its place. When the surveyor returned to the rear train Claude was in a corner seat gazing pensively through the window and out across the wide, backward-flying, purpling green canefields of St. Mary to where on the far left the live-oaks of Bayou Teche seemed hoveringly to follow on the flank of their whooping and swaggering railway train. Claude turned and met the stranger's regard with a faint smile. His new friend spoke first.

"Matters may turn out so that we can have your father — "

Claude's eyes answered with a glad flash. "Dass what I was t'inkin'!" he said, with a soft glow that staid even when he fell again into reverie.

But when the engineer — for it seems that he was an engineer, chief of a party engaged in redeeming some extensive waste swamp and marsh lands — when the chief engineer, on the third day afterward, drew near the place where he suddenly recollected Claude would be waiting to enter his service, and recalled this part of their previous interview, he said to himself, "No, it would be good for the father, but not best for the son," and fell to thinking how often parents are called upon to wrench their affections down into cruel bounds to make the foundations of their children's prosperity.

Claude widened to his new experience with the rapidity of something hatched out of a shell. Moreover, accident was in his favor; the party was short-handed in its upper ranks, and Claude found himself by this stress taken into larger and larger tasks as fast as he could, though ever so crudely, qualify for them.

"'T is n't at all the best thing for you," said one of the surveyors, "but I 'll lend you some books that will teach you the why as well as the how."

In the use of these books by lantern-light certain skill with the pen showed itself; and when at length one day a dispatch reached camp from the absent "chief" stating that in two or three days certain matters would take him to Vermillionville, and ordering that some one be sent at once with all necessary field notes and appliances and give his undivided time to the making of certain urgently needed maps, and the only real draughtsman of the party was ill with swamp-fever, Claude was sent.

On his last half-day's journey toward the place, he had fallen in with an old gentleman whom others called "Governor," a tall, trim figure, bent but little under fourscore years, with cheerful voice and ready speech, and eyes hidden behind dark glasses and flickering in their deep sockets.

"Go to Madame Beausoleil's," he advised Claude. "That is the place for you. Excellent person; I 've known her from childhood; a woman worthy a higher station." And so, all by accident, chance upon chance, here was Claude making maps, and this delightful work, he thought, was really all he was doing, in Zoséphine's little inner parlor.

By and by it was done. The engineer had not yet arrived. The storm had delayed work in one place and undone work in another, and he was detained beyond expectation. But a letter said he would come in a day or two more, and some maps of earlier surveys, drawn by skilled workmen in great New Orleans, arrived; seeing which, Claude blushed for his own and fell to work to make them over.

"If at first you not succeed," said Claude,

"Try — try aga-a-ain," responded Marguerite; "Bonaventure learn me that poetry; and you?"

"Yass," said Claude. He stood looking down at his work and not seeing it. What he saw was Grande Pointe in the sunset hour of a spring day six years gone, the wet, spongy margin of a tiny bayou under his feet, the great swamp at his back, the leafy undergrowth all around; his canoe and paddle waiting for him, and Bonaventure repeating to him — swamp urchin of fourteen — the costliest words of kindness — to both of them the costliest — that he had ever heard, ending with these two that Marguerite had spoken. As he resumed his work, he said, without lifting his eyes:

"Seem' to me 'f I could make myself like any man in dat whole worl', I radder make myself like Bonaventure. And you?"

She was so slow to answer that he looked at her. Even then she merely kept on sweeping her fingers slowly and idly back and forth on the table, and, glancing down upon them, said without enthusiasm: "Yass."

Yet they both loved Bonaventure, each according to knowledge of him. Nor did their common likings stop with him. The things he had taught Claude to love and seek suddenly became the admiration of Marguerite. Aspirations — aspirations! — began to stir and hum in her young heart, and to pour forth like waking bees in the warm presence of spring. Claude was a new interpretation of life to her; as one caught abed by the first sunrise at sea, her whole spirit leaped, with unmeasured self-reproach into fresh garments and to a new and beautiful stature, and looked out upon a wider heaven and earth than ever it had seen or desired to see before. All at once the life was more than meat and the body than raiment. Presently she sprang to action. In the convent school, whose white belfry you could see from the end of Madame Beausoleil's balcony, whither Zoséphine had sent her after teaching her all she herself knew, it had been "the mind for knowledge"; now it was "knowledge for the mind." Mental training and enrichment had a value, now, never before dreamed of. The old school-books were got down, recalled from banishment. Nothing ever had been hard to learn, and now she found that all she seemed to have forgotten merely required, like the books, a little beating clear of dust.

And Claude was there to help. "If C" —— C! —— "having a start of one hundred miles, travels" — so and so, and so and so, — "how fast must I travel in order to" — etc. She cannot work the problem for thinking of what it symbolizes. As C himself takes the slate, her dark eyes, lifted an instant to his, are large with painful meaning, for she sees at a glance she must travel — if the arithmetical is the true answer — more than the whole distance now between them. But Claude says there is an easy way. She draws her chair closer and closer to his; he bows over the problem, and she cannot follow his pencil without bending her head very close to his — closer — closer — until fluffy bits of her black hair touch the thick locks on his temples. Look to your child, Zoséphine Beausoleil, look to her! Ah! she can look; but what can she do?

She saw the whole matter; saw more than merely an unripe girl smitten with the bright smile, goodly frame, and bewitching eyes of a promising young rustic; saw her heart ennobled, her nature enlarged, and all the best motives of life suddenly illuminated by the presence of one to be mated with whom promised the key-note of all harmonies; promised heart-fellowship in the ever-hoping effort to lift poor daily existence higher and higher out of the dust and into the light. What could she say? If great spirits in men or maidens went always or only with high fortune, a mere Acadian lass, a tavern maiden, were safe enough, come one fate or another. If Marguerite were like many a girl in high ranks and low, to whom any husband were a husband, any snug roof a home, and any living life — But what may a maiden do, or a mother bid her do, when she looks upon the youth so shaped without and within to her young soul's belief in its wants that all other men are but beasts of the field and creeping things, and he alone Adam? To whom could the widow turn? Father, mother? — Gone to their rest. The curé who had stood over her in baptism, marriage, and bereavement? — Called long ago to higher dignities and wider usefulness in distant fields. O for the presence and counsel of Bonaventure! It is true, here was Mr. Tarbox, so kind and so replete with information; so shrewd and so ready to advise. She spurned the thought of leaning on him; and yet the oft-spurned thought as often returned. Already his generous interest had explored her pecuniary affairs, and his suggestions, too good to be ignored, had molded them into better shape, and enlarged their net results. And he could tell how many 8-oz. tacks make a pound, and what electricity is, and could cure a wart in ten minutes, and recite "Oh! why should the spirit of mortal be proud?" And this evening, the seventh since the storm, when for one weak moment she had allowed the conversation to drift toward wedlock, he had stated a woman's chances of marrying between the ages of fifteen and twenty; to wit: 14½ per cent.; and between thirty and thirty-five, 15½.

"Hah!" exclaimed Zoséphine, her eyes flashing as they had not done in many a day, "'t is not dat way! — not in Opelousas!"

"Arithmetically speaking!" the statistician quickly explained. He ventured to lay a forefinger on the back of her hand, but one glance of her eye removed it. "You see, that 's merely arithmetically considered. Now, of course, look at it geographically — why, of course! And — why, as to that, there are ladies — "

Madame Beausoleil rose, left Mr. Tarbox holding the yarn, and went down the hall, whose outer door had opened and shut. A moment later she entered the room again.

"Claude!"

Marguerite's heart sank. Her guess was right: the chief engineer had come. And early in the morning Claude was gone.

(To be continued.) *George W. Cable.*

SUGAR-MAKING IN LOUISIANA.

HE beginnings of the sugar industry in Louisiana are somewhat obscure. Even Gayarré fails to trace them definitely in his faithful and picturesque history of the State. There is a tradition that the Jesuit Fathers introduced the cane from San Domingo in 1751 and planted it on ground now occupied by the banks and chief commercial houses of New Orleans, just north of Canal street. The juicy plant was afterwards cultivated in a small way for syrup, but attempts to make sugar were not successful down to 1795. No dependence could be placed on the juice to granulate, and after numerous experiments had failed, the planters came to the discouraging conclusion that the climate of the Mississippi delta had an unfavorable influence on the cane. The man who finally dispelled this delusion and showed the way to the development of sugar-making into a great industry on the rich lowlands of Louisiana was Etienne de Boré. A striking character was this De Boré. He was born in what was known in the last century as the Illinous district of Louisiana, a region with vague boundaries which embraced the whole valley of the upper Mississippi. When he was four years old his parents took him back to France, and growing there to manhood, he became a member of King Louis' mousquetaire guard, a royal household troop to which only nobles could belong, and in which every private soldier had the rank and pay of captain, while the commander was a lieutenant-general. Etienne de Boré might have continued to parade at Versailles until death or the revolution had cut him off, had he not fallen in love with a daughter of Destréhan, ex-treasurer of Louisiana. His wooing prospered, and he married the girl in 1771. She received as part of her dowry an estate described as lying on the left bank of the Mississippi six miles above New Orleans. The ground is now covered by the suburb of Carrollton and by the park in which were held the exhibitions of 1884–85 and 1885–86. Soon after his marriage the gallant mousquetaire put off his uniform, and leaving the gayeties of the court forever, took ship for America with his wife, and converted himself into a plain colonial planter struggling with the problem, then a life-and-death one for Louisiana, of finding some crop that could profitably be raised on the fat, reeking soil redeemed by embankments from the overflow of the great river. He tried indigo, like many others, and failed. Cotton did not thrive save on the then scarcely known uplands north of Red River; Indian corn furnished a bread-stuff for house use, but had no export value. De Boré saw his hopes blasted and his family threatened with poverty. In his extremity he determined to renew the abandoned effort to manufacture sugar. His wife warned him that her father had in former years experimented with the cane and failed; she begged him not to hazard the little they had left in a hopeless undertaking. His friends, too, croaked disaster. Fortunately, De Boré was no irresolute dreamer. Nothing could shake his determination. In 1794 he planted a small crop, and using all the canes for a second planting, in 1795 he actually made a quantity of sugar so large that he sold it for twelve thousand dollars.

His grandson Charles Gayarré relates in his history of Louisiana that on the day when the grinding of the cane was to begin, large numbers of the most respectable inhabitants gathered at the sugar-house to witness the success or failure of the experiment. Would the syrup granulate? Would it be converted into sugar? "When the critical moment came," says Gayarré, "the stillness of death came among them, each one holding his breath and feeling that it was a matter of ruin or prosperity for them all. Suddenly the sugar-maker cried out with exultation, 'It granulates!' and the crowd repeated, 'It granulates!' Inside and outside of the building one could have heard the wonderful tidings flying from mouth to mouth, and dying in the distance, as if a hundred glad echoes were telling it to one another." A notable man indeed was this De Boré, the reader must agree, and well deserving of a place in history. When Governor Claiborne took possession of ceded Louisiana for the American Government, he appointed Captain De Boré mayor of New Orleans, as the best man to reconcile the Creole population with the new state of affairs.

Probably no important industry in this country — certainly none based directly upon the tillage of the soil — has suffered such vicissitudes as that of making sugar from the cane. The causes of these vicissitudes are two,—

A GANG-DRIVER.

first, the absolute dependence of the industry upon a protective tariff; and second, the fact that the total product of cane sugar in the United States is but a drop in the bucket of the aggregate sugar-product of the world. There is a small sugar district on the lower Brazos, in Texas, and a few plantations in Alabama and Florida, but the estimated product of all districts outside of Louisiana, is only 14,000,000 pounds a year. Now let us look

THE PLANTATION WATERING-CART.

Thus while subject to all the fluctuations of foreign markets, this product exercises no appreciable effect in determining prices. If the Louisiana crop should be a total failure this year, the price of sugar throughout the civilized world would not thereby be increased a fraction of a cent per pound. The Louisiana planter can look for no compensation for a short crop in higher prices. His contribution to the general demand for sweets is relatively a very small one. All the cane-sugar made in the United States during the year 1884 was 301,712,230 pounds, while we imported during the same year a total of 2,641,258,139 pounds. Thus the home cane-growers only supplied about one-ninth of the demand. If they should go out of the business at once by common accord, our grocers' bills would not apprise us of the change, for foreign sugars would immediately fill the gap in the market.

We Americans are the greatest sugar-eating people in the world, and our consumption is constantly increasing. It has almost doubled since 1867, and is now, including all kinds of sweets except glucose and honey, fifty-six pounds a year per capita of the population. Yet our domestic sugar-product is not increasing. It reached the highest point in 1861, and has never since approached the figures of that year. Let me say before we get further into the subject, that the Louisiana product of cane sugar is practically the national product. at the following table of the annual product of Louisiana in hogsheads, to get an idea of the great fluctuations the industry has undergone.

Crop of	*Hhds.*	*Crop of*	*Hhds.*
1884	170,431	1854	346,635
1883	221,515	1853	449,324
1882	241,220	1852	321,934
1881	122,982	1851	237,547
1880	218,314	1850	211,201
1879	169,972	1849	247,923
1878	213,221	1848	220,000
1877	127,753	1847	240,000
1876	169,331	1846	140,000
1875	144,146	1845	186,000
1874	116,867	1844	200,000
1873	89,498	1843	100,000
1872	108,520	1842	140,000
1871	128,461	1841	90,000
1870	144,881	1840	87,000
1869	87,090	1839	115,000
1868	84,256	1838	70,000
1867	37,647	1837	65,000
1866	41,000	1836	70,000
1865	18,070	1835	30,000
1864	10,387	1834	100,000
1863	76,800	1833	75,000
1862 (no data).		1832	70,000
1861	459,419	1829	48,000
1860	228,753	1828	88,000
1859	221,840	1827	71,000
1858	362,296	1826	45,000
1857	279,697	1825	30,000
1856	73,296	1824	32,000
1855	231,427	1823	30,000

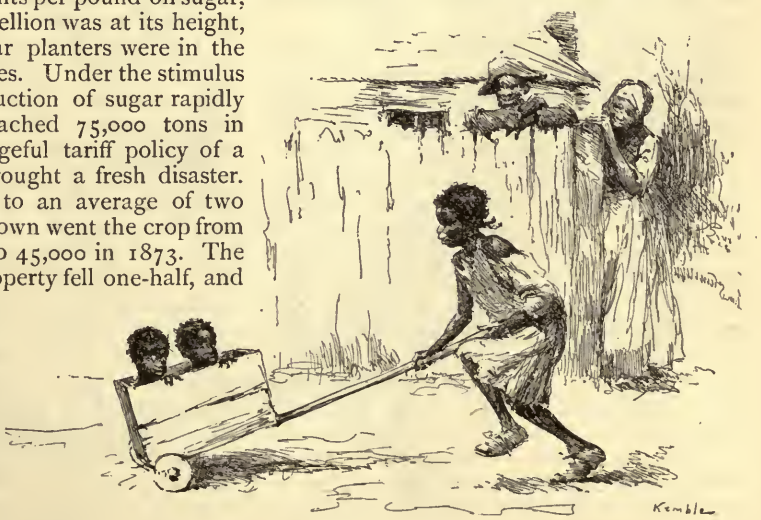
Some of the fluctuations observed in the above table were occasioned by unfavorable seasons; others by the effect of tariff legisla-

tion. It will be seen that there was on the whole a steady progress until 1833. This was due to the Clay Tariff of 1816, which levied a duty of 3 cents per pound on foreign sugars. In 1832 the duty was reduced to 2½ cents, and this blow was so severely felt that, of 700 plantations worked in 1833, 166 were abandoned during the ensuing 4 years' operation of the new tariff. The industry revived and enjoyed a period of great prosperity, which culminated in the Civil War. This period was the golden age of Louisiana, and the older people always speak of it with a sigh of regret. It was then that the Louisiana sugar-planters became the most cultivated, proud, and luxurious class in all the South. Their great white mansions, standing in groves of magnolias and orange-trees, on the shores of rivers and bayous, were the scenes of a lavishly generous hospitality. The wealth drawn from the soil by the slave labor under their control was poured into the lap of New Orleans with liberal hand, and made of that city a place of great commercial activities, and at the same time a social and intellectual capital whose influence was felt throughout the Gulf States.

The war changed all that. The slave-labor system, on which the sugar industry rested, was destroyed. Hostile armies ravaged the sugar districts. Houses were burned, mills destroyed, and the cane-fields grew up to weeds. In 1864 only five thousand tons of sugar were made in Louisiana. With the return of peace, however, the planters, always a peculiarly intelligent and enterprising class, courageously set to work to rebuild their broken fortunes. They were greatly aided by the tariff of 1864, by which Congress generously accorded a protective duty of three cents per pound on sugar, at a time when the rebellion was at its height, and nearly all the sugar planters were in the ranks of the rebel armies. Under the stimulus of this tariff, the production of sugar rapidly increased, until it reached 75,000 tons in 1870. Then the changeful tariff policy of a changeful Congress brought a fresh disaster. Down went the duty to an average of two cents per pound, and down went the crop from 75,000 tons in 1870 to 45,000 in 1873. The value of plantation property fell one-half, and two-thirds of the sugar commission houses of New Orleans went into bankruptcy.

In 1875 the duty was advanced to an average of 2½ cents, and the production increased to 110,000 tons in 1880, 120,000 in 1882, and 128,000 in 1884. But now arose a new menace to the much-vexed industry. The German Government stimulated the production of beet-sugar by a law which in effect gave a large bounty on all sugar exported. The beets were taxed at the rate of 16 marks per 1000 kilograms, and a drawback of 20.80 marks given on each 100 kilograms of sugar exported. Now, as 1000 kilograms of beets will produce 100 kilograms of sugar, the bounty on the sugar exported amounted to 4.80 marks per kilogram. An enormous increase of the German output resulted. It went up from 644,775 tons in 1881–82, to 1,150,000 tons in 1884–85. A very large part of this increased production was thrown upon the American market. Our importations of European beet-sugar in 1884 were double those of 1883, and twelvefold what they were in 1882. The price of sugar fell so low that the Louisiana planter, even with the 2½ cents duty in his favor, could only save himself from actual loss on his crop by practicing the closest economies in its production. Many of the Cuban planters were ruined. It is said that, after paying freight, brokerage, and other expenses connected with marketing their crops, there remained to the Cuban only about a cent a pound to meet the cost of producing it.

At the date this article is written (March, 1886) the situation is improving. A reaction has followed the artificial stimulus given to beet-sugar making by government bounties. Besides, the German law soon expires by limitation, and the beet-sugar producers will be thrown back upon the old law, not so favorable to exporting. In Louisiana the planters feel renewed confidence, believing that the



IN THE QUARTERS.

A PLANTER.

worst of their struggle with beet-sugar is over and that they have a fair chance for moderately profitable operations in future, if Congress will not diminish the advantage they now derive from the tariff.

The seeker after information concerning the cane-sugar industry in Louisiana is astonished at the outset of his researches by the significant fact that the acreage planted in cane has not increased during the past quarter of a century, but has, on the contrary, decreased. This is a statement that can be made of no other important agricultural crop produced in the United States. It cannot be said that it is due to the destruction of the system of slave labor, nor to any local peculiarity of climate or population. The cotton crop of the State has increased; so has the rice crop, which is cultivated on the same kind of land which grows the cane and in the same parishes. It is true that cane planting and grinding require a stricter and more systematic labor organization than raising cotton or rice, but experienced planters now get as good results per acre with free labor as they formerly did with slave. Mr. John Dymond, one of the largest planters in the State and one of the best-informed men on all matters concerning the sugar industry, says that Louisiana has the capacity economically to produce 500,000 tons of sugar a year; which is about four times her present production. Then why does not the annual product increase with the rapidly increasing consumption of sugar? The reason is that the sugar-planter stands on quite a different footing from the cotton-planter or the wheat-farmer. He must produce his staple in competition with the slave, coolie, peon, and other low grades of labor employed in its culture in other countries. He could not produce it at all save for the heavy tax on imported sugars levied by our tariff schedules. He can feel no certainty that this tax will not be varied to his serious detriment, if not to his absolute ruin, at any meeting of Congress. Consequently he is not willing to take the risk of opening new plantations or enlarging old ones. In fact he only continues in the business because he knows of no other way to utilize his fertile acres. Making sugar is his trade. He loves it and is unwilling to abandon it. Its very uncertainty has a fascination for him. Besides, it combines manufacturing with agriculture, and thus develops intellectual faculties not much called into play in ordinary farming. The planter must have the machinery and appliances for grinding the cane and converting the juice into sugar and molasses, and must understand their economical use. If he is unskillful, his product will not bring as much into one or two cents per pound as that of his skillful neighbor. To be successful he must also understand the management of labor, the purchase of supplies, the marketing of his product, and the diking and draining of his land. He must, therefore, be farmer, manufacturer, merchant, and civil engineer combined. I have said that the sugar-planters of Louisiana are a peculiarly intelligent class. They could not

be otherwise without going to the wall. It is not a business for dull, unprogressive men. These planters have an association which supports an experimental farm, where new varieties of cane are raised, new machinery tried, and the best scientific knowledge put into practice. They are a force in the politics of the State strong enough to defeat, recently, for reëlection a United States senator, because he was willing to uphold the sugar tariff as a revenue tariff only, and not as a tariff based on the principle of protection. The planters saw that if there was to be no principle of national policy underlying the sugar duty they were liable at any time to be ruined by the reduction of the duty to a point where it would yield the most revenue. Evidently, they said, the duty would produce more money to the Treasury if placed just below the figure which would enable the Louisiana planter to compete with foreign sugars.

The reader who has no interest in sugar other than as a consumer, will, I apprehend, be ready by this time to ask whether it is worth while to maintain by a high protective tariff an industry not indigenous and not capable, after nearly a hundred years of existence, of standing alone. Now let us hear the planter's argument for a protective tariff on his product. First, he says that cane-growing is not a forced and unnatural industry. The cane is not indigenous in this country, but neither is wheat nor oats nor cotton. There is no greater danger of frost injuring the cane crop of Louisiana than there is of its injuring the corn crop of Illinois. After a century of cultivation the cane may well claim to be a fully naturalized crop. Second, he argues that no tax by which money is raised to support the Federal Government is fairer or less onerous than the tariff on sugar. The rich use the most sugar and thus pay the heaviest tax per capita, but all pay something, as is just, because all are protected and benefited by the Government. In

THE PLANTER'S HOME.

fact the sugar tariff is the only natural tax which is distributed over the whole body of the population. The annual consumption of raw sugar in this country is about 56 pounds per capita of the population. At an average assumed a certain responsibility in the premises which it cannot honestly throw off. In other words, it has no right to ruin a large class of its citizens who have placed confidence in the continuance of a policy long since become settled and traditional. It is in honor bound, say the planters, either to maintain a duty on foreign sugars at a point high enough to enable them to compete with such sugars in our home markets, or to compensate them for the losses which would result from the abandonment of the protective policy.

IN THE FRENCH MARKET.

Finally they draw an affecting picture of the ruin and desolation that would come upon the richest districts of Louisiana if the sugar interests should be destroyed. There is only one other crop besides the cane adapted to the alluvial lands of the State, and that is rice. It would not be practicable or profitable to convert more than a small part of the area now cultivated in cane into rice plantations. Rice can only be grown where there are economical facilities for flooding the land. The greater part of the agricultural area below Red River would be abandoned if cane-planting could no longer be carried on. The levees could not be kept up, and the country would become a swampy wilderness. New Orleans would be ruined as a commercial city, the richest parishes in the State would be plunged into poverty and misery, and many thousands of people would die from starvation. In time the negroes who might survive the calamity would make shift to live by raising corn and potatoes on lands not requiring levee protection; but nothing could restore the former prosperity of the lowlands: they would fall into a condition of semi-barbarism, like the coast districts of Central America.

of 2½ cents per pound duty, the increased cost by reason of the tariff is $1.40 per individual. The duty paid on foreign sugars for the year ending June 30th, 1884, was in round numbers $48,000,000, and the benefit derived by the Louisiana planters from the duty was about $7,000,000. At the same time the planters of the Sandwich Islands received, in effect, a bounty from our Government of over $3,000,000 by the admission of their sugar duty free. Thus the United States practically gave nearly half as much to aid the cane-sugar industry in a foreign country as it did to foster it in our own State of Louisiana.

The next point in the argument is that the Government, having for nearly a hundred years encouraged the investment of capital in sugar-planting by a protective tariff, has

The area of land now cultivated in cane, in Louisiana, is about 170,000 acres. It is no greater than is embraced in an average prairie county in Dakota or Nebraska; but it is stretched out in narrow strips along the banks of the Mississippi, and of the numerous bayous, which serve as escape-pipes for the waters of the great rivers, and in reality comprises

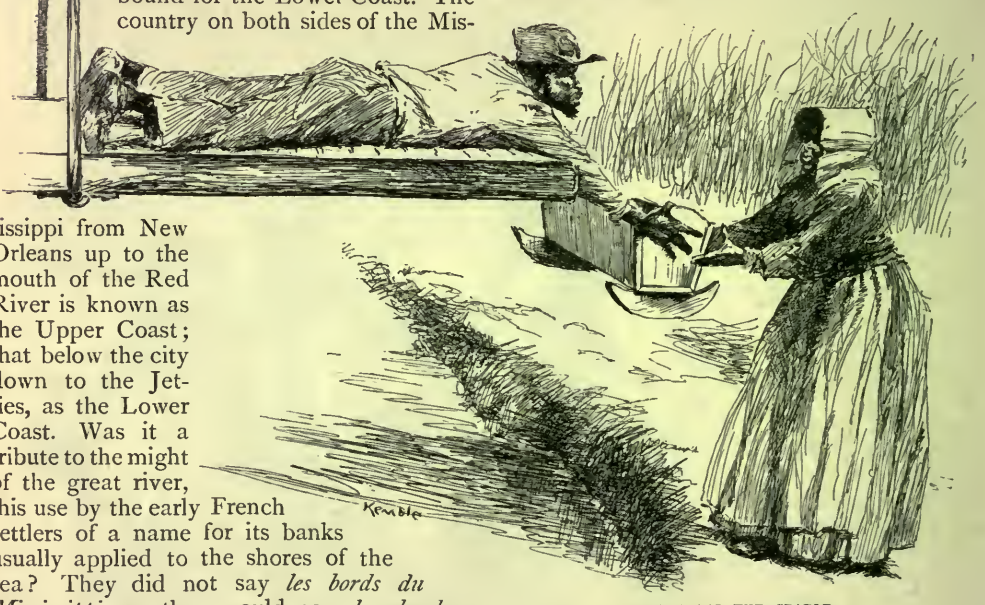
more than half the tillable soil in the lower half of the State. While a wheat-raising county in the North-west supports only 10,000 or 15,000 people at the most, this sugar country supports half the population of Louisiana. On the plantations it maintains 300,000 souls; and it is but a moderate estimate, to say that there are 150,000 more supported by transportation and the manufacture and sale of supplies used upon the plantations. An acre of wheat does not, on the average, produce more than $15; an acre of cotton will not average $30; but an acre of cane turns out a product in sugar and molasses which at the present low prices will bring from $75 to $100.

No important product of our national industry, with the possible exception of iron, has suffered such a fall in value in recent years as sugar. The grade of sugar which in 1869 sold in New Orleans for 15¼ cents per pound, sold in the same city in 1884 for 4½ cents. It is wonderful that the planting interest managed to resist annihilation under such disastrous conditions. That it still survives is an evidence of the courage and energy of the men engaged in it, and of its inherent vitality. The Louisiana planters have increased the yield of cane by better tillage and the introduction of new varieties, and at the same time have increased the yield of sugar per ton of cane by greater care in the manufacturing processes and by the use of improved machinery. Labor, which is 70 per cent. of the expense of producing sugar, costs them as much, and in most plantations more, than in 1869. They still believe, however, that the country has the capacity of furnishing all the sweets consumed by its people, and think it would do so in two or three decades if a uniform and permanent tariff policy were adopted by Congress, and if there should be no efforts on the part of the Government to bring in Mexican, West Indian, and Hawaiian sugars free, under the operations of special commercial treaties. Why, they ask, should our statesmen be willing to destroy a home industry, now producing $20,000,000 a year, for the sake of securing $8,000,000 or $10,000,000 of foreign trade? Our interstate trade is more valuable than any foreign trade. Louisiana now buys with the money her sugar brings more food products, manufactured goods, than Mexico and the West Indies combined. If all her alluvial lands were cultivated, and also the much greater area in Texas favorable to cane-growing, the sugar interest would develop a commerce of $200,000,000, most of which would go to the Northern States for clothing, machinery, coal, grain, and cured meats.

If the reader has now in mind a few cardinal points about the cane-sugar industry and

CAPTAIN, MATE, AND CLERK OF THE "ALVIN."

its relations to the general government, let us go on board one of the sugar-boats that carry supplies to the plantations on rivers and bayous and bring the crops to New Orleans. The artist and the writer thread their way through the French market with its polyglot chatter, its fragrant coffee-stands, and its queer medley of meats and calicoes, fish, oranges, and toys, and passing the open many-gabled sugar-sheds, come out on the broad levee. A group of steamboats lie with their noses against the bank. These are the sugar-boats, and this particular portion of the city's great protecting embankment is called the sugar levee. There is a mild stir of business upon the levee in the way of weighing and testing barrels of sugar, and a good many people, black, white, and yellow, saunter about as if they had nothing in particular on their minds. We are bound for the Lower Coast. The country on both sides of the Mississippi from New Orleans up to the mouth of the Red River is known as the Upper Coast; that below the city down to the Jetties, as the Lower Coast. Was it a tribute to the might of the great river, this use by the early French settlers of a name for its banks usually applied to the shores of the sea? They did not say *les bords du Mississippi*, as they would say *les bords du Seine*, but always *les côtes du Mississippi*. We make choice between the *Daisy*, a preposterously small and dirty boat, which carries the mail, and is therefore bound to make good time, and a large and reputable looking craft called the *Alvin*, which transports freight and stops at every plantation named on her manifest, preferring the latter. She does not start until an hour after her advertised time of leaving. Nobody grumbles or seems to think this extraordinary. It is the way of the country. Captain, mate, and clerk stand at the shore end of the long landing-stage, chatting and laughing, while keeping a desultory outlook for a belated passenger or dray-load of freight. Finally the *Alvin* backs out from between the other boats and begins a *voyage en zigzag*, crossing and recrossing the river more times than any one cares to keep account of, to land at plantations on one bank and the other. Every time the boat lands she must make a great circle so as to get her bows against the rushing yellow current. A great deal more space is traversed in these zigzags and curves than in a direct line down the river, so that we are all the afternoon making twenty-eight miles. But what matter? Is not the February air as mild as that of a Northern May, and does not the warm breeze bring grateful odors of the new-plowed earth, the budding cane, the orange groves, and the delicate green foliage of the willows and cypress? Besides we see in our leisurely progress much of the life of the plantations,—the gangs of negroes with plows and hoes, and



UNLOADING THE CRADLE.

the great cane-carts carrying the plant cane to the freshly tilled fields. Our boat is a traveling storehouse of curiously mixed merchandise. At one plantation we put off a consignment of crackers, at another a baby's cradle, at another a mule. Before the bows touch the bank a row of roustabouts stand on the plank, one with a barrel, another with a bag of fertilizer, a third with a box or bale—eight or ten of them ready to rush ashore. The moment the last article is landed, the mate shouts "get aboard" and "hoist away," and up goes the great plank into the air while the crew comes running in.

IN THE STORE.

At night the landing scenes are still more picturesque. The electric headlight suddenly irradiates a few rods of the levee, causing a negro cabin, the colonnaded mansion of a planter, or the dingy walls of a sugar-house to flash out of the obscurity for a moment, and then to relapse into the surrounding blackness. The boat feels her way with the light to the landing-places, and when she stops for a few moments, to put a passenger or a box ashore, the illuminated scene on the levee seems to have been conjured out of chaos and black night for our momentary wonder.

We go ashore at Belair, a plantation celebrated for its careful and systematic field work. The planter is waiting upon the levee for his guests. Two negroes seize our portmanteaux, and we are shown the way to an old-fashioned, square house, completely surrounded on all sides and on both floors by broad galleries supported by columns. It stands in perilous proximity to the menacing yellow flood of the river, and the owner explains its need of repairs by saying that as the water is eating into the land in front of it at the rate of seven feet a year, it must soon fall into the stream, which is a hundred feet deep at this point. He does not, therefore, think it worth while to spend any money on the old structure. After supper we go to the store. The store is usually the center of the business life and of much of the social life of a plantation. It is owned by the planter, who keeps in it a stock of clothing, provisions, and knick-knacks to supply his laborers. A book account is kept with each head of a family, and a settlement made on every weekly or monthly pay-day. We find a score of negro men and boys in the store listening to the music of an accordion, a fiddle, and a triangle, and with some little coaxing and the promise of a quarter to the best dancer we succeed in getting up an amusing competitive double-shuffle and heel-and-toe dance. The contestants, who have been toiling in the fields all day, throw off their coats and get down to the work with evident relish, amid shouts of "Hi! hi!" "Go in, Jim!" "You, dah, Gawge!" and "Let youssef out, Mose!" and clapping of hands on knees from the delighted sable spectators. When the fun begins to get monotonous I manage to have a talk with an intelligent old negro named Squire, who was a "driver" in slave days and is still a "driver" — not of mules, be it under-

stood, but of men. A "driver" is the foreman of a gang of laborers. On some plantations the title of foreman is coming into use, the negroes objecting to the old word. I ask Squire if the field hands do as much work in a day as they did in slave times. "Nuffin like it, boss," he replies; "befo' de wah, de plow gang had to be in de field long befo' sun up, all drawn up in line and ebery man a-hold of his plow, waitin' foh de first daylight to start. And de hoe gang was dah, ebery man a-leanin' on his hoe, ready to start at de word jist as soon as dey could rightly see de rows of cane."

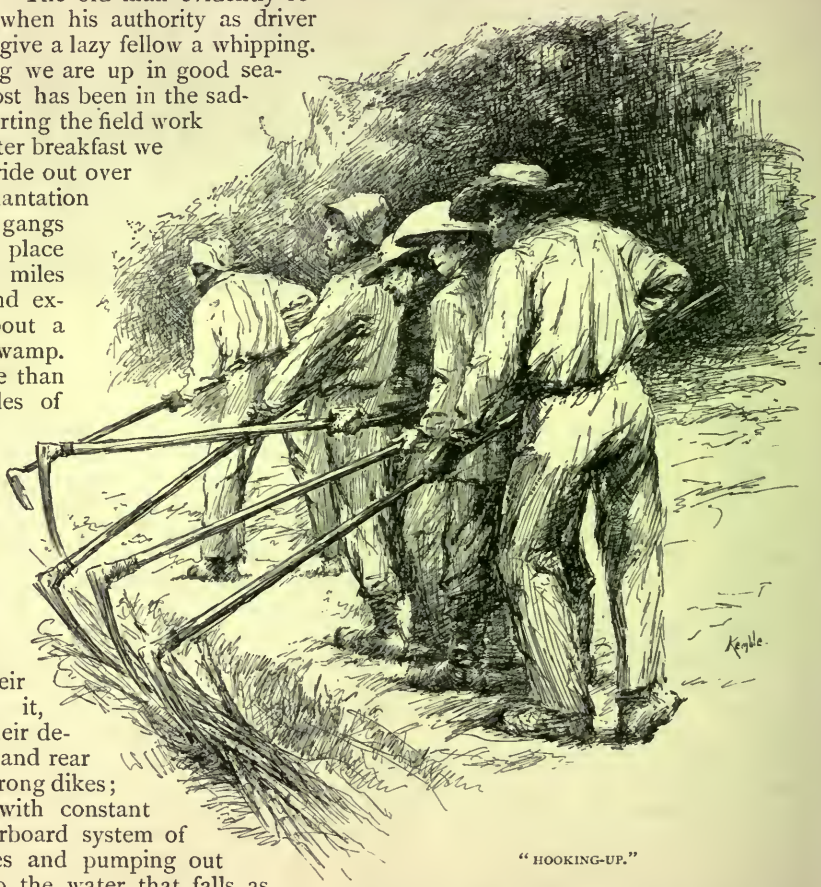
"If a man did not keep up his row, what did you do?"

"Give him a lick wid de whip. Dat mostly brought him to his senses. Times is not what dey was, boss." The old man evidently regrets the days when his authority as driver enabled him to give a lazy fellow a whipping.

Next morning we are up in good season, but our host has been in the saddle since six, starting the field work for the day. After breakfast we all mount and ride out over the smooth plantation roads to see the gangs at work. The place fronts for three miles on the river, and extends back about a mile to the swamp. There are more than twenty-five miles of roads upon it. About a thousand acres are under cultivation. The great enemy of the planters in all lower Louisiana is water. They must constantly be on their guard against it, throwing up their defenses in front and rear in the form of strong dikes; keeping open with constant labor a checkerboard system of drainage ditches and pumping out into the swamp the water that falls as rain or soaks through from the river. Belair has two protection levees on the swamp side, so that if one is overflowed a defense can be made on the second line. In sugar-culture an enormous amount of labor must be expended in diking and ditching that has no direct result in the production of the crop.

How delightful is a February morning in these warm lowlands! The atmosphere is like that in Corot's pictures, misty, vague, and dreamy. The gigantic live-oaks seem like ghosts of trees. The figures of men and animals moving across the shrouded fields against the gray sky loom up into strangely exaggerated proportions. A soft breeze blows from the Gulf. The line of faint green on the horizon shows that the cypress-trees in the swamp are beginning to put on their spring colors. Flocks of noisy blackbirds are holding mass meetings on the new-plowed ground and passing resolutions in favor of immediate migration to the North.

Let us follow in their sequence the processes of planting. First is the uncovering with plows of the furrows in which the seed-cane has been



"HOOKING-UP."

buried since last fall, the pulling it out of the ground with great iron hooks attached to poles, and the loading it into carts. In the "hooking-up" gang I observe two white men working with the negroes. They are Spaniards from the *Terre aux Bœufs* country, the other side of the swamps. There are two others who are neither whites nor negroes. They have a

brown complexion, high cheek-bones, regular features, and straight black hair. These are "Manilla men"—natives of the Philippine Islands. The curiously mixed population of lower Louisiana includes two or three thousand of them.

Big stout carts with broad-tired wheels haul the resurrected canes to the field prepared for planting. Here a gang of women called "droppers" take up the canes by armfuls and drop them in heaps at intervals beside the furrows. They are placed in the furrows by other women called "planters." Another gang passes along the furrows and chops up the canes with rude hatchet-like knives. The object of this is to give the weak eyes a chance to draw strength from the stalk which would otherwise be absorbed by those which have already a good start. About six tons of cane go to the planting of an acre. One acre of seed-cane will plant three acres, and as the planting must be done every third year, one-ninth of the crop average of a plantation must be given up to seed-cane. When the seed-cane is cut in the fall, the stalks are laid between the rows of stubble and covered with a plow run on each side.

DROPPING AND PLANTING.

After the canes are laid and cut, they are covered with plows or with a machine called a rotary hoe, and the ground is then rolled to press the dirt close to the sprouting eyes. The first crop is called plant-cane. Next year the cane sprouts from the stubble, and is called first ratoons. The second year it sprouts again, and is called second ratoons. The third year the stubble is plowed up and the ground sowed with field peas, which recuperates the land, as clover does Northern farms. The fourth year it is again put in plant-cane. A good yield to the acre is 25 tons of plant-cane, 20 of first ratoons, and 15 of second ratoons. On the Upper Coast, above New Orleans, it is customary to let the stubble ratoon but once. In Cuba it often ratoons six successive years, but the cane becomes constantly more woody and poorer in saccharine matter.

In the stubble-fields the first spring, work consists in "barring off," or moving the dirt away from the roots of the cane with plows and hoes, to permit the light and air to hasten the germinating of the ratoons. By the middle of April there should be a good "stand" of the young sprouts. Then the dirt is worked back toward the rows, and there is constant cultivation with the plow till about the 1st of July, when the crop is "laid by." No more work is done on it till the cutting begins in September. Now the cane is so high that a man driving a mule is lost to sight between the rows. Soon it will be tall enough to swallow up a man on horseback. The rows are usually seven feet apart and always run parallel with the ditches — that is, from the river or bayou toward the swamp. July and August was formerly the time for cutting wood in the swamps to run the sugar-mill during the grinding season, but now most plantations burn coal. The crop being "made," the planter feels that he can relax his vigilance, and if he has the means, he goes off to the North with his family to escape the two hottest months of the year in Louisiana and build up his health in a less enervating climate.

The field hands work steadily, but in a rather leisurely way. I am struck by the strong mus-

cular build of many of the men and women and the easy, cheerful way in which they go about their tasks. The women only do field work during the planting and grinding seasons. The rest of the time they look after their simple household duties. There is a good deal of light work on a plantation for the children, so that they become helps to their parents as soon as they are eight or ten years old. The ordinary wage of a man is 75 cents per day, and of a woman 65. But during the cutting and grinding period, which embraces three months of a year, the men earn $1 to $1.25 for regular hours and usually make extra pay by overwork. In no part of the South do the negroes seem to be as well off as on the sugar plantations: there is a common saying that it takes fourteen months' work in a year to make a sugar crop. An industrious man can actually earn fourteen months' wages between the 1st of January and the 31st of December. Each family gets a house and a garden-patch rent free, and on many plantations is allowed to keep chickens and pigs. Their fuel is cut in the swamp or picked up from the abundant drift-wood cast ashore by the river. The climate is so warm that not much money need be spent for clothes. A thrifty negro family will always manage, however, to have presentable garments for Sunday wear, and the women can usually gratify their love for bright ribbons and cheap flashy jewelry.

We ride back in the rear of the plantation to see the huge drainage-wheel driven by steam, lazily lifting the yellow water from the canal on its broad arms up to the level of the bayou that leads to the swamp. We pass a group of houses inhabited by Spaniards, where moss is drying on the palings and yellow-faced children are tumbling about the door-yards,—"Built for tenant farmers who worked ground on shares," explained the planter, pointing to the cottages, "but the system did not succeed. The tenants were not willing to share the hardships of a bad year, and when they got less money by reason of a short crop, they accused me of cheating them. I now let the cottages to white laborers employed for wages on the place."

"Is there much white labor seeking employment on sugar estates?"

"More and more every year—principally Germans and Italians. Thrifty people they are too; very poor when they come from the old country, but soon getting ahead."

Now the tones of the big plantation-bell are heard across the broad, level fields. All the gangs stop work, and people and animals go trooping to the quarters for dinner, the foreman of each gang going ahead to prevent the men from racing the mules. As we ride homewards, the planter talks of the great part religion plays in the lives of the negroes, and of the survival of old heathen superstitions. Some time ago the negroes took a dislike to the overseer, and sent to the city for a conjurer to come down and "Voodoo" him. The conjurer undertook to rid them of the overseer for $30, but finally came down in his demand to $2.50. An investigation showed

CUTTING CANE.

that the only thing he did was to place at night on the doorstep of the overseer's house some white powder with two black hairs crossed upon it. The negroes questioned would not say whether they expected the overseer to die, or only to leave the place. The Voodoo man had merely told them that they would "get shut of him."

Our next visit was to Magnolia plantation, the sugar estate farthest down the river of

HAULING CANE.

any now worked. Below it all the cultivated land is in small rice-farms.

The Magnolia sugar-house is generally known in Louisiana as having the best machinery and all the new processes. It is not much imitated, for two reasons: First, the conservatism of the older class of planters, which leads them to stick to the methods they understand, and second, the fact that the business of sugar-making has not been sufficiently profitable in recent years to enable planters of moderate capital to purchase new apparatus. They are obliged to hold on to their old pans and kettles, for want of money to buy new. Let us now go into the great irregular brick building, with its three tower-like chimneys and its general big-factory air, which contains the sugar-making plant, promising at the start to go through hastily, and not to bore the reader with details about machinery, or with the fine scientific points of the business. A sugar-planter will talk to you by the hour, about percentages of sucrose, and glucose, inverted crystallization, degrees of vacuum, and polariscope tests, until your brain takes in only a confusion of words and figures. First the owner of "Magnolia" calls attention to his bagasse-burner, which makes more than half the steam used to run the mill. Formerly the bagasse, which is the cane after it has parted with as much of its juice as the mill will extract, was either burned in a furnace to get rid of it, or thrown out on the levee to help fight off the river from eating away the bank. Now every economically managed mill burns it to make steam, by the aid of the draught of an enormous chimney. The best method is to burn it on grates, under which air is forced by a blower.

The canes, hauled in the big carts from the fields, are dumped upon an endless band and carried into the mill, usually direct to the big iron rollers, but at Magnolia first to a "shredder." There are only two shredders in the State, the machine being a new invention. Its revolving teeth chew up the cane into pulp. The pulp and juice fall upon a rubber apron which carries them to the mill; grinding is simply squeezing between three or four sets of iron rollers. Now the juice runs in a trough to a strainer, where a woman gathers up now and then the shreds of cane remaining and takes them back to the mill. Next the juice is pumped into an iron cylinder called the "juice-heater," and heated with exhaust steam to 190°. This is a new process, not much in use. Next it runs into the clarifiers or defecators, which are large iron vats with rows of steam pipes at the bottom. Here slacked quicklime is added, which brings to the top all impurities, to be skimmed off into a division of the pan at the end. The juice is then boiled and "brushed" with a long paddle until the bubbles become white, when it is allowed to settle for fifteen minutes. There is a side operation for saving the sugar in the skimmings by putting them through filter presses.

In the advanced process at Magnolia the juice next goes through bone-black filters instead of to the ordinary settling-tanks, to settle for six or seven hours. A filter is a big iron drum containing ten thousand pounds of animal bone-black. The "char" must be washed with

hot water every two days and dried in a kiln. After filtering, the juice, still thin as when first pressed from the cane, goes to the "double effects." This is a new apparatus, resembling two upright boilers of a portable engine. Each cupola-like machine contains five hundred tubes in which the juice is boiled in a vacuum by exhaust steam. The usual plan is to boil in an open cylindrical pan, having coils of steam pipe at the bottom. Now the juice goes to fresh filters and next to the vacuum-pan, which is not a pan, but a big iron cupola-shaped cylinder, with an apparatus for exhausting the air and multitudinous coils of steam pipe. This is the process requiring most skill. The chief sugar-maker attends to it himself, watching his vacuum-gauge and thermometer carefully, and testing every few minutes his boiling mass by drawing out a tube which does not break the vacuum. He seeks to keep the temperature down to 130°. If it is too high some of the sucrose will "invert" or "caramel" into glucose, and the proportion of sugar will be lessened. First, he fills the pan only in part. Then when he sees fine granulations of sugar against the light in his test-tube, he admits more juice, and thus builds up the grains little by little to larger size. When sufficiently boiled, the thick syrup is called the "masse cuite." The "strike" is now done, air is admitted to the pan, and the contents are run off into the "mixer,"—a huge oblong iron pan in which steel arms revolve. Next the "masse cuite" falls into the "centrifugals," which are small drums holding about 120 pounds of sugar. Within the drum is a wire screen basket revolving at the rate of 1600 turns per minute. The centrifugal force throws out the molasses through the wire network and leaves the sugar. Perfectly clear water is then spurted into the drum from a syringe. This water is thrown out through the sugar, washing out the remaining coloring matter. The motion of the centrifugal is now stopped and the sugar let out of a trap in the bottom into a screw conveyer, from which a bucket band carries it to a big bin. A man stands in the bin and shovels the sugar, as if it were wheat, into a tube under which the barrels are placed one by one to receive it.

MAKING THE SUGAR.

This first product of the sugar-mill is called "firsts," and is the whitest and best sugar. The molasses is boiled again in the vacuum-pan, goes again through the centrifugals, and a light-brown sugar called "seconds" results. Yet again the remaining molasses goes through the pans, but the "masse cuite" is now sticky and stringy, and will not yield its sugar to the centrifugals. It is put into iron tanks on wheels, called "wagons," each of which holds about 2500 pounds, and wheeled into the hot-room. The temperature here is from 90° to 100°. Here the wagons stand in closely packed rows for thirty days. The mass is now

very stiff and waxy. It is next thrown into the boiler, stirred up well and put into the centrifugals, with cold water, which washes out the molasses. The final remainder of sugar is called "thirds," and is of a dark-brown color. The separated molasses is of a very poor quality, and sells for only about thirteen cents a gallon. Distillers use it to make alcohol, and the glucose manufacturers buy it to give a cane-flavor to their glucose syrup.

By the improved processes I have thus described about 78 per cent. of the weight of the cane is extracted in juice, whereas the average extraction in Louisiana is only about 63 per cent. The best five roller-mills get about 70 per cent., the additional 8 per cent. being due to the use of the shredder. The new processes give about 160 pounds of sugar from a ton of cane, the average of the State being only 100 pounds. In 1885 Magnolia plantation averaged 163 pounds from a ton of cane. The sucrose of the crop of 1885 was about 11 per cent. less than that of 1884, but the sugar yield was increased 6 pounds to the ton of cane by improved manufacture. To some extent the low amount of sugar produced by old methods is compensated for by the greater amount and better quality of the molasses, but as molasses is worth only 2 cents a pound, when sugar brings from 4½ to 6, there is no possible economy in holding on to the old processes.

WASH-DAY IN THE QUARTERS.

A SUGAR plantation is divided by main ditches and roads into sections known in some parishes as "cuts," in others as "strips," and in still others as "blocks." These have names familiar to all the people on the place. At Magnolia they talk of the "Polly Garden Strip," the "Molly Shanty Strip," the "North Front Strip," the "Big Oak Strip," etc. Each of these sections is subdivided by small ditches into fields containing an average of about twenty-five acres. Every well-managed plantation is carefully mapped, and the planter, running his eye over the map in his office, will tell you just what fields are in plant-cane, in stubble-cane, or in cow-peas. He plans his operations on his map as a general does a campaign. It is a stirring, fascinating business, which keeps a man on the alert, mentally and physically, and develops the most intelligent type of the country gentleman to be found in the South.

The cane-cutting season begins the 1st of October. It would be advantageous to wait longer, for the canes are constantly sweetening their juices, but there is danger that the crop may not all be harvested before the frosts come. In Cuba, where there is no frost, the planter can continue to cut and grind until the new sap begins to flow in the stalks. Not infrequently it happens that a Louisiana planter raises more cane than he can work up in his mill before the cold weather of January sets in. The next year he reduces his acreage. The amount of land he can cultivate must depend on the capacity of his mill.

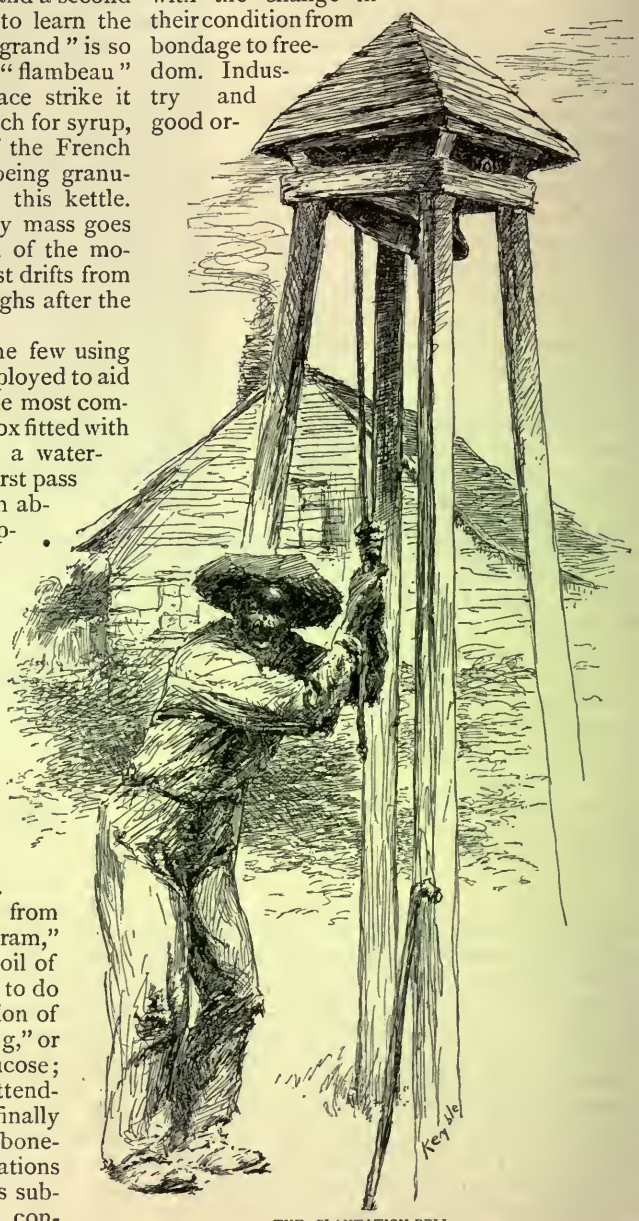
A great deal of sugar is still made in Louisiana by the old open-kettle process, wasteful as it is, for the simple reason that the planters cannot afford to buy new apparatus. This old process is substantially the same as was in use at the beginning of the century. Five or six big cast-iron kettles of graduated size are arranged in line over a brick furnace. At one end is the fire of cypress wood; at the other the tall chimney. The cane-juice runs into

the largest kettle, called "the grand," which is farthest from the fire, and in the course of the boiling is ladled successively into the others, called, in order, "the prop" or "proy," "the flambeau," the "sirop," and "the battery." Often there are six kettles, a first and a second "grand." I have not been able to learn the derivation of the "prop." The "grand" is so called because of its size, the "flambeau" because the flames of the furnace strike it with most force; "sirop" is French for syrup, and "battery" is a corruption of the French word *bâtir*, to build, the syrup being granulated or built up into sugar in this kettle. From the battery the thick sugary mass goes to wooden tanks to cool. Much of the molasses is here drained off. The rest drifts from the hogsheads placed above troughs after the sugar is packed.

In all sugar-houses, except the few using bone-black, sulphur fumes are employed to aid the lime process in clarifying. The most common apparatus is a large wooden box fitted with numerous shelves, a retort, and a water-tank. The fumes of the sulphur first pass over the water in the tank, which absorbs the sulphuric acid and is supposed to leave only sulphurous gas to go up into the box, and mingle with the cane-juice which drips from shelf to shelf. To produce a draught there is a steam-exhaust apparatus above. The juice next goes to the clarifiers to be mingled with lime. Here the vegetable albumen is coagulated and rises in a scum called the "blanket," which is skimmed off, the mineral constituents of the juice falling to the bottom of the pans.

Next in order in the advance from the old open kettles is the "steam tram," which is a series of vats with a coil of steam pipe at the bottom of each to do the boiling without the direct action of fire, and thus prevent "carameling," or the inversion of sucrose into glucose; next is the vacuum-pan with its attendant centrifugal machines, and finally the "double effects" and the bone-black apparatus. On a few plantations the high-grade centrifugal sugar is subjected to a drying process, and converted into "plantation granulated."

At Southdown plantation in Terrebonne parish, I found a good example of an estate and sugar-house of the first class, not employing, however, the exceptionally advanced appliances. The lands embraced in the horse-shoe bend of a bayou were originally cleared by the father of the present owner, and most of the laborers were formerly slaves or are the children of slaves born upon the place. Their docility and attachment to the family of the proprietor seem to have been little changed with the change in their condition from bondage to freedom. Industry and good or-



THE PLANTATION-BELL.

der are secured by their dread of being discharged and thus compelled to leave the old plantation. Their local attachments are very strong. Their whitewashed cabins, each with its piazza fronting upon a street shaded with live-oaks, are as dear to them as is the "big house"

to the "boss." To the "big house," as they call the residence of the planter, they resort for medicine and advice in case of illness and for kindly counsel and assistance in trouble.

The relations between employer and employees on a sugar estate are unique. They are the nearest approach in America to a feudal system. Not a foot of land do the laborers own. Yet their right to homes and labor on an estate is a sort of unwritten law, so binding that they are seldom sent away except for very serious cause. They regard the mules and implements of the planter as to some extent their own, using them to cultivate their gardens and to haul their fuel. In directing the plantation work he seldom uses any harsh words of command; talks rather in kindly tones, scolds a little if needs be, but in rather a parental fashion; asks opinions at times from swarthy old "uncles" who have a standing on the place as faithful men and experts in cane-culture; knows the strong and weak points in the character of every man in his employment. Indeed his rule is so mild that a stranger to plantation life wonders how the uncouth mass of black laborers is held together and disciplined so as to produce favorable industrial results.

I must leave the picturesque features of plantation life to the pencil of the artist. Something I would like to say in this regard, and something, too, of the pleasant homes of the planters of the better class, with their portraits of ancestors for a century back on the walls, their old mahogany furniture, their libraries of old books, their bountiful hospitality, the good conversation in front of brass andirons and blazing wood fires, the tea served in old china, "brought from France by our grand-mother," whose portrait by Gilbert Stuart looks benignly down on the scene, the willing, friendly black servitors, the reminiscent tone of much of the talk, referring constantly to the golden age of sugar-planting, which was in the "good old times before the war." But for all this there is no space, and I must close with a few random notes that have not fitted themselves into the foregoing text.

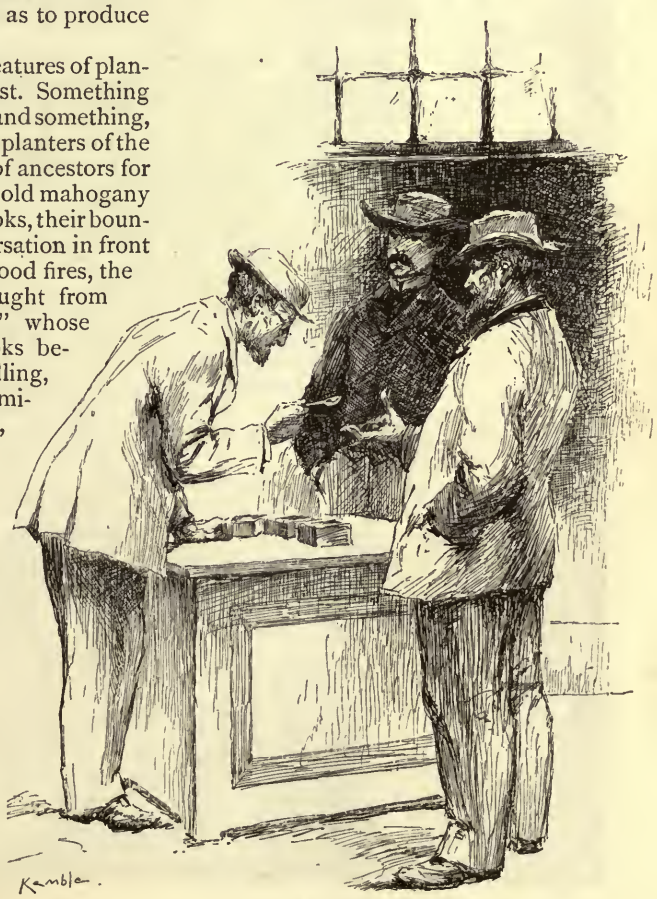
NOTES FROM A MEMORANDUM-BOOK.

THE heaviest yield of sugar on record was raised in 1882 on a plantation in Jefferson parish, opposite the city of New Orleans. From 50 acres of canes 300,000 pounds of sugar and 12,000 gallons of molasses were obtained.

The "double-effects" apparatus was invented about thirty years ago by a free colored man named Relieux, who went to Paris and made a fortune from it. It is generally used in beet-sugar making, and also in most cane-sugar countries except Louisiana. Relieux told the Louisiana planters before he went to France that they would in the end have to use his invention or quit the sugar business.

The Louisiana Sugar Exchange, built three years ago, is a commodious structure having a large exchange room, a reading-room, telegraph office, secretary's room, etc. In the exchange are many tables where the samples of sugar and molasses are displayed. There is no speculation — no daily call, no dealing in futures, the business being purely commercial. Most of the Louisiana product is disposed of here by brokers, but many planters are members of the exchange and sell their crop directly to the merchants.

To show the wide range of values for differ-



IN THE EXCHANGE.

AT TWILIGHT.

ent grades of sugars and molasses, I copied the following figures one day in February, 1886, from the bulletin board of sales made at the Exchange. Open-kettle sugar ranged from 2 cents per pound for inferior of lowest grade to 5⅛ cents; centrifugals from 4⅝ for "seconds" to 6¼ cents; molasses from 20 cents for centrifugal to 27 for open kettle.

In St. Mary's parish farmers who have no sugar-houses are raising cane, crushing it, and conveying the juice through pipes to centrally located sugar-houses, just as petroleum is conveyed by the Pennsylvania pipe-lines. This system promises to have important results in opening the cane-planting industry to men of small means who cannot own large plantations and expensive apparatus.

I saw on two plantations on the "Lower Coast" a portable railway used for hauling the canes from the fields to the mill. The planters said it effected an important economy in the labor of men and animals. Rails and ties were moved from road to road as the cutting progressed.

In Ascension parish a tenant system has been in successful operation for several years. A large land-owner leases his land to small farmers, white and colored, buying the canes of them at a fixed price per ton. The tenants get their houses free of rent. In recent years barrels have entirely taken the place of hogsheads as receptacles of sugar except for the open-kettle sugar. Nevertheless the hogshead is still the unit of measurement in speaking of the crop of plantations, parishes, or the State.

The Louisiana sugar country is usually divided into the following districts, all lying below Red River: the Upper Coast, the Lower Coast, Bayou Lafourche, Terrebonne, and St. Mary's on Bayou Teche. The Upper Coast is the most important.

About one-fourth of the sugar estates are said to be owned by Northern men who have come to Louisiana since the war. As a rule they are more successful than the old planters. Many plantations are in the hands of New Orleans banks that have taken them in payment of loans. If sold by the sheriff, a plantation will not bring much more than the cost of the sugar-house and machinery. No estimates I have heard agree as to the number of estates still in the possession of the families owning them before the war. Some place it is as low as 10 per cent., some as high as 33.

Next to the negro the mule is the most important force on the sugar plantation. No mules are raised in Louisiana. All are brought from Kentucky, Tennessee, or Missouri. Horses do not long endure hard work in the hot, moist climate of Louisiana lowlands. The mule is much more hardy and longer-lived.

The plantations do not feed their laborers nor their animals. Sometimes a little corn is raised; oftener none. Hay is put up from cow-peas. Flour, bacon, corn-meal, potatoes, oats, and baled timothy hay came from the North. A planter cultivating about 700 acres will pay out $50,000 during the year for labor, victuals, clothing, and forage before he gets a dollar back. Nearly all this money goes to Northern farmers and manufacturers.

Whisky-drinking is a common vice among the plantation negroes. Looking over the books of a plantation store in Terrebonne parish, I observed that among the items charged in each entry there was pretty sure to be a quart of whisky. Indeed whisky occurred oftener in the accounts than bacon or flour.

Indian corn-meal is no longer the staple bread-stuff on the plantations, as in the days of slavery. The negroes prefer wheat flour, and insist on having a good quality. They consume large quantities of bacon and salt pork. Fresh beef they seldom eat. They vary the monotony of hot biscuits and bacon with game and fish. Rabbits abound, wild ducks are plentiful, and rivers, bayous, and bays afford an abundant supply of fish.

Among the planters I hear two radically different opinions as to the future of the cane-sugar industry in Louisiana. A planter who is using old-fashioned apparatus, carrying heavy mortgages, and paying 12 or 15 per cent. interest and commissions, thinks the business is going to ruin. On the other hand, a planter who has a sugar-house equipped with the best machinery, and is every year getting more cane to the acre, more juice to the ton of cane, and a larger percentage of sugar from the juice, believes that the industry is only in its infancy. The scientific study of fertilizers and drainage, and further improvements in the processes of sugar-making, will result in still greater yields, he says, and if Congress will let the tariff alone for ten years Northern capital will be attracted to the industry; much wild land will be diked and drained, and Louisiana, with the aid of the beet-sugar factories of the Pacific Coast, and the sorghum of the West, will furnish sweets enough for the entire population of the United States.

Hawaiian sugar is sold to the New Orleans refiners at two cents per pound less than the price in San Francisco. The excuse for the Hawaiian treaty was to give the people of the Pacific Coast cheap sugar. It has no such effect. The exemption from duties is simply a bounty to the Hawaiian producer, to enable him to compete with our own planters. The price of sugar in San Francisco is always the Eastern price, plus the high transcontinental freight rate. Hawaiian sugar coming East is

said to pay less than half the freight rate charged Louisiana sugar going West. Since the treaty went into operation, we have practically paid the Sandwich Islands planters $23,000,000 in the form of a remission of tariff dues,—that is, more than the value of all the goods they have bought of us. If we had presented them with the goods outright, and collected duties on their sugar, the account between the two countries would have been more favorable to the United States.

Eugene V. Smalley.

INDIAN SUMMER.

AS frosty Age renews the early fire
Whose eager flame in hazy warmth appears,
And brings again, across the shadowy years,
The vanished dreams that kindle and inspire;
As time repeats the hour of young desire
In smoother laughter and more tranquil tears,
And childish pleasures mixed with needless fears
Stir through the pulses of the withered sire,—
So when November, sharp with frost and sleet
And moaning winds about the rocky height,
Has reaped the shining forest to his hand,
The charm of Spring returns in mellower heat,
To veil the leafless hills with purple light
And brood in peace above the naked land.

Dora Read Goodale.

THE LIGHT.

THERE is no shadow where my love is laid;
For (ever thus I fancy in my dream
That wakes with me and wakes my sleep), some gleam
Of sunlight, thrusting through the poplar shade,
Falls there; and even when the wind has played
His requiem for the Day, one stray sunbeam,
Pale as the palest moonlight glimmers seem,
Keeps sentinel for her till starlights fade.

And I, remaining here and waiting long,
And all enfolded in my sorrow's night,
Who not on earth again her face may see,—
For even Memory does her likeness wrong,—
Am blind and hopeless, only for this light —
This light, this light, through all the years to be.

H. C. Bunner.

COLLEGE COMPOSITES.

COMPOSITE photographs of college classes should furnish more important evidence as to the value of this method of typical representation than any which could be derived from composites of less closely related groups. The likenesses and the differences which might be found to exist should lead to some interesting conclusions in regard to the limitations of the process.

When the composite portrait of the class of '86 at Smith College* was made, it was my plan to make composites of the succeeding Senior classes, and I hoped at some time to be able to secure composites of classes in other colleges. This hope has been already realized, as the accompanying illustrations show. Through the courtesy and coöperation of friends in a number of colleges and universities, the students were interested in the matter, and arrangements were made with various photographers for taking the special negatives necessary for the purpose. These were all sent to me, and from them the composites were made in the manner described in the March CENTURY. To these portraits and that of the Harvard Faculty, for which negatives were made at the same time as those of the Harvard Seniors and students of the "Annex," I am fortunately able to add one of the students of Wells College, which was made by Professor French of that college, and one of a class of nurses at the McLean Asylum Training School, which Dr. Cowles has been kind enough to place at my disposal.

The first question which these composite photographs enable us to answer is: Will all Senior classes of the same college yield the same composite face? Any one who will take the trouble to compare the portrait of the class of '87 Smith with that of the class of '86 will see at a glance that this is not the case. The groups are not large enough to give in both cases (or in either) the general type of the Smith Senior. There is a difference as distinct as the impression which different classes make upon the minds of their instructors or fellow-students. The class individuality asserts itself, and we can hope to get the general type only when a co-composite of many class composites can be made; and this will then be perhaps somewhat aside from the present truth, for I suspect that the type of Senior in most American colleges (and especially in those for women) is slowly changing.

With the answer to this question one anticipates the answer to another which many have asked: Would the composites of the same class in different colleges for women (or for men) be identical?

Yet, though prepared for a negative, many will probably be surprised at the great diversity which is shown in the experimental answer given by these Senior portraits which lie before us.

Although we are not justified in taking any of these as exhibiting the general type of Senior in the particular college, they must be regarded as approximations to that type, and closer approximations as the number of the group is larger. Perhaps in the case of Harvard the number is large enough to give accurately the general type. They serve thus fairly well to show the diversities in type of the students at the colleges and universities

* See THE CENTURY for March, 1887.

SEVENTY-ONE MEMBERS OF THE CLASS OF '87 AT AMHERST COLLEGE. 63 PER CENT. FROM NEW ENGLAND; 21 PER CENT. FROM THE MIDDLE STATES. (FROM NEGATIVES BY PACH.)

TWENTY-EIGHT MEMBERS OF THE CLASS OF '87 AT BOWDOIN COLLEGE. ALL, WITH ONE OR TWO EXCEPTIONS, FROM MAINE. (FROM NEGATIVES BY REED, OF BRUNSWICK, ME.)

SEVENTY MEMBERS (SIXTY-FIVE MEN AND FIVE WOMEN) OF THE CLASS OF '87 AT CORNELL UNIVERSITY. ABOUT 75 PER CENT. FROM NEW YORK AND PENNSYLVANIA. (FROM NEGATIVES BY EVANS, OF ITHACA.)

ONE HUNDRED AND FIFTY-EIGHT MEMBERS OF THE CLASS OF '87 AT HARVARD UNIVERSITY. ABOUT 60 PER CENT. FROM NEW ENGLAND; 17 PER CENT. FROM THE MIDDLE STATES. (FROM NEGATIVES BY LOVELL, OF NORTHAMPTON, MASS.)

TWENTY-TWO DOCTORS OF PHILOSOPHY AT JOHNS HOPKINS UNIVERSITY. (FROM NEGATIVES BY CUMMINS, OF BALTIMORE.)

FORTY-THREE MEMBERS OF THE CLASS OF '87 AT THE SHEFFIELD SCIENTIFIC SCHOOL. ABOUT 40 PER CENT. FROM NEW ENGLAND (CHIEFLY CONN.); 32 PER CENT. FROM THE MIDDLE STATES. (FROM NEGATIVES BY PACH.)

which are represented. These diversities are the resultants of many conditions. The difference in locality from which the students are drawn is perhaps the most tangible of these conditions, and is probably a considerable factor in the result. But many of the conditions are much too subtile to be dealt with by any ordinary statistical method, and can find fitting expression only in the composite photograph. This shows at a glance much that the statistician's tables could never give, and tells many things which could not find adequate expression in words. The influences of parentage, of home-training, of the "atmosphere" of the college in which three or four years have been spent — in a word, of heredity and environment — are here all summed up and averaged.

Along with the differences in these faces of college students, one cannot fail to note a certain "family resemblance." While this is doubtless increased by the general effect of a process which eliminates all strong individual characteristics and leaves a somewhat colorless expression, it is due chiefly to the inherent

similarity of the groups. Each class forms a group whose variation from the type shown in the co-composites is not very great, a fact rendered more distinct by comparison of the fair collegians with the attractive nurse of the training school.

In the co-composites it is probable that the number of faces is large enough to yield a general type. They were made in such a way,— by exposures of the single composites for times which were proportional to the number of individuals in each group,— that the results are the same as those which would have been obtained by making them directly from the original negatives. Co-composites of succeeding classes in the same institutions would not, I fancy, vary much, if at all, from these. The types which they give are the general ones of students in all these representative colleges. Marked resemblances to one of the composites are to be noticed in each of these co-composites. A like similarity has been sometimes remarked in comparing the individuals of a group with their composite portrait, and only goes to prove that the individual or group in which the likeness to the blended portrait is detected, comes very near to the average of the entire number.

FIFTY-SEVEN MEMBERS OF THE CLASS OF '87 AT WILLIAMS COLLEGE. ABOUT 35 PER CENT. FROM NEW ENGLAND; 45 PER CENT. FROM THE MIDDLE STATES. (FROM NEGATIVES BY LOVELL.)

In the article on composite photography in the March CENTURY the possible influence of the order of exposing the components in making composites was discussed, and it was stated that there was very conclusive experimental evidence to the effect that the order of exposure made no difference. In spite of this statement it has been said to me again and again by those who professed to have read the article with attention, that "of course" the negative last (or first) exposed must control the result. A well-known photographer, in commenting on the article in a photographic journal, writes: "In our opinion the master face of the group is always bound to assert itself, and by master (or mistress) we mean the first image impressed upon the film."

Another photographer of reputation, in an article on the subject, states that in consequence of "atomic momentum" each successive exposure should be less than the preceding one — which amounts to saying that, if equal exposures are given, the *last* face exposed will be strongest in the composite picture. Of course, if this notion in regard to the influence of the order is correct, all composite photographs made by the usual method are valueless as types. But the only way to decide

SIXTY MEMBERS OF THE CLASS OF '87 AT WELLESLEY COLLEGE. ABOUT 53 PER CENT. FROM NEW ENGLAND; 25 PER CENT. FROM THE MIDDLE STATES. (FROM NEGATIVES BY PACH.)

SIXTY-TWO STUDENTS OF WELLS COLLEGE, CHIEFLY FROM CENTRAL AND WESTERN NEW YORK. (COMPOSITE MADE BY PROF. E. L. FRENCH FROM NEGATIVES BY R. R. ABBOTT.)

THIRTY-SIX MEMBERS OF THE CLASS OF '87 AT VASSAR COLLEGE. 24 PER CENT. FROM NEW ENGLAND; 54 PER CENT. FROM THE MIDDLE STATES. (FROM NEGATIVES BY VAIL BROS. OF POUGHKEEPSIE.)

such a question as this is by direct experiment and not by theoretical arguments. Here, too, the notion would seem to find some support, one photographer at least having claimed, according to the New York "Sun," that he obtained a different result with every change in the order of exposure.

My own experiments on this point have, however, invariably confirmed the statement that, when the intensity of illumination is the same, and the times of exposure are equal, the order makes no difference whatever. This has also been the result of experiments by others, among them a Philadelphia photographer who tested the matter thoroughly in making a composite of a club of clergymen.

So much interest has been shown in this point, and such an obstinate belief in the in-

fluence of the order manifested, notwithstanding the statements of experimental results, that I am disposed to lay the results before the reader in the hope that in this form they may appeal even to those who do not appreciate the value of statements of scientific evidence, and may, perhaps, interest those who do not need such an illustrated argument. From several examples at hand one has been selected which shows two composites made from three negatives exposed in different orders, all other conditions remaining the same. These engravings, like all the others in this paper, were made by a photographic process and are hence exact reproductions of the original transparencies. In the two views in the lower right hand corner of page 123 the individual faces were selected for their distinct diversity. One was spectacled, one adorned by a mustache, the third smooth and quite unlike the others. In making one composite the spectacles came first, the mustache last; in the other, the mustache first, the spectacles last. Any influence of the "order" would certainly have made itself apparent under these circumstances.

Some successful composites have been made with an ordinary camera, and one by Mr. Rockwood of New York City † was made directly from the sitters instead of from negatives. These methods are of course possible; but the use of the special camera with a mirror for aid in focusing and adjustment will be found much more convenient and satisfactory, while there is a grave objection to the plan of working from the sitters. This lies in the fact that it is difficult to control the illumination by daylight in this case, and almost impossible to make proper allowance for the different photograhic effect of various tints of coloring. Indeed, Mr. Rockwood recognizes this by saying:

"I can readily see how one of the young ladies with round smooth face, blonde complexion and flaxen hair, could, if not guarded against, have neutralized the impression of all the rest, if they were of a darker style."

But he does not seem to realize that this difficulty is one which is inherent in the method he used and which cannot be guarded against without very unusual judgment and knowledge of the photographic action of different tints; while when negatives are employed, there is no variety of colors — one has to deal only with the comparatively simple problem of securing equal intensity of illumination by means of artificial light.

John T. Stoddard.

* The McLean Asylum Training School was brought into successful operation through the energy of Dr. Edward Cowles, Superintendent of the McLean Asylum at Somerville, Mass. It was decided upon in 1879, and after due preparation formally organized in 1882. Its work has been developed slowly for the sake of soundness, and the first class of sixteen nurses (fifteen of whom form the composite) was graduated in 1886. This school is the first organized in this country for the training of nurses for the insane. The second class has now been graduated and the school is well established with full classes. See Dr. Cowles's article on "Nursing-Reform for the Insane," in the October number of the "American Journal of Insanity."

† See the "Art Amateur" for June, 1887.

MUSIC ON SHERIDAN'S LINE OF BATTLE.

GRANT'S LAST CAMPAIGN.

I.

THE CAPTURE OF PETERSBURG.*

AT 9 o'clock in the morning of the 29th of March, 1865, General Grant and the officers of his staff bid good-bye to President Lincoln and started by special train from City Point to the front.

The military railroad connecting headquarters with the camps south of Petersburg was a surface road, built up hill and down dale, and its undulations were so emphasized, that a train moving along it looked in the distance like a fly crawling over a corrugated washboard. The general sat down near the end of the car, drew from his pocket the flint and slow match that he always carried, which unlike a match never missed fire in a gale of wind, and was soon wreathed in the smoke of the inevitable cigar. I took a seat near him with several other officers of the staff, and he at once began to talk over his plans in detail. They had been discussed in general terms before starting out from City Point.

For a month or more, General Grant's chief apprehension had been that Lee might suddenly pull out from his intrenchments, and fall back into the interior, where he might unite with General Joe Johnston against Sherman and force our army to follow him to a great distance from its present base. General Grant had been sleeping with one eye open and one foot out of bed for many weeks, in the fear that Lee would thus give him the slip. Each army, in fact, had been making preparations for either a fight or a foot-race, or both, and the starting time had now arrived, for the weather had been fair for several days, and the roads were getting in good condition for the movement of troops, that is, as good as could be expected, through a section of country in which the dust in summer was generally so thick that the army could not see where to move, and the mud in winter was so deep that it could not move anywhere. On the train General Grant said: "The President is one of the few visitors I have had who has not attempted to extract from me a knowledge of my plans. He not only never asks them, but says it is better he should not know them, and then he can be certain to keep the secret."

When we reached the end of the railway, we rode down the Vaughn road, and went into camp for the night in a field just south of that road, close to Gravelly Run (see map, page 128). That night (March 29th), the army was disposed in the following order from right to left: Weitzel in front of Richmond, with a portion of the Army of the James, Parke and Wright holding our works in front of Petersburg, Ord extending to the intersection of Hatcher's Run and the Vaughn road, Humphreys stretching beyond Dabney's Mill, Warren on the extreme left reaching as far as the junction of the Vaughn road and the Boydton

* The reader is referred to the September CENTURY for articles on the siege of Petersburg, the last event described there being the Confederate sortie and repulse at Fort Stedman on March 25th. In order to bring the first half of General Horace Porter's paper within the limits of the present magazine article, many interesting details, including those of the fighting at Five Forks, have been necessarily omitted. The paper will be given entire in "Battles and Leaders of the Civil War," a work now being published by subscription, by the Century Co., in thirty-two parts—or four volumes—containing THE CENTURY war series in permanent and greatly extended and embellished form. —EDITOR.

plank-road, and Sheridan at Dinwiddie Court House. The weather had become cloudy, and towards evening rain began to fall. It fell in torrents during the night and continued with but little interruption all the next day. The country was densely wooded, and the ground swampy, and by the evening of the 30th whole fields had become beds of quicksand in which horses sank to their bellies, and the bottoms of the roads seemed to be falling out. The men began to feel that if any one in after years should ask them whether they had been through Virginia, they could say, "Yes, in a number of places." The roads had become sheets of water; and it looked as if the saving of that army would require the services not of a Grant but of a Noah.

While standing in front of the general's tent on the morning of the 30th, discussing the situation with several others of the staff, General Sheridan turned in from the Vaughn road with his escort and came up to our headquarters camp. He dismounted, entered General Grant's tent, and had a long interview. The general informed Sheridan that he had intended to send him a corps of infantry that day, but the condition of the roads prevented, and that he hoped he could feel the enemy the next day, and if possible seize Five Forks with his cavalry. The next morning, the 31st, Sheridan reported that the enemy had been hard at work intrenching at Five Forks and to a point about a mile west of there. Lee had been as prompt as Grant to recognize Five Forks as a strategic point of great importance, and, to protect his right, had sent Pickett there with a large force of infantry and nearly all the cavalry. The rain continued during the night of the 30th, and the weather was cloudy and dismal on the morning of the 31st.

General Grant had anticipated that Warren would be attacked that morning and had warned him to be on the alert. Warren advanced his corps to develop with what force the enemy held the White Oak road and to try to drive him from it; but before he had gone far, he met with a vigorous assault. When news came of the attack, General Grant directed me to go to the spot and look to the situation of affairs there. Upon meeting him afterwards, about 1 o'clock, as he was riding out to Warren's command he directed me to go to Sheridan and explain what was taking place in Warren's and Humphreys's front, and have a full understanding with him as to further operations in his vicinity. I rode rapidly down the Boydton plank-road, and hearing heavy firing in the direction of the Five Forks road, hurried on in that direction by way of the Brooks road.

I found Sheridan a little north of Dinwiddie Court House, and gave him an account of matters on the left of the Army of the Potomac. He said he had had one of the liveliest days in his experience, fighting infantry and cavalry with only cavalry, but that he was concentrating his command on the high ground just north of Dinwiddie, and would hold that position at all hazards. He begged me to go to General Grant at once and urge him to send him the Sixth Corps, because it had been under him in the Shenandoah Valley, and its people knew his people and were familiar with his way of fighting. I told him, as had been stated to him before, that the Sixth Corps was next to our extreme right, and that the only one which could reach him by daylight was the Fifth. I started soon after for General Grant's headquarters, then at Dabney's Mill, a distance of about eight miles, reached there at 7 o'clock P. M., and gave the general a full description of Sheridan's operations. He at once telegraphed the substance of my report to Meade, and preparations soon after began looking to the sending of the Fifth Corps to report to Sheridan. This proved to be one of the busiest nights of the whole campaign. Generals were writing dispatches and telegraphing from dark till daylight. Staff-officers were rushing from one headquarters to another, wading through swamps, penetrating forests and galloping over corduroy roads, engaged in carrying instructions, getting information, and making extraordinary efforts to hurry up the movement of the troops.

The next morning, April 1st, General Grant said to me: "I wish you would spend the day with Sheridan's command, and send me a bulletin every half-hour or so, advising me fully as to the progress being made. You know my views, and I want you to give them to Sheridan fully. I hope there may now be an opportunity of fighting the enemy's infantry outside of its fortifications."

I set out with half a dozen mounted orderlies to act as couriers in transmitting field bulletins. Captain Hudson, of our staff, went with me. After traveling again by way of the Brooks road, I met Sheridan about 10 A. M., on the Five Forks road, not far from J. Boisseau's house. General Warren, who had accompanied

NOTE TO THE PROFILES OF GENERAL GRANT: On being asked for the history of these portraits (which, it will be noticed, were taken during General Grant's second term as President), Colonel Frederick D. Grant replied: "The taking of the photographs in profile was the occasion of my father's shaving for the second time that I ever knew of. My mother had asked him to have a profile taken so that she might send it to Rome to have a cameo cut. Thinking that she wanted a profile of his features, he got shaved and had these pictures taken, very much to the disgust of my mother, who did not accept them for the cameo, but waited until his beard grew out again, and then had another profile taken for the purpose."—EDITOR.

GENERAL GRANT'S HEADQUARTERS, CITY POINT. (FROM THE PAINTING BY E. L. HENRY, OWNED BY THE UNION LEAGUE CLUB, NEW YORK.)

Crawford's division, arrived at 11 o'clock and reported in person to Sheridan.

A few minutes before noon, Colonel (afterwards General) Babcock, of General Grant's staff, came over from headquarters, and said to Sheridan: "General Grant directs me to say to you, that if in your judgment the Fifth Corps would do better under one of the division commanders, you are authorized to relieve General Warren, and order him to report to him, General Grant, at headquarters." General Sheridan replied, in effect, that he hoped such a step as that might not become necessary, and then went on to speak of his plan of battle.

The enemy's earth-works were parallel to the White Oak road and about a mile and three-quarters in length, with an angle formed by running a line back about one hundred yards from the main line and at right angles to it. The Fifth Corps was to wheel to the left and make its attack upon the "angle," and then moving westward sweep down in rear of the enemy's intrenched line. The cavalry, principally dismounted, was to deploy in front of the enemy's line and engage his attention, and, as soon as it heard the firing of our infantry, to make a vigorous assault upon his works.

The Fifth Corps had borne the brunt of the infantry fighting ever since the army had moved out on the 29th, and the gallant men who composed it were eager once more to cross bayonets with their old antagonists. But the movement was slow, the required formation seemed to drag, and Sheridan, chafing with impatience and consumed with anxiety, became as restive as a racer when he nears the line, and is struggling to make the start. He made every possible appeal for promptness; he dismounted from his horse, paced up and down, struck the clenched fist of one hand into the palm of the other, and fretted like a caged tiger.

GENERAL PHILIP SHERIDAN. (FROM A PHOTOGRAPH TAKEN IN 1864.)

At 4 o'clock, the formation was completed, the order for the assault was given, and the struggle for Pickett's intrenched line began.

Soon Ayres's men met with a heavy fire on their left flank and had to change directions by facing more towards the west. As the troops entered the woods and moved forward over the boggy ground and struggled through the dense undergrowth, they were staggered by a heavy fire from the angle and fell back in some confusion. Sheridan now rushed into the midst of the broken lines, and cried out: "Where is my battle-flag?" As the sergeant who carried it rode up, Sheridan seized the crimson and white standard, waved it above his head, cheered on the men, and made great efforts to close up the ranks. Bullets were humming like a swarm of bees. One pierced the battle-flag, another killed the sergeant who had carried it, another wounded Captain McGonnigle in the side, others struck two or three of the staff-officers' horses. All this time Sheridan was dashing from one point of the line to another, waving his flag, shaking his fists, encouraging, threatening, praying, swearing, the very incarnation of battle. It would be a sorry soldier who could help following such a leader. Ayres and his officers were equally exposing themselves in rallying the men, and these veterans soon rushed forward with a rousing cheer and dashed over the earth-works, sweeping everything before them, and killing or capturing every man in their immediate front whose legs had not saved him.

Sheridan rode "Rienzi," the famous horse that had once carried him "twenty miles from Winchester." The general spurred him up to the angle, and with a bound he carried his rider over the earth-works, and landed in the midst of a line of prisoners who had thrown down their arms and were crouching close under their breastworks. Some of them called out, "Whar do you want us all to go?" Then Sheridan's rage turned to humor, and he had a running talk with the "Johnnies" as they filed past. "Go right over there," he cried, pointing to the rear, "get right along, now, drop your guns, you 'll never need them any more. You 'll all be safe over there. Are there any more of you? We want every one of you fellows." Nearly 1500 were captured at the angle.

The cavalry commanded by the gallant Merritt had made a final dash, had gone over the earth-works with a hurrah, captured a battery of artillery, and scattered everything in front of them. Here Custer, Devin, Fitzhugh, and the other cavalry leaders were in their element, and vied with each other in deeds of valor.

After the capture of the angle, I went in the direction of Crawford's division, passed around the left of the enemy's works, and met Sheridan again, west of the Ford road, just a little before dark. He was laboring with all the energy of his nature to complete the destruction of the enemy's forces, and to make preparation to protect his own detached com-

mand from an attack by Lee in the morning. He said he had relieved Warren, directed him to report in person to General Grant, and placed Griffin in command of the Fifth Corps.

Sheridan had that day fought one of the most interesting technical battles of the war, almost perfect in conception, brilliant in execution, strikingly dramatic in its incidents, and productive of immensely important results.

TWO OF SHERIDAN'S SCOUTS. (SKETCHED FROM LIFE BY WINSLOW HOMER.)

About half-past 7 o'clock I started for general headquarters. The roads in places were corduroyed with captured muskets; ammunition trains and ambulances were still struggling forward for miles; teamsters, prisoners, stragglers, and wounded were choking the roadway; the "coffee-boilers" had kindled their fires, cheers were resounding on all sides, and everybody was riotous over the victory. A horseman had to pick his way through this jubilant condition of things as best he could, as he did not have the right of way by any means. As I galloped past a group of men on the Boydton plank, my orderly called out to them the news of the victory. The only response he got was from one of them who raised his open hand to his face, put his thumb to his nose, and yelled: "No, you don't — April fool." I then realized that it was the 1st of April. I had ridden so rapidly, that I reached headquarters at Dabney's Mill before the arrival of the last courier I had dispatched. General Grant was sitting with most of the staff about him before a blazing camp-fire. He wore his blue cavalry overcoat, and the ever-present cigar was in his mouth. I began shouting the good news as soon I got in sight, and in a moment all but the imperturbable general-in-chief were on their feet giving vent to wild demonstrations of joy. For some minutes there was a bewildering state of excitement, grasping of hands, tossing up of hats, and slapping each other on the backs. It meant the beginning of the end, the reaching of the "last ditch." It pointed to peace and home. The general, as was expected, asked his usual question: "How many prisoners have been taken?" This was always his first inquiry when an engagement was reported. No man ever had such a fondness for taking prisoners. I think the gratification arose from the kindliness of his heart, a feeling that it was much better to win in this way than by the destruction of human life. I was happy to report that the prisoners this time were esti-

mated at over five thousand, and this was the only part of my recital that seemed to call forth a responsive expression from his impassive features. After having listened attentively to the description of Sheridan's day's work, the general, with scarcely a word, walked into his tent, and by the light of a flickering candle took up his "manifold writer," a small book which retained a copy of the matter written, and after finishing several dispatches, handed them to an orderly to be sent over the field wires, came out and joined our group at the camp-fire, and said as coolly as if remarking upon the state of the weather: "I have ordered an immediate assault along the lines." This was about 9 o'clock.

In his conversation now, his sense of humor began to assert itself. I had sent him a bulletin during the day saying, "I have noticed among the prisoners many old men whose heads are quite bald." This was mentioned as an evidence that the enemy in recruiting was "robbing the grave." A staff-officer was sitting with us whose hair was so thin, that he used to part it low behind and comb the stray locks forward, trying to make the rear-guard do picket duty at the front. The general delighted in teasing him on this subject, and he now said to me: "When I got your message to-day about the bald-headed men, I showed it to General Blank and told him he had better take care and not fall into the hands of the enemy, for that is just the way they would be commenting on his head in their reports."

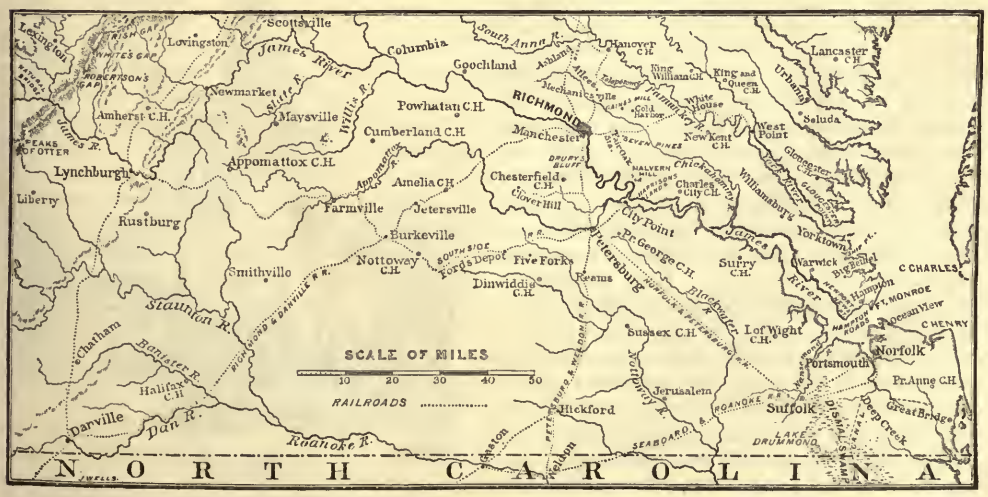
A little after midnight General Grant tucked himself into his camp-bed, and was soon sleeping as peacefully as if the next day was to be devoted to a picnic instead of a decisive battle.

At 4:45 there was a streak of gray in the heavens which soon revealed another streak of gray formed by Confederate uniforms in the works opposite, and the men rushed forward to the charge. The thunder of hundreds of guns shook the ground like an earthquake, and soon the troops were engaged all along the lines. The general awaited the result of the assault at headquarters, where he could be easily communicated with, and from which he could give general directions.

At a quarter past 5 a message came from Wright that he had carried the enemy's line and was pushing in. Next came news from Parke, that he had captured the outer works in his front, with 12 pieces of artillery and 800 prisoners.

Soon Ord was heard from as having broken through the intrenchments, and Humphreys, too, had been doing gallant work.

The general and staff now rode out to the front, as it was necessary to give immediate direction to the actual movements of the troops, and prevent confusion from the overlapping and intermingling of the several corps as they pushed forward. He urged his horse over the works which Wright's corps had captured, and suddenly came upon a body of three thousand prisoners marching to the rear. His whole attention was for some time riveted upon them, and we knew he was enjoying his usual satisfaction in seeing them. General Grant, after taking in the situation, directed both Meade and Ord to face their commands towards the east, and close up towards the inner lines which covered Petersburg. Lee had been pushed so vigorously, that he seemed for a time to be making but little effort to recover any of his lost ground, but now he made a determined fight against Parke's corps, which was threaten-



MAP OF THE PETERSBURG—APPOMATTOX CAMPAIGN.

PRESIDENT LINCOLN, GENERAL GRANT, AND TAD LINCOLN AT A RAILWAY STATION. (SKETCHED FROM LIFE BY WINSLOW HOMER.)

ing his inner line on his extreme left and the bridge across the Appomattox. Repeated assaults were made, but Parke resisted them all successfully, and could not be moved from his position. Lee had ordered Longstreet from the north side of the James, and with these troops reënforced his extreme right. General Grant dismounted near a farm-house which stood on a knoll within a mile of the enemy's inner line, and from which he could get a good view of the field of operations. He seated himself at the foot of a tree, and was soon busy receiving dispatches and writing orders to officers conducting the advance. The position was under fire, and as soon as the group of staff-officers was seen, the enemy's guns began paying their respects to the party. This lasted for nearly a quarter of an hour, and as the fire became hotter and hotter several of the officers, apprehensive of the general's safety, urged him to move to some less conspicuous position, but he kept on writing and talking without the least interruption from the shots falling around him, and apparently not noticing what a target the place was becoming, or paying any heed to the gentle reminders to "move on." After he had finished his dispatches, he got up, took a view of the situation, and as he started towards the other side of the farm-house said, with a quizzical look at the group around him: "Well, they do seem to have the range on us." The staff was now sent to various points of the advancing lines, and all was activity in pressing forward the good work. By noon, nearly all the outer line of works was in our possession, except two strong redoubts which occupied a commanding position, named respectively Fort Gregg and Fort Whitworth. The general decided that these should be stormed, and about 1 o'clock three of Ord's brigades swept down upon Fort Gregg. The garrison of three hundred men with two rifled cannon made a desperate defense, and a most gallant contest took place. For half an hour after our men had gained the parapet a bloody hand-to-hand struggle continued, but nothing could stand against the onslaught of Ord's troops, flushed with their morning's victory. By half-past two, 57 of the brave garrison lay dead, and about 250 had surrendered. Fort Whitworth was at once abandoned, but the guns of Fort Gregg were opened upon the garrison as they marched out, and the commander and sixty men were surrendered.

Prominent officers now urged the general to make an assault on the inner lines and capture Petersburg that afternoon, but he was firm in his resolve not to sacrifice the lives necessary to accomplish such a result. He said the city would undoubtedly be evacuated during the night, and he would dispose the troops for a parallel march westward, and try to head off the escaping army. And thus ended this eventful Sunday.

The general was up at daylight the next morning, and the first report brought in was

UNION CAVALRYMEN RIDING AROUND THE MONUMENT OF JACKSON IN THE CAPITOL SQUARE, RICHMOND.

that Parke had gone through the lines at 4 A. M., capturing a few skirmishers, and that the city had surrendered at 4:28 to Colonel Ely. A second communication surrendering the place was sent in to Wright.

The evacuation had begun about 10 the night before, and was completed before 3 on the morning of the 3d. Between 5 and 6 A. M. the general had a conference with Meade, and orders were given to push westward with all haste. About 9 A. M. the general rode into Petersburg. Many of the citizens, panic-stricken, had escaped with the army. Most of the whites who remained staid indoors, a few groups of negroes gave cheers, but the scene generally was one of complete desertion. Grant rode along quietly with his staff until he came to a comfortable-looking brick house with a yard in front, situated on one of the principal streets, and here he and the officers accompanying him dismounted and took seats on the piazza. A number of the citizens now gathered on the sidewalk and gazed, with eager curiosity, upon the features of the commander of the Yankee armies.

CITIZENS OF RICHMOND TAKING REFUGE IN CAPITOL SQUARE DURING THE CONFLAGRATION FOLLOWING UPON THE EVACUATION, APRIL 3D, 1865.

The general was anxious to move westward at once with the leading infantry columns, but Mr. Lincoln had telegraphed that he was on his way to see him, and the general decided to prolong his stay until the President came up. Mr. Lincoln soon after arrived, accompanied by his little son "Tad," dismounted in the street and came in through the front gate with long and rapid strides, his face beaming with delight. He seized General Grant's hand as the general stepped forward to greet him, and stood shaking it for some time and pouring out his thanks and congratulations with all the fervor of a heart which seemed overflowing with its fullness of joy. I doubt whether Mr. Lincoln ever experienced a happier moment in his life. The scene was singularly affecting and one never to be forgotten. He then said:

"Do you know, general, I have had a sort of sneaking idea for some days that you intended to do something like this, though I thought some time ago that you would so manœuvre as to have Sherman come up and be near enough to coöperate with you."

"Yes," replied the general, "I thought at one time that Sherman's army might advance so far as to be within supporting distance of the

Eastern armies when the spring campaign against Lee opened, but I have had a feeling that it is better to let Lee's old antagonists give his army the final blow and finish up the job single-handed."

"I see, I see," said Mr. Lincoln, "but I never thought of it in that light. In fact my anxiety has been so great that I did n't care where the help came from so the work was perfectly done."

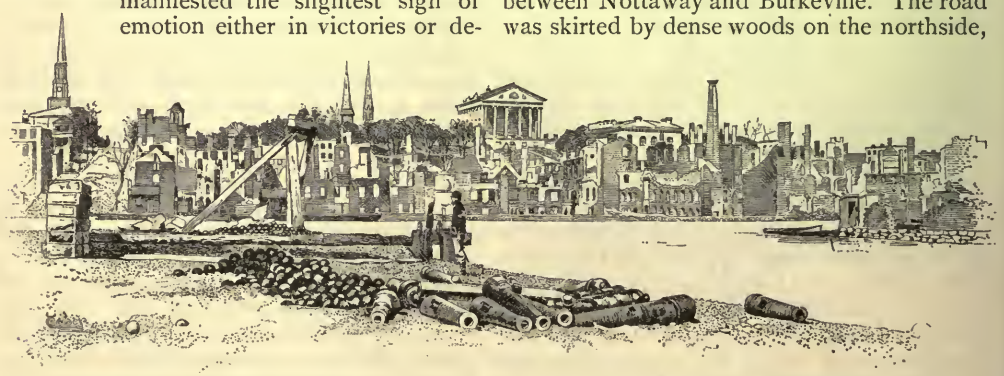
Mr. Lincoln then began to talk about the civil complications that would follow the destruction of the Confederate armies in the field, and showed plainly the anxiety he felt regarding the great problems in state-craft which would soon be thrust upon him.

Meanwhile Tad, for whom he always showed great affection, was now becoming a little uneasy and gave certain appealing looks to which a staff-officer responded by producing some sandwiches, which he offered to him, saying: "Here, young man, I guess you must be hungry." Tad seized them as a drowning man would seize a life-preserver, and cried out: "Yes, I am, that 's what 's the matter with me." This greatly amused the President and the general-in-chief, who had a hearty laugh at Tad's expense.

The general hoped that he would hear before he parted with the President that Richmond was in our possession, but after the interview had lasted about an hour and a half, the general said he must ride on to the front and join Ord's column, and took leave of the President who shook his hand cordially, and with great warmth of feeling wished him God-speed and every success.

The general and staff had ridden as far as Sutherland's Station, about nine miles, when a dispatch from Weitzel overtook him, which had come by a roundabout way, announcing the capture of Richmond at 8:15 that morning. Although the news was expected, there were wild shouts of rejoicing from the group who heard it read. The general, who never manifested the slightest sign of emotion either in victories or defeats, merely said: "I am sorry I did not get this news before we left the President. However, I suppose he has heard of it by this time," and then added: "Let the news be circulated among the troops as rapidly as possible."

Grant and Meade both went into camp at Sutherland's Station that evening, the 3d. The Army of the Potomac caught a few hours' sleep, and at 3 the next morning was again on the march. The pursuit had now become unflagging, relentless. Grant put a spur on the heel of every dispatch he sent. Sheridan "the inevitable," as the enemy had learned to call him, was in advance thundering along with his cavalry, followed by Griffin and the rest of the Army of the Potomac, while Ord was swinging along towards Burkeville to head off Lee from Danville, to which point it was naturally supposed he was pushing in order to unite with Joe Johnston's army. The 4th was another active day; the troops found that this campaign was to be won by legs, that the great walking match had begun, and success depended upon which army could make the best distance record. General Grant marched this day with Ord's troops. Meade was quite sick and at times had to take to an ambulance, but his loyal spirit never flagged, and his orders breathed the true spirit of the soldier. That night General Grant camped at Wilson's Station, on the South Side railroad twenty-seven miles west of Petersburg. On the 5th he marched again with Ord's column, and at noon reached Nottaway Court House, about ten miles east of Burkeville, where he halted for a couple of hours. A young staff-officer here rode up to General Ord, in a state of considerable excitement, and said to him: "Is this a way-station?" The grim old soldier, who always went armed with a joke concealed somewhere about his person, replied with great deliberation: "This is Nott-a-way Station." We continued to move along the road which runs parallel to the South Side railroad till nearly dark, and had reached a point about half-way between Nottaway and Burkeville. The road was skirted by dense woods on the northside,



THE RUINS OF RICHMOND BETWEEN THE CANAL BASIN AND CAPITOL SQUARE. (FROM A PHOTOGRAPH.)

the side towards the enemy. There was a sudden commotion among the headquarters escort, and on looking around I saw some of our men dashing up to a horseman in full Confederate uniform, who had suddenly appeared in the road, and in the act of seizing him as a prisoner.

I recognized him at once as one of Sheridan's scouts, who had before brought us important dispatches, and said to him: "How do you do, Campbell?" and told our men he was all right and was one of our own people.

He informed us he had had a hard ride from Sheridan's camp, and had brought a dispatch for General Grant. By this time the general had recognized him, and had stopped in the road to see what he had brought. Campbell then took from his mouth a wad of tobacco, broke it open, and pulled out a little ball of tin-foil. Rolled up in this was a sheet of tissue paper on which was written the famous dispatch so widely published at the time, in which Sheridan described the situation at Jetersville, and added: "I wish you were here yourself."

The general said he would go at once to Sheridan, and dismounted from his black pony "Jeff Davis," which he had been riding, and called for his big bay horse "Cincinnati." He stood in the road for a few minutes and wrote a dispatch, using the pony's back for a desk, and then mounting the fresh horse, told Campbell to lead the way. It was found we would have to skirt pretty closely to the enemy's lines, and it was thought prudent to take some cavalry with us, but there was none near at hand, and the general said he would risk it with our mounted escort of fourteen men. Calling upon me and two or three other officers to accompany him, he started off. It was now after dark, but there was enough moonlight to enable us to see the way without difficulty. After riding nearly twenty miles, following cross-roads through a wooded country, we struck Sheridan's pickets about half-past 10 o'clock and soon after reached his headquarters.

Sheridan was awaiting the general-in-chief, thinking he would come after getting the dispatch; a good supper of coffee and cold chicken had been spread out, and it was soon demonstrated that the night ride had not impaired any one's appetite.

When he had learned fully the situation in Sheridan's front, General Grant first sent a message to Ord to watch the roads running south from Burkeville and Farmville, and then rode over to Meade's camp near by. Meade was still suffering from illness. His views differed somewhat from General Grant's regarding the movements of the Army of the Potomac for the next day, and the latter changed the proposed dispositions so as to have the army swing round towards the south, and endeavor to head off Lee in that direction. The next day, the 6th, proved a decided field day in the pursuit. It was found in the morning that Lee had retreated during the night from Amelia Court House, and from the direction he had taken and from information received that he had ordered rations to meet him at Farmville, it was seen that he had abandoned all hope of reaching Burkeville and was probably heading for Lynchburg. Ord was to try to burn the High Bridge and push on to Farmville. Sheridan's cavalry was to work around on Lee's left flank, and the Army of the Potomac was to make another forced march and strike the enemy wherever it could reach him.

I spent a portion of the day with Humphreys's corps, which attacked the enemy near Deatonsville, and gave his rear-guard no rest. Joining General Grant later I rode with him to Burkeville, getting there some time after dark.

Ord had pushed out to Rice's Station, and Sheridan and Wright had gone in against the enemy and fought the battle of Sailor's Creek [east of Farmville, see map, page 143] capturing six general officers and about seven thousand men, and smashing things generally. General Grant started from Burkeville early the next morning, the 7th, and took the direct road to Farmville. The columns were crowding the roads, and the men, aroused to still greater efforts by the inspiring news of the day before, were sweeping along, despite the rain that fell, like trained pedestrians on a walking-track. As the general rode amongst them, he was greeted with shouts and hurrahs, on all sides, and a string of sly remarks, which showed how familiar swords and bayonets become when victory furnishes the topic of their talk.

II.

THE SURRENDER AT APPOMATTOX COURT HOUSE.

A LITTLE before noon on the 7th of April, 1865, General Grant with his staff rode into the little village of Farmville on the south side of the Appomattox River, a town which will be memorable in history as the place in which he opened the correspondence with Lee which led to the surrender of the Army of Northern Virginia.

He drew up in front of the village hotel, dismounted, and established headquarters on its broad piazza. News came in that Crook was fighting large odds with his cavalry on

THE RETREAT FROM PETERSBURG — CONFEDERATES AT A WELL NEAR FARMVILLE.
(DRAWN BY W. L. SHEPPARD, WHO OBSERVED THE INCIDENT.)

the north side of the river, and I was directed to go to his front and see what was necessary to be done to assist him. I found that he was being driven back, and the enemy was making a bold stand north of the river. Humphreys was also on the north side, isolated from the rest of our infantry, confronted by a large portion of Lee's army, and having some very heavy fighting. On my return to general headquarters that night, Wright's corps was ordered to cross the river and move rapidly to the support of our troops there. Notwithstanding their long march that day, the men sprang to their feet with a spirit that made every one marvel at their pluck, and came swinging through the main street of the village, with a step that seemed as elastic as on the first day of their toilsome tramp. It was now dark, but they spied the general-in-chief watching them with evident pride from the piazza of the hotel.

Then was witnessed one of the most inspiring scenes of the campaign. Bonfires were lighted on the sides of the street, the men seized straw and pine knots, and improvised torches. Cheers arose from throats already hoarse with shouts of victory, bands played, banners waved, arms were tossed high in air and caught again. The night march had become a grand review, with Grant as the reviewing officer.

Ord and Gibbon had visited the general at the hotel, and he had spoken with them as well as with Wright about sending some communication to Lee which might pave the way to the stopping of further bloodshed. Dr. Smith, formerly of the regular army, a native of Virginia and a relative of General Ewell, now one of our prisoners, had told General Grant the night before that Ewell had said in conversation that their cause was lost when they crossed the James River, and he considered it the duty of the authorities to negotiate for peace then, while they still had a right to claim concessions, adding that now they were not in condition to claim anything. He said that for every man killed after this somebody would be responsible, and it would be little better than murder. He could not tell what General Lee would do, but he hoped he would at once surrender his army. This statement, together with the news which had been received from Sheridan saying that he had heard that General Lee's trains of provisions which had come by rail were at Appomattox and that he expected to capture them before Lee could reach them, induced the general to write the following communication:

"HEADQUARTERS ARMIES OF THE U. S.
"5 P. M., April 7th, 1865.

"GENERAL R. E. LEE, Commanding C. S. A.:

"The results of the last week must convince you of the hopelessness of further resistance on the part of the Army of Northern Virginia in this struggle. I feel that it is so, and regard it as my duty to shift from myself the responsibility of any further effusion of blood by asking of you the surrender of that portion of the Confederate States army, known as the Army of Northern Virginia. U. S. GRANT, LIEUT.-GENERAL."

This he intrusted to General Seth Williams, adjutant-general, with directions to take it to Humphreys's front, as his corps was close up to the enemy's rear-guard, and have it sent into Lee's lines.

The general decided to remain all night at Farmville and await the reply from Lee, and he was shown to a room in the hotel in which he was told Lee had slept the night before.

Lee wrote the following reply within an hour after he received General Grant's letter, but it was brought in by rather a circuitous route and did not reach its destination till after midnight:

"April 7th, 1865.

"GENERAL: I have received your note of this date. Though not entertaining the opinion you express of the hopelessness of further resistance on the part of the Army of Northern Virginia, I reciprocate your desire to avoid useless effusion of blood, and therefore, before considering your proposition, ask the terms you will offer on conditions of its surrender.

"R. E. LEE, GENERAL.

"LIEUT.-GENERAL U. S. GRANT,
"Commanding Armies of the U. S."

The next morning before leaving Farmville the general wrote the following reply, and General Williams again started for Humphreys's front to have the letter transmitted to Lee:

"April 8th, 1865.

"GENERAL R. E. Lee, Commanding C. S. A.:

"Your note of last evening in reply to mine of the same date, asking the conditions on which I will accept the surrender of the Army of Northern Virginia, is just received. In reply I would say that, peace being my great desire, there is but one condition I would insist upon,—namely, that the men and officers surrendered shall be disqualified for taking up arms against the Government of the United States until properly exchanged. I will meet you, or will designate officers to meet any officers you may name for the same purpose, at any point agreeable to you, for the purpose of arranging definitely the terms upon which the surrender of the Army of Northern Virginia will be received.

"U. S. GRANT, LIEUT.-GENERAL."

There turned up at this time a rather hungry-looking gentleman in gray, in the uniform of a colonel, who proclaimed himself the proprietor of the hotel. He said his regiment had crumbled to pieces, he was the only man left in it, and he thought he might as well stop off at home. His story was significant as indicating the disintegrating process which was going on in the ranks of the enemy.

General Grant had been marching most of the way with the columns which were pushing along south of Lee's line of retreat, but expecting that a reply would be sent to his last letter and wanting to keep within easy communication with Lee, he decided to march this day with the portion of the Army of the Potomac, which was pressing Lee's rear-guard. After issuing some further instructions to Ord and Sheridan, he started from Farmville, crossed to the north side of the Appomattox, conferred in person with Meade, and rode with his columns. Encouraging reports came in all day, and that night headquarters were established at Curdsville in a large white farm-house, a few hundred yards from Meade's camp. The general and several of the staff had cut loose from the headquarters trains the night he started to meet Sheridan at Jetersville, and had neither baggage nor camp equipage. The general did not even have his sword with him. This was the most advanced effort yet made at moving in "light marching order," and we billeted ourselves at night in farm-houses, or bivouacked on porches, and picked up meals at any camp that seemed to have something to spare in the way of rations. This night we

THE RETREAT FROM PETERSBURG—CONFEDERATES GRATING AND GRINDING CORN, AND COOKING FLOUR-PASTE ON RAMRODS. (BY W. L. SHEPPARD, WHO OBSERVED THE INCIDENT.)

sampled the fare of Meade's hospitable mess and once more lay down with full stomachs.

General Grant had been suffering all the afternoon from a severe headache, the result of fatigue, anxiety, scant fare, and loss of sleep, and by night it was much worse. He had been induced to bathe his feet in hot water and mustard, and apply mustard plasters to his wrists and the back of his neck, but these remedies afforded little relief. The dwelling we occupied was a double house. The general threw

CAPTURE OF GUNS AND THE DESTRUCTION OF A CONFEDERATE WAGON-TRAIN AT PAINEVILLE, APRIL 5TH, BY DAVIES'S CAVALRY BRIGADE OF CROOK'S DIVISION. (BY A. R. WAUD, AFTER HIS SKETCH MADE AT THE TIME.)

The wagon-train was escorted by Gary's cavalry with five guns. General Humphreys, in "The Virginia Campaign of '64 and '65" (Charles Scribner's Sons), says it is believed that "the papers of General Robert E. Lee's headquarters, containing many valuable reports, copies of but few of which are now to be found, were destroyed by the burning of these wagons."

himself upon a sofa in the sitting-room on the left side of the hall, while the staff-officers bunked on the floor of the room opposite to catch what sleep they could. About midnight we were aroused by Colonel Whittier of Humphreys's staff, who brought another letter from General Lee. General Rawlins at once took it in to General Grant's room. It was as follows:

"April 8th, 1865.

"GENERAL: I received at a late hour your note of to-day. In mine of yesterday I did not intend to propose the surrender of the Army of Northern Virginia, but to ask the terms of your proposition. To be frank, I do not think the emergency has arisen to call for the surrender of this army, but as the restoration of peace should be the sole object of all, I desired to know whether your proposals would lead to that end. I cannot, therefore, meet you with a view to surrender the Army of Northern Virginia; but as far as your proposal may affect the Confederate States forces under my command, and tend to the restoration of peace, I should be pleased to meet you at 10 A. M. to-morrow on the old stage road to Richmond, between the picket-lines of the two armies. R. E. LEE, GENERAL.

"LIEUT.-GENERAL U. S. GRANT."

General Grant had been able to get but very little sleep. He now sat up and read the letter, and after making a few comments upon it to General Rawlins, lay down again on the sofa.

About 4 o'clock in the morning of the 9th, I got up and crossed the hall to ascertain how the general was feeling. I found his room empty, and upon going out of the front door saw him pacing up and down in the yard holding both hands to his head. Upon inquiring how he felt, he replied that he had had very little sleep and was still suffering the most excruciating pain. I said: "Well, there is one consolation in all this, general: I never knew you to be ill that you did not receive some good news. I have become a little superstitious regarding these coincidences, and I should not be surprised if some good fortune overtook you before night." He smiled and said: "The best thing that can happen to me to-day is to get rid of the pain I am suffering." We were now joined by some others of

the staff, and the general was induced to go over to Meade's headquarters with us and get some coffee, in the hope that it would do him good. He seemed to feel a little better now, and after writing the following letter to Lee and dispatching it, he prepared to move forward. The letter was as follows:

THE VILLAGE OF APPOMATTOX COURT HOUSE. THE McLEAN HOUSE ON THE RIGHT. (FROM A SKETCH MADE BY R. K. SNEDEN.)

"April 9th, 1865.

"GENERAL: Your note of yesterday is received. I have no authority to treat on the subject of peace. The meeting proposed for 10 A. M. to-day could lead to no good. I will state, however, that I am equally desirous for peace with yourself, and the whole North entertains the same feeling. The terms upon which peace can be had are well understood. By the South laying down their arms, they would hasten that most desirable event, save thousands of human lives, and hundreds of millions of property not yet destroyed. Seriously hoping that all our difficulties may be settled without the loss of another life, I subscribe myself, etc.,

"U. S. GRANT, LIEUTENANT-GENERAL.

"GENERAL R. E. LEE."

It was proposed to him to ride during the day in a covered ambulance which was at hand, instead of on horseback, so as to avoid the intense heat of the sun, but this he declined to do and soon after mounted "Cincinnati" and struck off towards New Store. From that point he went by way of a cross-road to the south side of the Appomattox with the intention of moving around to Sheridan's front. While riding along the wagon road which runs from Farmville to Appomattox Court House at a point eight or nine miles east of the latter place, Lieutenant Pease of Meade's staff overtook him with a dispatch. It was found to be a reply from Lee, which had been sent in to our lines on Humphreys's front. It read as follows:

"April 9th, 1865.

"GENERAL: I received your note of this morning on the picket-line, whither I had come to meet you and ascertain definitely what terms were embraced in your proposal of yesterday with reference to the surrender of this army. I now ask an interview, in accordance with the offer contained in your letter of yesterday, for that purpose. R. E. LEE, GENERAL.

"LIEUTENANT-GENERAL U. S. GRANT."

Pease also brought a note from Meade, saying that at Lee's request he had read the communication addressed to General Grant and in consequence of it had granted a short truce.

The general, as soon as he had read these letters, dismounted, sat down on the grassy bank by the roadside, and wrote the following reply to Lee:

"April 9th. 1865.

"GENERAL R. E. LEE, Commanding C. S. Army:

"Your note of this date is but this moment (11:50 A. M.) received, in consequence of my having passed from the Richmond and Lynchburg roads to the Farmville and Lynchburg road. I am at this writing about four miles west of Walker's Church, and will push forward to the front for the purpose of meeting you. Notice sent to me on this road where you wish the interview to take place will meet me.

"U. S. GRANT, LIEUTENANT-GENERAL."

He handed this to Colonel Babcock of the staff, with directions to take it to General Lee by the most direct route. Mounting his horse again, the general rode on at a trot towards Appomattox Court House. When five or six miles from the town, Colonel Newhall, Sheridan's adjutant-general, came riding up from the direction of Appomattox and handed the general a communication. This proved to be a duplicate of the letter from Lee which Lieutenant Pease had brought in from Meade's lines. Lee was so closely pressed that he was anxious to communicate with Grant by the most direct means, and as he could not tell with which column Grant was moving, he sent in one copy of his letter on Meade's front and one on Sheridan's. Colonel Newhall joined our party, and after a few minutes' halt to read the letter, we continued our ride towards Appomattox. On the march I had asked the general several times how he felt. To the same question now he said, "The pain in my head seemed to leave me the moment I got Lee's letter." The road was filled with men, animals and wagons, and to avoid these and shorten the distance, we turned slightly to the right and began to "cut across lots"; but before going far we spied men conspicuous in gray, and it was seen that we were moving towards the enemy's left flank and that a short ride farther would take us into his lines. It looked for a moment as if a very awkward condition of things might possibly arise, and Grant become a prisoner in Lee's lines instead of Lee in his. Such a circumstance would have given rise to an important cross-entry in the system of campaign book-keeping. There was only one remedy — to retrace our steps and strike the right road, which was done without serious discussion. About 1 o'clock the little

APPOMATTOX COURT HOUSE. (FROM A WAR-TIME PHOTOGRAPH.)

village of Appomattox Court House with its half-dozen houses came in sight, and soon we were entering its single street. It is situated on some rising ground, and beyond the country slopes down into a broad valley. The enemy was seen with his columns and wagon trains covering the low ground. Our cavalry, the Fifth Corps, and part of Ord's command were occupying the high ground to the south and west of the enemy, heading him off completely.

Generals Sheridan and Ord with a group of officers around them were seen in the road, and as our party came up, General Grant said:

"How are you, Sheridan?"

"First-rate, thank you; how are you?" cried Sheridan, with a voice and look that seemed to indicate that on his part he was having things all his own way.

"Is Lee over there?" asked General Grant, pointing up the street, having heard a rumor that Lee was in that vicinity.

"Yes, he is in that brick house," answered Sheridan.

"Well, then, we 'll go over," said Grant.

The general-in-chief now rode on, accompanied by Sheridan, Ord, and some others, and soon Colonel Babcock's orderly was seen sitting on his horse in the street in front of a two-story brick house, better in appearance than the rest of the houses. He said General Lee and Colonel Babcock had gone into this house a short time before, and he was ordered to post himself in the street and keep a lookout for General Grant, so as to let him know where General Lee was. Babcock told me afterwards that in carrying General Grant's last letter he passed through the enemy's lines and found General Lee a little more than half a mile beyond Appomattox Court House. He was lying down by the roadside on a blanket which had been spread over a few fence rails on the ground under an apple-tree, which was part of an orchard. This circumstance furnished the only ground for the widespread report that the surrender occurred under an apple-tree. Babcock dismounted upon coming near, and as he approached on foot, Lee sat up, with his feet hanging over the roadside embankment. The wheels of the wagons in passing along the road had cut away the earth of this embankment and left the roots of the tree projecting. Lee's feet were partly resting on these roots. One of his staff-officers came forward, took the dispatch which Babcock handed him and gave it to General Lee. After reading it, the general rose and said he would ride forward on the road on which Babcock had come, but was apprehensive that hostilities might begin in the mean time, upon the termination of the temporary truce, and asked Babcock to write a line to Meade informing him of the situation. Babcock wrote accordingly, requesting Meade to maintain the truce until positive orders from General Grant could be received. To save time it was arranged that a Union officer, accompanied by one of Lee's officers, should carry this letter through the enemy's lines. This route made the distance to Meade nearly ten miles shorter

than by the roundabout way of the Union lines. Lee now mounted his horse and directed Colonel Charles Marshall, his military secretary, to accompany him. They started for Appomattox Court House in company with Babcock and followed by a mounted orderly. When the party reached the village they met one of its residents, named Wilbur McLean, who was told that General Lee wanted to occupy a convenient room in some house in the town. McLean ushered them into the sitting-room of one of the first houses he came to, but upon looking about and finding it quite small and meagerly furnished, Lee proposed finding something more commodious and better fitted for the occasion. McLean then conducted the party to his own house, about the best one in the town, where they awaited General Grant's arrival.

The house had a comfortable wooden porch with seven steps leading up to it. A hall ran through the middle from front to back, and on each side was a room having two windows, one in front and one in rear. Each room had two doors opening into the hall. The building stood a little distance back from the street, with a yard in front, and to the left was a gate for carriages and a roadway running to a stable in rear. We entered the grounds by this gate and dismounted. In the yard were seen a fine large, gray horse, which proved to be General Lee's, and a good-looking mare belonging to Colonel Marshall. An orderly in gray was in charge of them, and had taken off their bridles to let them nibble the grass.

General Grant mounted the steps and entered the house. As he stepped into the hall, Colonel Babcock, who had seen his approach from the window, opened the door of the room on the left, in which he had been sitting with General Lee and Colonel Marshall, awaiting General Grant's arrival. The general passed in, while the members of the staff, Generals Sheridan and Ord, and some general officers who had gathered in the front yard remained outside, feeling that he would probably want his first interview with General Lee to be, in a measure, private. In a few minutes Colonel Babcock came to the front door, and making a motion with his hat towards the sitting-room, said: "The general says, come in." It was then about half-past 1 of Sunday, the 9th of April. We entered, and found General Grant sitting at a marble-topped table in the center of the room, and Lee sitting beside a small oval table near the front window, in the corner opposite to the door by which we entered, and facing General Grant. Colonel Marshall, his military secretary, was standing at his left side.

CONFEDERATES DESTROYING THE RAILROAD FROM APPOMATTOX TOWARD LYNCHBURG, AND ARTILLERYMEN DESTROYING GUN-CARRIAGES AT NIGHTFALL, SATURDAY, APRIL 8th. (BY W. L. SHEPPARD, WHO OBSERVED THE INCIDENTS.)

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15

THE SURRENDER AT APPOMATTOX. (DRAWN BY W. TABER; BASED UPON THE LITHOGRAPH CALLED "THE DAWN OF PEACE," BY PERMISSION OF W. H. STELLE.)

2. General Robert E. Lee. 1. Colonel Charles Marshall, of General Lee's Staff. 8. Lieutenant-General Ulysses S. Grant. 15. Major-General Philip H. Sheridan. 7. Major-General Edward O. C. Ord. 14. Brevet Major-General Rufus Ingalls. 10. Brigadier-General John A. Rawlins, Chief of Staff; other members of General Grant's Staff: 4. Major-General Seth Williams. 12. Brevet Major-General John G. Barnard. 9. Colonel Horace Porter. 3. Colonel Orville E. Babcock. 5. Colonel Ely S. Parker. 6. Colonel Theodore S. Bowers. 11. Colonel Frederick T. Dent. 13. Colonel Adam Badeau.

We walked in softly, and ranged ourselves quietly about the sides of the room, very much as people enter a sick-chamber when they expect to find the patient dangerously ill. Some found seats on the sofa and a few chairs which constituted the furniture, but most of the party stood.

The contrast between the two commanders was very striking, and could not fail to attract marked attention, as they sat ten feet apart facing each other.

General Grant, then nearly forty-three years of age, was five feet eight inches in height, with shoulders slightly stooped. His hair and full beard were a nut-brown, without a trace of gray in them. He had on a single-breasted blouse, made of dark-blue flannel, unbuttoned in front, and showing a waistcoat underneath. He wore an ordinary pair of top-boots, with his trousers inside, and was without spurs. The boots and portions of his clothes were spattered with mud. He had had on a pair of thread gloves, of a dark-yellow color, which he had taken off on entering the room. His felt "sugar-loaf" stiff-brimmed hat was thrown on the table beside him. He had no sword, and a pair of shoulder-straps was all there was about him to designate his rank. In fact, aside from these, his uniform was that of a private soldier.

Lee, on the other hand, was fully six feet in height, and quite erect for one of his age, for he was Grant's senior by sixteen years. His hair and full beard were a silver gray, and quite thick except that the hair had become a little thin in front. He wore a new uniform of Confederate gray, buttoned up to the throat, and at his side he carried a long sword of exceedingly fine workmanship, the hilt studded with jewels. It was said to be the sword which had been presented to him by the State of Virginia. His top-boots were comparatively new, and seemed to have on them some ornamental stitching of red silk. Like his uniform, they were singularly clean and but little travel-stained. On the boots were handsome spurs, with large rowels. A felt hat, which in color matched pretty closely that of his uniform, and a pair of long buckskin gauntlets lay beside him on the table. We asked Colonel Marshall afterwards how it was that both he and his chief wore such fine toggery, and looked so much as if they had just turned out to go to church, while with us our outward garb scarcely rose to the dignity even of the "shabby-genteel." He enlightened us regarding the contrast, by explaining that when their headquarters wagons had been pressed so closely by our cavalry a few days before, and it was found they would have to destroy all their baggage except the clothes they carried on their backs, each one, naturally, selected the newest suit he had, and sought to propitiate the gods of destruction by a sacrifice of his second-best.

General Grant began the conversation by saying:

"I met you once before, General Lee, while we were serving in Mexico, when you came over from General Scott's headquarters to visit Garland's brigade, to which I then belonged. I have always remembered your appearance, and I think I should have recognized you anywhere."

"Yes," replied General Lee, "I know I met you on that occasion, and I have often thought of it and tried to recollect how you looked, but I have never been able to recall a single feature."

After some further mention of Mexico, General Lee said:

"I suppose, General Grant, that the object of our present meeting is fully understood. I asked to see you to ascertain upon what terms you would receive the surrender of my army."

General Grant replied:

"The terms I propose are those stated substantially in my letter of yesterday,—that is, the officers and men surrendered to be paroled and disqualified from taking up arms again

McLEAN'S HOUSE, APPOMATTOX COURT HOUSE. (FROM A PHOTOGRAPH.)

until properly exchanged, and all arms, ammunition, and supplies to be delivered up as captured property."

Lee nodded an assent, and said:

"Those are about the conditions which I expected would be proposed."

GENERAL LEE AND COLONEL MARSHALL LEAVING McLEAN'S HOUSE AFTER THE SURRENDER.
(BY A. R. WAUD, FROM HIS SKETCH MADE AT THE TIME.)

General Grant then continued:

"Yes, I think our correspondence indicated pretty clearly the action that would be taken at our meeting; and I hope it may lead to a general suspension of hostilities and be the means of preventing any further loss of life."

Lee inclined his head as indicating his accord with this wish, and General Grant then went on to talk at some length in a very pleasant vein about the prospects of peace. Lee was evidently anxious to proceed to the formal work of the surrender, and he brought the subject up again by saying:

"I presume, General Grant, we have both carefully considered the proper steps to be taken, and I would suggest that you commit to writing the terms you have proposed, so that they may be formally acted upon."

"Very well," replied General Grant, "I will write them out." And calling for his manifold order-book, he opened it on the table before him and proceeded to write the terms. The leaves had been so prepared that three impressions of the writing were made. He wrote very rapidly, and did not pause until he had finished the sentence ending with "officers appointed by me to receive them." Then he looked towards Lee, and his eyes seemed to be resting on the handsome sword which hung at that officer's side. He said afterwards that this set him to thinking that it would be an unnecessary humiliation to require the officers to surrender their swords, and a great hardship to deprive them of their personal baggage and horses, and after a short pause he wrote the sentence: "This will not embrace the side-arms of the officers, nor their private horses or baggage." When he had finished the letter he called Colonel (afterwards General) Parker, one of the military secretaries on the staff, to his side and looked it over with him and directed him as they went along to interline six or seven words and to strike out the word "their," which had been repeated. When this had been done, he handed the book to General Lee and asked him to read over the letter. It was as follows:

"APPOMATTOX COURT HOUSE, VIRGINIA,
"April 9th, 1865.

"GENERAL R. E. LEE, Commanding C. S. A.

"GENERAL: In accordance with the substance of my letter to you of the 8th inst., I propose to receive the surrender of the Army of Northern Virginia on the following terms, to wit: Rolls of all the officers and men to be made in duplicate, one copy to be given to an officer to be designated by me, the other to be retained by such officer or officers as you may designate. The officers to give their individual paroles not to take up arms against the Government of the United States, until properly [exchanged], and each company or regimental commander to sign a like parole for the men of their commands. The arms, artillery, and public property to be parked, and stacked, and turned over to the officers appointed by me to receive them. This will not embrace the side-arms of the officers, nor their private horses or baggage. This done, each officer and man will be allowed to return to his home, not to be disturbed by the United States authorities so long as they observe their paroles, and the laws in force where they may reside.

"Very respectfully,
"U. S. GRANT, LIEUT.-GENERAL."

Lee took it and laid it on the table beside him, while he drew from his pocket a pair of steel-rimmed spectacles and wiped the glasses carefully with his handkerchief. Then he crossed his legs, adjusted the spectacles very slowly and deliberately, took up the draft of the letter, and proceeded to read it attentively. It consisted of two pages. When he reached the top line of the second page, he looked up, and said to General Grant: "After the words 'until properly,' the word 'exchanged' seems to be omitted. You doubtless intended to use that word."

"Why, yes," said Grant; "I thought I had put in the word 'exchanged.'"

"I presumed it had been omitted inadvertently," continued Lee, "and with your permission I will mark where it should be inserted."

"Certainly," Grant replied.

Lee felt in his pocket as if searching for a pencil, but did not seem to be able to find one. Seeing this and happening to be standing close to him, I handed him my pencil. He took it, and laying the paper on the table noted the interlineation. During the rest of the interview he kept twirling this pencil in his fingers and occasionally tapping the top of the table with it. When he handed it back it was carefully treasured by me as a memento of the occasion. When Lee came to the sentence about the officers' side-arms, private horses and baggage, he showed for the first time during the reading of the letter a slight change of countenance, and was evidently touched by this act of generosity. It was doubtless the condition mentioned to which he particularly alluded when he looked towards General Grant as he finished reading and said with some degree of warmth in his manner: "This will have a very happy effect upon my army."

General Grant then said: "Unless you have some suggestions to make in regard to the form in which I have stated the terms, I will have a copy of the letter made in ink and sign it."

"There is one thing I would like to mention," Lee replied after a short pause. "The cavalrymen and artillerists own their own horses in our army. Its organization in this respect differs from that of the United States." This expression attracted the notice of our officers present, as showing how firmly the conviction was grounded in his mind that we were two distinct countries. He continued: "I would like to understand whether these men will be permitted to retain their horses?"

"You will find that the terms as written do not allow this," General Grant replied; "only the officers are permitted to take their private property."

Lee read over the second page of the letter again, and then said:

"No, I see the terms do not allow it; that is clear." His face showed plainly that he was quite anxious to have this concession made, and Grant said very promptly and without giving Lee time to make a direct request:

"Well, the subject is quite new to me. Of course I did not know that any private sol-

UNION SOLDIERS SHARING THEIR RATIONS WITH THE CONFEDERATES AT APPOMATTOX.
(BY A. R. WAUD, AFTER HIS SKETCH MADE AT THE TIME.)

diers owned their animals, but I think this will be the last battle of the war — I sincerely hope so — and that the surrender of this army will be followed soon by that of all the others, and I take it that most of the men in the ranks are small farmers, and as the country has been so raided by the two armies, it is doubtful whether they will be able to put in a crop to carry themselves and their families through the next winter without the aid of the horses they are now riding, and I will arrange it in this way. I will not change the terms as now written, but I will instruct the officers I shall appoint to receive the paroles to let all the men who claim to own a horse or mule take the animals home with them to work their little farms." (This expression has been quoted in various forms and has been the subject of some dispute. I give the exact words used.)

Lee now looked greatly relieved, and though anything but a demonstrative man, he gave every evidence of his appreciation of this concession, and said, "This will have the best possible effect upon the men. It will be very gratifying and will do much towards conciliating our people." He handed the draft of the terms back to General Grant, who called Colonel Bowers of the staff to him and directed him to make a copy in ink. Bowers was a little nervous, and he turned the matter over to Colonel (afterwards General) Parker, whose handwriting presented a better appearance than that of any one else on the staff. Parker sat down to write at the table which stood against the rear side of the room. Wilbur McLean's domestic resources in the way of ink now became the subject of a searching investigation, but it was found that the contents of the conical-shaped stoneware inkstand which he produced appeared to be participating in the general breaking up and had disappeared. Colonel Marshall now came to the rescue, and pulled out of his pocket a small box-wood inkstand, which was put at Parker's service, so that, after all, we had to fall back upon the resources of the enemy in furnishing the stage "properties" for the final scene in the memorable military drama.

Lee in the mean time had directed Colonel Marshall to draw up for his signature a letter of acceptance of the terms of surrender. Colonel Marshall wrote out a draft of such a letter, making it quite formal, beginning with "I have the honor to reply to your communication, etc." General Lee took it, and after reading it over very carefully, directed that these formal expressions be stricken out and that the letter be otherwise shortened. He afterwards went over it again and seemed to change some words, and then told the colonel to make a final copy in ink. When it came to providing the paper, it was found we had the only supply of that important ingredient in the recipe for surrendering an army, so we gave a few pages to the colonel. The letter when completed read as follows:

"HEADQUARTERS ARMY OF NORTHERN
"VIRGINIA, April 9th, 1865.

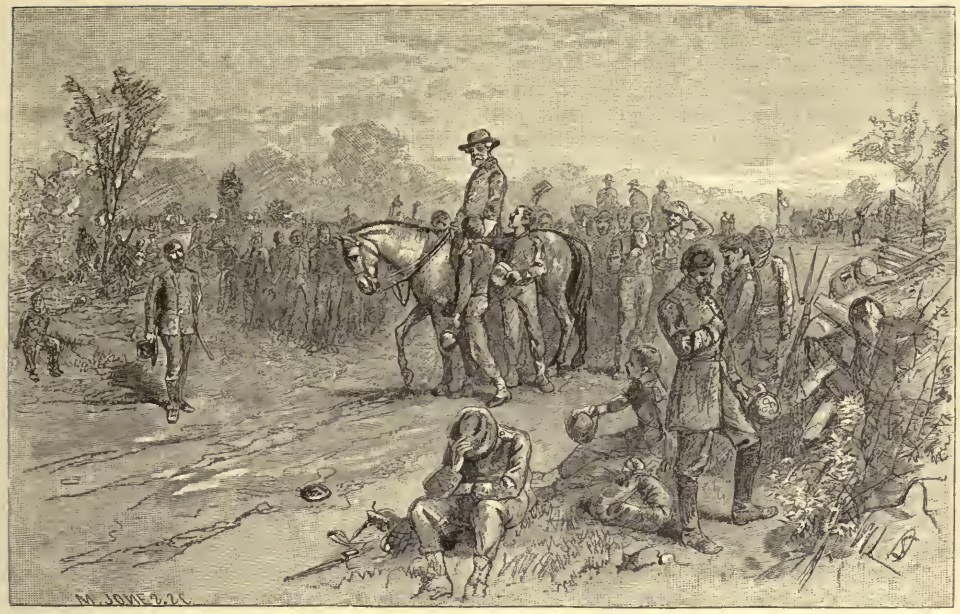
"GENERAL: I received your letter of this date containing the terms of the surrender of the Army of Northern Virginia as proposed by you. As they are substantially the same as those expressed in your letter of the 8th inst., they are accepted. I will proceed to designate the proper officers to carry the stipulations into effect. R. E. LEE, GENERAL.

"LIEUT.-GEN. U. S. GRANT."

While the letters were being copied, General Grant introduced the general officers who had entered, and each member of the staff, to General Lee. The general shook hands with General Seth Williams, who had been his adjutant when Lee was superintendent at West Point, some years before the war, and gave his hand to some of the other officers who had extended theirs, but to most of those who were introduced he merely bowed in a dignified and formal manner. He did not exhibit the slightest change of features during this ceremony until Colonel Parker of our staff was presented to him. Parker was a full-blooded Indian, and the reigning Chief of the Six Nations. When General Lee saw his swarthy features he looked at him with an evident stare of surprise, and his eyes rested on him for several seconds. What was passing in his mind probably no one ever knew, but the natural surmise was that he at first mistook Parker for a negro, and was struck with astonishment to find that the commander of the Union armies had one of that race on his personal staff.

Lee did not utter a word while the introductions were going on, except to Seth Williams, with whom he talked quite cordially. Williams at one time referred in rather jocose a manner to a circumstance which occurred during their former service together, as if he wanted to say something in a good-natured way to break up the frigidity of the conversation, but Lee was in no mood for pleasantries, and he did not unbend, or even relax the fixed sternness of his features. His only response to the allusion was a slight inclination of the head. General Lee now took the initiative again in leading the conversation back into business channels. He said:

"I have a thousand or more of your men as prisoners, General Grant, a number of them officers whom we have required to march along with us for several days. I shall be glad to send them into your lines as soon as it can be arranged, for I have no provisions for them. I have, indeed, nothing for my own men. They have been living for the last few days principally upon parched corn, and we are badly in



GENERAL LEE'S RETURN TO HIS LINES AFTER THE SURRENDER — THE LAST APPEARANCE AMONG HIS TROOPS. (DRAWN BY W. L. SHEPPARD.)

In his "Memoirs of Robert E. Lee" (J. M. Stoddart & Co.), General A. L. Long says of this scene: "When, after his interview with Grant, General Lee again appeared, a shout of welcome instinctively ran through the army. But instantly recollecting the sad occasion that brought him before them, their shouts sank into silence, every hat was raised, and the bronzed faces of the thousands of grim warriors were bathed with tears. As he rode slowly along the lines hundreds of his devoted veterans pressed around the noble chief, trying to take his hand, touch his person, or even lay a hand upon his horse, thus exhibiting for him their great affection. The general then, with head bare and tears flowing freely down his manly cheeks, bade adieu to the army. In a few words he told the brave men who had been so true in arms to return to their homes and become worthy citizens."

need of both rations and forage. I telegraphed to Lynchburg, directing several train loads of rations to be sent on by rail from there, and when they arrive I should be glad to have the present wants of my men supplied from them."

At this remark, all eyes turned towards Sheridan, for he had captured these trains with his cavalry the night before, near Appomattox Station. General Grant replied:

"I should like to have our men sent within our lines as soon as possible. I will take steps at once to have your army supplied with rations, but I am sorry we have no forage for the animals. We have had to depend upon the country for our supply of forage. Of about how many men does your present force consist?"

"Indeed, I am not able to say," Lee answered after a slight pause. "My losses in killed and wounded have been exceedingly heavy, and, besides, there have been many stragglers and some deserters. All my reports and public papers, and, indeed, my own private letters, had to be destroyed on the march, to prevent them from falling into the hands of your people. Many companies are entirely without officers, and I have not seen any returns for several days; so that I have no means of ascertaining our present strength."

General Grant had taken great pains to have a daily estimate made of the enemy's forces from all the data that could be obtained, and judging it to be about 25,000 at this time, he said:

"Suppose I send over 25,000 rations, do you think that will be a sufficient supply?"

"I think it will be ample," remarked Lee, and added, with considerable earnestness of manner, "and it will be a great relief, I assure you."

General Grant now turned to his chief commissary, Colonel (afterwards General) Morgan, who was present, and directed him to arrange for issuing the rations. The number of men surrendered was over 28,000. As to General Grant's supplies, he had ordered the army on starting out to carry twelve days' rations. This was the twelfth and last day of the campaign.

General Grant's eye now fell upon Lee's sword again, and it seemed to remind him of the absence of his own, and, by way of explanation, he said to Lee:

"I started out from my camp several days ago without my sword, and as I have not seen my headquarters baggage since, I have been riding about without any side-arms. I have generally worn a sword, however, as little as possible, only during the actual operations of a campaign."

"I am in the habit of wearing mine most of the time," remarked Lee; "I wear it invariably when I am among my troops, moving about through the army."

General Sheridan now stepped up to General Lee and said that when he discovered some of the Confederate troops in motion during the morning, which seemed to be a violation of the truce, he had sent him (Lee) a couple of notes protesting against this act, and as he had not had time to copy them he would like to have them long enough to make copies. Lee took the notes out of the breast-pocket of his coat and handed them to Sheridan with a few words expressive of regret that the circumstance had occurred, and intimating that it must have been the result of some misunderstanding.

After a little general conversation had been indulged in by those present, the two letters were signed and delivered, and the parties prepared to separate. Lee before parting asked Grant to notify Meade of the surrender, fearing that fighting might break out on that front and lives be uselessly lost. This request was complied with, and two Union officers were sent through the enemy's lines as the shortest route to Meade, — some of Lee's officers accompanying them to prevent their being interfered with. At a little before 4 o'clock, General Lee shook hands with General Grant, bowed to the other officers, and with Colonel Marshall left the room. One after another we followed and passed out to the porch. Lee signaled to his orderly to bring up his horse, and while the animal was being bridled the general stood on the lowest step and gazed sadly in the direction of the valley beyond where his army lay — now an army of prisoners. He smote his hands together a number of times in an absent sort of a way; seemed not to see the group of Union officers in the yard who rose respectfully at his approach, and appeared unconscious of everything about him. All appreciated the sadness which overwhelmed him, and he had the personal sympathy of every one who beheld him at this supreme moment of trial. The approach of his horse seemed to recall him from his reverie and he at once mounted. General Grant now stepped down from the porch, and moving towards him, saluted him by raising his hat. He was followed in this act of courtesy by all our officers present; Lee raised his hat respectfully in acknowledgment, and rode off to break the sad news to the brave fellows whom he had so long commanded.

General Grant and his staff then mounted and started for the headquarters camp, which in the mean time had been pitched near by. The news of the surrender had reached the Union lines and the firing of salutes began at several points, but the general sent orders at once to have them stopped, and used these words in referring to the occurrence: "The war is over, the rebels are our countrymen again, and the best sign of rejoicing after the victory will be to abstain from all demonstrations in the field."

Mr. McLean had been charging about in a manner which indicated that the excitement was shaking his system to its nervous center, but his real trials did not begin until the departure of the chief actors in the surrender. Then the relic-hunters charged down upon the manor-house and made various attempts to jump Mr. McLean's claims to his own furniture. Sheridan set a good example, however, by paying the proprietor twenty dollars in gold for the table at which Lee sat for the purpose of presenting it to Mrs. Custer, and handed it over to her dashing husband, who started off for camp bearing it upon his shoulder, and looking like Atlas carrying the world. Ord paid forty dollars for the table at which Grant sat, and afterwards presented it to Mrs. Grant, who modestly declined it and insisted that it should be given to Mrs. Ord, who then became its possessor. Bargains were at once struck for all the articles in the room, and it is even said that some mementos were carried off in the shape of flowers and other things for which no coin of the realm was ever exchanged.

Before General Grant had proceeded far towards camp, he was reminded that he had not yet announced the important event to the Government. He dismounted by the roadside, sat down on a large stone, and called for pencil and paper. Colonel (afterwards General) Badeau handed his order-book to the general, who wrote on one of the leaves the following message, a copy of which was sent to the nearest telegraph station. It was dated 4:30 P. M.

"HON. E. M. STANTON, SECRETARY OF WAR, WASHINGTON.

"General Lee surrendered the Army of Northern Virginia this afternoon on terms proposed by myself. The accompanying additional correspondence will show the conditions fully.

"U. S. GRANT, LIEUT.-GENERAL."

Upon reaching camp he seated himself in front of his tent, and we all gathered around him, curious to hear what his first comments would be upon the crowning event of his life. But our expectations were doomed to disappointment, for he appeared to have already dismissed the whole subject from his mind, and turning to General Ingalls, his first words were: "Ingalls, do you remember that old white mule that so-and-so used to ride when we were in the city of Mexico?" "Why, perfectly," said Ingalls, who was just then in a mood to remember the exact number of hairs in the mule's tail if it would have helped to make matters agreeable. And then the general-in-chief

went on to recall the antics played by that animal during an excursion to Popocatapetl. It was not until after supper that he said much about the surrender, when he talked freely of his entire belief that the rest of the rebel commanders would follow Lee's example, and that we would have but little more fighting, even of a partisan nature. He then surprised us by announcing his intention of starting to Washington early the next morning. We were disappointed at this, for we wanted to see something of the opposing army, now that it had become civil enough for the first time in its existence to let us get near it, and meet some of the officers who had been acquaintances in former years. The general, however, had no fondness for looking at the conquered, and but little curiosity in his nature, and he was anxious above all things to begin the reduction of the military establishment and diminish the enormous expense attending it, which at this time amounted to about four millions of dollars a day. When he considered, however, that the railroad was being rapidly put in condition and that he would lose no time by waiting till the next noon, he made up his mind to delay his departure.

That evening I made full notes of the occurrences which took place during the surrender, and from these the above account has been written.

There were present at McLean's house besides Sheridan, Ord, Merritt, Custer, and the officers of General Grant's staff, a number of other officers and one or two citizens who entered the room at different times during the interview.

About 9 o'clock on the morning of the 10th General Grant with his staff rode out towards the enemy's lines, but it was found upon attempting to pass through that the force of habit is hard to overcome, and that the practice which had so long been inculcated in Lee's army of keeping Grant out of its lines was not to be overturned in a day, and he was politely requested at the picket-lines to wait till a message could be sent to headquarters asking for instructions. As soon as Lee heard that his distinguished opponent was approaching, he was prompt to correct the misunderstanding at the picket-line, and rode out at a gallop to receive him. They met on a knoll which overlooked the lines of the two armies, and saluted respectfully by each raising his hat. The officers present gave a similar salute, and then grouped themselves around the two chieftains in a semicircle, but withdrew out of earshot. General Grant repeated to us that evening the substance of the conversation, which was as follows:

Grant began by expressing a hope that the war would soon be over, and Lee replied by stating that he had for some time been anxious to stop the further effusion of blood, and he trusted that everything would now be done to restore harmony and conciliate the people of the South. He said the emancipation of the negroes would be no hindrance to the restoring of relations between the two sections of the country, as it would probably not be the desire of the majority of the Southern people to restore slavery then, even if the question were left open to them. He could not tell what the other armies would do or what course Mr. Davis would now take, but he believed it would be best for their other armies to follow his example, as nothing could be gained by further resistance in the field. Finding that he entertained these sentiments, General Grant told him that no one's influence in the South was so great as his, and suggested to him that he should advise the surrender of the remaining armies and thus exert his influence in favor of immediate peace. Lee said he could not take such a course without consulting President Davis first. Grant then proposed to Lee that he should do so, and urge the hastening of a result which was admitted to be inevitable. Lee, however, was averse to stepping beyond his duties as a soldier, and said the authorities would doubtless soon arrive at the same conclusion without his interference. There was a statement put forth that Grant asked Lee to go and see Mr. Lincoln and talk with him as to the terms of reconstruction, but this was erroneous. I asked General Grant about it when he was on his death-bed, and his recollection was distinct that he had made no such suggestion. I am of opinion that the mistake arose from hearing that Lee had been requested to go and see the "President" regarding peace, and thinking that this expression referred to Mr. Lincoln, whereas it referred to Mr. Davis. After the conversation had lasted a little more than half an hour and Lee had requested that such instructions be given to the officers left in charge to carry out the details of the surrender, that there might be no misunderstanding as to the form of paroles, the manner of turning over the property, etc., the conference ended. The two commanders lifted their hats and said good-bye. Lee rode back to his camp to take a final farewell of his army, and Grant returned to McLean's house, where he seated himself on the porch until it was time to take his final departure. During the conference Ingalls, Sheridan, and Williams had asked permission to visit the enemy's lines and renew their acquaintance with some old friends, classmates and former comrades in arms who were serving in Lee's army. They now returned, bringing with them Wilcox, who

DEPOT OF SUPPLIES FOR THE UNION ARMY AT BELLE PLAINE ON THE JAMES RIVER. (FROM A PHOTOGRAPH)

had been General Grant's groomsman when he was married,— Longstreet, who had also been at his wedding, Heth, who had been a subaltern with him in Mexico, besides Gordon, Pickett, and a number of others. They all stepped up to pay their respects to General Grant, who received them very cordially and talked with them until it was time to leave. The hour of noon had now arrived, and General Grant, after shaking hands with all present who were not to accompany him, mounted his horse, and started with his staff for Washington without having entered the enemy's lines. Lee set out for Richmond, and it was felt by all that peace had at last dawned upon the land.

The charges were now withdrawn from the guns, the camp-fires were left to smolder in their ashes, the flags were tenderly furled,— those historic banners, battle-stained, bullet-riddled, many of them but remnants of their former selves, with scarcely enough left of them on which to imprint the names of the battles they had seen,— and the Army of the Union and the Army of Northern Virginia turned their backs upon each other for the first time in four long, bloody years.

Horace Porter.

SOLDIERS' GRAVES AT CITY POINT. (FROM A PHOTOGRAPH.)

A LITTLE DINNER.

REGRET to have to use so unpleasant a description, — and nothing in the world would induce me to do it outside of this confidential circle,— but Juliet Scatterbury, who afterwards became Mrs. Bang, was one of the most surprising of liars. Oh, it was so admitted. You should hear the gentle irony of Sam Lambert's remarks about her! His wife checks him, it is true, as to the particular case here to be described, believing that to have been largely her own fault, but the fact remains that Juliet was an egregious follower of Ananias and Sapphira.

There was wide range and ingenuity in her inventions; no one ever appeared to take a more genuine comfort in mendacity than she. It often seemed as if she would rather employ it than truth, even when the latter would have answered the purpose better. She sometimes wore a rapt and imaginative air as if she thoroughly believed in her statements herself. She would romance, for instance, about her early life, tell you of journeys she had made, thrilling adventures she had met with, priceless jewels and wondrous ball-dresses she had worn, and unmeasured social attentions that had been showered upon her. She would make small scruple, if it suited her whim, of claiming that she owned the largest steam yacht in the world, had written, anonymously, the last popular novel, or had sometimes played the part of Ristori or Bernhardt, appearing under proper disguise. With all this, she was young, pretty, possessed of the art of dressing well, and accomplished in several ways.

Her career in the large Western city of — let us say — Minneapolis was but a brief one. Her family were not in affluent circumstances; they had moved about a good deal,— her father had something to do with contracts,— but they were respected, and, for Juliet's part, she was the associate of the leading people. While there she was not thoroughly found out. There were always some who believed in her, thought her a very sprightly and entertaining person, and confidently expected her to make a great match. The young men in particular did not credit all the ill they heard of her, but laid a good part of this to the natural jealousy of their sisters and cousins, her rivals. It was probably not till individuals from different quarters of the country began to meet casually and compare notes about her that the full measure of her iniquities came out.

Now, Juliet Scatterbury also confidently counted on making a brilliant match. When she removed to New York, and, in some unaccountable way, made one of quite the opposite sort instead, she was still anxious that an impression to that effect should go out among the denizens of the place she had left. The view, in fact, prevailed there, from some artful hints let fall in a few letters she had sent back, that, though the marriage had been a very quiet one, it was due to a recent death in Mr. Bang's family, that it covered in reality a good deal of solid magnificence, and that her position in the world was a highly enviable one.

She had, in truth, married a club man, and the son of a club man, a fellow of good intentions enough, but not at all enterprising and with no very definite means of support. They lived in a small flat, in a respectable neighborhood, where everything was, as it were, something else. Their bedstead, for instance, was a mantelpiece, when off duty; their piano a refrigerator, and the principal arm-chair a coal-box. About the only genuine piece of furniture was an easel, holding some photo-engravings. This gave an elegant air of space, and served no extraneous purpose save to suggest to Mr. Bang his very obvious standing pun as to the facility with which it also might have been something else.

This manner of living was Juliet's own doing; she was brimful of vanity and active social push still.

They had some prosperous acquaintances who befriended them; among these, Mrs. Lambert, a former schoolmate of Juliet's, and friend of her husband, and a person, it would seem, of quite phenomenal good-nature.

"Poor little thing," said Mrs. Lambert, "and her husband has the makings of such a good fellow about him, and they have so much to contend with."

Many the little dinner, therefore, they had at her house, and many the comfortable drive for Juliet in her carriage.

As to Mrs. Bang's peculiar trait of invention, she probably employed it outside of the house, at this time, as briskly as ever, but she did not employ it at home, having found out, in very emphatic form from Jim, soon after their marriage, that he did not approve of it.

One afternoon she rushed in, in a state of much excitement, and said to Jim:

"I have just met the Gradshaws of Minneapolis,—a mother and daughter, you know,—the most prominent people there. They were at Arnold's, and are staying in town a short time, at the Bolingbroke. I hardly knew how I should get away from them, but I made a great palaver about intending to go and see them immediately, and escaped under cover of the confusion."

"Oh," said Jim, with but a languid interest, looking for a fresh cigar in a Japanese jug on the mantelpiece.

"I wish we could think of some way of entertaining them without letting them come near us. Our fate is in their hands; whatever they report, when they go back to Minneapolis, will settle it. I told them we were all upset with house-cleaning. If they should once see how we live ——"

"Well, we have n't any patent on it, and can't expect to keep it to ourselves always. I don't know as there 's any invention of ours they 'd want to steal very much, unless it 's the way that piano plays sonatas on the butter and eggs, when you touch the keys."

"Jim, you don't quite understand. I guess you 'd want to produce a good impression too, in the place where you used to live, and were brought up. They seem to think I 've made a—a rich marriage; that we are great swells, you know, and rolling in luxury."

"They 've got left, have n't they? Well, then, I see nothing for it but to pretend to be such swells we could n't possibly associate with anybody so much beneath us. We must cut their acquaintance."

Mrs. Bang repeated this same source of anxiety to her friend Mrs. Lambert, when she happened to drop in upon the latter the next morning.

"They live a thousand miles away, and will not turn up here again in nobody knows how long," she recited complainingly. "Why can't I think of something to do for them? If I could only give them a little dinner in such a charming house as yours. Why cannot such things be done? Why could not one go to a friend and say, 'Here, just lend me your beautiful house for one evening'? It would n't be such a very great tax upon them, and might do such an enormous amount of good to somebody else."

"It can be done," said Mrs. Lambert, whose amiability sometimes ran to quixotic extremes. "You shall have my house for any evening you may select — provided it be within the week, for after that, unfortunately, I expect visitors."

"Beware, I may take you at your word."

"That is just how I mean to be taken," said her hostess, warming with the idea. "It will not incommode us in the least. Mr. Lambert is at the South, and his return is indefinite, and my parents, whom I had been expecting this week to begin their annual visit to us, have written to say that they have put it off a few days longer. I will go to the opera on that night, and take care not to return too early."

"It is too kind of you. Of course I shall only say that we are in the house of one of our friends for a short time," said Mrs. Bang. "If they happen to think that our own is just as good, and is closed for repairs or something of the sort, why, we can't help that, can we?" To this extent alone Mrs. Lambert became a sharer in the proposed deception.

"Oh, here, no nonsense," said Jim, when he heard of the plan.

"I will do it," responded Juliet.

She explained it to him, and began with feverish energy to carry out her preparations for it. It was necessary to manœuvre somewhat for the proper date. The best would be that just previous to her intended guests leaving town; otherwise they might turn up again, in some awkward way, at her supposed residence and, then, all would be lost. She discovered that they were to go on the 24th, and that their tickets and sleeping-car berths were already taken, and, accordingly, invited them for the 23d — addressing to them somewhat the following discourse:

"It has been the greatest grief to me ever since you have been here that we are so upset that we could not receive you at our house; but, thank heaven, in a day or two everything will be in order, and you positively must dine with us on the 23d. I cannot think of letting you go back without a glimpse of our interior, modest as it is. It will please my dear friends at Minneapolis to know that you have seen it and broken bread with us. And my husband as well as myself will be inconsolable if you will not promise to make us a long visit on your next coming to town."

By such hospitable insistence she managed to secure the Gradshaws on her own date. They had not intended to go out at all that evening, but rather to reserve themselves for the fatigues of their long journey, which was to begin at a seasonable hour on the following morning.

A cab deposited them before a handsome house in West Thirty-seventh street. All, both without and within, accorded with what they were prepared to expect of the good fortune of Juliet Scatterbury.

Mrs. Juliet met them in the hall and went upstairs with them herself. The door below being heard to shut again, she left them and

hurried down to say a word, by way of warning, to Jim. It was characteristic of that rather slow-moving person that he had only at this moment arrived, leaving himself no time to become more familiar with his surroundings.

"Of course you will take care to sustain me in all that I say, Jim," she said. "We may have to make a few harmless little — a — efforts, to carry out our position."

Jim began to grumble, but, at this moment, the guests were heard coming downstairs.

Mrs. Gradshaw had a bustling, assertive way with her, and was evidently a person used to much consideration. Her daughter was of the quieter sort, yet quite ready to echo all her opinions, the more especially in the present case as she wholly agreed with them. The two professed themselves delighted with everything.

"Such comfort, such good taste! We thought we had a good deal, but I begin to see now, we don't half know how to live," explained the elder. "Everything is perfect. You really must excuse me if I stare round a little." She put up her eyeglass, first at one wall of the parlor, then at the other. "You say there is a separate bath-room for each sleeping-apartment? And, then, all this patent ventilation, and hot-air supply, and electrical attachments, and the sliding shutters — it is perfect, perfect."

"There is one thing poor Jim insists upon; I don't know that he is such a particularly selfish individual, but he will have comfort."

Fortunately, at this time, Jim had led Miss Gradshaw to the front window, and they were gazing out of it at the dimly discerned architecture of the neighborhood.

"What does the vapor-bath attachment connect with? It seems so convenient. We must have one too," continued Mrs. Gradshaw.

Juliet was a little flustered. "The — the elevator, I believe," she said, and then launched out into a torrent of words, intended to mystify her visitor and carry her over this tight place. "And all the furnace-pipes, and electric bells, and range, and burglar alarms, and stationary tubs, and everything, are hydrostatic, pneumatic, interchangeable, and self-acting. We would n't be without them for anything."

The rugs, portières, astral lamps, an elaborate piece of statuary, and the pottery, even to a choice collection of old luster-ware, were a subject on which she was much more nearly at home. She drew attention to some of these things of her own accord, and deftly invented the occasions on which they had acquired them. The portraits were a more difficult field. Still, Juliet had thought it quite probable she might have to respond to some comments about them, and — though her answers were left chiefly to the inspiration of the moment — she did not shrink from the ordeal. She had hurried round just before the arrival of the guests, and put away most of the small family photographs, porcelain-types, and the like that bestrew the usual American household, and replaced them with an album full of similar mementos of her own; but the framed pieces were naturally too heavy to be treated in this summary fashion. She proceeded to account for the large heads of the Clamptons, Mrs. Lambert's father and mother, by saying they were a dear old great aunt and uncle of her own, who had always been extremely devoted to her. They had sent their portraits as a token of their warm regard, on their last birthday — the birthdays of both occurring, by a singular coincidence, on the same date.

Mrs. Gradshaw paused before a painting of Mr. Lambert, in Huntington's best bank-president manner, including a red curtain, a column, a table, and a globe.

"Who is this?" she asks.

"Jim's, that is, Mr. Bang's, father." To have made it any more remote connection she thought would have necessitated too elaborate an accounting for the principal place given it.

"Mr. Bang's father, so young?"

There was in reality but little difference in the ages of the two men.

"Oh, it was taken a long time ago, you know; and it really is remarkable how young he does look for his age. It is noticed by everybody."

"And who is this?" She stops now before the likeness of the Lamberts' boy, now absent at boarding-school, painted with an orange and a hoop in either hand.

"Oh, that is only a fancy piece," replies Juliet, nonchalantly.

"Oh, I thought it *must* be a portrait; it 's so very like one."

"It 's Louis XIV. at the battle of — how execrable my memory is! — Of course I mean before the battle. It 's from some old painting. I forget what — but I want you to look at *this*."

She escaped in this way similar inquiry as to the likeness of Lambert's daughter, diverting her guests' attention to a valuable picture of the Munich school that hung near by. She thought good to affect to scorn it.

"I have never had any patience with it," she said. "Did you ever see such sheep and peasants? Jim sat at Leavitt's sale like grim death till he got it. It cost him ten thousand dollars. Perhaps I 'm wrong, but I actually cried the night he brought it home."

Jim, coming up, had caught the last words of this, and his eyes opened widely, but a maid, of a veteran air, now appeared at the portière announcing dinner.

"We have had to let our butler go for to-day; one of his family is sick, and we shall have to try to put up with the girl," whispered Juliet, confidentially, as they went in. "We are so fortunate in our servants; we have had the same ones, either in Jim's family or mine, almost always. Entertaining as much as I do, even in my quiet way, you can appreciate what an incalculable blessing it is."

There were indications, upon this, in the figure of Jim, who was going in first with Mrs. Gradshaw on his arm, as if he were about to kick backwards in some alarming way, or even to burst.

Nevertheless — for the memory of the prevaricator must be a good one — Mrs. Juliet was soon mistaking repeatedly even her long-tried servant's name.

"Miss Gradshaw is not drinking her wine; won't you see if you can find some Apollinaris water, Susan?" she said. Again, "The terrapin is a little under-flavored: will you just mention it to the cook, Susan?"

"Jane, ma'am," corrected the woman, in a stolid way, not too respectfully, it must be admitted, but she was secretly resenting the invasion.

At table, in the cozy, rich dining-room, not too large, Juliet romanced about the plates, reconciled discrepancies in the monograms on the silver and linen, and fabricated striking origins for the handsome screen and carven, high-backed chairs. These were a few of the "harmless little efforts" they were to make, to carry out their position. Jim was a person of so little imagination that all this adapting of one's self in detail to the small intimacies of another's household had never once occurred to him as a necessity of the situation, but he could not now retreat, and he endeavored to distract himself from it for the time being, by opening a little flirtation with Miss Gradshaw, who was comely, and did not show herself wholly averse to something of that sort.

Whenever anything inconvenient was trenched upon, Mrs. Juliet began to ply Mrs. Gradshaw with more sweet-breads or mushrooms or red-head duck or the delicacies of dessert. That lady was fond of her dinner, and the policy was generally successful. As to Lucy, she plied her with questions upon the current state of society at Minneapolis, asking her who was married, who were the belles, who was giving parties, who leading the germans, and the like. In spite of all this management, however, there was presently an inquiry that fell like a thunderbolt.

"By the way, who is the portrait over the mantel, in your room?" broke out Mrs. Gradshaw, addressing herself to Jim.

"In my room?" murmured Jim, taken extremely aback.

"Yes, the door of the adjoining one where we were stood ajar, and we really could n't resist the temptation of peeping in, to see what the retreat of the lord and master was like. Of course it was wholly inexcusable."

"Do try some of the vegetables," hastily interposed Juliet. "Speaking of vegetables, Mrs. Hedges, who has lately returned from San Francisco, was telling me the other day what a wonderful market they have for vegetables there. Do you know, I want to see San Francisco so much." And so forth, and so forth, and so forth.

But without avail, for though diverted from the subject for the time being, Mrs. Gradshaw kept an air of having something on her mind, and returned to it again.

"Such an unusual face and such an excellent piece of crayon work," she said; "we were both intending to speak to you about it."

It was, in fact, that of Mrs. Lambert herself.

Now, Jim had never been in the chamber thus ascribed to him, and Juliet could not, for the life of her, remember the likeness, nor even whether it was that of a man or a woman. Jim, driven to the necessity of saying something, was about to open his mouth for a reply that would certainly have been their utter ruin, but Juliet snatched the words from him, and manœuvred for time. Could she have got at the key controlling its electric lighting, she would have suddenly extinguished all the gas. As it was, she meditated tipping over her bottle of claret, to escape the topic under cover of a calamitous crash. There was a long-drawn moment of suspense, when Miss Lucy let fall a further word or two giving, as Juliet thought, a clew to the sex of the person. Upon no more basis than this,— in which she was mistaken,— she launched out intrepidly:

"Oh, yes, that is Colonel Toplift — in citizen's dress. He is one of the most gentlemanly men and best fellows that ever was. He comes in on my mother's side,— my mother was a Toplift, you know. Jane, I think there is a draught; just draw the screen a little more. I am sure you must feel it, dear Mrs. Gradshaw; these New York dining-rooms are so draughty, do what you will."

"Not at all, I assure you. But the one I was speaking of was not a man's face; it was a woman's."

"Yes, such a really charming expression," echoed the daughter.

"To be sure! How stupid I am! Colonel Toplift was sent to the frame-makers', for repairs, only a few days ago. I could n't think for the moment just which one you meant. It is a Mrs. N — Neufchatel, a cousin of Jim's. There 's the most romantic history connected with her life. I wish I had time to tell it to

you with all the details. She was a great beauty. The family lived in Portugal. All the men at the foreign legations and consulships and everything were wildly in love with her. They say whenever she left St. Petersburg to visit this country, it was like a perfect funeral. She and Jim were wrecked, on the same steamer, once, and saved each other's lives. It was near Havana. That was before she married, of course. I suppose I ought to be jealous about leaving her up there for Jim to gaze upon all the time, but, you know, they were always like brother and sister together; and then, if there 's one thing I do abominate, it 's having your own portraits all around the house, so one must fill up with something."

Furthermore, on the retirement to the drawing-room, the budget of small effects of the Lamberts, which Juliet had meant to put away, but, in reality, had only absently laid down instead, turned up again and fell into the hands of the visitors, necessitating new prodigies of invention. She met them, as she thought, to a marvel. The greatest absolute awkwardness, if not danger of detection, after so many miraculous escapes, arose with her unfamiliarity with so innocent-seeming a bit of furniture as a coal-scuttle. It was of a new ornamental pattern, which would not give out its contents, when she undertook to throw coal on the fire, without pressing on a certain spring. Again, Jim, in order to give himself an easy air of proprietorship, after remaining by himself to smoke as long as possible in the dining-room, undertook to kindle in the library grate a fire of ostensible logs, which turned out to be only a cunning imitation in cast iron, designed to be illuminated by gas — though this, with a sickly kind of smile, he managed to turn off as only his humor.

However, even these episodes passed safely over, and the evening came to an end without disaster. The Gradshaws made their farewells in the friendliest manner. They may have felt that Juliet, as of old, was a little absent in her replies and not always governed by the strictest accuracy of statement,— perhaps they did not thoroughly believe, for instance, the story of the romantic shipwrecked cousin of Jim's, with its numerous variations of scene between Portugal and St. Petersburg — but what seemed certain was that Juliet had a most comfortable home. She appeared a person of decidedly important and luxurious position in the world, and to that, as we all know, much may be forgiven. As to Jim, he was an honest soul, without an atom of pretense about him.

Hardly had they taken their departure when the Bangs — Juliet first gathering up her photographic mementos — followed them. Jim was exceedingly grouty, declaring he would rather spend an evening in the infernal regions than another such as this. Juliet comforted him, and defended the case on the plea that once in they had to keep it up. But it was all over now, it was a great success, the Gradshaws were immensely pleased, and there was no telling how much good it might do in the future.

A few minutes after they had gone, Mrs. Lambert returned from the opera. She found the house quiet and everything pretty much in its usual order. The first object on which she set eyes, after entering her room and tossing about a few light articles on the dressing-table, was a valuable ring.

At an early hour the next morning she ordered her carriage and drove away. While she was out, it so happened that the elderly Clamptons and Mr. Lambert himself unexpectedly arrived. The former had changed back to an original plan once countermanded, and now calmly proceeded to install themselves. Lambert, like a true business man, hurried out again on some affair, the very moment he was at home, leaving word he would return to lunch.

This being the new situation in the house, about 11 o'clock a hack loaded with traveling-trunks drew up before it in a hasty way, and Mrs. Gradshaw, followed by her daughter, alighted and ascended the steps.

"Is Mrs. Bang at home?"

"She don't live here, ma'am."

"You don't quite understand: I said *Mrs. Bang*," repeated Mrs. Gradshaw blandly. "We dined here last evening, you remember. Will you ask her to step here a moment; it is about something important."

"Those ones went away last night, and Mrs. Lambert is out," returned the maid.

"Went away last night? went away?" catching her breath in amazement at this unforeseen rebuff. "Well, where did they go?"

"They might 'a' went home, ma'am; I could n't say."

"In goodness' name! you mean to tell me they went home? Where *is* their home, if not here?"

"I disremember, ma'am. You might inquire next door," suggested the servant; "I ain't livin' very long in this block."

"Can it be that we have somehow mistaken the number, Lucy?" Mrs. Gradshaw said, gazing round in an unsettled way at her daughter. "I was so absolutely sure of the place."

"No, mamma, it *is* the right number," replied Lucy. "Here is the same carved oak chest — from the royal palace at Dresden, you know — and the chairs — from the Cologne cathedral." And they proceeded to identify many other objects immediately under their eyes, in the entrance hall.

"Let this stupidity cease instantly," now

exclaimed Mrs. Gradshaw, to the flurried maid. "Go at once and tell your mistress we would like to see her. We must catch a train at Forty-second street, and have but little time to spare."

With that, she pushed on into the drawing-room, as having a perfect right to do so. She heaved a sigh of relief at seeing there the alleged portrait of Mr. Bang's father, the little Louis XIV., and the rest of the well-known objects of the night before. But, as they entered, the maid who had waited at dinner, and who had heard something of the altercation at the door came up to corroborate the other, and said:

"Mrs. Lambert, the lady's name as lives here, is out, ma'am, and Mr. and Mrs. Bangs don't belong to us at all."

"Oh, this is a gross conspiracy, Lucy," cried the matron, flushing red with indignation. "This girl is probably the one who has stolen your ring, and the family being away from home, she has formed a plot with the other to evade us in this little way, at least until she has a chance to escape. I think I ought to have our driver bring a policeman at once. You stay here, Lucy, to see that she does not leave the house."

"Is it me steal a ring, me that was with the Lambert family for twenty years? Oh, my! Oh, my! but the poor girls do have their characters easy took away."

She gave a hysterical gasp and then a scream that hastened the advent of the elderly Clamptons, who were already coming down.

"Thank heaven! the 'dear old great aunt and uncle'!" Mrs. Gradshaw exclaimed, at sight of them; "now we shall see."

But Mrs. Clampton, far from being conciliatory, sailed in with the majesty of a seventy-four-gun ship.

"What is the meaning of this invasion of a peaceful home, this brow-beating of our servants," she demanded, full of trepidation, shared by the old gentleman who attended at her side.

"I asked only for Mrs. Bang. I presume you have but lately arrived and do not know the circumstances," said Mrs. Gradshaw, bristling in return. "My daughter unfortunately lost a valuable ring, when we dined here last night. If Mrs. Bang is not at home, will you kindly look on the dressing-table upstairs, where the ring was left? We discovered the loss only as we were starting for our train, and have driven here on our way."

"We know nothing about Mrs. Bang. You have certainly mistaken the address."

"Mistaken the address? and here is Mr. Bang's portrait before our eyes, and there your own, Juliet's great aunt and uncle!"

"Great aunt and uncle? ha, ha!" hysterically; "we are Mrs. Lambert's father and mother. Lester,"— to her husband,— "perhaps they are burglars and want to rob the house; you must certainly bring a policeman."

"It is a shameless conspiracy to defraud us of our property, Lucy. Who could have suspected it in such a place? Or else they are all mad. But I will not be done out of it so. I insist upon going upstairs. I know just where the ring was left. And do you see that none of them leave."

She made a bold push to go up the stairs, but, being a stout woman, and her way being barred by somebody, this was not effective. There was general hysteria among the women. The suspected servant, pale with fright, was almost fainting. Lucy Gradshaw leaned, weeping, against the wall. A policeman had, somehow, actually been brought, and instigated by the Lambert servants, even went so far as to confront Mrs. Gradshaw in a sort of official way. Mrs. Lambert, now returning, followed almost upon his heels. In the midst of all the confusion, the two visitors recognized her as the heroine of the multifarious adventures of which they had heard; they turned upon each other wild eyes of wonderment, and Mrs. Gradshaw gasped:

"The beautiful cousin from Portugal!"

Next Lambert rushed in, and sustained pleasing Lucy Gradshaw in his arms,— by some unconscious mental process selecting her as the most worthy object of sympathy. But he made a vigorous effort, at the same time, to dissipate the misunderstandings that had settled down upon all the group like an obfuscating fog.

"In heaven's name, what does all this mean?" he ejaculated. "Anita,"— to his wife,— "explain it."

"It means, it means," breathed Mrs. Lambert faintly, "that — that they dined here last night, and — and Juliet must have represented this as her own house. I did not think she would do that. And — and some one left a valuable ring. So I drove right down to their flat, after breakfast, to give it to Juliet. She was not at home," — addressing the visitors,— "and I left it for her with a very particular note. I *thought* it might belong to her guests."

"Pray, where *is* this flat?" demanded Mrs. Gradshaw grimly.

The others were all so occupied in offering her profuse apologies, with which by degrees she allowed herself to be somewhat mollified, that she could not for a while procure the address. Why dwell upon the long conversation and comparison of notes about Juliet Scatterbury that followed. Mrs. Gradshaw persisted in her demand for the address, wrote it down, and departed to find it.

"I will go there myself: we have now lost

our train, and there is plenty of time," she said, with the same ominous grimness.

"The deceitful, deceitful, deceitful little minx!" ejaculated old Mrs. Clampton. "What punishment is bad enough for her?"

Mrs. Lambert made a feeble attempt to say something for her quondam friends, but was easily put down.

"A quarter of an hour with Mrs. Gradshaw will be a very good beginning," responded Lambert, his wonted cheerful flow of spirits quite restored at the prospect. So, indeed, it proved. Mrs. Bangs had rallied forth that morning, after an earlier breakfast than Mrs. Lambert. After performing various errands, she bethought her that it would be becoming and polite to go and thank the friend who had so kindly lent her her house the night before; the more so, as the visit was, more likely than not, to be accompanied by an invitation to stay to lunch. She was in the vicinity of Thirty-fourth street, going up Madison Avenue, when she saw the carriage containing the Gradshaws, coming down. Not that she would have noticed it, except that they had had their heads out of the window, their eyes glaringly fixed upon her. They waved her to stop, and drew up close beside the curbstone, where she met them. She suspected some unusual circumstance, of course, from an excited air worn by the inmates, but supposed it would be only some travelers' delay, and, seeing the baggage piled high behind, had no idea of any change of plan that could interfere with the successful consummation of events as they had been left. Mrs. Gradshaw in her eagerness thrust the door ajar. Both women opened their mouths at once, but Juliet, with traditional glibness, got in her effusion first.

"What a delightful surprise! Not off yet? It is such a pleasure to see you again. Now, why will you not postpone your going and come and make us a nice visit? I declare! I am going to tell your coachman to drive around to Thirty-seventh street at once." And she bobbed her pretty head aside as if about to do so.

Good Mrs. Gradshaw fell back, all but in an apoplectic fit, at this unheard-of attempt to renew the imposition.

"You wicked, disgraceful, brazen girl, get right into this carriage," she exclaimed, straightening herself again. "Oh, what a cheat and humbug you are! You always were, from a little child. We know all about you; you never lived there; all those people you described were utter fictions. We have been there. It was all owing to the blessed circumstance of Lucy's ring. She left it, and Mrs. Lambert took it round to your — abode, and we are going after it. Produce it instantly, or get into this carriage and drive with us to where it may be found."

She even laid her hand on Juliet's shoulder to enforce her commands.

"I have n't got it," murmured Juliet feebly, overwhelmed by a torrent so violent that it was useless to think of stemming it; she offered no resistance, but entered the carriage with them.

"*This* shall go to Minneapolis; *this* shall be related to your old acquaintances," resumed the Nemesis, with high and mighty sarcasm; "this is what is called keeping up appearances, I suppose — I don't know why I don't expose you to the people in the street."

Juliet essayed some other feeble fabrications — that she and Jim had had a wager; that some people had different ideas of hospitality from others; that it was a joke, and she had meant to tell them all about it,— but all was overborne in Mrs. Gradshaw's indignation.

"Mamma!" expostulated the daughter, from time to time. Her own way would have been a much better "form," to treat this person with dignified silence, and simply keep clear of all such hereafter.

Finally, "You had a good dinner, at any rate," declared Juliet, trying open bravado, but immediately after she broke down, put both hands before her face, begged her accusers not to relate the affair in Minneapolis, and threw herself back among the cushions sobbing.

"Mamma!" exclaimed Lucy Gradshaw, this time with energy — touched, as women will be, at tears. Mrs. Gradshaw was fond of describing the "tongue-lashing" she gave the reprobate, but they rode the rest of the way in silence.

They mounted the stairs to the flat, and found the very particular note, with the ring. Mrs. Gradshaw surveyed with a supercilious air all the economic make-shifts in the place, which, had it had a straightforward mistress, she would have considered a trim and attractive little domicile. Delivering a parting homily in the same severe strain, she withdrew, leaving the culprit in a cowed attitude, overcome with chagrin.

Juliet did not dare to tell her husband, but somehow he heard of it, and though this particular offense was condoned, the Little Dinner was popularly thought to be the starting-point of a rupture in virtue of which Juliet Scatterbury went abroad to reside in the Riviera, where Jim — having in the mean time done better in a pecuniary way — sends her money to maintain existence on her own account.

William Henry Bishop.

ONE BORN IN NOVEMBER.

HE leaps to touch again the pulse of Spring:
None quick as he that pleasure to forestall!
But while he smiles in light of everything,
The cherry-blossoms suddenly take wing.
Such silky flights can have no sound of fall,
But yet he hears November in them all.

Burning with rapture on June's perfect breast,—
As if he stirred the roses breathing there,
Lo! some loose petals by his foot are prest,
And with the sum of her warm beauty blest,
He feels a sudden chillness in the air,
And sees the hint of ashes everywhere.

When summer glory shines with August height,
And his high spirits match the splendid day,
Just one soft, purpling leaf's slow, silent flight
Rustles like autumn on the ear of sight!
The forest-curves in fancy sink away,
And leave November's bony forms and gray.

Yet dream not when his birth-month draweth near,
He is a man that maketh Gloom his guest.
Nay! from the tender droppings of the year;
From summer leaves that fall before they sear;
From autumn leaf-rain, life doth snatch a zest:
For — shadowed joys are always vividest!

Charlotte Fiske Bates.

TOPICS OF THE TIME.

To the Readers of "The Century."

WITH this number of THE CENTURY the magazine begins its thirty-fifth volume and eighteenth year. Again it is our pleasure to record a very large annual growth in the number of readers which the magazine regularly addresses. It is with an increasing sense of responsibility that we contemplate the fact that THE CENTURY possesses to-day, and has for several years possessed, the largest audience that was ever gathered about any periodical of its class printed in the English language. The first edition of the present number is a quarter of a million copies. As each copy has from one reader to six hundred (the latter in a few of the large public reading-rooms), the readers of THE CENTURY throughout the world are estimated at nearly two millions.

In considering the causes which have given THE CENTURY its unprecedented circulation, there is one that should never be forgotten; and that is, the spirit in which it was founded, and in which it was conducted in its early years. Dr. Holland, in assuming the direction of a "people's magazine," determined that it should not shirk living subjects; that the great questions of the day should be treated seriously, earnestly, and continuously in its pages; that while carrying on its purely literary and artistic functions, it should tell as a constant force in the intellectual, moral, and political development of the country. That freedom of opinion, that fair play, and that hospitality to ideas which he insisted upon have been of the highest service to THE CENTURY in its history since he was called away. A notable instance of the possibilities under such a policy is the War Series of THE CENTURY (now concluded as a battle series, but to be continued, from time to time, with short papers on special and picturesque phases of the war),— a historical work of such importance as to be in itself a part of our national history — in its relation to the personal career of General Grant, in the wealth of its original testimony with regard to great events, and in its moral effect in helping to bring the once warring sections into a better understanding and a higher mutual regard.

The publication of the War Series made possible the publication, as its continuation and culmination, of the authorized Life of Lincoln and History of his times. This work is now entering upon its most interesting stage, having reached the point where the authors themselves became associated with the President, in official and confidential relations, and are therefore able to bring to the elucidation of the story a number of unpublished documents and reminiscences of the highest interest and value.

The generous manner in which the public has greeted such enterprises as these confirms the purpose of THE CENTURY to do all in its power to help make our multitudinous American communities feel and appreciate their national unity and destiny. We have no sympathy with that false and ill-informed patriotism which flatters its audience by affecting to despise Abroad. There is a long distance between the state of mind of an American who refuses to learn anything from the past or present of that great majority of mankind belonging to the Old World and the state of mind of the American who simply recognizes the development of human freedom and thought which has taken place in the New World — recognizes not only our national faults and dangers, but also every gain made here, and every golden opportunity which is here still open to the race.

A Phase of Political Independence.

"DEMOCRACY," explains your American philosopher, "signifies the rule of the people, the whole people. It is distinguished from monarchy, which means the rule of one; and from aristocracy, which denotes the rule of a few." The American philosopher seems to have the dictionary on his side; whether history, ancient or modern, supports his assertion, is matter of dispute. Most of the democracies of history have, as a matter of fact, been governments of the many by the few. Our own ought to be an exception, but is it so?

An aristocracy, our philosopher asserts, is the rule of the few. To be quite accurate (for we are now speaking etymologically), it is the rule of the best. That is what it purports to be. Practically it is not always so. Those who assume to be the best of the people are not always the best; the selections of heredity are not infallible. If we only knew how to choose the best — the wisest, the bravest, the most unselfish — could we do better than to commit the administration to their hands? Is not this, indeed, what we mean by democracy? Is it not the fundamental assumption of the philosophic democrat, that the investiture of the people with the political power will result in the selection of the ablest and wisest men to administer the affairs of the State; or if not in all cases the ablest and wisest, yet, in the long run and as a general rule, abler and wiser men than can be secured by any other method? Is it not believed that in the open discussion of public questions, and the free criticism of candidates, truth will prevail over error, and wisdom over folly, and probity over rascality, and that thus, by the free choice of the people, the men who are best fitted to govern will be called to govern? Mirabeau said truly, "In a certain sense republics are monarchical, and again in a certain sense monarchies are republics." Quite as truly we might say, "All strong aristocracies have a democratic element in them, and all vigorous democracies tend to a genuine aristocracy." This is the test of democracy. Does it indeed secure wise and capable administration? Does it bring to the front its natural rulers?

Ask this question respecting our municipal government. Are the mayors of our cities their ablest and soundest men? Sometimes they are; but is it the rule? How about the members of the municipal councils? Here the test fails utterly. The legislative bodies of our cities, with scarcely an exception, are composed of men who are not above the average in intelligence, and who are below the average in morality. Saloon-keepers, small politicians with axes to grind, and various unsocial and disreputable characters form the majority of most of these city councils. This does not look as though our democracy were succeeding in bringing to the front its natural leaders. Instead of selecting the best to rule, it seems to be selecting the worst.

In many ways this tendency finds expression. Recently, in one of our inland cities, the mayor sent a message to the Common Council pointing out that many of the saloons were open all night; that the worst injuries of these saloons upon public morals were perpetrated in the hours between midnight and morning, and that many of the crimes engendered in these saloons were brought forth in these small hours of the night. The mayor furnished figures from the police reports to prove these statements, and asked the Council to pass an ordinance requiring the closing of these saloons between twelve at night and six in the morning. The Council deliberated, hesitated, weighed and measured, postponed, reconsidered, and finally defeated the ordinance. The facts presented by the mayor were not disputed; and it was well known that a large number, probably a majority, of the liquor sellers themselves were in favor of the ordinance; but a minority of them, and these the lowest and worst, the keepers of the vilest dives in the city, were opposed to it; and the majority of the Council made common cause with the dregs of the population, and permitted them to control its administration. Beyond controversy, if the question of the closing of these saloons after midnight could have been submitted directly to the people of the city they would have voted ten to one in the affirmative; doubtless these councilors were perfectly well aware of this fact; they knew that they were not representing their constituents; yet they disregarded the wishes of the overwhelming majority of the people and made themselves the willing instruments of that small fraction of the population which lives to propagate poverty and crime.

Such debasing subjection to the vilest elements of the people is very common, not only on the part of office-holders, but also, and more especially, on the part of political managers. In making nominations, it is not the support of the intelligent and virtuous classes that is most carefully inquired after, but the support of the vicious and disorderly classes. Your average boss, in either party, is not solicitous about the vote of the churches; his problem is to secure the vote of the saloons. He seeks first the kingdom of Beelzebub and his iniquity, confident that all the other support that he needs will be added unto him. In a convention, met for the nomination of a candidate for mayor, in one of our most reputable capital cities, the friends of one candidate boldly announced in their conferences with the rest that three hundred gamblers stood ready to make handsome contributions to the election funds if their man was nominated. The argument seemed to be conclusive, for their man was nominated, and elected. That such a reason can be urged in a political convention is itself a startling fact.

Those who watch the debates of a State legislature wrestling with any phase of the liquor question at once perceive that the policy of both parties is dictated not by the better half of either party, but by the worse half — probably by the lowest and meanest eighth or tenth of the party. These legislatures are asking, not what measures will best satisfy the great mass of industrious, thrifty, law-abiding people, but what measures will alienate the smallest number of the enemies and parasites of society.

These statements may seem to be extravagant, but it would be easy to give abundant illustrations from our recent political history of every one of them. And without wishing to take a pessimistic view of our American type of democracy; without doubting, indeed, that the tendencies pointed out are a temporary disorder which the good sense of our people will find a way of curing, the philosophic observer cannot help asking what these things mean, and what remedies are readiest and most effectual.

The fact that party managers and public officials show themselves so responsive to the vilest elements of society indicates great activity on the part of these vilest elements. Their number is not large, but their zeal is hot and their purpose is strong; what they lack in weight they make up in velocity. Their demands are incessant and insistent; their pressure upon the political leaders is never lightened. The better classes make no such demonstration of their purpose. There is little political activity among them; their numbers and their weight give them little force, because there is so little movement. The vilest prevail over the best because they are so much more active in their

own interest, and so much more positive in their demands.

They gain advantage, also, in another way. They are much less intense in their partisanship. One who watches the municipal contests in a city where the two great parties are pretty evenly balanced will see that the disorderly and vicious classes are by no means wedded to either party. Their vote goes, almost solidly, first to one party and then to the other,—always to the candidates that are the most satisfactory to them. Their political principles are precisely those which one of our prominent capitalists has so humorously avowed, and for the same reason. They are no bigoted partisans, not they. Consequently they manage, in a good many of our cities, to have things largely their own way.

If the supremacy of the vilest in our municipal governments is explained by the facts just mentioned, the way of overthrowing that supremacy is clearly indicated. A great increase of political activity and a corresponding abatement of partisanship, on the part of the best citizens is urgently called for. The latter is the simpler, and perhaps the more effective, remedy. If the upper half of each of the great parties were as fearlessly independent as the lowest quarter of the party is, the rule of the vilest would speedily cease and determine. It is the confidence of the bosses that the better citizens will be steadfastly loyal to their party obligations, that encourages them to truck and dicker with the rabble. The knowledge that they were in danger of losing the support of the reputable people would lead them to withdraw from that alliance.

The effectiveness of this remedy has already been demonstrated in several of our great cities. In these cities there is a great gain in the *personnel* of the government, and in the vigor and purity of the administration. The same remedy is within reach of the voters of all our cities.

Sanitary Legislation in American Cities.

It is somewhat depressing to look back and see how large a part of what has passed for political principle in the United States has been really only a temporary exemption from the necessity of meeting problems which had long vexed older peoples. In 1790, when there were but four American cities with a population of more than 10,000, and when the population of the largest was but about 40,000, it was easy for our people to relegate all matters relating to the prevention of disease to individual care, and to look with complacency upon this solution, as only a phase of the great political principle of individual liberty. It is a different matter in 1887, when nearly one-fourth of our people live in cities, when a single city with its environs contains almost as many persons as the whole United States in 1790, and when the consequences of individual carelessness or incompetency may be frightful. Under the latter circumstances, we can no longer leave to the individual, or force upon him, duties to which he is incompetent; nor, above all, can we any longer put such a solution into the class of political principles.

The only comprehensible relation which human society bears to the individual is that of conferring benefits on him; if it fails in this function, it is only a nuisance and an impediment to him. But the real benefit which society can confer on him is not, as the socialist assumes, that of making life easier; it is rather that of enabling the individual to reach the point of the most strenuous endeavor, with the highest percentage of results. Society injures the individual when it repays to him the sum which a swindler has abstracted from his pocket; it confers a benefit on him when it locks up the swindler, and makes it more difficult for other swindlers to entrap the unwary. The dividing line is not difficult to follow, if one is honestly anxious to follow it. And it seems a natural, however unpleasant, consequence that the energy of the State should increase with the intensity of modern life; otherwise, the whole growth of the race in numbers and civilization would be a decided disadvantage to the individual, for every invention and development would merely bring in some new danger, against which he must guard himself, to the detriment of his ordinary work. When the numbers of a people have increased so that a small percentage is a large absolute number, when the individual workman finds himself menaced by an organization which is too strong for him, however weak it may be in comparison with the whole State, he has a right to expect from the State ample protection against anything which interferes with the full efficiency of his labor: it is no answer to say that the precedents do not meet the case; the State exists to make precedents in such cases. When new chemical processes in manufacture have brought into populous places odors and gases which are not only offensive, but distinctly detrimental to health, it is not fair to the individual to expect him to stop his ordinary work in order to abate nuisances of the sort: the State has found a new sphere of activity. When a city becomes packed like an ant-hill, and there is every temptation to individuals to disregard the usual laws of health in the construction and regulation of buildings, it is not fair to the individual to leave to his conscience or personal investigation the regulation or detection of defects which are so easily concealed; he is not to blame for the new conditions, and the State must do the work, in order that he may attend to his own work, and not be injured, instead of benefited, by the new developments. He who would reject at once a proposition that the State should build houses for workingmen, on the ground that such a step would tend only to injure the individual activity of the recipients of the bounty, is not at all illogical in believing that the State is bound to use every energy for the prevention of preventable diseases in cities, for the latter step is merely a removal of the burden of new conditions from the individual who has become exposed to them, and an effort to enable him to do his work with as much efficiency as ever. Such legislation seems to be altogether Individualistic, as opposed to Socialistic.

That legislation can do much in this direction has been abundantly proved by experiment. England's first half-century of sanitary legislation, beginning in 1838, has just ended, and its results are full of encouragement to those who have had faith in the possibilities of such work in American cities. During this period, the death-rate of England and Wales has been reduced from 22.07 to 19.62 per 1000; and that of London from 25.57 to 21.01 per 1000. Such percentages become much more intelligible when it is added that the death-roll of England and Wales, at the rate of 1838, would have

been 102,240 larger last year than it was under a system of sanitary legislation: that is, that this number of lives was actually saved and prolonged by the intelligent direction of the energy of the State. If there is any taint of socialism in "State interference" of this sort, which goes only to the relief of the individual from the necessity of guarding him from the unhealthy influences of modern city life, and thus enabling him to work longer, with less anxiety and more efficiency, it is not easy to detect it.

The conditions of American life have thus far been in favor of a low death-rate. The death-rate of the whole United States in 1880 was stated by the Census Bureau as 15.09 per 1000; but it is difficult to believe that some failures to report did not have an influence on this very favorable showing. London's death-rate of about 20 per 1000 is extremely low for an English city, and yet Philadelphia and Pittsburg about equal it, and Chicago, Cleveland, Milwaukee, Providence, St. Louis, and San Francisco surpass it, Cleveland having about the lowest death-rate of the world's great cities. In all these cases, active municipal work has done much to reënforce the naturally healthy conditions of American cities, even under the increasing density of population; but the time is rapidly approaching when legislators must realize their duty of giving an active and intelligent support to those who have in hand the municipal work of fighting off disease, under conditions which give every advantage to the encroachments of disease. With the increase of tenement districts, in which human beings are packed closer than an inexperienced person would think possible, while ignorance and heedlessness add to the difficulties of obtaining prompt information, a case of small-pox or cholera is really more frightful than tons of gunpowder; and yet the difficulty of the work of municipal boards increases out of proportion even to the increase of the peril.

It would be well, too, if our people could realize, before that time comes, the necessity for the entire freedom of the municipal health service from any control by the so-called politician class. As population grows denser, the debasement or elevation of this branch of the municipal civil service will be seen most plainly in the death-rate, for consistent and intelligent sanitary legislation may be passed, but can never be administered, except by a class of public servants who are not bound to any party, but to the public service. A high death-rate falls most severely on the poor; and it would seem that a wide field for watchfulness and usefulness is here offered for the proper energies of every labor organization, quite apart from all boycotts or sympathetic strikes. Good municipal civil service touches interests of the workingman which are quite as important, if he would but see it, as any for whose defense the walking delegate has yet given his signal for action.

OPEN LETTERS.

Education of the Blind.— II.

THE BLIND AS STUDENTS.

WE pride ourselves much in this country upon our special schools for this exceptional class, and with reason. Unquestionably they have done and are doing a vast amount of good; unquestionably they are, in comparison with those of Europe, the acme of perfection in system and management. Yet they are fearfully one-sided in their training, lamentably limited in their scope.

Many suppose that the only rational course, the moment an individual under thirty is pronounced hopelessly blind, is to send him at once to one of these establishments and keep him there till he is turned out a finished specimen of its educational excellence. For the child of indigent or wholly incompetent parents, this may be the only choice, to be taken for better or worse; but where a fair amount of means, intelligence, and attention can be devoted to him at home, he had much better remain there during most of his formative period, learning and doing what others do, as far as possible.

I am very far from denying the great value of these special schools to any and all pupils in the pursuit of certain peculiar branches of study, and in learning the application and use of certain inventions peculiar to the needs of the blind; and a short attendance at some institution of the kind is most advisable, say from one to three years. But this time should be amply sufficient in which to avail one's self of such particular advantages, and a longer sojourn, even at one of the best institutions, I hold to be decidedly detrimental.

It is in the actual active world, not within the sheltering walls and among the specially adapted arrangements and customs of an asylum for their class, that the blind must live and labor; and the almost unavoidable danger is that a prolonged stay at the latter will unfit them in a great measure for the former. Certain peculiar habits are too likely to be acquired, harmless enough in themselves and useful to sightless persons when together, but which attract attention and stamp one as odd in the outside world. Such, for instance, as snapping the fingers to indicate the position of the extended hand, when about to exchange a friendly greeting or pass any object; making some sound in passing one another to show exact whereabouts; groping noisily and conspicuously for any desired article; and many more of the like, all of which are roughly but forcibly classed in the school phraseology under the head of "blindisms," and, once adopted, are very difficult to lay aside.

Then the competition at such institutions is always and in every department only with those hampered by a like disadvantage; and the pupil is too apt to content himself with slow, clumsy methods and a low standard of results. He needs the constant spur to his pride of seeing those about him, many of whom he feels to be his inferiors in intellect, accomplishing more in less time, whether in study or competitive sports, to stimulate his ambition and arouse his faculties, so as to overcome the greater obstacles and equal his companions. He needs the broadening influence of being brought into forcible daily contact with subjects and with attainments which are not naturally within his

sphere, to prevent a narrow and one-sided mental development. In a word, he needs to be constantly with those not like himself, so as to eradicate, so far as possible, the differences between them, since it is among them, subject to their opinions, amenable to their laws, that he must make his way through life.

His best plan is to go through the regular public-school course, preparing his lessons at home, or between recitations with a fellow-pupil, by having them read over aloud, and be subject to the same discipline, and share in the same pastimes, as the other scholars. Of course there will be a few things he cannot do, like ciphering on the blackboard in school and playing base-ball at recess. But these he and his companions, as well as the teacher, will soon find out and cease to expect of him. He will sometimes miss in recitation and get bruised at play, but probably not oftener than his fellows; for necessity is upon him, demanding the exercise of his caution as well as his active powers. Even the few special points in which the institutions for the blind offer peculiar advantages may be successfully taken up at home, if conditions are favorable; and the earlier they are acquired, the more benefit he can derive from them.

First and chief among these is the use of the Braille-board, upon which the perforated or pricked writing is done, originally a French invention and now employed almost universally. It consists of a simple frame upon which the paper is placed, with a movable ruler to serve as guide in tracing the lines. The writing was formerly done with a stiletto, but the latest and best boards have a sliding cube attached to the ruler, supplied with six little keys, which control a similar number of points below and may be pressed singly or together. By this means ease and rapidity in writing are greatly increased. The character employed is a species of stenography, formed by the different grouping of six punctures, which cause in the reverse of the paper corresponding slight elevations. It is very easily learned, and seeing-people familiar with it prefer it to writing with the pen for an equal length of time. It is reasonably compact, occupying about twice the space of ordinary writing, may be read by sight or touch with equal facility, and is invaluable for private correspondence, taking notes, and making the first draft of all literary work.

The blind frequently learn to write legibly with pencil; but as they cannot re-read or correct such writing and must employ an amanuensis to read the replies to their letters, it is of comparatively little value. The type-writers recently invented are for such work infinitely more rapid and reliable.

Books printed in the Braille character are by far the most serviceable and legible for those who read by touch, but are so expensive and so limited in number as to be a resource attainable by few.

I regard as wholly wasted the time spent in learning to read the ordinary raised print, so long in use, and upon which so much wondering and admiring laudation has been expended. This is one of the inventions of the seeing for the blind. It is always a slow, laborious process at best, to feel one's way through one of those cumbersome volumes, though it may be interesting to the looker-on. The character employed cannot be written, so is useless save in books, and the works of any value so printed may almost be numbered on the fingers of one hand, besides being so costly that any person who could afford one of them might buy a half dozen of equal merit in the most elegant editions and hire them read in a much more enjoyable manner.

Another very useful contrivance is the type-board, which takes the place of the slate in mathematical studies: an oblong board, closely covered with small square holes, into which a number of metal or wooden types are set in any desired position, each bearing on its upper extremity a sign to represent some figure. The most complicated problems may be wrought out on one of these boards with the same convenience and accuracy as upon a slate, and with considerable rapidity.

The raised wooden maps and globes, used by all schools for the blind, deserve mention as of real assistance in study; but an excellent substitute may be furnished by any friend at home who will carefully trace the outlines of maps in a common atlas by a succession of pin-pricks, made from the opposite side of the page. The position of cities and course of rivers can be indicated in the same manner, thus forming a map, distinct to the touch.

Whatever these contrivances lack, the native ingenuity and aptitude of the pupil must supply; and, after all, the stimulating of these is of far more value than any number of facts or theories crammed into his brain by a patent process. It is what he is, not what he has been taught, that makes him a success or a failure; the more since it is the active rather than the retentive or digestive capabilities of the blind that are in greatest danger of neglect and are most distrusted by the world.

As partial compensation, in the midst of his many discouragements, the sightless pupil possesses one vital advantage over his companions. His memory, accustomed to seize and assimilate facts, definitions, and miscellaneous information at a single hearing, acquires both a marvelous alertness and a phenomenal retentive capacity which enable him to master certain branches of study with singular ease and rapidity. Deprived of books and without any very ready and reliable method of making notes, he obtains a habit, often envied by the seeing, of appropriating instantaneously anything addressed to his intellect through his hearing. Hence the proverbially good memory of the blind person. His mind is his memorandum-book, always at hand and always open.

To the present writer, who never remembers having a lesson in anything read over to him more than twice, nothing is more strange and more amusing than a room full of school children, with fingers crammed in their ears, buzzing over a lesson of three pages for the fifteenth time. Equally incomprehensible is it to see a man making a note of a single address, or a lady referring to a shopping-list. Such observations force one to the conclusion that the art of writing, invaluable as it is, has been disastrous to the human memory. People have grown so to rely on a piece of white paper covered with black scratches, that if this be lost or misplaced, they are reduced almost to the condition of creatures without intellect.

So marked is the advantage of the blind in this respect as almost to atone for their extra difficulties in others; that is, the sightless pupil will acquire scientific and philosophical studies with a rapidity which

will counterbalance the greater amount of time demanded by his less facile methods of writing out exercises in linguistic and ciphering in mathematical branches; so that in taking the regular course at academy or university, he will require, all in all, neither more time nor more labor than the average student.

Of not less value in after life is this extraordinarily trained and developed memory. It enables the blind to derive from lectures, conversation, and general reading ten times the benefit of others, on whose minds a single mention of facts and thoughts makes little or no impression.

Thus the law of compensation is seen working in all things, making good on one hand, approximately at least, what is wanting on the other; not by the special mysterious interference of Providence or other power with natural conditions and processes, for the benefit of the individual, as many claim, but through the inevitable sequence of cause and effect, by which senses and faculties become, through unusual training, abnormally developed and their value radically enhanced.

Edward B. Perry.

Sugar.*

PROBABLY most of those who are classed as free-traders or revenue reformers, if they could fix the policy of the country in accord with their own theories, would retain the duty on sugar, because it yields a very large revenue easily collected and widely distributed, the protective feature being relatively small; for although the duty is high, being more than 100 per cent. *ad valorem* at the present time, the amount of sugar produced in this country is so small that it may be accounted a *quantité négligeable*. Some of this class, among whom the writer is one, consider the fact that sugar is an article of universal consumption (being a common and almost necessary kind of food among the poor as well as the rich) the strongest argument for reducing the duty, the condition of the national treasury admitting of large remissions of taxes. Accordingly, when we are told by the sugar protectionists that we are paying $48,000,000 per annum in sugar taxes to the Government, in order that the Louisiana planters may get only $7,000,000 by the enhanced price,—a total burden on the consumers of $55,000,000,—we reply that the means are immensely disproportionate to the end, because if we could get our sugar free of tax, we could pay the $7,000,000 and still save $48,000,000. If we are really paying nearly seven dollars in order that the Louisiana planters may get one dollar, hardly anything could be more wasteful and extravagant. This is upon the supposition that the Government can now afford to dispense with the sugar tax altogether. It can easily afford to do so if it leaves the other sources of revenue untouched; but as it is almost certain that the internal taxes on tobacco will be repealed, it would not be prudent to wholly abolish the sugar duties until some time shall have elapsed sufficient to show the fiscal effect of that measure, together with a reduction of say one-half of the sugar tax. That the sugar duties will be entirely repealed within a very few years there can be little doubt. The outgivings of leading protectionist statesmen like Senators Sherman and Dawes should be taken as fair notice of what is coming. With the question of bounties to compensate the planters for the loss of the protection to which they are accustomed, I do not purpose to deal in this article, except to express the opinion that even if such bounties should be allowed they would not be of long duration, and that those who advocate them can hardly expect them to be so.

In reply to the argument that the taxpayers are committed to continue paying a bonus to the sugar planters,—or to any other class, for that matter,—because they have paid it so long that the recipients have become accustomed to it and think they cannot get on without it, it strikes me that equity rather requires the repayment of some part of the $7,000,000 per annum that has been so long contributed to the Sisyphean task of putting sugar on a self-sustaining basis in this country. The United States makes no contracts with industries, express or implied, to "carry" them beyond the next election. Taking the most favorable view of the claim made in behalf of the planters, the contract was never made to bolster them up or to bolster up any trade indefinitely. It would be safe to challenge anybody to find any speech in Congress, since the foundation of the Government, advocating a policy of perpetual protection to sugar or to anything. Nor can any such thing be found in any national platform of any political party. The doctrine of implied powers has been pretty well stretched at times, but the doctrine of an implied contract to pay $7,000,000 per year in perpetuity to the cultivators of less than 200,000 acres of land in Louisiana is rather too absurd for serious discussion.

There are many duties the repeal of which would be equally, perhaps more, advantageous to the taxpayers than the repeal of the sugar duties; as, for example, those on cheap blankets and low woolen goods, ranging from 100 to 116 per cent. *ad valorem*. This article does not profess to deal with the tariff question at large.

Horace White.

* For the planter's argument see "Sugar-making in Louisiana," in this number of THE CENTURY.—EDITOR.

The Incompetence of Legislative Bodies.

THE important question of to-day is that arising from the realization of the general incompetence of legislative bodies, the appreciation of the need of some change, and the query, What shall that change be? Legislatures are now meeting once a year, or in some States once in two years. A great bulk of statutes, most of them worthless, many of them dangerous and injurious, is passed at every session. The statute-books are becoming cumbered with numberless laws, whose only excuse for existence is a negative one, that they are harmless. It may be safely stated, that in most of the States hardly more than a statute a year is absolutely needed. The same may be said of Congress. It passes what is questionable, rejects what is good, discusses endlessly and fruitlessly what is indifferent—the contrary is the exception that proves the rule.

The great struggle must be, then, to change the character of our legislatures, State and National, or to prevent our present representatives from continuing this indiscriminate heaping up of laws. Thus far, the endeavor to purify the legislature has been unsuccessful. An effort to induce the men now in it to consent to a change that will decrease their own powers may prove

equally unsuccessful; but it certainly extends more hope of victory, and is worth making. This effort must be concentrated on a change that will be simple. Not only is the average legislator incapable of understanding a complicated scheme, but the simpler the bill the less opportunity there is of discussion of details, and change of incidentals, and the more hope it has of passage.

My suggestion is a change that will make a two-thirds majority necessary for the passage of a bill through either house of Congress, or a legislature. No measure absolutely demanded by the people will fail to secure such a majority. The presidential succession bill did not, for instance, at the late congressional session. And so with every such bill. If the people do not demand its passage, it ought not to pass. The bill that is simply the idea of the legislator is an unnecessary bill,—and these bills form the bulk of our new laws.

The Constitution provides for a two-thirds vote to *propose* amendments, deeming it necessary to make the vote more than a majority, to prevent ill-considered action. Yet, all will agree — with the possible exception of the prohibitionists — that we have as many amendments as are needed.

Ill-considered action is what we must guard against to-day in mere law-making, and the requirement that bills should receive this two-thirds vote is the simplest safeguard yet suggested. In a smaller country, perhaps, the bills might be voted on by the people after the final adjournment of the Congress or legislature. In a State, this certainly would be a safe and by no means inconvenient plan. But a movement in this direction would be more radical, and would have less of a chance of success. A measure that changes the vote necessary to the passage of a bill, from a bare majority to two-thirds, would meet with greater support, and would have a fair chance of success. If adopted, it would satisfactorily meet the evil it was intended to remedy — it would reduce the bulk of legislation; would prevent the passage of most unnecessary or dangerous bills; and would leave ample opportunity for the passage of good laws, demanded by the people; besides insuring their better execution when passed, since the larger the majority favoring a law, the stronger will be the effort to carry into effect its commands.

Charles Fiske.

Lynching.

THE number of reported murders in the United States in 1882 was 1266. There were only 93 persons executed and 118 lynched,— in all, 211. Consequently, very nearly 1055 criminals escaped. We say very nearly, because some criminals may have had more than one victim each. If any of those who were executed and lynched were innocent, then perhaps more than 1055 criminals escaped. Under any government where 1173 murderers out of every 1266 escape legal execution, it is a wonder that there are not 1000 lynched, instead of 118. A man planning a cold-blooded murder may safely calculate upon more than eleven chances for escape to less than one for his detection, conviction, and execution; and taking in the conjoint probabilities of legal and extra-legal capital punishment, he may safely calculate on five chances to one, for escape.

Lynching will hardly be defended by any man in sober mood. What is the remedy? *Increased care and zeal upon the part of all good citizens to secure the execution of the law.* If all men, good and bad, could rely upon *that* in every case of capital felony, there would perhaps be almost no case of lynching.

Taking the figures of 1882 as a basis, it would appear that if hereafter out of every 1266 murderers, 619 were sure to be executed, the cases of lynching would probably diminish to 58; if, out of every 1266, only 66 escaped, there would probably be not more than 7 cases of lynching. Of course this is only mathematical, subject to the fluxions introduced by free human nature and ever-changing circumstances, but these would probably be in favor of the abandonment of the lynching process. We see that even when it is known that only *one* in about every *fifteen* murderers is legally punished, the people lose patience only to the degree of taking into their own hands the punishment of less than one in nine escaped murderers. This must give us the assurance that such are the restraints of our Christian civilization as to warrant the belief that if the present rate of legal executions were doubled there would be less than half the number of cases of lynching. The conviction should be strong in us all that it is the duty of each citizen to see, so far as in him lies, that the laws applying to the taking of human life be promptly and thoroughly enforced. Laxity in this increases the danger to every man. Certainty and promptness of punishment would diminish both ordinary murder as well as lynching. It is not a comfortable fact to contemplate that in each State of the Union we have on an average *forty murderers* now going about freely among the population.

In treating this phenomenon one must take the statistics of the country generally. It is only fair, however, to say that lynching is rarer in the Eastern and Middle States than in the Western and Southern States. It would naturally more readily occur in frontier communities in which it was difficult to meet the case by any accepted legal process, while it would be destruction to the inchoate community to allow the special crime to go unpunished. On the other hand, it would seem that the cases of escaped criminals are more numerous in our Eastern than in our Western States. There must be something in our compact population and in the provisions of our civilization to make it more easy for a murderer to escape. Three times murders have occurred near the residence of the writer, in the city of New York, to which not the slightest clew seems to have been found. In addition to the moral sentiment which will not acquit the guilty, there seems to be the need of an intellectual alertness which will not allow a criminal to elude both the processes of law and the violence of popular resentment.

Charles F. Deems.

The Powel Portraits of Washington.

THE oil-painting from which the frontispiece of this number of THE CENTURY Magazine was engraved was painted from life in 1784 by Joseph Wright, a pupil of Benjamin West. The portrait was a commission from Mrs. Elizabeth Powel of Philadelphia, and through inheritance is now owned by Samuel Powel, Esq., of Newport, Rhode Island, through whose courtesy we are permitted to engrave it for the first time. Of this portrait it is stated that "Washington wrote

Mrs. Powel it was the best for which he had then sat." And later, in Tuckerman's work on "The Character and Portraits of Washington," it is said: "Perhaps no portrait of Washington bears such convincing marks of genuine individuality, without a particle of artistic flattery."

The silhouettes on page 12 were drawn and cut by Mr. Powel sometime previous to the year 1790. George Washington, John Washington, and Benjamin Franklin amused themselves after tea one evening, according to the fashion of the day, by cutting "shades." They are now in the possession of his grandnephew Samuel Powel, and have never before been copied.

BRIC-À BRAC.

A Little Comedy.

IS the world the same, do you think, my Dear,
As when we walked by the sea together,
And the white caps danced and the cliffs rose sheer,
And we were glad in the autumn weather?

You played at loving that day, my Dear —
How well you told me that tender story —
And I made answer, with smile and tear,
While the sky was flushed with the sunset's glory.

Now I shut my eyes, and I see, my Dear,
That far-off path by the surging ocean —
I shut my eyes, and I seem to hear
Your voice surmounting the tide's commotion.

It was but a comedy slight, my Dear —
Why should its memory come to vex me?
Can it be I am longing that you should appear
And play it again? My thoughts perplex me.

'Tis the sea and the shore that I miss, my Dear —
The sea and the shore, and the sunset's glory —
Or would these be nothing without you near,
To murmur again that fond, old story?

I know you now but too well, my Dear —
With your heart as light as a wind-blown feather —
Yet somehow the world seems cold and drear
Without your acting, this autumn weather.

Louise Chandler Moulton.

The November Lady, in "The Century."

FAIR lady, seated on THE CENTURY'S cover,
Stretching thy shapely arm with tragic grace,
Around thy head the dead leaves whirl and hover,
The light of other days illumes thy face.
What dost thou see, with that far, yearning vision,
Which follows summer's train, to fields Elysian?

Thou look'st as one who stands upon the shore,
Watching some shortening sail sink down the main;
And fain in thy sad heart would'st follow o'er
Those stormy waves, to clasp thy loved again.
The gracious memory of days now spent,
Its joy and pain in thy sad gaze is blent.

Why dost thou mourn departed flowers of summer?
The flowers of song bloom bright within thy pages.
There spreads, a royal feast, for each new-comer —
The wit and wisdom of the seers and sages.
"The fair lands beckon us; the great seas roar."
Empress of this domain, what would'st thou more?

Lonely, art thou? Dost not unto thee throng
The good and great of every age and clime?
The valiant souls who live to conquer wrong,
The keen-eyed seekers after truths sublime —
All gifted ones who have enriched the earth
Thou bringest, to sit with us beside the hearth.

Rise up, dear lady! and put down thy pan;
Let those who have delayed have none at all.
Stand up, and let thy fond admirers scan
Thy figure, "fair," and most "divinely tall."
Chill blows the wind upon thy regal back —
Mourn'st thou because thou hast no sealskin sack?

Perish the thought! I have it now! I see
The hidden meaning of thy perturbation:
Why thou dost sit beside the wind-swept tree,
And gaze afar, in silent lamentation.
I understand thy countenance dejected:
Thou sorrowest for manuscripts rejected!

Courage, fair damsel! 'Tis no easy matter
The lofty heights of *serial* fame to climb;
The flinty editorial heart to batter
With fragile missiles like a maiden's rhyme.
Strive on! and haply, ere thy life is over,
Thou shalt have place within — not on — the cover.

Maria Hurlbut Burditt.

Una.

LATE — as I sat before the fire,
Perusing some old tome
That took my thoughts to Italy
And left my heart in Rome,

Where, 'mid fair scenes, the writer's skill
Had wrought a maid so well,
My fancy went a-wooing her
Long past the midnight bell —.

Just then, I say, up the long path
Came pretty Una home;
She touched the latch, it startled me,
And brought me back from Rome.

I closed my book. We two sat down,
She leaning on my knee,
With cloak unclasp't, and hat thrown back,
Her fair face turned on me.

I made her tell me of the Ball;
Her frankness won me quite.
To see the child so act it all —
It was a lovely sight.

Such graceful things the elders said:
But when I took her hand,
And questioned of the youths, she said
I "would not understand."

You see I had forgot myself
While reading that old tome;
My beard is turning gray, and I
Am only young — in Rome.

James Herbert Morse.

In "Face to Face," in the September "Bric-à-Brac," the second line of the sixth stanza should read:

"Two forces ever warring in the soul."

In part of the edition it did not so appear.

Tempora Mutantur.

When I first began, at twenty,
To indulge in idle rhyme,
Life was *dolce far niente*,
And a trifling thing was Time:
I could link the lines together,
Praising any girl I knew,
Not deliberating whether
They were true.

Twenty-one,— my heart was plastic
To the beauty of a face,
But my fancy, too elastic,
Frequently would jump its trace
After some new, dainty being,
Following where'er she went; —
There was no such thing as fleeing
Sentiment.

Twenty-two,— I had a passion
For a girl with golden hair,
Somewhat of a slave to fashion,
But for books she did n't care;
So when "love" I tried to stammer,
Cupid went upon a crutch; —
She abused the English grammar
Overmuch.

Twenty-three,— my mind was restive,
Now brunette, anon a blonde;
Each one seemed to me suggestive
Of a better one beyond:
So I waited on and dallied
With perhaps a half a score,
Till Time came around and tallied
Twenty-four.

Twenty-five,— no more a chicken!
I essayed to make a choice,
But the "plot began to thicken"—
Love in me had lost its voice.
Thus the girls all went the way of
Other girls, and — fiddle-sticks! —
I 'm a bachelor to-day of
Twenty-six!

Frank Dempster Sherman.

Aspiration.

Ah, were I but a pair of dainty, best
Four-buttoned kids (a size or so too small),
That I might squeeze my lady's hand with zest
And own no impropriety at all!

About her wrist to count the pulsing flow,
Fresh from her throbbing heart; or from her lips
To catch the wafted kiss she fain would throw
To some one else, from taper finger-tips.

To feel the pressure of her soft, warm cheek
When wearily she poised her drooping head
Upon the hand enveloped — so to speak —
By my sleek self, caressed and comforted.

Perchance affrighted, with a sudden start
And little cry of terror she might press
The palpitating region of her heart; —
How sweet to soothe and quiet her distress!

And when together we grew old, I 'd seek
Within her boudoir still to find a place;
Devoted to the last, I 'd kiss her cheek,
And bring the rouge-red roses to her face.

Arthur J. Mundy.

A Song of Degrees.

10.

He. It is n't polite to call them fools,
But I do wish girls would n't meddle with tools!
I had to lend them, she begged me so,
And just see here what a state they 're in.
She reamed a hole with the scoop, you know,
And took the reamer to cut a pin.
And she 's went and knocked the head off the hammer —
(I don't care a cent if that is n't grammar!)

She. Of all the troublesome creatures, boys
Are the troublesomest, and fullest of noise!
I lent them my work-box to make a sail;
I had to, or else there 'd have been a fuss,
And I 'd sooner have lent it to a — whale!
Everything 's tangled, and all in a muss.
And now they say, if a girl was n't "dumb,"
She 'd wear her thimble upon her thumb!

20.

He. Ah, not with those dear little hands — so white,
So sweetly helpless; it is n't right!
Give me the hammer, and let me, please!
Oh, yes! you were doing it bravely, love,
But I can't sit here in selfish ease,
And see you driving a nail, my dove.
If you think that I could, you do me wrong;
Your hands are so weak, and mine so strong.

She. Give me your gauntlet, Sir Knight — your glove,
I 'd call it, if I were not in love!
You 're graceful, whatever you do, you know,
But what sort of *fiancée* should I be,
If I even let you try to sew?
I will mend it neatly — you shall see.
I do love sewing; and you too, dear.
Now, do not be foolish — give it here!

30.

He. It is more than a man can well endure!
If I 've mentioned this button once, I 'm sure
I 've mentioned it twenty times, and yet
I could n't induce you to sew it on.
It 's no excuse to say you forget!
It hung by a thread, and now it 's gone.
Just reach me the button-box off the shelf—
I 'll be hanged if I don't sew it on myself!

She. The lock of the pantry-door is broken,
And this is the fiftieth time I 've spoken!
There 's a handle off this bureau-drawer,
And here 's that chair that you said you 'd mend.
I will not speak of them any more;
It 's always so, I find, in the end.
I 'll do them myself — oh, you may scoff,
But I will, if I pound my fingers off!

Margaret Vandegrift.

Misunderstood.

He thought I said yes; but I 'm sure I said no.
My heart was a-beating, my cheeks were aglow;
I looked on the ground and I thought he would go:
He thought I said yes, but I 'm sure I said no.

Now what could I do? For he thought I said yes;
He sat close beside me, and — you 'll never guess;
If you look at me so, I cannot confess,
He — I 'm sure I said no, but he thought I said yes.

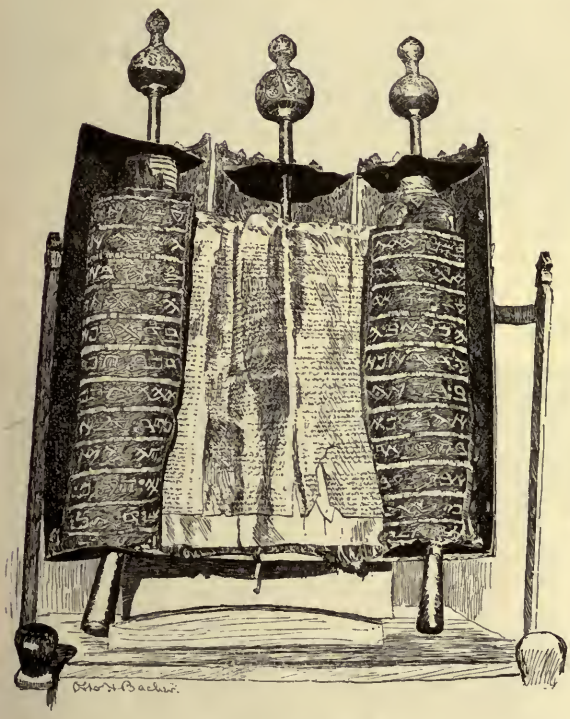
THE SEA OF GALILEE.



THE ROLL OF THE LAW.

THE first impressions of the Sea of Galilee should be gained from the town of Safed. The point of view there is 3000 feet high and affords a nature-drawn topographical map of the whole of the sea, from north to south, from east to west. Sunken amid the encircling hills to a depth of 1659 feet, the sea is like a deep-cut intaglio,—harp-shaped, smooth, and glittering. Every incision contributing to the changing outlines of the water marks the entrance of some plunging torrent or the termination of a winding wady or valley.

Every valley remaining upon the Galilean shores may be exactly located. The place where the Jordan enters the lake at the north, and where it makes its departure at the south, may also be plainly discerned. Far to the north lies the long Mount Hermon range, cloud-capped and snowy.

Between Safed and the sea there is a tract of country richer in romantic scenery and holding wider interest than any other part of the region of Galilee. On the score of natural beauty the Sea of Galilee is by no means remarkable. Its mountains are high enough to be attractive, but they are even-topped and monotonous when compared with the bold outlines, the isolated domes and peaks, among which the Swiss, Scotch, and American lakes nestle. The bare rocks, meadowless inclines, and treeless shores of Galilee again place it at a disadvantage. Yet all who view it are charmed with it.

In the little life which now pervades its shores, one may daily see repeated the references made to it by the simple records of the evangelist,—the casting of nets; the abundant supply of fish; the scattered flocks; the sheep which follow the good shepherd; the lilies of the field, in abundance; the sea, often tempestuous, and all the old-time natural surroundings. But the evidences that art once lent its generous and powerful aid to make the shores of Galilee one of the garden spots of the world are now but few, and hard to find. War, pestilence, earthquake, time, have all contributed to the surrounding scenes of ruin. The eastern side is now infested by

Copyright, 1887, by THE CENTURY CO. All rights reserved.

Bedouins whose homes are among the ruins of Bozrah, and who are as remorseless invaders as any who lived in the time of Gideon.

The western coast was once inhabited by a hardy race of mountaineers,— an energetic, remarkable people, despised by the Jews, but preferred by Christ,— industrious, skillful, and valorous, ready to muster at a time one hundred thousand men to defend Galilee against the Romans. Now there remains only a comparatively desolate waste, with but a few hamlets, in place of the once densely populated region. Since the interest held by this locality is due to the residence of Jesus in Capernaum, and since within view of the Sea of Galilee the sacred events took place which are now studied in every Christian country, a brief reference to national affairs as they then existed may perhaps be of interest.

The government was Roman. Herod Antipas was the civil ruler to whom Jesus was subject. During the years when the Great Teacher resided with his parents in Nazareth, the whole country was in a state of expectation, apprehension, and excitement. The Jews chafed under the Roman yoke, and caught at every sign which gave hope of the coming of the promised Messiah. The trumpet-like tones of the Pharisees were heard daily at every market-place appealing to Jehovah for the release of the people "left of God." The synagogues were razed to the ground, though many talents were offered to the treasury of the empire to ransom them. Scenes of tumult and confusion, involving Roman, Greek, and Jew, were of frequent occurrence.

"Sweep down the rebel! Crush him to earth!" was often the command given to the Roman horse, as amid the clang of trumpets they swept along after the terrified and retreating crowds; or, again, "Come on, men of Israel — for the Lord and Judea!" rang out with desperate bravery the Jewish cry, as the Romans and the Greeks approached, ready to sell their lives for Cæsar. Dreadful was the slaughter, and horrible were the acts of tyranny. But they only served to strengthen the hope and renew the expectation of the early coming of the Messiah to restore abridged liberty and to bring release from wanton and unbearable cruelty, as had been spoken by the prophets.

During the waiting of this oppressed people, so ready always to receive the promised Deliverer with acclamations of welcome, false prophets appeared. They caused hearts to beat with new hope, and sword and spear to be grasped ready for combat in their cause. But such impostors arose only to be rejected and driven away or crucified. At last John came.

From that time Jesus began to preach, and to say, "Repent: for the kingdom of heaven is at hand."

THE SEA OF GALILEE, FROM SAFED.

At that time the palatial residence and capital of Herod Antipas was at Tiberias, named thus after his friend and patron the emperor Tiberius. Herod spared neither art nor treasure to make the place worthy of his throne and his palace. By generous grants of land and immunity from taxation, and by expending large sums of money in enhancing the attractions of Tiberias, Herod induced Gentiles of great wealth to gather around him. Amphitheaters, baths, and temples were constructed on a grand scale. Groves were cut down to make room for costly works of art, that Tiberias might gain the reputation of being "the center of Roman civilization,— the Athens of the East." It became also a noted health-resort, because the extensive hot-springs close by drew many a distinguished dweller to the political and courtly center. New towns and cities sprang up along the shores of the sea and upon the neighboring hills, until a large number, rich and populous, could be seen from the pinnacle of the temple. The rich architecture of the Jewish synagogues was eclipsed by the airy columns, vast courts, and long-reaching colonnades of the heathen temples.

THE WARM BATHS OF TIBERIAS.

As the Pharisee stood at the sixth hour upon the portico of the synagogue and prayed, he was disturbed by the sounds of the hammer and chisel of the Greek artisan, shaping the marble images of the gods for the stupendous Roman shrine opposite. Villas with tropical gardens, new streets and thoroughfares, seemed to grow up in a night. Merchants, travelers, and sojourners came from the east, the west, and the south to barter, to bathe, and to buy; and the native Galileans were put to shame before the strangers because compelled by Herod to be his builders.

"The Sea of Galilee was a focus of life and activity." Numerous ships and boats sailed upon it. Its quays were dotted here and there with the booths of the humble fishermen from whom Jesus chose his disciples. There were but few idlers there. Creeds multiplied, and disputes followed — in the houses of worship, in the market-places, and in the homes. Profligacy, splendor, conceit, arrogance, bigotry, and skepticism grew apace.

The Roman ruler even conspired against his home government and aspired to be "The King of the Jews." Stores of arms were gathered, and soldiers were secretly enlisted to fight for his cause. The "Israelite indeed" was waiting and watching, and ready to welcome the true Messiah; so that Jesus was, in the main, well received by the people among whom he dwelt.

About this tiny inland Sea of Galilee, seventeen miles long, and from six to nine miles broad, and environed by the retiring hills, during three years the most sacred scenes of history were enacted — scenes which still make this the most sacred of all localities.

Sir John Mandeville, one of the earliest travelers who makes record (A. D. 1322), thus quaintly describes the region:

EXIT OF THE JORDAN FROM THE SEA OF GALILEE.

"Upon the Sea (of Galilee Tyberie or Jenazarethe) went oure Lord drye feet; and there he toke up Seynte Petir when he began to drenche within the see, and seyde to him, *Modice Fidei, quare dubitasti?* and after his Resurrexionn, oure Lord appered on that See to his Disciples, and bad hem fyssche and filled alle the nett full of gret Fisshes. In that See rowed oure Lord often tyme; and there he called to hym, Seynt Petir, Seynt Andrew, Seynt James, and Seynt John, the sons of Zebedee.

"In that city of Tyberie is the Table, upon the which oure Lord eete upon with his Disciples, after his Resurrexionn, and thei knewen him in brekynge of Bred as the Gospelle seythe: *et cognoverunt eum in fractione Panis.* And nyghe that Cytee of Tyberie is the Hille where our Lord fed 5 thousand persons, with 5 barley Loves and 2 Fisshes. In that Cytee cast an brennynge Dart in wratthe aftir our Lord, and the Hed smot in to the Erthe, and wax grene, and it growed to a gret Tree; and zit it growethe, and the Bark thereof is alle lyke Coles. . . . Fast beside is Capharnaum; that Contree is clept the Gallilee of Folke (Gentiles) that were taken to Tribute of Sabulon and Neptalym."

The horseback ride from Safed to the shore of the Sea of Galilee requires of an interested traveler five or six hours. It can be "done" in one-half that time. As the descent over the winding, rocky road is made, the water is soon partly hidden from view, and is frequently altogether out of sight. The crater-like depression seems to deepen; the mountains round about appear to grow higher and to fall back farther from the shores. The last thousand feet are through narrow, rocky pathways of steep descent, which lead one to the shore near the hot-springs below Tiberias. A large structure is located there, into which come pouring from the mountain-side four impulsive streams of hot, sulphurous water, the bulk of which is arrested by a canal and led into a huge basin. The overflow empties into the lake.

Pilgrims come from all quarters of the globe to end their days at the holy city of Tiberias, and meanwhile endeavor to prolong life by bathing in the water of these springs. The greater number are Jews, and they may be seen straggling along the beach at all hours, on the way to the baths. The afflicted either plunge or are helped into the basin, and remain there many hours. The air is suffocating; the scene is pitiful and sickening.

The only point of interest south of the baths, on the western shore, is where the Jordan, having passed through the sea, makes its departure, and follows on southward, now through fertile meadows, now between the hills which border it. A ford is there. Formerly there was a bridge, with a long, extended causeway. A great sea-wall kept the turbulent waters under control. Even now the Jordan often plunges and swirls as though maddened by the interruption of the lake, and drives hastily onward, only to be intercepted again and forever brought to a stand-still by the bitter waters of the Dead Sea. Mounds of rub-

bish abound at this southern extremity of the lake, telling where a Phenician fortress and the Roman city of Tarichea, numbering about forty thousand inhabitants, stood. Here, too, was the great fishing-port where the navy was organized. One crossing the river at this point would find an interesting excursion up the valley of the Yarmuk as far as where it breaks forth from the bosom of the mountains of Gilead and Jaulân. But our interest at present lies northward, and we turn back.

TIBERIAS, FROM THE SOUTH.

TIBERIAS, FROM THE NORTH.

A small, rude stone pier reaches a few feet out into the sea, near the hot-springs. There the masters of the one or two boats which comprise the present navy of Galilee land their freight of fish and arrange for excursions. A boat-ride affords ocular demonstration of the sudden and remarkable meteorological changes which take place. The water may be calm and placid when the departure is made, but before the boat is half a mile off shore the wind may rise, and the water become so perturbed that there is no safety except in turning back. Fortunate is the navigator who is not defeated, in the effort to land again, by the mountains of spray and foam that sport with the rude boat as if it were but a palm-branch.

Again, an excursion may be easily made early in the morning, when the water is as still as death, and all on the western shore is reflected — doubled and inverted in the calm surface of the sea. During the night of such a day the wind may tear the tent-pins from the sand and throw the tents down upon the head of the trustful traveler with a crash. Frequently a cold hail-storm accompanies the wind, sending home the lesson of man's weakness at such times of turbulence and terror.

The towns on the Sea of Galilee that are inhabited are still farther north. The first one reached is Tiberias, discovered by the tall minaret of its mosque and the round towers of its southern wall. The first Christian church is said to have been built on this spot by Con-

A FISHING-BOAT ON THE SEA OF GALILEE.

stantine in the fourth century, and was called St. Peter's. Justinian rebuilt the walls of the city. It was sacked in the seventh century by Caliph Omar; in the twelfth, by Saladin. Then the real ruin began. The splendid palaces, churches, and synagogues began to crumble, and finally an earthquake completed the devastation. An atmosphere of desolation hangs about the place like a chilly fog.

Hebron, Jerusalem, Safed, and Tiberias became the "holy cities" of the Jews after the Roman persecution had ceased somewhat. The Sanhedrim was at Tiberias for a number of years. Thirteen synagogues were here at one time, each one having a school connected with it as certainly as the present churches have their Sunday-schools. A Jewish school of languages became the center of the Jewish faith. To learn Hebrew from a rabbi of Tiberias is even yet considered a great privilege.

The old synagogue carries one back a thousand years. Its roof is supported by stone arches and columns. In the center is a great cage-like inclosure, constructed of wood which is dried and twisted by centuries of exposure, but yet as sound as when hewed from the log. This is the reading-place. Ascending the steps which lead to the interior, the rabbi opens the scroll and begins to teach and intone. The assembled congregation walk around the cage, muttering and gesturing, some chiming in a high key, or imitating the blasts of a trombone through the hands. Some weep as they frantically throw up their arms; others kiss their phylacteries as they fold and unfold them about the left arm and the head; others march around and beat time with their hands and feet. Any reference to the coming of the Messiah excites them to frenzy.

Little else remains in Tiberias to interest the student. Relics of the past are found intermingled with the necessities of the present. Disks cut from the syenite columns of the old temple serve as millstones to grind barley for the sons of Mohammed; fine old porphyry columns are thrown upon the ground and hollowed out for public horse-troughs; threshing-floors are paved with bits of frieze chiseled after Grecian designs paid for by Herod Antipas.

BETHSAIDA WEST.

The cattle are slaughtered in the public thoroughfares; the streets are hopelessly filthy; the bazars are unattractive; the people are depressed; and, as the dragoman tells us, "the king of the fleas" resides here. Yet here come the pilgrim Jews to die, in order that their bones may rest close to the tombs of their wise men who have gone before; some declare that here the Messiah will appear.

From Tiberias the ride along the lake shore

MAGDALA.

to Magdala is a lovely one. The face of the lake may be viewed its whole length. Now, instead of being covered with sand and gravel or tiny shells, the beach is more rocky, and here and there a cliff reaches out to the shore — sometimes so tumbling its black, basaltic débris into the water that the horses must step into the lake to pass by the obstructions. Now the path again ascends. The shores are either marshy or so overgrown with thistles and reeds as to make travel impossible. On each side, the soft colors of the cliff — yellow and white and red — remind the traveler that he is in the Orient.

Again the path changes towards the lake and descends to El-Mejdel, or Magdala, the "Watch-tower." The poor, squalid little town, hugged in behind its low wall, seems to have crept down to the shore in self-defense to escape the suffocating heat of the cliff reflected upon it as from a fiery furnace. Magdala has but a single palm, but its view of the sea is sublime.

READING-PLACE IN THE SYNAGOGUE AT TIBERIAS.

BOWERS ON THE HOUSE-TOPS, MAGDALA.

From its old-time "Watch-tower" nearly the whole expanse of the plain of Gennesaret may be viewed. The inhabitants are wont to erect bowers — or arbors of palm-leaves and oleander bushes upon their house-tops. In these they dwell during the hot season to escape the heat and to catch the breeze; in the wet season also they resort to them to get away from the scorpion and the centipede. The men and women of Magdala are the farmers of the plain of Gennesaret, and there enact over and over again "the parable of the sower." They look as though they never saw a whole happy day.

Magdala is at the southern border of the plain. It must have been an important place in its best days. It was and is one of the halting-places on the caravan road leading from Jerusalem to Damascus, Bagdad, and Nineveh. The walk from Magdala to Khan Minyeh is one of the most interesting and enjoyable in all Palestine. On the left is the wide plain of Gennesaret, dotted here and there with the picturesque people plowing and pushing their phlegmatic teams. Beyond is the deep wady El-Hamam, which leads towards the "Horns of Hattîn," the "Mount of Beatitudes." On

the right is the sea, with all its attendant charms. Turn as you will, the view is sublime.

Soon, now, an entirely new feature breaks the landscape. The plain comes to a sudden termination, and a great black cliff rises in the way. A stream comes hurrying down the incline toward the sea, and the clatter of a mill-wheel disturbs the stillness. The voice of the turtle is heard here and there coming up from the stream. From the great marsh which spreads out towards the lake the wild fowl rise in flocks, and fly frightened back far into the El-Hamam Valley.

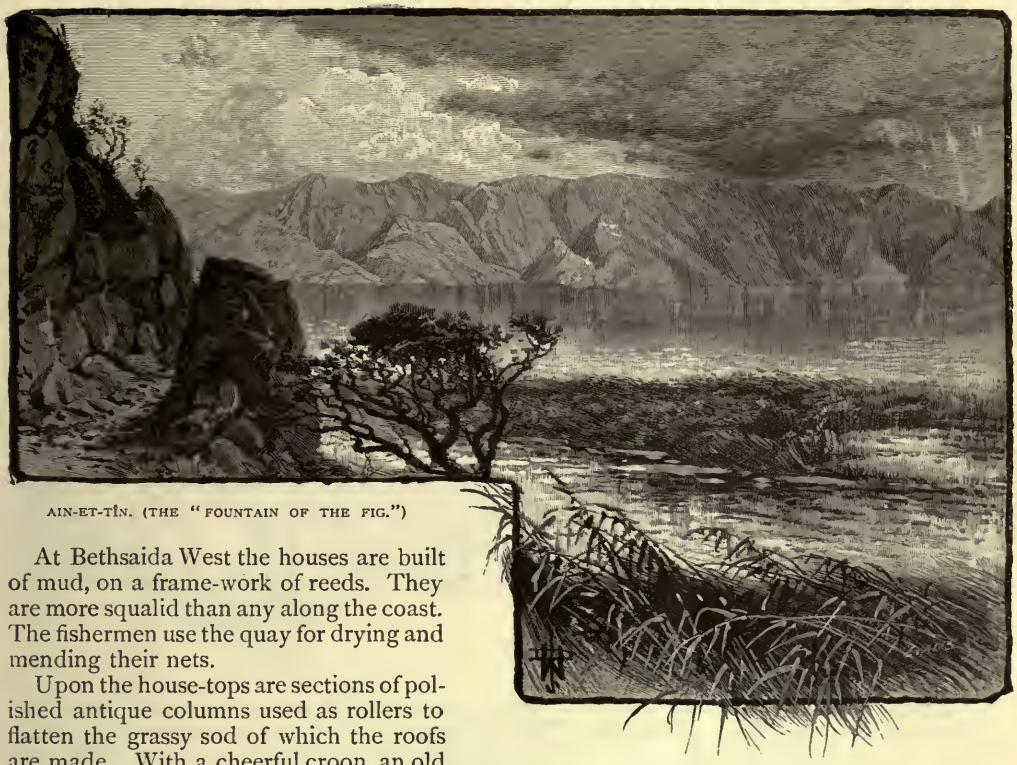
SYNAGOGUE RUINS AT TELL HÛM, A SUPPOSED SITE OF CAPERNAUM.

At the feet of the cliff is Ain-Et-Tîn, the "Fountain of the Fig." This spot is also called Khan Minyeh, and has been thought by some geographers to be the site of ancient Capernaum. Plenty of evidences of the civilization and artistic tastes of the past are here — ruins scattered about in profusion. A section of a deep aqueduct cuts through the cliff, and serves as part of the roadway. When Josephus came hither in pursuit of the Romans, his horse fell in the bog and threw him. "But for this unforeseen accident I should have been victorious," said the great general and historian.

Tell Hûm, an hour's journey north of Khan Minyeh, is, however, deemed by many modern scholars the site of Capernaum. Devout pilgrims believe that the ruins of a synagogue lying here are those of the one erected by the Roman centurion mentioned in Luke vii. 5. If so, then Christ's discourse on "that bread of life" was delivered there; there the demoniac was healed, and the stony columns still standing echoed the divine words as he taught "the multitude," for "they went into Capernaum; and straightway on the Sabbath-day he entered into the synagogue, and taught." (Mark i. 21.)

Seated in a boat at Capernaum, "a little way from the shore," Christ also taught; at Capernaum Zebedee lived and trained James and John to follow his vocation; there Andrew and Peter dwelt — mended their nets and landed their fish; there four of the disciples were summoned to become "fishers of men."

From Khan Minyeh to "Bethsaida of the West," the ride is less than two hours, and rather a rough one. There was also, some think, a Bethsaida east of the Jordan. Neither site holds much of interest to-day. Only the saddest of feelings are awakened when one sees how the "tooth of time" has left little but "dry bones."



AIN-ET-TÎN. (THE "FOUNTAIN OF THE FIG.")

At Bethsaida West the houses are built of mud, on a frame-work of reeds. They are more squalid than any along the coast. The fishermen use the quay for drying and mending their nets.

Upon the house-tops are sections of polished antique columns used as rollers to flatten the grassy sod of which the roofs are made. With a cheerful croon, an old mill greets the little stream which creeps into it, and seems to be about the only disturber of the prevailing quiet. It is a picturesque scene, with all its dreariness. On right and left are the mountains; in full view beyond is the whole expanse of the lake. Surely, nature has made up for the interest which the unambitious inhabitants fail to inspire in the expectant traveler.

Less life and a worse "woe" are found at Kerâzeh, supposed to be Chorazin. The ruins are about two miles north of Khan Minyeh. There is said to be "a path" up the hillside which leads to them, but "woe" be to the man who tries to follow that path with his horse. He will be glad enough to dismount, and would be still more delighted if he could carry his poor animal and prevent it from straining and spraining its limbs in the effort to clamber over the rocky ruins hidden among the wheat and tares and thistles. Chorazin must have been built partly on a hill and partly in a valley, for the heaps of quarried stone abound both on a long ridge and at the bottom of the hollow. Here and there they look as if they had been methodically piled in the effort to clear some of the land for agricultural purposes. Near by is a wild gorge called "Wady Kerâzeh." From the higher elevation a lovely view of the Sea of Galilee is obtained, reaching to the extreme southern limit, though it is not nearly so impressive as the view from Safed.

The ruins of a synagogue may be plainly made out, and some of the abiding-places — the houses of the fated city — may be traced by their strong walls and still unbroken doorways. The roofs were apparently supported by columns in the center. Sometimes one, sometimes two columns were so used. Some of the houses had small windows and as many as four apartments. A rank growth of thorns and thistles covers a large portion of the ruins of Chorazin. The industrious explorer, by beating such intruders aside, is almost sure to reveal the hiding-place of some quarried capital or column. A Bedouin farmer has piled some of the stones of Chorazin against a hillside so as to form a home. There is a fragment of frieze at his door which would be prized in any museum; and he has placed an ancient wooden arch over his doorway.

Thus much for the towns located on the Sea of Galilee. The natural points of interest connected with the sea are the plain of Gennesaret, the "Horns of Hattîn" (the supposed "Mountain of the Beatitudes"), and the historical valley of El-Hamam, which connects them.

The beautiful plain of Gennesaret reaches from Magdala to Khan Minyeh, and is bounded on the east by the sea. On the west it is partly

THE SEA OF GALILEE, SOUTH OF CHORAZIN.

bordered by the hills which start at Safed and continue southward as far as we can see. The afternoon view of the plain is the most brilliant, for then the sunshine is full upon it and the elevations beyond. That brings out all the glorious coloring to its full value,— the hundred varieties of wild flowers; the "lilies of the field"; the fields green and golden and tare-tangled; the squares of yellow mustard; the pink tracts of newly plowed soil; the rank growth of blossomed thistles; the shining streams and the glistening fountains, and the cliffs beyond, catching the glare and giving us the details of their dark shadows. One is reminded by the shape of things of a valley scene in northern New Hampshire, only New Hampshire shows no such luxuriant coloring. It seems impossible to push through the thickets; but there are pathways, and the horse finds them. Here and there groups of sycamores hide placid fountains, which bubble up at their feet, reflect their images upon the shining surface, and then overflow among tall grasses and proceed upon their benign errand of giving life to the lovely plain.

Josephus, in speaking generally of the region of Galilee, praises the soil and the temper of the air, which in his day fostered the growth and fruitfulness of many varieties of trees — the palm and the walnut, the fig and the olive, all growing well together. "One may call this place the ambition of nature where it forces those plants that are naturally enemies to one another to agree together. During ten months of the year the markets were laden with the fruit of the land." Then the inhabitants were industrious and prosperous. To-day Moslem rule blasts all growth. One bit of history seems to be repeated on and on. "The harvest truly is plenteous, but the laborers are few." There are more idlers hereabouts who live on the charity of their creedsmen in Europe than there are industrious husbandmen. They still "pray standing in the synagogues and in the corners of the streets"; but they will not aid in making this "ambition of nature" productive.

We now leave the plain and enter Wady El-Hamam, an hour's journey southward from Mejdel. The visitor familiar with the Franconia Notch in New Hampshire would again see a resemblance here. On the left of the gorge is a cliff not unlike "Eagle Cliff." It is over one thousand feet high and almost perpendicular; on the right is a bluff, much higher, more terrific, and requiring but little imagination to trace outlines similar to those of the "Old Man of the Mountain." A backward look presents a stretch of the Sea of Galilee which brings "Echo Lake" to mind. Then the similarity ends; for instead of magnificent shrubbery such as clothes much of the rugged inclines of Franconia Notch, here but little foliage grows. But there have been growth and life enough here, of a far different nature, if we may trust the accounts of Josephus and

his fellow-historians for our data. In the face of the cliffs on each side, reached by lofty stone stairways, tier above tier, are vast caverns cut from the rock, with their open doorways towards the valley, and protected by walls. They were the homes of robbers in the time of Herod Antipas; the refuge of the persecuted Jew and the brave Crusader in more modern days. Now they harbor the "wild birds of the air," which fly out and then back again to "their nest" as we approach; and here too "the foxes have holes."

Caves, graves, and other signs of former habitation abound in this historical valley. Ruins of towns, often surrounded by fortresses, are here, all constructed by the Saracens or by those who came long before that time. The district is full of places which have long been held sacred by the Jews.

We now approach the spot which is looked upon by many as the place where Jesus sat when "teaching the multitudes" who followed him. "Kurûn Hattîn"—the "Horns of Hattîn"—are upon the mountain-ridge followed in journeying from Safed to the Sea of Galilee. Below them is a wide plateau where the assembled multitude could have been seated while listening to the Sermon on the Mount when the sweetness of the Beatitudes was revealed to them by the lips of Jesus. The cool stillness of the morning should be chosen for the visit to this spot. A few clouds may lie sleeping in the valley of El-Hamam then, and the thickets by the pathway may scatter their store of dew upon you if you touch them. As the breeze increases and the light penetrates, the dew-drops creep down the stalks to the ground; like the summer waves of the sea, rising and receding, always gently, the grain bends beneath the winds. As soothing as balm is the soft, warm breath of the pure air, laden with the perfume of blossoms and falling upon the brow like a benediction. Yet, upon this very plain, more than once, the roar of battle has been heard. In July, 1187, the plain of Hattîn was the gathering place of the Crusaders—the spot where they were hemmed in by the hosts that Saladin led against them. At early dawn the clash of sword and the storm of arrow and javelin began. Brave was the charge of the Saracens, and braver still the defense of the retreating Christians. Driven to and from their stronghold on Hattîn, they were vanquished, and the fate of their cause was sealed.

From the historical mountain-top is seen Safed, the city which some scholars believe to be the place alluded to by Jesus when he said "a city that is set on a hill cannot be hid."

DRUSE PLOWMAN AND TEAM.

The two "Horns" of Hattîn seem to have been protected by massive structures. The approach to the higher one is easy from one side, while to the north-east there is a sheer ascent of over seven hundred feet. The white limestone hills, the basaltic cliffs, the modern village of Hattîn in the plain below, the orange groves and the fruit gardens, the waving grain, the varied families of flowers, and the groups of Druse farmers present pictures at every glance.

In many spots upon the plain the traveler will be impressed by the reënactment of the "parable of the sower." Within a small space he may see where "a sower went forth to sow . . . and when he sowed, some seeds fell by the wayside. . . . Some fell upon stony places . . . some fell among thorns . . . but other fell into good ground."

Once more the eye is turned for a farewell glance at the distant views. Far down through the rocky vista of El-Hamam Valley, to the north-east, one sees the caravans moving north and south across the Gennesaret plain. Two thousand feet below, glistening like a mirror in the sun, is the sacred sea. Yet only the north-east corner of the water is discerned, for the mountains of Bashan and Gilead hide the view with their sun-scorching inclines and long shadows.

The mountains of the Hauran on the east and the Jaulân on the south are visible. When the air is clear, the silver serpentine line of the Jordan may be made out, gleaming through the foliage — creeping through the jungle down to the Dead Sea.

If there be one word which fell from the Divine Teacher that impresses the mind more than any other at this place, it is "Peace," for there is so much here to suggest it. Nature moves on in her luxuriant course, peacefully, calmly, with no discord. The freshness of the morning, the repose of noonday, the golden tints and purple shadows of evening, the reflections of the stars on the bright surface of the sea, all bring in continued succession the messages of peace. Much more is this so now than when Jesus dwelt at Capernaum. The city of his adoption is in ruins. On the sea to-day sails no boat with a deck upon

THE HORNS OF HATTÎN. (THE MOUNT OF BEATITUDES.)

A FIELD OF THE SOWER.

which he could sit and teach the multitudes on the shore. The multitudes are gone to rest. The synagogues are in ruins, and "the cities wherein most of his mighty works were done" are no more. The jealous Herod and his host of admirers are gone. But there are the same mountains that echoed his voice. Here, like a floor of adamant, still is spread the blue sea on whose troubled waters he walked in the "fourth watch of the night"— where twice he rose and "rebuked the winds," and said, "Peace, be still"; and it is here that he came to meet the disciples after his resurrection.

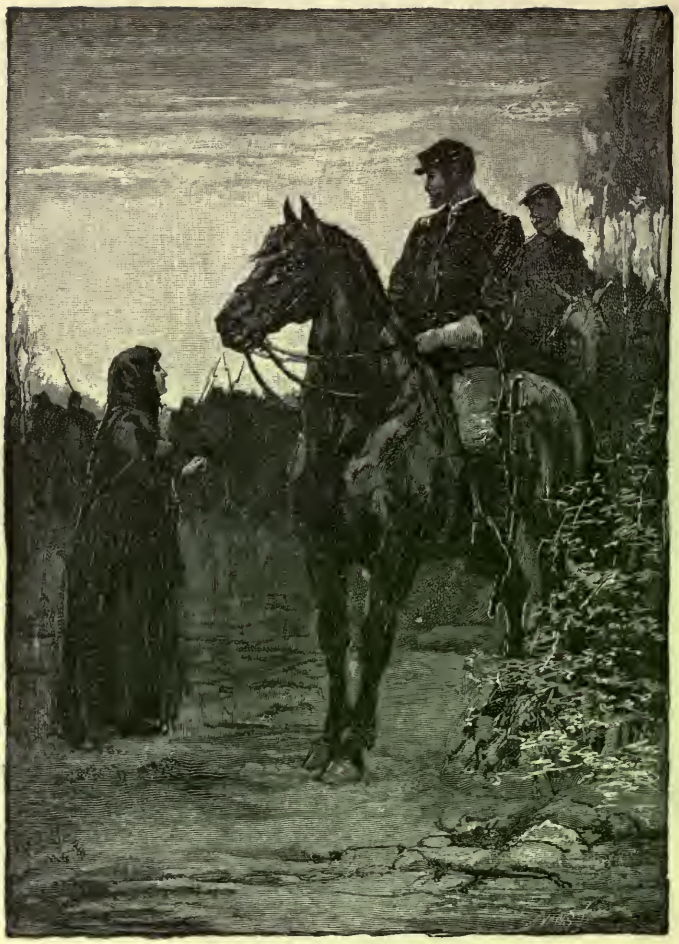
Edward L. Wilson.

PERPETUAL YOUTH.

'TIS said there is a fount in Flower Land,—
De Leon found it,— where Old Age away
Throws weary mind and heart, and fresh as day
Springs from the dark, and joins Aurora's band:
This tale, transformed by some skilled trouvère's wand
From the old myth in a Greek poet's lay,
Rests on no truth. Change bodies as Time may,
Souls do not change, though heavy be his hand.

Who of us needs this fount? What soul is old?
Our mere masks age, and still we grow more young,
For in our winter we talk most of Spring;
And as we near, slow-tottering, God's safe fold,
Youth's loved ones gather nearer; — though among
The seeming dead, youth's songs more clear they sing.

Maurice Francis Egan.



VERNAFF AND CLAUDINE.

AS he reined in his horse, the provost said, "Colonel, I 've some prisoners down there who asked to see the old man."

By the kindly though disrespectful appellation of "old man," the provost indicated the general commanding the division; the colonel addressed was Edgar Vernaff, his chief of staff; the place of meeting, the woods of North Carolina; and the time, not long after the surrender of the Southern army.

At this moment an orderly bearing a note directed to the general reined up his horse. The chief of staff opened it and read:

"Hon. James Algier presents his compliments to the general commanding United States forces, and requests an immediate interview. Mr. Algier is at present under arrest of the provost guard."

"Who is this Algier?" asked the chief.

"He is a man who arrested himself this morning. Captain Bryant told me to say that he did not think it of any account, if the general was busy. Captain thinks the man is crazy."

"Very well. Say to Captain Bryant I will be along in a little while, and then we 'll see what the man wants."

The sun was sinking through the trees when Vernaff, accompanied by the provost, made his way through the woods to a spring, where

they found two country wagons drawn up, and protected by a detail from the guard.

An elderly man advanced from the fire, and in a stilted way began:

"Sir, have I the honor to address the general commanding this division of the Federal army?"

"I am chief of staff," answered Vernaff. "Any communication you have to make, I will receive in the general's name."

"Sir," replied the old man, "I am not habituated to dealing with subordinates; I demand an immediate interview with the officer in command."

Vernaff flushed at this rebuff, then smiled at the pompous manner of the man. Though hurt for an instant by the disdainful speech, he was too good-tempered to take deep offense, so he answered: "General Brown cannot see you to-night; maybe he will find time in the morning, but I will not promise even that. If you have anything important to say, I am the proper person to hear it."

"I have the honor to represent the twenty-fourth district of the State of Alabama in the Congress of the Confederate States, and I repeat my demand for an interview with your superior."

"Captain Bryant, you will withdraw your guard. This gentleman is free to go when he sees fit. We have prisoners enough to take care of without bagging the whole rebel Congress."

"But I refuse to be released, sir."

"I hardly see how you can help yourself," said Vernaff.

"Sir," returned the man angrily, "I have heard of the impudence of the Northern soldiery, and gave credit for all the evil of which the whole world accuses them, but this surpasses my wildest conception."

"Call in your guard. Whether he will or not, this gentleman is free." Then addressing the man, he touched his cap and wished him "Good-night." But this politeness seemed to inflame the rage of the self-made prisoner, who burst out: "I defy you to withdraw your guard, and leave me and my family unprotected from your brutal hirelings."

"If you ask for a safe-guard," said the colonel coolly, "that is another thing, and I will consider your request when you have time to speak with a little more politeness. You are not a prisoner, and we take no responsibility about you in any way; but I have no doubt that if you move up near Captain Bryant's camp he will see that you come to no harm."

"In my day and country," replied Algier, "we were taught respect for our elders, but it seems that this is not a part of Northern education. Sir, I am by the fortunes of war thrown into your power, and in the name of the Confederate States I demand the consideration which is my due."

"I do not recognize any Confederate States," said Vernaff; "and the consideration which is your due? — I don't think you would be willing I should pay you what I think that is. And for the rest, my time is of some value, so I will go on my way."

The guard had already left. The dusk had risen up under the trees, though the open places were still flooded with light. The sweet, cool smell of the swamp flowers, the murmurous silence, so strange after the turmoil of camp, flowed over the rider and softened his mood. True, the old man was a representative of the class most offensive to the Northern mind, and Vernaff was a New Englander of the new school, cool and without enthusiasm; yet at heart he was a strong partisan, and the loud vaporings of the Southerner grated upon his nerves.

Scarcely had he turned his face, when a new person entered into the conversation. Close beside him some one said: "Pardon my father. We are all alone here, far from home, and are starving. We have hardly eaten for three days."

The voice was very low and sweet, and the articulation of the words slow, and muffled by a slight lingering upon the vowel sounds. If it had been a male voice, the prolongation of the syllables would have suggested a drawl, and the distinct pauses between the words indicated indifference; but so liquid were the intonations, so sweetly constrained the pronunciation, that at first he did not comprehend that the appeal was a cry for help; and so rare and pure was the cadence, that when it ceased he continued to listen, and the echoes sank deep into his heart — it was like a cool hand upon a fevered brow.

He was disappointed when on looking down his eyes encountered the face of his petitioner. She who stood beside him was a young girl, clothed in garments draggled to the knees with yellow mud and torn in a hundred places. Her head and shoulders were covered with a dirty black and green shawl drawn tightly together under her chin. Her face was too long, her nose too large, and her mouth too full; through the grime and soot which lay in ridges under her eyes it was impossible to guess at her complexion, though the tear-courses had striped this envelope, and their channels showed white by contrast against the surrounding blackness. But the clear brown eyes which were turned on his face were piteously beautiful. There was nothing vulgar or bold about the face, and through all the misery there was a suspicion of mockery — shamed amusement at her uncouth appearance, as well as a wild desperation at

her terrible condition. She looked like a lady playing the part of stage beggar, but not quite able to forget herself in the dramatic impersonation.

Though she stated the fact that they were starving but as an excuse for her father's excitement, yet her manner was that of one asking for charity, and so he understood it, and would have granted aid without question, probably without verbal reply to her words, but that the circumstances were so novel.

The girl repeated, though less earnestly this time: "We are wofully hungry. Your men, or some one else, have stolen our mules; we can't get on, we can't go back, we can't stay here,— and what in the world are we to do? Father at last made up his mind to surrender, and now it seems you won't have him." Then, with a faint little attempt at a smile and a careless gesture, she added: "He thought at least you would feed and protect your prisoners."

Vernaff hesitated; and before he found words, the old man broke in: "Come away, Claudine. These people do not care for our misfortunes. To them it is but one more injury they find themselves permitted to inflict upon their hated enemies. Why allow them the satisfaction? I had supposed you to have too much pride to bandy words with persons of their class."

Bryant laughed aloud at the dignity assumed by the old Southerner, and even Vernaff threw down an amused glance. He did not reply directly, but gave orders to the provost to have the two cared for. Something in his contemptuous tone and manner made the girl flush at the indignity.

As the young officer rode off, Bryant said to the colonel: "I hardly know what to do with these people; I 've got five hundred now in the bull-pen, and I guess some of them are pretty rough. I can't very well spare a special detail, and besides, my own lambs ain't saints, and I don't want to take the responsibility of a female Sunday-school on my shoulders; so it is not a very nice place for a woman. Don't you think if I should send them some rations and let them look out for themselves here in the woods, it would be just as well? Then if there should be any trouble, it would be their own fault and not ours."

"But," responded Vernaff, "the woods are full of stragglers, broken men of both armies. No, we must take care of them in some way. If you think best, you may send them up to headquarters. I suppose they will be safe enough under our guard, and General Brown can shoulder the responsibility. But don't pick up any more women, if you please. Camp is no place for them."

Vernaff, who was just completing his studies when the war came, had left women out of his consideration, and now the idea of having a girl on his hands was disagreeable to contemplate. He tried to forget her, but somehow he could not bring himself to that state of feeling; the refugees were to be in some sort his guests — they must be fed and given shelter. This, at least, he could attend to, and to-morrow some arrangement might be made for forwarding them to their destination.

The chief of staff made a report to his commanding officer on his return, who was amused at the narration of the old man's peculiarities, laughing off the whole affair as a jest. "They are your friends, colonel," he said; "I wash my hands of all responsibility. Do with them as you please."

"But you will see the man?"

"Not to-night, I guess. Give him some supper to cool off his blood, and, if I feel like it, I 'll talk with him to-morrow. But where do you propose to stow them? If Bryant's guards are a little wild, what do you think of the joyous reprobates you have picked out for headquarters?"

"If you have no objections, I will give up my rooms to them," answered Vernaff.

"Very well," said the general.

The general and his staff were lodged in an old plantation house, the commander and his chief of staff taking the upper story for their own quarters, each occupying the suite on each side of the wide hall. The lower floor was devoted to the remainder of the staff, while tents and shelters ranged around the yard served for the guard and the band. Vernaff and the young aide-de-camp, who was his mess-mate, gave up their rooms, arranging the front one with what comforts they could find, and Vernaff ordered the best supper the place afforded for the entertainment of his guests.

In an hour the wagon came. The night had fallen, but the lanterns on the piazza gave light enough to show the passengers as they stepped from the rude vehicle. The old man walked across the veranda as solemnly as Jugurtha marching to the Mamertine. He cast a haughty look of recognition at Vernaff, but did not vouchsafe a word. "You will go upstairs with this gentleman," said the colonel, indicating the aide-de-camp. "The lady will take the front room. There is a door between the two."

The girl, her head still covered by the dark shawl, hesitated a moment, then said pleasantly:

"We thank you very much for your politeness: yes, you are very kind." She paused, drew a long sigh of relief, and continued: "I never thought I should be so glad to see

a Federal—but it is much better than the dark."

The young lieutenant showed the father and daughter to their rooms, while Vernaff directed the servants to carry their goods and chattels after them. In a few moments the aide returned, saying that the lady wished to speak with the chief, and in obedience the colonel presented himself at her door, which she opened at his knock. She had removed the dingy shawl, and her hair, long and thick, hung in careless coils about her neck and face. Her whole expression was changed by this flood of brown and golden red: thin and pale as she was, the outlines of her features were not so angular, nor her profile so sharp as it had appeared. It was a striking face—not very pretty, and maybe a little harsh, but one capable of infinite variety; a face that would become more attractive as one grew better acquainted with its charm. But now there was a deprecatory trembling of her lips, though an amused smile sparkled in her eyes. With a quick gesture she began:

"I want to be a model prisoner, and how can I obey you if you don't send me some soap and hot water?" She paused a moment; then, looking frankly into his eyes, continued: "I would n't trouble you so much,—but, oh! I am so uncomfortable, and I could n't make up my mind to speak to the other officer. You won't think me unreasonable, will you?"

"I shall be extremely happy to supply all your wants," answered Vernaff stiffly. He wanted to say something pleasant, and to relieve the girl from her evident embarrassment; but under his calm demeanor he was the more embarrassed of the two, and could only articulate this frigid sentence. But he avenged himself on his awkwardness by sending the whole of his dressing-service—and it was a very elegant one—to the young lady's chamber. For now it was slowly dawning upon him that she was a lady. They should be made to understand that the officers of the United States could be kind when occasion called for kindness.

It was the custom of the division that the band should play before the general headquarters every pleasant evening, and a couple of hours after the arrival of the refugees the music burst out with a sudden crash. Vernaff was smoking his pipe on the lower piazza when the concert began. He knew that his prisoners—if so they were to be considered—could hear perfectly well from their apartments, and that it would be a work of supererogation to inform them that the band was playing; yet, after some hesitation, he ascended the stairs and knocked at the old man's door. It was opened by Miss Algier, who, candle in hand, made way for him to pass. The change in her appearance was startling. Her rich hair was carefully brushed and coiled in a graceful knot; her face, too thin and careworn for beauty, was refined and full of intelligence. She had changed her dress, and though poor in material, it was clean and skillfully fitted to her person, and the hand that held the candle was the hand of a person with a grandmother.

Vernaff looked at her with astonishment. Except for her eyes he would not have known her,—they were sparkling with excitement from the coffee, and their redness had been washed away, but they were the same great brown eyes that had looked out from under the shawl when he encountered her in the wood.

"If you would like," began the colonel, "you may go on the upper piazza to hear the music."

The old man answered, from the cot where he was seated: "I had hoped that my cell would be free from intrusion. No, sir; if it is permitted, I will remain in my confinement."

"As you please," said Vernaff, changing color at this rebuff. But the words were hardly uttered when the lady interrupted: "Oh! I shall be very glad to go. Please wait a moment." And without consulting her father, she darted into her own room, and returned with a shawl hanging over her arm. "Good-night, papa," she said, throwing her arm around his neck and kissing him on the forehead. "Don't keep awake for me; I shall not be gone long. Leave the door between our rooms half open, so that we can hear each other in the night"; and she came into the dusky hall, closing the door behind her.

When she was alone with the chief, she said demurely: "Am I to be shot at sunrise?"

"No; why?" he asked.

"Oh, I did not know. From your tone I thought you might mean,"—and here she tried to imitate his voice,—"the condemned are now permitted to take the air for a few moments, before being led to execution. Now I feel relieved."

"You are in no sense a prisoner," he answered gravely.

By this time they had come to the piazza, where it was light enough to distinguish faces, the great fire in the yard throwing a red glare over the scene.

The girl looked up at her companion with amused astonishment; she could not understand why he should take her badinage so seriously. But seeming to reason that it must be the way with all "Yankees," her mouth hardened into a faint ironical smile, and following his example, she sedately said: "But I do

not know but that I would rather like to be a prisoner."

"And why is that?" he asked.

"Oh, I have read that in jail they allow, with other things, one chair for their convicts; and I think I should like to sit down." Vernaff brought a chair for the lady and a blanket for himself. When she was seated, he threw the latter at her feet, but at a respectful distance, and in camp fashion cast himself down upon it.

"How in the world did you get lost in these woods?" he asked, in a pause of the music.

She told how they had left Richmond on the Sunday afternoon of the evacuation; how, there being no railroad available, her father had procured the team, and how they had intended to find their way back to their home, across the mountains; and that when they arrived at this halting-place, their draught animals had been stolen, and they could go no farther. Their provisions were exhausted; their money, being in Confederate currency, was worthless; and altogether their condition was desperate. Then the advance of the Union army came in sight. "I knew," she said, "that you Yankees were cannibals, but I thought father was too old and I too thin to serve. So, being hungry and perfectly miserable, we surrendered; and on the whole," she concluded, "I don't know but I rather like being a prisoner; it relieves one of all responsibility,— though of course it would depend on who your jailer might be."

"So you consider all Yankees cannibals?" asked Vernaff.

"Certainly; there can be no doubt about that. We Southrons live entirely upon fire and blazes, and you all upon your fellow-creatures. But," checking herself, "I do not include you with the rest. You might almost pass for a rebel. That is the highest compliment I can pay any one."

"Thank you," he said, flattered by her evident desire to please, and too unaccustomed to women's ways to suspect that she was playing with his vanity for her own amusement.

When again the band was silent, the girl drew a long breath of quiet satisfaction. She looked at her companion, and speaking lazily, said: "Yes, I think I like being a prisoner. I feel very contented."

"I 'm sure," he responded, "I like being a jailer; at least, if I am to have you for my charge."

"That sounded very pretty," she said, without changing the tone of her voice. "But yes, it would make a difference who might be your keeper. Your friend Captain Bryant, for instance, would have been very attentive and flattering,— but I don't think I should have liked him. He would have disturbed me, whereas you rest me."

"Then you are satisfied with your stern jailer?" he asked.

"Oh, I suppose I must make the best of a bad bargain; and again, I am dependent on you for my breakfast, so must make friends of my enemies. Don't you think a little deception is justifiable?"

The conversation drifted on in this way until, the band long retired, the moon rose high above the pines. Then at length the girl arose to go in, and Vernaff sprang to his feet.

"Good-night," she said, holding out her hand. "Again let me thank you for all your kindness, and for a very pleasant evening."

Now, among the people with whom Vernaff had been educated, the old custom of shaking hands has fallen somewhat into disuse. Perhaps a light touch of the fingers might be allowed when meeting after a long separation, or a gentle pressure when taking farewell; but the clasping of hands on every possible occasion, as is the fashion in the South, was a surprise to him. Of course he took the hand which was extended to him; but then he found that he did not know what to do with it. It was an honest, firm hand, warm and pleasant to hold, and he did not care to drop it; so, not knowing what else to do, he raised it to his lips and kissed its smooth surface.

It was the young lady's turn to be astonished. With eyes full of half-covert indignation, she examined him from head to feet; then seeing that no ill meaning was attached to his motion, she withdrew her hand, and, repeating her farewell, entered her apartment. Once in her room, she carefully washed away the innocent kiss, rubbing the spot until it burned red.

In the morning Vernaff was grave and distant. He had sent a handful of flowers at breakfast-time, and when they met in Algier's room she thanked him for the politeness with pleasant effusion.

"You are very welcome," he replied solemnly; and then gravely made arrangements with her father concerning their journey home. He gave the old man a safe conduct through the lines of the army, furnished provisions, and even supplied a pair of condemned government mules for draught. They were to leave at once, and before dark travel beyond danger from stragglers.

The girl sat watching while he was talking to her father. The mastery which he seemed to have over everything at first irritated her nerves, but presently she succumbed to his strong personality. The old man, haughtily accepting the proffered assistance, asked: "Are

these things furnished by your Federal Government?"

"I am not authorized to supply you from the Government, so I have taken the liberty of doing what I thought best, on my own account," replied Vernaff.

"I prefer that it should be so," said Algier, with an assumption of great dignity. "I will endeavor to compensate you at the earliest time possible. May I ask the amount of your expenditures, and the address to which I may remit the sum of this indebtedness, with interest?"

"I have not the least idea what it will cost," answered the colonel. "It is nothing. I hoped that Miss Algier and you would use what I could supply, and say no more about it."

Vernaff looked at the daughter, and saw that she was pained at the manner her father had chosen to take, flushing up under his gaze, but not interrupting the conversation; so, to end the matter, he wrote the address of his New England home.

"Is there anything further?" asked Algier, when the writing was finished. "If not, I will bid you a very good morning"; and the old man rose, making a stiff bow of dismissal. Vernaff also rose, returning the bow, and saying under his breath, "D—— his impudence!" took his departure. But Miss Algier followed him to the door and into the hall. She was flushed and trembling, and there was an angry look in her eyes which showed how indignant she was at her father's ungracious conduct. She spoke rapidly and with forced enunciation.

"My father is worn out by fatigue and disappointment. He does not mean to be rude, and I know he will appreciate your kindness when he is himself again; please forgive him. And me! I thank you more than words can say." She held out her hand. "I will never forget your goodness to us poor unfortunates."

II.

Six months after this, Colonel Vernaff was ordered to Esperanza, Alabama, as agent of the Freedmen's Bureau. The position was not of his seeking, nor quite to his liking, but he was made to feel that his duty called him to take the place. Some one with authority must be present to prevent friction, or the new relation of races would cause a social conflagration.

So far as the limits of his district extended the agent was supreme. Law was under his feet and the whole army of the country stood ready to support him. His accountability was practically so slight that he was virtually irresponsible. Public opinion was so strongly antagonistic to these agents that any attempt at conciliation was folly.

When Vernaff was established at Esperanza, he found himself entirely alone in a hostile country; he endeavored to perform the duties of his office with impartial justice.

The feeling that he was on a battle-field, and must not desert, alone prevented him from throwing up his commission. His sympathy went out towards the poverty-stricken people around him, and in every way in his power — and there were many — he endeavored to alleviate their suffering. Knowing that all the whites hated his office, and feeling that this animosity extended to his person, he did not slacken his hand in helping, but rather increased his kindness, feeling a savage sort of satisfaction in heaping benefits on the most rancorous of his enemies. The negroes felt an awful reverence for their sad-visaged protector, and the whites grew to consider him as a passionless but sternly just fanatic. No tale of trouble came to his ears which he did not, so far as he might, relieve; but no one ever heard a sympathetic word from his lips.

Vernaff remembered that Miss Algier had mentioned Esperanza as the end of her journey, but he had been three months in the town without any recognition either from the young lady or her father. He had discovered that their residence was a few miles outside the town proper, and that, like most of their neighbors, they were reduced to abject poverty, with only the naked lands from which to derive subsistence. The girl's face and manner were still fresh in his memory; it seemed in character that she should have given him some recognition, some payment of thanks, for his kindness in her hour of need. But now there was no sign from her that she had ever heard his name.

One day he received, for his approval, a copy of a contract which differed from others. In this bargain the proprietor of the lands had bound himself even more strictly than in the common form, but had expressly left the negroes untied in every respect. Vernaff did not notice the signature attached to the paper, but turned with some interest to the note which accompanied it. In this the land-owner stated that he desired fully to try the effects of the new liberty on his late slaves; that he was willing to run the risk to himself of any failure in his project. "I wish," he wrote, "to put the hands under the protection of the United States Government; I purpose to protect myself solely by doing justice. I am not very sanguine of success, but wish to find some fair *modus vivendi* under the new régime." This note and the contract were signed by James Algier, who also appointed a time when he would call at the office and acknowledge the execution of the paper before the agent. The

note was addressed, "Agent Freedmen's Bureau," without naming the officer.

One day General Algier came to the Bureau. The room was filled with people awaiting their turns to transact business, but by tacit consent they made way for the old man,— for he, by inheritance and by force of character, was the first man in the county, and the feeling of subservience to representative men was still alive in this community. As he passed through the crowd, greeting every one with loud condescension, Vernaff recognized his voice, and his heart stirred with bitterness when he remembered the ungraciousness of his visitor. But this feeling was changed into astonishment at the effusive manner with which the old man accosted him. The instant their eyes met, a pleasant glow came to the face of the Southerner, and advancing with outstretched hand, he exclaimed: "Truly, this is an unexpected pleasure; I had no idea that in the Bureau officer I should find the gallant gentleman to whom I am so much indebted both for material and spiritual comfort. Sir, I welcome you among us. We are poor and disconsolate; but we still know how to appreciate kindness. I know that I was forgetful of the laws of politeness when last we met. But now, sir, if you will forgive the irritation of a starving man, bitter and sore from defeat, and who has since regretted his conduct sincerely, I will try and pardon you for not letting me know that you were in my vicinity."

General Algier concluded his business, and afterwards sat with Vernaff in the agent's private apartment. He said that he had made his way home safely and without adventures worth narration; that he was ruined in pocket, and at first bankrupt in hope. "I am an elderly man, sir, and it was hard to accept, or even to understand, the new conditions of social polity; but in a little while Claudine and I looked the matter over, and saw that it was necessary for some one occupying a prominent position to set an example. Sir, I went to work in the fields: yes, sir, with my own hands — and your mules. I deserve no credit, sir; I ask for none. The consciousness that I am putting a light in the path of my unfortunate countrymen is satisfaction enough for me. I said I was bankrupt in hope: no, sir; that divine feeling springs eternal in the human breast. The South must be restored by industry. I intend to do my part, and with God Almighty's blessing I will succeed."

"And Miss Algier, may I inquire after her?" said Vernaff.

"She, sir," responded the general, "is teaching music and French to the descendants of Jews and army contractors,— they are the only people here who can afford to pay for the education of their children. I did not wish that she should engage in a money-making occupation, but she insisted, and I am proud of it, sir. She will be pleased to see you, sir, and add her thanks to mine for your great consideration, both to our wants and, what is more, to our feelings. For though we are now very poor,— downtrodden, sir,— yet we remember all your kindness in our time of trouble. My daughter comes to town twice a week — Tuesdays and Fridays — to perform the duties she has taken upon herself, but we shall be at home at all other times; and you will be more than welcome to our best, poor as it is. Will you not come next Saturday and spend Sunday? There is preaching in the neighborhood which you can attend: for lack of a better minister, I sometimes ascend the sacred desk myself. Our whole social system is overthrown, and one must make himself a rallying-point for all the better elements of the community."

III.

VERNAFF had no difficulty in finding his way when, on Saturday, he rode out of the dirty little town. Every one knew the road to General Algier's plantation; so as the dusk fell on the short winter afternoon, he dismounted at the door of his expectant host.

The house was of the ordinary plantation type,— large, white, with double piazzas, standing high from the ground; and in the yard was a collection of negro-cabins and stables. Algier met his guest at the foot of the long steps which led to the front door, and gave him a cordial welcome. Now, in his own house, though the host was somewhat overpowering in his attentions, his loud politeness accorded not unpleasantly with the spacious rooms and wide halls of his residence.

The interior of the mansion was very bare; it seemed that it had been sacked during the war, and there had been no refurnishing. Yet the room into which the visitor was shown was comfortable enough, though there was an incongruity about its appointments which gave to Vernaff the feeling that Miss Algier had plundered her own apartments to render his more attractive. Pleasantest of all, there was no attempt at shabby gentility. Indeed, throughout this visit the guest felt, that however poor the entertainment, it was honest and without pretense. No effort was made to conceal the actual poverty, nor, on the other hand, was there any parade of ruined fortunes — never once was the *ante-bellum* grandeur mentioned either by Algier or his daughter. They gave their best to their guest, but made no embarrassing apology. The one thing which struck the young officer as extravagant was the number of useless ne-

groes around the place. He knew that the wages paid must be very small, if any, but the blacks must at least be fed; and they swarmed about the yard and even into the house, with no work to do and no will to do any. He afterwards discovered that this retinue were but waifs from the old days, remaining on the property because they had no other shelter, and that to some extent the old condition of affairs was inverted,— now the white man was working to put bread into the mouths of the idlers, and though the negroes seemed good-natured enough, neither the master nor his daughter called upon their pensioners for assistance. The late slaves still lived in their cabins, and received such rations as the industry of their former owner could supply, but were not expected to make any returns for these favors. Any little service which they might perform was scrupulously paid for — at a very low rate, to be sure; but some payment marked the distinction between slavery and freedom.

Vernaff did not see Miss Algier until she came into the general's sitting-room to announce that supper was waiting. She entered easily, and without sign of embarrassment renewed the acquaintance begun, and ended, under such different circumstances. She was neatly though very plainly dressed; her hair was parted smoothly over her round forehead, and there was just a little color brightening her pure, pale face. There was a defiant sparkle in her eyes which contradicted the gravity of her speech and added piquancy to her gentle manners.

All through the supper she was the attentive hostess: there were cheerful smiles and sallies of wit, and to the guest the whole room was illuminated by her presence, though he felt that every moment she was growing further away from him. She talked more than at their former interview, but easily turned the point of any remark of a personal nature. After the first greeting, she made no allusion to their previous meeting, but in her conversation he found little suggestions of the thoughts they had interchanged on that night of moonlight and music in the spicy woodlands.

In the evening, she sat with the two men and joined in the talk, her sweet voice mingling with the rounded tones of the older man like a silver thread through a dark web, but Vernaff was refused an instant's *tête-à-tête*. Inwardly he raged against his luck — and the girl knew that he was raging; still, she gave him no opportunity to address her outside the general conversation. But when she rose to say good-night, after kissing her father with lingering emphasis, she extended her hand to the guest as he stood holding the door for her to pass, and said in an undertone, "I always knew you would come. Good-night."

This remark, which might mean anything, he turned over in his mind all night, until it sounded as if it had been, "I am glad you have come; I have waited for you."

In the morning Mr. Algier excused himself, and set out alone for the church, leaving his daughter to follow with the new friend. This arrangement did not seem perfectly satisfactory to the young lady, but her father was serenely unconscious of her objections, and strode away wrapt in the thought of the sermon which he was to preach.

At length the lady was ready, and, accompanied by the young officer, took the by-path leading through the woods to the place of meeting. There was a demure expression on the girl's face, a kind of Sunday look, which at first abashed her companion; but he gathered courage as they went on, and, dropping the commonplace tone in which they had been talking, said:

"I wish I had known of your whereabouts sooner; I feel that I have lost so much by not knowing I was so near your home."

"I knew who the agent was on the first day of your arrival at Esperanza," she answered.

"And why did you not let me know that you were living here?" he asked.

She hesitated a moment, then stopped, and faced him. The color came to her cheeks, a gleam of hard, determined light showed through the tender brown of her eyes, and there was a little tremble in the voice with which she answered him.

"I did not care to see you again; at least, just at present. I did not mention your coming to my father; I have told no one that I ever saw you before. My own circle of friends is large enough for me; we are all proud and poor together, and there is no room or place for a new-comer. I would not say anything to hurt you, or anything ungentle, but you ask me, and I must tell you the truth. You are my father's guest. Once you did me a kindness greater than you knew,— you saved my father's reason, and probably my life. For this I respect you and honor you, and would in my weak way repay you; but I know, and you know, that all social intimacy is impossible. I can't think it best to associate with the people of your country. The recollection of the suffering brought on by the war, the whole conflict, rankles perhaps more with us women than with the men, who have so much else to think about. But, oh, Colonel Vernaff, we cannot forget so readily! Then you, whom I know to be so different from my idea of a Yankee, came here, armed with such authority as no

man should have over another. You are an autocrat; I cannot hire a servant without your assent; why, I almost need your permission to buy a spool of thread. You trample upon everything I hold dear; your very presence is a perpetual reminder of our shame and despair; our necks are bowed before you, though our souls refuse the chains. So it is best that the two people dwell apart. But, there! I am getting as long in my speeches as father is sometimes. Come, let us go on to the church. If I have offended you, I ask your pardon; but I know that I am right, and please don't let us talk about such things. I suppose we can be good friends enough, if you do your part. And now that I have poured out all the perilous stuff there was on my mind, and maybe hurt myself more than I have you, I feel more like a Christian on the way to church."

Vernaff could not but admit that there was a certain amount of reason in this long argument; but he did not agree with any conclusion that would deprive him of Miss Algier's society. It would be difficult to say if he knew just what his feelings had been before he listened to her logic, but now there was no doubt but that he was driven towards her with irresistible impulse. He did not stop to think of his words.

"Miss Algier, if you should tell me that my presence was personally disagreeable to you, then I should feel obliged either to give up your acquaintance or change my conduct; but when you say that politics raises a bar between us that cannot be taken down, I deny your position." Then turning to her he added, slowly and distinctly: "You *shall* like me. Do you remember that you once said to me, 'You shall pay for it,' when you thought I offered you a slight? Well, now I am going to pay you."

"And how, pray?" she answered, defiantly.

"By making you like me better than you do any one else in the world," he answered.

"But would that not be rather punishment than payment?"

"I will try that it shall not be," he answered.

"Well," she said gayly, "at least you have given me fair warning, and I can look out. I doubt if the game is worth the candle. You could get nothing but a poor amusement, and I should get nothing but a great deal of annoyance. So let us settle it now. You paid me that same night by your kindness. I give you full quittance. Now, do let me off from the terrible fate you denounce against me."

"Would the fate be so terrible?" he asked.

"I can conceive of nothing so horrible," she answered, with a mocking smile, "unless it is to be late at church." And hurrying her steps, they soon came to the log meeting-house.

In the evening some people called upon General Algier on private business, so Vernaff and the young lady were left together; and this situation did not seem displeasing to either. They sat in the half-dusk of the great parlor, lighted only by the pitch-pine fire, which, flaming on the hearth, threw warm yellow illuminations about the room, softening the angles and concealing the barrenness.

A storm was rising in the woods outside, the murmur of the pines grew louder and deeper, and the shrunken casement shook and rattled in the wind. Inside, the colonel, under his daughter's laughing instructions, piled high the light wood-knots upon the fire. It was very sweet and homelike, these two shut in from the wild weather, warmed and cheered by the same fire, talking or silent as the moods changed, and perhaps saying most in the pauses. The girl's pure face was lit up yet softened by the rosy splendor of the fire. What wonder that love grew up in his heart so suddenly yet so easily that it was in flower and filling his soul with perfume before he was conscious of its existence. To the girl, surely it was pleasant to be with him. Why struggle? why think of consequences? why think at all? The last years had been passed in conflict and tempest; her daily life was hard and barren, and there was but little peace and joy in her world; even her hopes were dull and uninteresting. She voluntarily forgot that there must be a to-morrow, and floated down the river of the present. It would have been easy for him to have checked her then: had he made one rash step towards familiarity, she would have taken the alarm and closed the door of her heart. But a trembling delicacy came to him with this new precious love, a tender compassion, a will to shield her even from himself.

Monday was so stormy that it was impossible to leave the house, so the day was passed indoors, and was tedious to all. But the old general did everything in his power to amuse his guest, and Miss Algier finally allowed him to sit with her in the housekeeping-room, where she was engaged in her domestic duties. He had become an intimate of the family and taken position as house friend. There was something very fascinating in his new relation; and in watching the girl's industry, assisting with his uncalled-for advice, both of them laughing and talking like children playing at doll's housekeeping, the stiffness of the young man wore away. There was a graceful shiftlessness about Miss Algier's methods which amused him; she did not know how to produce the desired ends by the simpler means, but

she seemed so bright and happy, so full of charming petulances, that far from losing his illusions by the sight of her homely every-day life, he found her only more attractive. His practical Yankee sense told him that she was not proficient in her tasks, and he doubted if housekeeping was within the scope of her mind; but he admired her none the less for this want, and her efforts were so earnest, her spirits so buoyant, that the charm grew with every motion of her white hands. Once he ventured to offer his sympathy, complaining that she was doing work which was beneath her. She stopped her labors, and looking at him sidewise said, with just a little flutter in her voice:

"I don't care if you know it, although it is a matter of small interest to you, but I can change all this whenever I please. To-day it is poverty and hard work; to-morrow, if I choose to write the word, it is leisure and wealth."

"Then why don't you write?" he asked, with a sharp pang of bitterness.

"I don't know; perhaps I may some time."

"If you love the man who can so change your life, I should n't think you would wait an instant."

"That is the point," she said. "I don't know if I love him or not." Then turning full towards him, she continued, in an indifferent tone, "What do you think?"

Notwithstanding the jealous pain in his heart, he could not help laughing at this singular question. "You must answer for yourself," he replied.

"But," she said, doubtingly, "every one would be so much pleased."

"Perhaps not every one."

She refused to notice the innuendo, and continued: "Then you think I had better say 'yes,' and have done with it?"

"No, I did not say that; I don't think I am a fair judge."

"Why, I thought you were sent South to arrange all our affairs. I shall have to report you at Washington as neglecting your duties. I expected you to issue a decree, 'By authority of the United States, and the Bureau of Freedmen, Refugees, and Abandoned Lands, etc., etc.' You refuse? Then I shall be obliged to decide for myself."

"I hoped," he said, willing to change the subject, "that you had forgotten that I was one of the hated Yanks."

"No," she answered; "I have not forgotten, nor do I wish to." Then seeing that he was hurt at her remark, she added coquettishly, "But if you continue good-tempered, perhaps some time I may forgive you."

"That will be far better," he answered.

"Far better for *you*," she replied, with daring emphasis on the pronoun.

"Why not for you, too?" he asked seriously.

"For me? Oh, I shall get along well enough," she said, avoiding a direct answer.

When he was about to leave her she explained. "I thought I would tell you about my affairs, because you seemed to pity my forlorn condition. Now, my condition is not forlorn, at least to my eyes. And again, I don't think I like commiseration — certainly not from you." Then maliciously she added: "Remember, I had enough of that in North Carolina."

"Will you never forgive that fancied slight?" he asked.

"I think not. No, I never shall. And for this reason,—it hurts my vanity, that you should have seen me when I was so — so dilapidated. Do you think it was quite fair?"

"How in the world could I help it?"

"Well, you won't pity me any more?"

"No, now I shall only pity myself," he answered.

"That is of no consequence," she replied, gayly nodding a farewell.

The next day was fair, and the two rode to town together,— he to resume his Bureau duties, she to give lessons in music.

IV.

After this he contrived to meet her almost every time she came to Esperanza, and these meetings became the objects of his life. To her also, though she disapproved of the intimacy, they were very pleasant. She did not dare look at the future,— every day this stranger grew dearer to her, and every day the bitter railings of her acquaintances made the political idea which he represented more hateful in her eyes. He was an intruder, a carpet-bagger, a Northern satrap, or at least a deputy satrap. She ground her white teeth when she thought of the humiliation of her country, and her pride called upon her to break away from the friendship forced upon her by one of the oppressors. But her heart called out to her that it was too late,— the die was cast. She could not bear to acknowledge it even to herself, yet she knew that all that was tender and loving in her nature had gone out to him. And she felt by no means sure of his love.

And the man,— he, too, was in doubt. She fascinated him, and he felt that his life was wrapt up in this woman. Yet, in a little while his work in the South, always distasteful, would be finished, and the path which he must follow in after life was already chosen. This girl would enter as a new factor in his plans; and her education, the simple fact that she

came from the South, would, if she were his wife, force a change in his projects. But why think about consequences, when the present was so delightful? When he was with her he was ready to bow down and worship; it was only when they were apart that the doubts came to his mind. He knew that he loved her better than anything else in the world, but from his standpoint all the world was in one side of the balance, and just this girl in the other. His taste was offended daily by the tone of the society in which she lived — even the girl herself sometimes shocked him by some expression which he considered as provincial; but for all this he loved her and admired her every motion. These doubts and hesitations were but the dying struggles of his own narrow prejudices, but they made him unhappy and irritable — discontented with himself and out of patience with his surroundings.

While in this confused state of mind, he received a call from Major Royal Algier, a nephew of the general, and so cousin to the young lady. Vernaff knew of this Major Algier, though he had never seen him. The gentleman lived in another county, and was the leader of the irreconcilable party in the vicinity. Neither young nor old, reduced like his neighbors to poverty, his dominant will and reckless courage had made him a marked man. A bitter opponent of the reconstruction policy of the Government, he refused to be silent, and carried his animosity even to blows. Once or twice Vernaff had been on the point of ordering his arrest, but there was a good-humored jollity about his high-handed outrages which turned the current in his favor, and, if he killed a man, as it was rumored he sometimes did, at least he shot from the front, and his adversary was some one whom society could well spare. Perhaps Vernaff thought that the major was a necessary evil in this law-breaking community, or it is possible that he allowed his personal feelings to influence him, and the relationship between the rough rider and the family of General Algier may have covered a multitude of sins. However this may have been, the Bureau agent made no difficulty in admitting the redoubtable major to his private apartments.

When the visitor entered, Vernaff was pleasantly disappointed at his appearance. Except that he was greatly browned by the sun and wind, and, like most men who ride on horseback, walked with his feet far apart, which gave a truculent air to his stride, he was as well mannered a red-eyed gentleman as ever filled the atmosphere with the rank fumes of corn whisky.

"Colonel Vernaff, of the United States, I presume?" said the major.

"Major Algier, I am happy to see you. Will you be seated?"

"Thanks; no, sir. The business between us will take but an instant. I have called to say that your persistent attentions to my cousin, Miss Algier, are not approved by her family, and from this time on must cease. The honor of my family will not permit any relations except those of the most distant civility between one of its members and — avoiding personality — persons from your section. I trust that having received this warning, I shall hear no more about it. Sir, I wish you a very good-evening." He turned to go, raising his slouch hat with ceremonious politeness.

"Stop!" cried Vernaff. "Do I understand that this is a message from Miss Algier or the general?"

"Such a question is unnecessary," replied the major. "I think I am sufficient authority in this matter. If my fair cousin has forgotten her position for a moment, or if my respected uncle, General Algier, has allowed her to amuse herself at your expense, that is their affair. But now I forbid you, sir."

For a moment the young officer was too angry to speak. The blood surged to his brain. The sublime impudence of his visitor was the accentuation of all that was hateful to him in Southern manners, and, coming as it did on his already exasperated feelings, broke down the last barrier of his self-control.

"D—— you, sir! I 'm not likely to hold myself accountable to any blood-and-thunder reprobate who tries to influence my conduct. But, be sure, if you venture to use that young lady's name in my presence, I 'll whip you within an inch of your life, cousin or no cousin."

He stood leaning one hand on the back of a chair, pale, and shaken with excitement, and his words were spoken slowly and distinctly. There was no bravado in his manner, but there was a look in his eyes and about the lines of his mouth that was even more menacing than his speech.

The major was apparently astonished at this outbreak. Whatever answer he may have expected, at any rate it was not this. He was no coward, and had often risked his life in brawl and in battle; but the white, rigid face of his opponent daunted him. It was not the fear of death or injury, but the spirit of the man before him, which overawed him. The situation became embarrassing; no further explanation was possible. He therefore, after saying, "You have heard my business, sir," departed in some haste.

The other did not follow, but stood rooted to the floor, his mind in a swirl of contending emotions. He stood long without changing a muscle, then lighted a cigar and paced the

apartment with long, even strides far into the night. The measured cadence of his step sounded through the room, and morning found him still deep in thought. At last, his mind made up, he threw himself upon his couch and slept. At noon he mounted his horse and galloped to the plantation of General Algier. He was happier than ever before in his life; whatever the issue of his errand, one thing was settled forever. He was willing to give up all his plans, all his prospects; give up, so far as he could, his very self. Brought to the dividing of the paths, he deliberately chose to turn from the broad and easy road and blindly trace his steps in a new direction. Once decided, no cloud remained in his mind; he knew that his doubts were dead, never to revive.

As he rode up the avenue leading to the great white house, and saw it standing cold and bare before him, he looked at it with new interest. Was this the last time he should ever look upon it? If this were so, then the picture would go with him to the grave. Would he sometime see it again? Then the house no longer would seem barren, but filled with a glory which would be his forever. He would have lingered before entering, but as he rode up to the steps, Miss Algier came upon the piazza and welcomed him.

"My father," she said," is somewhere in the fields. Will you go to find him, or come in and wait?"

He dismounted, and joined her on the steps. "If you are willing," he said, "we will go in; I can see him by and by."

So together they entered the house, the great door closed behind them, and they were alone in the dismantled drawing-room, where they had met so often. She instinctively knew that the hour had come; she would willingly have avoided an explanation. Her heart throbbed, her eyes moistened, and her voice failed; yet she was clear as to the course she would follow,—there was no shadow of wavering in her mind. She had regarded this day as something to be kept out of sight as long as possible, but had felt no doubt as to what she must do, at whatever cost.

For a while they fenced with embarrassed gayety, then he resolutely forced her attention.

"Miss Algier," he said, "does it seem so strange a thing to you that I dare to love you, that from the first moment I saw you my whole heart went out toward you? I can no longer hide from you, and from myself, that this love is all my life. I know no more than this. I love you."

She made no answer to this appeal, but sat white and seemingly unmoved, her face bowed down, and her hands closely clasped before her. He rose and came to her side, and, stooping down, took her hands and said very softly, "Claudine, you cannot bid me leave you."

A moment longer she was silent; it was very sweet to listen. For an instant she doubted her resolution; a wave of satisfied longing flowed into her heart, then ebbed again, but, summoning her strong will, she withdrew her hand and said:

"Please sit down again. I cannot speak just yet, nor with you so near."

Impressed by the strained composure in her tones, he obeyed her request; and, awed by her manner and evident distress, waited for her answer.

Presently she spoke again, hesitating at first, but as she went on, her voice grew firmer and her words clearer; a flush of color came into her face, and her eyes yearned towards him, full of love, and yet of inflexible determination.

"Perhaps I am to blame—I must be; but you will forgive me when you know all. Of course I wanted you to love me. How could I help that? Yet all the time I knew that the end could be nothing but sorrow to us both. Still, you know that this thing cannot be; our paths in this world are too far apart ever to come together. My lot, my duty, is here with my father, and with the people among whom I was born and with whom I have suffered. You belong to another world; your education, your choice, your duties are different. Shall I tell you truly? I could not bear to go among your people. I cannot forgive them all the wrong they have done us. I should feel like a traitor to my God and my country, if I went among them asking kindness. My father, too; he cannot live without me. I am all that is left to him, and he must stay among his old friends. No, don't speak. I have been thinking very hard. I know what is right, and this is wrong. You must not stay here; you cannot be one with us, and I would not have you change even if possible. Go back to the victorious North; I know that your place is waiting for you. You must not take up our burden. No, no; you must go, and I must stay. You will forget me, no doubt, or think of me as one who saved you from a great folly."

The man came again to her side. "Claudine," he said, "I, too, have thought of all this. If you can love me and give yourself to me, what do I care for the rest? If it is right that you should stay with your father, so be it, but that need not separate us; I will not let anything come between you and me." And he put his arm around her and raised her to his breast.

One moment she lingered, then gently released herself from his embrace. She was

frightened at her own passion. She felt herself yielding, and glad to yield. But she recovered, and, standing erect, her face full of determination, said, but not harshly:

"Please do not touch me, and do not argue with me. I know that I am right, and that what I do is for your best happiness. I don't think I am a heroine — I hope not. But listen, and then I must leave you. I refuse your suit. If you love me, if you respect me, then you will not press me, for this answer is the only one I can give. And, dear, you will leave here, won't you? Go back North. This is no place for you, and you cannot add to my happiness by staying." She moved to the door, as if to protect herself, not from her lover, but from herself; then returning, she held out her hand and said "Good-bye," and with a sob she added, "Would it make it any easier for you if I told you something? I do not know just how to say it. Perhaps it is unwomanly, but I do love you — yes, I think ever since that first meeting so long ago. How could I help it? And now again good-bye, and for the last time." She glided out of his hands, and was gone before he could answer her.

V.

SHORTLY after this, the colonel was visited by one of his acquaintances, bearing a note from Major Algier, which read:

"SIR: In our interview of the 11th inst. you made use of certain expressions which were offensive to my honor. I have waited, hoping that you would see fit, without motion on my part, to apologize for your language. The fact that you have acceded to the request I had the honor of making does not excuse your conduct to me on that occasion. Nothing remains for me to do but to say that my friend, the bearer of this note, will receive the apology which I demand, and your assurance of continued good conduct in connection with the matter of which we spoke; or, you refusing, he is authorized to make the arrangements for the meeting due to outraged honor. Hoping that one of these alternatives — it is indifferent to me which one — will meet your approbation, I remain your obedient servant."

"This is a challenge from Major Algier?" asked Vernaff.

"That," answered the other, "is as you choose to consider it. I understood from him that if you were willing to make a satisfactory apology, and to grant his request, nothing further would come of it."

"Sit down, Mr. Dupont," said the colonel. "First, as to any apology from me, or any attention to his impertinent demand, that is all nonsense, and I suppose he knows it. And as to being forced into fighting a duel, no man can do that to me. I do not put it on moral grounds. You and I probably look upon it from such different standpoints, that neither would understand the other. To tell the truth, I suppose the whole moral question to be a matter of education, and we have been brought up in different schools. I have nothing against Major Algier. If he would mind his own business, I should have no quarrel with him. Please tell him from me, that I consider him an officious ass, and am ready to fight him at any time or place." Vernaff began coolly enough, and had determined to refuse with dignity, but as he went on, his passion rose. The thought of his lost love, and the smirk on the face of his visitor, exasperated him. In desperation he turned to the old savage idea of fighting, and accepted the challenge. But he determined that Miss Algier's name should not appear, and so asked Dupont if he was acquainted with the original cause of the dispute. On being assured that Major Algier had made it a point that this should remain a secret between the principals, Vernaff felt easier, and angrily agreed to accept any arrangement that might be made. He insisted, however, that he should go to the ground without a second. "If I do choose to make a fool of myself, I 'm not willing to involve any one else in this medieval absurdity. I want as few witnesses as possible to my idiocy in paying any attention to the vaporings of this man. So tell him what I say, and fix things to suit himself. Let me know when you are ready."

In the afternoon Dupont came again, and proposed that the meeting should take place at dawn on the following morning, but Vernaff demurred to this, saying:

"I shall not get up to please you or go without my breakfast. I recognize the fact that I was a fool for entering into this thing. I am sorry that I consented, but now I 'll keep my agreement. At 11 o'clock, at the place you mention, I 'll be there. If it is any comfort to you, you can go at 'sun-up,' as you call it, and wait for me, but I shall not hurry to suit you. I am ashamed of myself for pandering to your ridiculous customs so far as I have. Perhaps it would be better not to try me further."

"I suppose," said Dupont, taken aback, and misunderstanding the fierce irritation of the colonel,—"I suppose my principal would still accept an apology."

"I will fight him now, if I have to follow him to Texas. I despise the whole race to which he belongs, and him as a particularly offensive specimen of his class"; and the excited agent showed his visitor to the door.

At the appointed hour the Northerner rode to the designated place. His opponent was already on the ground, and had brought with him a gentleman who was to act as witness for Vernaff, who carelessly accepting the prof-

THE GENERAL.

fered service, only asked that all possible haste be made in arranging the preliminaries.

The principals were posted and the question asked, "Are you ready? Fire! One!" At the word "One!" Major Algier fired. His intention was to wound his adversary but not to kill; but the ball went whizzing past, and Vernaff stood unharmed. He covered the major with his pistol while the second continued "two! three!" and it was too late to return the shot. Then he dropped his weapon and said: "Do you want to try it over?"

Algier was too much astonished to reply, but stood glaring, his red face redder than ever before. At length he gasped out, "I cannot understand your conduct, sir."

"It is not necessary that you should," returned the other. He halted an instant, then, with a sudden start, threw his pistol on the ground, and advanced towards his late antagonist.

"Major Algier," he began, "if I said anything improper to you, and I know that I did, I say freely that I am ashamed of myself. You acted up to your light, and I acted like a petulant ass."

"No more, sir; no more!" cried Algier, advancing with extended hand. "Even so much is more than I can ask of a brave man. Let us be friends now, and I, too, will ask pardon for my attempt at interference in affairs which probably I had better left alone. Come out to my place and see me; and, for God's sake, don't let my wife know about this scrape!"

At this moment General Algier dashed through the woods, and drove his horse directly between the speakers. "In the devil's name, gentlemen," he shouted, "what are you doing? Royal, I am ashamed of you! Can't you see that any injury to Colonel Vernaff would bring upon us the most terrible retaliation, and upset the little we have been able to do to get going again? You call yourself a patriot, and would do more harm in a moment than you could undo in a lifetime."

Then turning to Vernaff, he said, with less heat, "Colonel, I am old enough for you to listen to my advice without being offended. I had expected, from the good sense you have always exhibited, that you were above such escapades. Now, let me pray you, forget this matter, and remember that your life is not your own. It belongs to us all, if for no other reason, from the position you occupy among us."

The old man drew a long breath, cleared his throat, and smoothed his features. "I saw," he continued, "that you boys had made up before I came; but I was so full of it that I could not stop my remarks on that account. That is right; I don't intend to inquire into the merits of your quarrel. Of course, now, there can be none between you. Shake hands again, and both of you with me. Vernaff, I can't say that I respect you any more than I did, but I like you none the less. Only, don't do so any more. Royal, you fire-eating boy! I wonder when you will grow to years of discretion! But, now mount your horses; I promised Claudine to bring you both to lunch, safe and sound. So come along."

"If you will excuse me," said Vernaff, "I will deny myself the pleasure, and go back to town."

"I can't let you off; you must come," exclaimed the general. Then speaking in a more serious tone, he added, "I make it as a particular request, and as your oldest friend in the county. And how should I account to Claudine for your absence? She expects you."

So they mounted their horses and galloped across the country to the plantation.

"Here, Claudine!" cried the old man as the party arrived at the house and saw her standing on the step. "Here are two foolish boys

who have quarreled, and have made friends. They have come to eat salt together in token of a new peace. So hurry the lunch all you can, dear; and in the mean time I suppose they would like to wash their hands. I 'll take Royal to my room,— I have yet some scolding left for him,— and please have some one show Colonel Vernaff to his apartment."

"My pardon is nothing. I have no right to blame you. But when I heard of the affair, I did feel that you were not just kind to me. And when I knew that, even indirectly, I was the cause, I felt how wrong we had been these past six months, and I spoke to my father about it. Perhaps I ought not to have done this without your consent but it was all so

THE DUEL.

As Vernaff left his room, after making his toilet, he met Miss Algier, who evidently was waiting for him in the hall. She did not hesitate, but began speaking as she stepped towards him.

"Colonel Vernaff," she said, "do you think it was right for you to fight a duel with my cousin?"

"No," he answered boldly, "I don't think it was right; and to you I can say how sorry I am. I think I must have been crazy with your Southern fever when I accepted his challenge. I am not ashamed to ask your pardon — and I do."

sudden and terrible that I was overcome — and told him all."

"And what did he say?" asked Vernaff eagerly.

"He mounted his horse and rode to stop the duel," she answered.

"Yes, I know. But what did he say when you told him all?"

She blushed, looked down, then, with some return to her old provoking manner, said, "I fear I have forgotten his exact words." Then she looked up, and, with a tearful smile lighting her eyes, continued, "I suppose you might ask him yourself. He may remember."

IN THE HALL.

At the smile and the words hope sprang up in Vernaff's heart. In an instant she was in his arms, trembling, frightened at his tender violence, but unresisting.

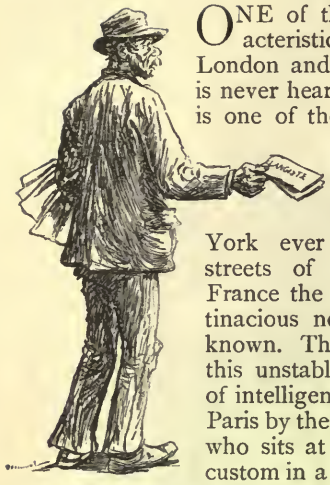
J. G. Perkins.

THE HOUR-GLASS.

TIME is no rushing torrent, dark and hoarse,
As thou hast heard from bards and sages old;
Sit here with me (wouldst thou the truth behold)
And watch the current hour run out its course.
See how without uproar or sullen force
Glides the slim, shadowy rill of atom gold,
Which, when the last slow, guileful grain is told,
Forever is returned unto its source!
This is Time's stream, by whose repeated fall
Unnumbered fond ones, since the world was new,
Loitered as we, unwarned of doom the while:
Wouldst think so slender stream could cover all?
But as we speak, some eddy draws us too.—
Meseems dim grow thine eyes and dim thy smile.

Edith M. Thomas.

NOTES ON PARISIAN NEWSPAPERS.



ONE of the most characteristic street-cries of London and of New York is never heard in Paris, nor is one of the most picturesque figures in the streets of London and of New York ever seen in the streets of Paris, for in France the noisy and pertinacious newsboy is unknown. The functions of this unstable disseminator of intelligence are filled in Paris by the staid old dame who sits at the receipt of custom in a *kiosque*. A Parisian kiosque has nothing oriental but the name. It is a little sentry-box of glass, just large enough to shelter the news-vender from the changeable weather of the French capital. On a little stand in front of the kiosque are tiny heaps of the countless newspapers of the city, and on strings on each side are pendent numbers of the chief illustrated journals, artistic and comic. These kiosques are scattered along the boulevards, and from them the Parisian buys his "Figaro" in the morning and his "Temps" at five in the afternoon.

This difference of attitude between the hurrying American, who has to have his newspaper brought to him in haste hot from the press, and the leisurely Frenchman, who is content to pick up his paper when he goes abroad — this difference is far more than external; it is essentially typical of the irreconcilable difference between the French journal and the English or American newspaper. For one thing, the French journal is not a *news*paper in the American sense of the word — and of a truth it does not pretend or desire to be. The "Figaro" now and again makes a ludicrous claim to the ubiquitous omniscience of the London "Times" or "The New York Herald," but this is not to be taken seriously. The fact is, that while the primary quality of a good English or American daily paper is news, the primary quality of a good French paper is not news, but criticism,— criticism of politics in the first place, of course, and in the second, criticism of commerce, of law, of finance, of science, of art, of literature, and of the drama. The aim and ideal of the best French editors is to present not so much the minor details of a fact, but the best possible opinion on the fact. Of mere brute news, minute particulars of scandals, crimes, and horrors, such as we here in America have dumped upon our breakfast table every morning, with all the accompanying repetition and accumulation of uninteresting fact,— of all this the reader of the Parisian journal sees little or nothing. The childish or unintelligent thirst to know what has happened, regardless of the importance of the event, has not yet been developed in France by the rivalry of scrambling editors; and it may be asserted without fear of contradiction that even if they could have it without cost and without trouble, French editors would refuse to print most of the trivial trash which cumbers the columns of even the foremost American papers.

It is not that some Parisian papers do not print trivial trash and trash worse than trivial; the difference is rather in aim, the French editor thinking first of criticism and the American editor only too often thinking of mere news — first, last, and all the time. Yet the leading principle which should govern even in news-gathering is better understood in Paris than in London or New York. This is the principle which has been aptly called the "perspective of news," and by virtue of which a trifling accident in the immediate neighborhood is of more importance than a great calamity a thousand miles away. As Villemessant concisely put it, "A dog run over on the Boulevard des Italiens is of more consequence to the 'Figaro' than an earthquake in Australia." If we substitute for the injured dog a picture exhibited or a new play produced, we have just the things about which the Parisian papers give the most news.

In the eyes of foreigners the "Figaro" is the typical French newspaper, just as the London "Times" is the typical English newspaper and "The New York Herald" the typical American newspaper. Perhaps the "Figaro" is indeed as fairly representative of the French character, or, at least, of certain predominant traits in it, as the "Times" or "The New York Herald" is representative of English or American character. In so far as it is representative, the "Figaro" represents Paris rather than France; and in Paris it represents the boulevards, and not the faubourgs. It is the organ of society and of the stage; it is fashionable and frivolous; and it affects to be royalist and re-

actionary; it delights in scandal; it is mercenary; it is always pert, lively, and amusing; and it has the largest circulation of all the papers in Paris — excepting, of course, the little journals sold for five centimes each. The "Figaro" pretends now to be royalist, just as it pretended under the Empire to be in the liberal opposition; and it let M. Saint Geneste fall foul of the Republic as it once let M. Rochefort rain epigrams on the Empire. At bottom the "Figaro" has no principles — except to sell as many copies as possible. It has skillfully allowed honest and enthusiastic writers to urge their causes in its columns with what heat and strength they might: as their articles were signed, the paper bore no odium for their opinions, while it reaped the benefit of the attention they might attract. Nowadays its political attacks are perfunctory, and but little notice is paid to them by any serious politician. It continues to defend the throne and the altar in the language of the tap-room and the stable; but the circulation of the paper in no wise depends on these empty assaults. It may be that this violent devotion to reactionary faith pleases the old ladies of the conservative party; and certainly the "Figaro" — so Mr. Hamerton tells us — is taken throughout France by the country *curés*.

A NEWSPAPER KIOSQUE ON THE BOULEVARD.

The real cause of the "Figaro's" success is the skill with which it reflects the shifting scenes and opinions of the boulevard. A glance at its make-up will show how carefully it has considered the taste of the modern Athenians who idle away their time under the shadow of the opera. It is a four-page paper. On the lower third or fourth of the first and second pages is the *feuilleton*, or daily installment of the serial story which is now to be found in every well-regulated French newspaper. The opening article on the first page is what we should call the chief "editorial" and what the English term a "leader." In Paris it is known as a *chronique*, and in the "Figaro" it is always signed by the writer's name or pseudonym. Here in this post of honor are placed the vehement protests of M. Saint Geneste, of the pompous person who signs himself "Ignotus," and of the other political polemists of his kind. Here, in default of a political essay, are placed the social essays of M. Albert Wolff, of M. Bergerat, and of the other lively writers who devote themselves to the manufacture of the glittering and flimsy *article de Paris*. Here the "Figaro" is wont to put the paper it has coaxed from the man of the moment — from M. Émile Zola, for example, whom it engaged, after his quarrel with the "Voltaire," to contribute a weekly essay on topics chosen by himself. (M. Zola's volume "Une Cam-

pagne" is a reprint of most of these "Figaro" articles.) Generally the second article is a series of paragraphs, personal and political, put under the title of "Echoes of Paris" and signed "The Iron-Mask." The final paragraphs are jokes, not long and often broad.

THE OFFICE OF THE "TEMPS."

After these may come a "society" article, a report of the proceedings of the two chambers, a review of the other papers, a summary of the chief cases in the law-courts, an occasional letter from a special or a foreign correspondent, and a column of local news — accidents, fires, murders, and the like. These fill the second page and lap over on the third. The advertisements generally begin on the third page and fill the fourth.

Most of the reading-matter on the third page is given up to the theaters, which are probably more amply considered in the "Figaro" than in any other daily paper in the world — and this is typical of the importance of the theater in France. New plays are criticised at length by the dramatic critic, M. Auguste Vitu, a writer with a wide knowledge of theatrical history. M. Vitu's criticisms are of special value to those who seek to know the probable success of a new play, since he is apt to yield his own judgment somewhat to popular opinion. The musical criticisms were signed "Benedict," which is a pseudonym of M. Jouvin, the son-in-law of Villemessant, the founder of the "Figaro." There is a column of theatrical notes and news, announcements of new plays, anecdotes, puffs, and so forth. There is a list of plays to be acted at the different theaters that night; and during the theatrical season there is an article called the "Soirée Théâtrale," in which a "Monsieur de l'Orchestre," formerly M. Arnold Mortier and now M. Émile Blavet, gossips about the theatrical sensation of the hour, describing the people present at an important "first night," commenting on the scenery and the costumes, and inventing humorous conversations between histrionic celebrities. The connection of the "Figaro" with the theater has always been very close. Nearly every one of its writers has written plays, and M. Millaud, the comic poet of the "Figaro," and M. Philippe Gille, the editor of the department of "Paris Echoes," and the

late M. Mortier have all collaborated with M. Henri Meilhac. M. Vitu was the French adapter of Signor Giacometti's "Morte Civile," the painful play in which Salvini acts with so much pathetic effect. M. Jules Prével, the collector of theatrical news, M. Émile Blavet, and M. Albert Wolff are other of the contributors to the "Figaro" who are also contributors to the stage.

It was in 1826 that "Figaro" was first used as the name of a weekly paper, which lived brilliantly for seven years. Many attempts were made to revive it, notably one by M. Alphonse Karr in 1837. But its actual resurrection took place in 1854, when the late M. de Villemessant, with the aid of Auguste Villemot, Edmond About, M. Francisque Sarcey, M. Aurélien Scholl, M. Charles Monselet, M. Théodore de Banville, and other wits as lively, succeeded in making the "Figaro" the most alert and vivacious weekly journal in Paris. In 1866, when the daily "Événement," belonging also to Villemessant, was suppressed, he filled its place instantly by turning the "Figaro" into a daily. Then came the engagement of M. Henri Rochefort and his rattling fire of small shot against the Empire and the Emperor. Villemessant, leaving the responsibilities of these attacks to the man whose signature

THE OFFICE OF THE "FIGARO."

they bore, artfully counterbalanced them by other signed articles defending the Empire or advocating the Legitimist cause. When M. Rochefort's violence became dangerous to the "Figaro," Villemessant advised him to found a paper of his own, and the result was the "Lanterne," which lighted up the last days of the last Empire.

This is typical of Villemessant's tact in using honest enthusiasm to turn the "Figaro's" grindstone; and the "Figaro" has always an ax to grind. Of the important newspapers of the world, the "Figaro" is the least reputable and the most frankly mercenary. Its columns are for sale to the highest bidder. Its financial review, and with this the right to control every paragraph in the paper bearing in any way on the money market, stocks, investments, etc., are sold openly to the Banque Parisienne for a sum exceeding a quarter of a million francs a year. Puffs of all kinds can be seen on every page: the mingling of advertisements with the more important articles of a newspaper, so that the praise of the advertiser seems to be the expression of editorial opinion, is a prevailing sin of most Parisian journals; but no other paper is quite so shameless as the "Figaro." Even its literary and dramatic departments are tainted. The "Figaro" publishes on Wednesdays and Saturdays a literary supplement, much as the American daily enlarges its Sunday issue; and this supplement, in addition to a letter from London, other odd bits of correspondence, and a few selected articles, contains a review of current literature with abundant quotations from books of the day. Many of these criticisms are the work of friendship; some are purchased. If a publisher wishes a few words of praise in the "Figaro" to precede the quotation of the most striking chapter of a new novel, he finds that there is a regular tariff for this as for any other advertisement. One of the oldest of French dramatists, speaking to me of the "Figaro," said that "it is nothing but a shop"—and such, in fact, it is.

It is, however, an example of successful shopkeeping. Its circulation varies from sixty to eighty thousand copies daily, and its profits from advertisements, both open and concealed, are large. Within a few years it has moved into a house of its own, in the Rue Drouot. In this hotel the "Figaro" now and again gives receptions to visiting notabilities, calling on the leading artists of the leading theaters of Paris to aid in entertaining the wandering monarch or prince after he or she has finished inspecting the power-presses, the business offices, and the editorial rooms. The building is a rather erratic specimen of Parisian architecture. The front is adorned by a bronze statue of *Figaro*, ordered only after a competition of designs. On the ground-floor of the building is another money-making invention of the "Figaro's"—the *Salle de dépêches*, a hall in which the public can gaze on the latest dispatches, maps of the seat of war wherever it

ALBERT WOLFF.

may now chance to be, sketches, autographs, and caricatures of the celebrities of the moment.

M. Albert Wolff is the typical writer for the "Figaro." His biography, by the friendly hand of M. Toudouze, was given to the world three or four years ago. M. Wolff is called a Parisian of the Parisians, and he thinks himself the absolute quintessence of the boulevards, but by birth he is a German. As a boy in Cologne he met that other typical Parisian, Offenbach, and became possessed of the idea that Paris was the center of the solar system. He made his first appearance in literature with a book of comic travels on the Rhine, illustrated by his own rough wood-cuts. Then he wrote sentimental tales for children. Suddenly he gave up Germany and German for Paris and French. In Paris he had to begin at the bottom; but he had wit and will, and in time he began to be noticed as a writer of flashing brilliancy. He toiled at his trade of acquired cleverness, and he learnt the art of being a Parisian. He collaborated with M. Rochefort in writing a farce or two, and with M. Blum in writing the "Memoirs of Thérésa, by Herself," a book which had a questionable notoriety. By dint of hard labor he made himself a Frenchman, as his fellow-German Grimm, as the Englishman Hamilton, as the Italians Galiani and Fiorentino had done before him. He

is as clever as Fiorentino, and as much feared. He is the art critic of the "Figaro," and he writes its annual report on the Salon. It may suffice to say that although his hostility is dreaded, his praise is not respected — yet of course it has its influence.

The success of the "Figaro" has led to many imitations. The chief of these are the "Gaulois," the "Événement," the "Voltaire," and the "Gil Blas." The "Gaulois" is the oldest and has had the most ups and downs; it has less originality and says ditto to the "Figaro" more persistently than the others. The "Événement" is perhaps the most prosperous of the "Figaro's" immediate rivals; its circulation is more than half as large; its theatrical gossip is as accurate as the "Figaro's" and more aggressive; and in M. Aurélien Scholl it had a writer of chroniques quite as Parisian as M. Wolff and far wittier. M. Scholl writes too much, and the quality of his writing suffers from the quantity, but at his best he is really a wit. He has written countless columns of copy, but lost in this mass are articles of the finest temper and the most perfect point.

I remember hearing M. Sarcey say that there could be collected from M. Scholl's essays a book of two hundred or three hundred pages equal to the best of Chamfort — and Chamfort is the French equivalent for Sheridan or Sydney Smith. Even M. Scholl's average articles are very clever — clever, indeed, as the acting of Mme. Sarah Bernhardt, the plays of M. Victorien Sardou, or the architecture of M. Charles Garnier, all very clever Parisians. The "Voltaire" is also prosperous; among its chief writers are M. Ranc, M. Naquet, and M. J. J. Weiss, one of the sharpest and most sarcastic of all French journalists. The "Voltaire" owes much of its circulation to the skill with which its serial stories are chosen. M. Émile Zola was once the dramatic critic of the "Voltaire."

Here occasion serves to note how many distinguished French authors have been engaged as dramatic critics on the daily papers. M. Zola now no longer writes dramatic criticism, as the success of his novels has made him independent. M. Alphonse Daudet was in 1882 the dramatic critic of the "Parlement," and M. Georges Ohnet held the same post on the "Constitutionnel." M. Adolphe Jullien, the erudite author of the "History of Theatrical Costume" and of several studies in the history of music, is the musical critic of the "Français." M. François Coppée, the poet, criticised the acted drama for the "Patrie," and his fellow-poets M. Armand Silvestre and M. Henri de Bornier did the same for the "Estafette" and the "Nouvelle Revue." Three other poets are or until recently have been dramatic critics — M. Théodore de Banville, M. Jean Richépin, and M. Paul Arène. And while these distinguished writers are dramatic critics just as Théophile Gautier was a dramatic critic, simply because the position is honorable and remunerative, — for a poet must live, — the chief of those who are dramatic critics by vocation because they love their work, M. Francisque Sarcey of the "Temps" and M. Auguste Vitu of the "Figaro," have also done noteworthy work in other branches of literature and journalism.

The "Gil Blas" as a rival of the "Figaro" demands a few words by itself. It was started seven or eight years ago, in the belief that a purely literary daily paper would succeed in Paris. Unfortunately the belief was not founded on fact, as the event proved, and the "Gil Blas" came near foundering. It was in the habit of printing short stories, sketches, and little tales in nearly every number. One day it published a funny story as broad as anything in Boccaccio or Balzac's "Contes Drolatiques." That day the "Gil Blas" sold its whole edition. A few days later another story of the same sort appeared, and was eagerly bought. In a little while the circulation of the "Gil Blas" quadrupled. Again a little while and the paper was seized by the police. It mended its manners and its morals for a time. When next it fell from grace the police seized it again. Having attracted attention, the "Gil Blas" has now moderated its grossness, and is trying to regain its position as a literary journal. M. Guy de Maupassant, M. Théodore de Banville, M. Jean Richepin, M. Armand Silvestre are all clever men, and their writing is often brilliant, but work like theirs in the "Gil Blas" — to use Cowper's words —

> "Shines in the dark, but ushered into day
> The stench remains, the luster dies away."

The success of lively and entertaining newspapers like the "Figaro" and the "Événement" has greatly cut into the circulation and diminished the influence of the staid and sober papers like the "Journal des Débats." The "Parlement," the organ of M. Dufaure, was recently consolidated with the equally judicial and temperate "Débats." In an article on the Forty Immortals of the French Academy, in the number of THE CENTURY for January, 1884, there was a portrait of M. John Lemoinne, the chief writer on the "Débats" and in many respects the foremost of French journalists. Among his fellow-contributors are M. Renan, M. Taine, and M. Cuvillier-Fleury, all of whom are also members of the Academy. It was for the "Débats" that Jules Janin wrote his famous dramatic criticisms, now well-nigh unreadable. The "Constitutionnel" and the "Siècle" are fast fading away. It is said that the

circulation of the "Constitutionnel" is now only two thousand. Edmond About, the novelist, was the founder and manager of the "XIX^e Siècle," and it was to his own paper that he contributed his manly "Romance of an Honest Man." The "XIX^e Siècle" was the organ of the anti-clerical middle class, the Voltairean bourgeois. Its success was assured when it took a bold and patriotic position during the revolutionary usurpations of the 16th of May; after About's death it lost its grip.

"La France" was founded by the late Émile de Girardin, the inventor (in France, at least)

ROCHEFORT.

of the cheap newspaper. In his hands the paper was a militant republican organ. Like the "XIX^e Siècle," its opportunity came with the reactionary and insidious intrigues of the 16th of May. The double-leaded and double-shotted articles of M. de Girardin were awaited daily with the utmost interest; the crowds formed in line before the kiosques every afternoon to get early copies of the paper; and its circulation rose at one time to 120,000 copies. But Girardin is dead, "La France" has gone over to the monarchists and the anarchists, and its influence has departed. Under Émile de Girardin "La France" fought side by side with the "République Française," the paper started in 1871 by Gambetta with the aid of M. Challemel-Lacour, M. Paul Bert, M. Spuller, M. Ranc, and M. de Freycinet. It was his share in the "République Française" which made Gambetta financially independent. In the hands of his friends it is the outspoken advocate of the policy he professed, and its influence on contemporary politics is perhaps larger than that of any other paper in Paris — excepting only the "Temps." Part of this influence is due to the circulation of more than 150,000 achieved by a one-cent tender to the "République Française"—the "Petite République Française," a tiny little sheet, modeled on the "Petit Journal," and advocating with mingled vigor and moderation the same broad views of French politics which are set forth in the parent paper.

Among the more radical journals are the "Justice," the "Rappel," and the "Intransigeant." The "Justice" is the organ of M. Clémenceau. The "Rappel" was the organ of Victor Hugo: it was started just before the fall of the Empire by his two sons, now both dead, and by his chief disciples and personal adherents, M. Paul Meurice and M. Auguste Vacquerie. It beats time for the more advanced democrats. Its chief writer is M. Edouard Lockroy, who married the widow of one of Hugo's sons. The "Rappel" has a literary quality more pronounced than is usual in polemic and political newspapers. It was in the "Rappel" that M. Henri Rochefort, when he was an exile, published the most of his serial stories, at least one of which, "Mlle. Bismark," has been translated in America.

M. Rochefort is one of the most striking figures in contemporary Parisian journalism, and his career is curious in its contrasts. A radical republican of an advanced type, M. Rochefort is by birth the Marquis de Rochefort-Luçay. A free-thinker now of the most aggressive school, one of M. Rochefort's earliest efforts in literature was a poem in honor of the Virgin. Successful beyond expectation in his destructive attacks on the hollow pretensions of the Second Empire, M. Rochefort began as a hack writer of comic copy for the minor papers and as a maker of cheap farces for the minor theaters. It is to be said, however, that M. Rochefort's entrance into politics was almost accidental, and that his bitterest diatribes owe their effect chiefly to his mastery of the methods of comic journalism. In fact, M. Rochefort's transformation from a lively critic of ephemeral fashions into a stinging assailant of the Imperial Government was a slow and gradual evolution, and it took the best of three years (1865–1868) before the change was complete. It was in June, 1868, that he abandoned

CLÉMENCEAU.

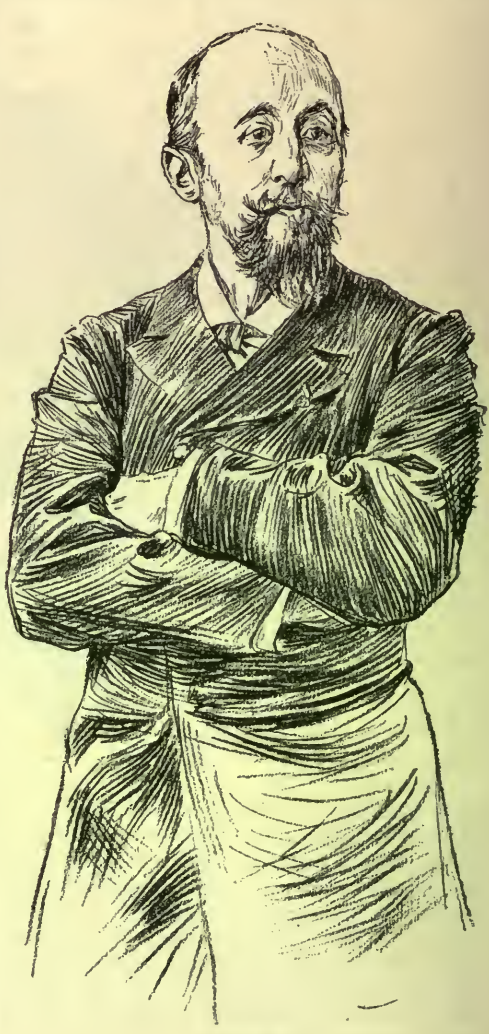
the "Figaro," and issued the first number of his own weekly, the "Lanterne," a little pamphlet of thirty-two pages, clad in a cover of fiery red. Of the first number eighty thousand copies were sold. In the "Lanterne," the flippant chatter of the "Figaro" no longer accompanying it, the girding wit of M. Rochefort had full play, and the Imperial court winced under the satire which made it ridiculous. When the "Lanterne" was forbidden in France, its offices were transferred to Brussels, and the weekly numbers were smuggled into France. A favorite device was to pack them inside plaster busts of the Emperor of the French. In 1869 M. Rochefort was elected to the Assembly, and returning to Paris, founded the "Marseillaise." It was in consequence of articles in the "Marseillaise" that one of its contributors, Victor Noir, called on Prince Pierre Bonaparte and was shot dead by the Prince. Arrested in February, 1870, M. Rochefort was set free in September by the fall of the Empire. In February, 1871, he founded the "Mot d'Ordre," and in September he was condemned to a long term of imprisonment for his part in the resistance of the Commune of Paris to the Republic of France. Sent in 1873 to New Caledonia, he escaped in 1874, crossed America, paused in London, and settled in Geneva, whence he returned to Paris in July, 1880, when the general amnesty of the communists was proclaimed. Two days after his return he brought out a new daily paper, "L'Intransigeant," which remains the mouthpiece of the extreme Left, impracticable and intractable. "L'Intransigeant" seems, however, to be to the taste of a certain section of Parisians, for its circulation is quite thirty thousand copies — nearly as large as that of the "Temps," which most competent critics would be inclined to call the best paper in Paris. "L'Intransigeant" is M. Rochefort's personal organ; it says what he thinks, and it is read simply to see what he says; its importance is due wholly to M. Rochefort. And so the "Justice" is the personal organ of M. Clémenceau: but M. Clémenceau is taken seriously and M. Rochefort is not. The "République Française" was Gam-

betta's organ, but Gambetta was the center of the strongest and sanest group in French politics, and the "République Française," although it has lost a little of its circulation since Gambetta's death, did not depend on any one man, however popular or able. It is a good general newspaper, while "L'Intransigeant" of M. Rochefort and the "Justice" of M. Clémenceau are organs, no more and no less.

The "Temps" and the "République Française" are the best representations of the temperate, moderate, and yet vigorous republicanism of France. The "République Française" is tainted by a certain aggressive agnosticism, the result of a violent reaction against ultramontane pretensions. The "Temps" is Protestant in its leanings. The "République Française" is a morning journal, and the "Temps" is an afternoon paper: they support the same views, and pay the same attention to foreign affairs. The "Temps" is now owned and managed by M. Adrien Hébrard and M. Jacques Hébrard, who are both senators. It has the strongest staff of any Parisian paper. In foreign correspondence, in political information and criticism, in literary and artistic reviewing, and even in the gathering of news, it is the foremost of French newspapers. In its sobriety of tone and dignity of manner it resembles the best English and American dailies. It is in the "Temps" that M. Edmond Schérer publishes his critical articles, and M. Schérer is the French critic whose articles on Wordsworth and Goethe served as texts for two of Mr. Matthew Arnold's most interesting essays. M. Schérer is, in a measure, the successor of Sainte-Beuve, but he has not yet Sainte-Beuve's authority. His mind and his manner are drier and have less charm; but none the less is he a chief representative of the higher criticism in France.

Among the other eminent literary contributors is M. Legouvé, the dramatist, who published in the "Temps" the most of his admirable notes on reading aloud, an art of which he is past-master. The art critic is M. Paul Mantz, and the musical critic is M. Weber; and, although they may have equals among their fellow-journalists, they have no superiors. The dramatic critic is M. Francisque Sarcey, to whom I shall recur shortly. There is a weekly scientific review by M. Vernier. There is an abundance of foreign correspondence of a very high quality. There is a weekly sketch of country life called "La Vie à la Campagne," by M. Georges de Cherville; and there was a weekly chronique called "La Vie à Paris," by M. Jules Claretie. Since the fall of 1885, when M. Claretie was appointed director of the Théâtre Français, this article has been contributed by that charming writer, M. Anatole France.

M. Jules Claretie is perhaps best known in America as a novelist. His "M. le Ministre" and "Le Million" have been translated — or rather mistranslated, for the books were shamefully mangled — for American readers. "M.



CLARETIE.

le Ministre" is an admirable novel; it stands even a comparison with the "Numa Roumestan" of his friend M. Alphonse Daudet, which deals with a subject closely akin. As a novelist M. Claretie has had the tact and the insight to borrow from the naturalists just enough of their descriptive methods, without allowing the exhibition of things to overpower the revelation of persons. Besides his novels, M. Claretie has also written plays, at least one of which, the "Régiment de Champagne" has been acted in the United States. He is also a historian, and he has made the epoch of the French Revo-

lution wholly his own. He has a wider knowledge of literature and life in England and in Germany than most Frenchmen, having frequently visited both countries. Next to the breadth of his knowledge of men and things, he has indefatigable industry, and the union of these two qualities makes him one of the foremost journalists of France. M. Claretie has a pleasant wit and a sharp eye; his tastes are clean and honorable; and so the best of his chroniques in the "Temps" was sometimes not unlike one of Mr. George William Curtis's always delightful "Easy-Chair" articles, and the worst of them was always an amusing medley of judicious observation and antiquarian research. As M. Claretie's chroniques in the "Temps" were more widely quoted from than any other non-political articles of the Parisian press, it is no wonder that they have found many readers when gathered together into annual volumes. The future historian of manners and customs and fashions and ephemeral fancies will have no more trustworthy source of information than the yearly tomes of M. Claretie's "Vie à Paris." (For the instruction of the inquiring, it may be noted that M. Claretie pronounces his name "Clar-ty.")

The honor of being the most quoted writer on the "Temps" M. Claretie shared with M. Sarcey, whose criticism of the drama of the day fills the ground-floor of the "Temps" every Sunday afternoon. M. Sarcey is a graduate of the Normal School; and M. Taine and About were his classmates there. When they left the school in 1848, M. Taine was first, About third, and M. Sarcey fifth. For ten years M. Sarcey taught; then he gave up teaching and took to journalism under the guidance of his friend About. M. Sarcey has recently written a lively and instructive account of his life at the Normal School and of the constant intellectual fencing in which the brilliant band of scholars indulged. He asserts that he can always tell a graduate of the Normal School by the sincerity of his disputation, and he informs us that the scholars had declared war on two formulas only too frequently heard in debate. One of these is the assertion that the adversary is an ass, and the other impugns his motives, declaring that he is too clever to believe what he says. Whenever, therefore, any of the young debaters lost his temper and sneered at the sincerity of his opponent, the entire body arose as one man and said: "Sir, you are an ass!" And when he protested in vain, the chorus rejoined: "Then you do not believe a word of what you say." The German students have in like manner made war on two other silly formulas, which they term the apple and the spinach argument. The apple argument is the twitting of an opponent with a change of opinion, and it is so called because an apple when accused of having changed color answered that "it is only bad fruit which remains green"; and the spinach argument is the self-congratulation on the fact that one does not think like the opponent, and it is so called because a lady once declared that she was very glad she did not like spinach, for if she did, she would eat it, and she could not bear it.

The robust sincerity thus learnt in the Normal School M. Sarcey has carried through life. M. Sarcey is honest, earnest, and devoted to his work, whether it be the exposure of an ultramontane trick or the analysis of a new play. He used to roast a priest for breakfast every morning in the "XIX^{e} Siècle," and he parboils himself every evening in one of the Parisian play-houses, all of which are as innocently free from ventilation as a Turkish bath. M. Sarcey is independent; he has never been willing to join any society or to accept any honors; more than once has he refused the cross of the Legion of Honor. His special characteristics are a robust and broad common sense and an equally broad good humor. As a dramatic critic he has attained to the highest repute; his authority, I venture to believe, is greater than was Jules Janin's — and it is assuredly founded on a firmer base. M. Sarcey has a great many qualifications for a dramatic critic, and he has in abundance the most important of all — he is very fond of the theater. He is fair, he is willing to hear both sides, the temper of his mind is judicial, and it is only when he is absolutely convinced of the guilt of the prisoner that the sword of justice falls; but when it does fall, it falls swiftly and to good purpose. M. Sarcey has sympathy with both the dramatic and the histrionic arts. He has insight into both, and he has logically coördinated a system of principles about them both. He is almost the only dramatic critic I know whose report of a performance gives a sound reason for its success or its failure. He has a habit of going at once to the heart of a play, and in telling the story of a drama he sets forth first of all the essential situation, the vital knot, the salient point where this play differs from all other plays. This is a very rare faculty. M. Vitu, for example, contents himself with a verbatim report of the plot of a play, followed by a criticism of its construction and its characters; but M. Sarcey so sets before you the situation that you are enabled to criticise for yourself and to seize at once on every point of his criticism. M. Sarcey has always refused to allow the collection of his dramatic criticisms, declaring that they are journalism and not literature. The only book about the stage he

CORNER OF SARCEY'S LIBRARY.

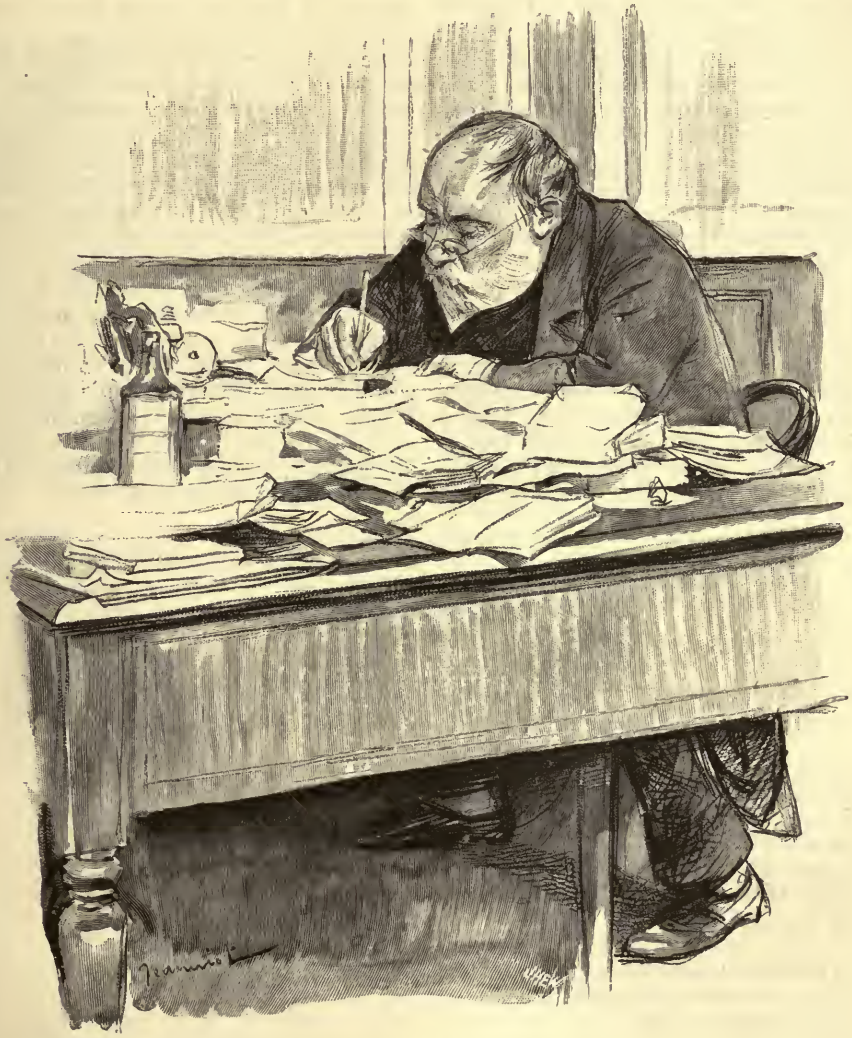
has published is "Comédiens et Comédiennes," a series of biographic criticisms of the leading actors of Paris. A satire of M. Sarcey's on the French fondness for office has been translated in America as "The Miseries of Fo-Hi."

The "Temps," it is to be recorded to its credit, has kept itself free from the financial scandals which disgrace most of the Parisian papers. As a rule a new paper is either started by some stock speculator or its financial columns are sold outright. Even the most of the personal organs of prominent French politicians do not disdain to turn a dishonest penny by the open and unblushing advocacy of all sorts of wild-cat enterprises. Indeed, the more swindling the speculation, the more lucrative is the assistance of the journalist. A French friend told me that he had heard the publisher of a Parisian daily complaining that only sound companies were being launched just then, and that of course there was little or no profit to be made out of sound companies. No puffs of this kind disfigure the "Temps," which is in this, as in most respects, the cleanest and most wholesome of Parisian papers.

In another respect also is the "Temps" setting a good example — its political articles are anonymous. Under the Empire the law required every article to be signed, that the courts might lay hands at once on an offending writer. The effect of this was undoubtedly to lower the tone of discussion, which tended always to leave the secure ground of argument for the quaking morass of personality. Both the "Temps" and the "République Française" let their admirable political articles speak for themselves without the intrusion of the personality of the writer. The purely artistic criticisms — literary, dramatic, or musical — still bear the signatures of the writers.

The most widely circulated daily paper in Paris, and indeed in the world, is the "Petit Journal," which prints daily more than half a million copies. The "Petit Journal" is a tiny little four-page paper, sold for a cent. It contains a daily chronique, a few items of news, a little correspondence, a little theatrical gossip, nearly a page of advertisements, and installments of two serial stories. To these

serial stories the keeping up of its circulation is due. The announcement of the beginning in its columns of a new novel by one of the writers beloved of its readers suffices sometimes to send up its circulation fifty thousand copies. On the other hand, with an unsatisfactory story its circulation soon drops. To guard against this, probably, there are two serials, that one may hit if the other miss. The authors most popular with the readers of the "Petit Journal" have little popularity elsewhere, and their stories, when reprinted as books, have only an insignificant sale. Chief among them are M. Émile Richebourg, M. Xavier de Montépin, and M. Arthur Arnould.



SARCEY.

One of the most characteristic of Parisian journals remains to be considered; this is the "Charivari." George Eliot opens her essay on Heine with a quotation from Goethe to the effect that "nothing is more significant of men's characters than what they find laughable"; and in one of her novels she declares that a difference of tastes in jests is a great strain on the affections. The Parisian of the boulevards is a laughing biped without feathers; his wit is easy and his humor free: he is not like the Scots editor who "jocked wi' difficulty"; and his taste in jests can be best discerned in "Charivari." The Frenchman born with a bitter wit created the vaudeville, so the saying goes; and he also created the comic paper.

"Le Charivari"— which was the model of "Punch," as the sub-title of that journal attests to the present day — was founded more than half a century ago by Charles Philipon, the inventor of the historic likeness of Louis Philippe to a pear. The comic journalist is like unto the Irish-American immigrant who when questioned as to his politics asked anxiously, "Have ye a government? — Thin I'm ag'in' it!" "Le Charivari" was against the government of Louis Philippe, so was it against the Republic of 1848, and so would it have been against the Second Empire, if the Imperial censors had not held it bound and muzzled. Forced to turn from the manly satire of politics to the more effeminate satire of fashion and life, "Le Charivari" lost much of its influence and power. The boisterous fun of Cham and the delicate indelicacies of M. Grévin but ill made up for the loss of the rough-and-ready satires of Daumier, often of a vigorous and vitriolic brutality unmatched in the history of caricature. Only too frequently both the text and the illustrations of "Le Charivari" and of its fellow comic papers "Le Journal Amusant" and "Le Petit Journal Pour Rire" bear witness to the French worship of the strange goddess. Only too frequently are they absolutely unfit for publication. M. Taine, in his "Notes on England," was specially struck by the total unlikeness of the English comic paper to the French in the subjects it treated and in the decency and cleanliness of the treatment. The English comic paper, like the English novel, is written to be read by the English young lady, while the French comic paper, like the French novel, is more often than not intended only for men, or for women who are willing to look at life as a coarse-grained man views it. Of course it is easy to say that just as the French novel is more artistic than the English,— I do not include the American novel with the English here,— so the French comic paper is comic while the English not unfrequently is comic only in intent; but this is in reality only an aggravation of the offense. There is no sin more heinous than letting the devil have all the fun. It is to be said for "Le Charivari" that it has never speculated in pornography, and that its lapses from what we of the English stock are wont to consider as good morals, if not good taste, are accidental rather than premeditated. It remains to be noted that "Le Charivari" is a four-page daily,— and for many years it was the only illustrated daily paper in the world. Its illustration or illustrations fill the most of the third page: formerly they were lithographic, but they are now produced by one of the many mechanical processes.

Brander Matthews.

THE WINGING HOUR.

"It is better to do the most trifling thing in the world than to consider a half hour a trifle."
GOETHE'S *Sprüche in Prosa.*

STAY not! Pause not!
The noon is near;
The sun hath climbed the height.
Stay not nor fear!
Follow till thy work be done!
On, ever on!

No summer beam shall scorch thee,
Nor sudden wave o'erwhelm thee,
Till thy task be ended.
On, ever on!
Through the mist and through the night,
Through the blinding morning light,
By elements befriended,
Till thy work be done.

Thou wouldst sail the sea,
The mountain wouldst thou scale,
Upon the starry worlds
Exhaust thy vision frail,
Stay not for the storm
And stay not for the hour,
A greater master yet
Holds thee in his power.

The noon is here,
Thy work undone,
The end draws near
Ere thou hast won.

Conquer Death, for he is weak
And the gathering days are strong!
Time to struggle, time to seek
While the untired moments throng
Close about thee; seize the first!
Then to thee the second turns,
And the third is all thine own;
Thine the light and thine the strength,
Thine the throne!

Annie Fields.

AU LARGE.*

BY GEORGE W. CABLE,

Author of "Old Creole Days," "The Grandissimes," "Grande Pointe," etc.

V.

FATHER AND SON.

SUCH strange things storms do,—here purifying the air, yonder treading down rich harvests, now replenishing the streams, and now strewing shores with wrecks; here a blessing; there a calamity. See what this one had done for Marguerite! Well, what? She could not lament; she dared not rejoice. Oh! if she were Claude and Claude were she, how quickly—

She wondered how many miles a day she could learn to walk if she should start out into the world on foot to find somebody, as she had heard that Bonaventure had once done to find her mother's lover. There are no Bonaventures now, she thinks, in these decayed times.

"Mamma,"—her speech was French,—"why do we never see Bonaventure? How far is it to Grande Pointe?"

"Ah! my child, a hundred miles; even more."

"And to my uncle Rosamond's,—Rosamond Robichaux, on Bayou Terrebonne?"

"Fully as far, and almost the same journey."

There was but one thing to be done—crush Claude out of her heart.

The storm had left no wounds on Grande Pointe. Every roof was safe, even the old tobacco-shed where Bonaventure had kept school before the school-house was built. The sheltering curtains of deep forest had broken the onset of the wind, and the little cotton, corn, and tobacco fields, already harvested, were merely made a little more tattered and brown. The November air was pure, sunny, and mild, and trilled every now and then with the note of some lingering bird. A green and bosky confusion still hid house from house and masked from itself the all but motionless human life of the sleepy woods village. Only an adventitious china-tree here and there had been stripped of its golden foliage and kept only its ripened berries with the redbirds darting and fluttering around them like so many hiccoughing Comanches about a dram-seller's tent. And here, if one must tell a thing so painful, our old friend the mocking-bird, neglecting his faithful wife and letting his home go to decay, kept dropping in, all hours of the day, tasting the berries' rank pulp, stimulating, stimulating, drowning care, you know,—"Lost so many children, and the rest gone off in ungrateful forgetfulness of their old hard-working father; yes"; and ready to sing or fight, just as any other creature happened not to wish; and going home in the evening scolding and swaggering and getting to bed barely able to hang on to the roost. It would have been bad enough, even for a man; but for a bird—and a mocking-bird!

But the storm wrought a great change in one small house not in Grande Pointe, yet of it. Until the storm, ever since the day St. Pierre had returned from the little railway station where Claude had taken the cars, he had seemed as patiently resigned to the new loneliness of Bayou des Acadiens as his thatched hut, which day by day sat so silent between the edges of the dark forest and the darker stream, looking out beyond the farther bank, and far over the green waste of rushes with its swarm of blackbirds sweeping capriciously now this way and now that, and the phantom cloud-shadows passing slowly across from one far line of cypress wood to another. But since that night when the hut's solitary occupant could not sleep for the winds and for thought of Claude, there was a great difference inside. And this did not diminish; it grew. It is hard for a man to be both father and mother, and at the same time be childless. The bonds of this condition began slowly to tighten around St. Pierre's heart and then to cut into it. And so, the same day on which Claude in Vermillionville left the Beausoleils' tavern, the cabin on Bayou des Acadiens, ever in his mind's eye, was empty, and in Grande Pointe his father stood on the one low step at the closed door of Bonaventure's little frame school-house.

He had been there a full minute and had not knocked. Every movement, to-day, came only after an inward struggle. Many associations crowded his mind on this doorstep. Six years before, almost on this spot, a mere brier patch then, he and Maximian Roussel had

risen from the grassy earth and given the first two welcoming hand-grasps to the schoolmaster. And now, as one result, Claude, who did not know his letters then, was rising — nay, had risen — to greatness! Claude, whom once he would have been glad to make a good fisherman and swamper, or at the utmost a sugar-boiler, was now a greater, in rank at least, than the very schoolmaster. Truly, "Knowledge is power" — alas! yes; for it had stolen away that same Claude. The College Point priest's warning had come true: it was "good-bye to Grande Pointe!" — Nay, nay, it must not be! Is that the kind of power education is? Power to tear children from their parents? Power to expose their young heads to midnight storms? Power to make them eager to go, and willing to stay away, from their paternal homes? Then indeed the priest had said only too truly, that these public schools teach everything except morals and religion! From the depth of St. Pierre's heart there quickly came a denial of the charge; and on the moment, like a chanted response, there fell upon his listening ear a monotonous intonation from within the door. A reading-class had begun its exercise. He knew the words by heart, so often had Claude and he read them together. He followed the last stanza silently with his own lips.

> "Remember, child, remember
> That you love, with all your might,
> The God who watches o'er us
> And gives us each delight,
> Who guards us ever in the day
> And saves us in the night."

Tears filled the swamper's eyes. He moved as if to leave the place, but paused with one foot half lowered to the ground. His jaws set, a frown came between his eyes; he drew back the foot, turned again to the door, and gave a loud, peremptory knock.

Bonaventure came to the door. Anxiety quickly overspread his face as he saw the gloom on St. Pierre's. He stood on the outer edge of the sill and drew the door after him.

"I got good news," said St. Pierre, with a softening of countenance.

"Good news?"

"Yass.— I goin' make Claude come home."

Bonaventure could only look at him in amazement. St. Pierre looked away and continued:

"'S no use. Can't stand it no longer." He turned suddenly upon the schoolmaster. "Why you di' n' tell me ed'cation goin' teck my boy 'way from me?" In Bonaventure a look of distressful self-justification quickly changed to one of anxious compassion.

"Wait!" he said. He went back into the school-room, leaving St. Pierre in the open door, and said:

"Dear chil'run, I perceive generally the aspects of fatigue. You have been good scholars. I pronounce a half-hollyday till to-morrow morning. Come, each and every one, with lessons complete."

The children dispersed peaceably, jostling one another to shake the schoolmaster's hand as they passed him. When they were gone he put on his coarse straw hat, and the two men walked slowly, conversing as they went, down the green road that years before had first brought the educator to Grande Pointe.

"Dear friend," said the schoolmaster, "shall education be to blame for this separation? Is not also non-education responsible? Is it not by the non-education of Grande Pointe that there is nothing fit here for Claude's staying?"

"You stay!"

"I? I stay? Ah! sir, I stay, yes! Because, like Claude, leaving my home and seeking by wandering to find the true place of my utility, a voice spake that I come at Grande Pointe. Behole me! as far from my childhood home as Claude from his. Friend,— ah! friend, what shall I,— shall Claude,— shall any man do with education? Keep it? Like a miser his gol'? What shall the ship do when she is load'? Dear friend," — they halted where another road started away through the underbrush at an abrupt angle on their right,— "where leads this narrow road? To Belle Alliance plantation only, or not also to the whole worl'? So is education! That road here once fetch me at Grande Pointe; the same road fetch Claude away. Education came whispering, 'Claude St. Pierre, come! I have consfitute' you citizen of the worl'. Come, come, forgetting self!' Oh, dear friend, education is not for self alone! Nay, even self is not for self!"

"Well, den,"— the deep-voiced woodman stood with one boot on a low stump, fiercely trimming a branch that he had struck from the parent stem with one blow of his big, keen clasp-knife,— "self not for self,— for what he gone off and lef' me in the swamp?"

"Ah, sir!" replied Bonaventure, "what do I unceasingly tell those dear school-chil'run? 'May we not make the most of self, yet not for self?'" He laid his hand upon St. Pierre's shoulder. "And who sent Claude hence if not his unselfish father?"

"I was big fool," said St. Pierre, whittling on.

"Nay, wise! Discovering the great rule of civilize-ation. Every man not for self, but for every other!"

The swamper disclaimed the generous imputation with a shake of the head.

"Naw, I dunno nut'n' 'bout dat. I look out

for me and my boy, me.— And, beside,"— he abruptly threw away the staff he had trimmed, shut his knife with a snap, and thrust it into his pocket,—"I dawn't see ed'cation make no diff'ence. You say ed'cation — priest say religion — me, I dawn't see neider one make no diff'ence. I see every man look out for hisself and his li'l' crowd. Not you, but —" He waved his hand bitterly toward the world at large.

"Ah, sir!" cried Bonaventure, "'t is not something what you can see all the time, like the horns on a cow! And yet, sir,— and yet!"—he lifted himself upon tiptoe and ran his fingers through his thin hair — "the education that make' no difference is but a dead body! and the religion that make' no difference is a ghost! Behole! behole two thing' in the worl', where all is giving and getting, two thing', con*trar*y, yet resem'ling! 'T is the left han'— alas, alas! — giving only to get; and the right, blessed of God, getting only to give! How much resem'ling, yet how con*trar*y! The one — han' of all strife; the other — of all peace. And oh! dear friend, there are those who call the one civilize-ation, and the other religion. Civilize-ation? Religion? They are one! They are body and soul! I care not what religion the priest teach you; in God's religion is comprised the total *mécanique* of civilize-ation. We are all in it; you, me, Claude, Sidonie; all in it! Each and every at his task, however high, however low, working not to get, but to give, and not to give only to his own li'l' crowd, but to all, to all!" The speaker ceased, for his hearer was nodding his head with skeptical impatience.

"Yass," said the woodman, "yass; but look, Bonaventure. Di'n' you said one time, 'Knowledge is power'?"

"Yes, truly; and it is."

"But what use knowledge be power if goin' give ev't'in' away?"

Bonaventure drew back a step or two, suddenly jerked his hat from his head, and came forward again with arms stretched wide and the hat dangling from his hand. "Because — because God will not let it sta-a-ay given away! 'Give — it shall be give' to you.' Everything given out into God's worl' come back to us roun' God's worl'! Resem'ling the stirring of water in a bucket!"

But St. Pierre frowned. "Yass,— wat' in bucket,— yass. Den no man dawn't keep nut'n'. Dawn't own nut'n' he got."

"Ah! sir, there is a better owning than to *own*. 'T is giving, dear friend; 't is giving. To get? To have? That is not to own. The giver, not the getter; the giver! he is the true owner. Live thou not to get, but to give." Bonaventure's voice trembled; his eyes were full of tears.

The swamper stood up with his own eyes full, but his voice was firm. "Bonaventure, I don't got much. I got dat li'l' shanty on Bayou des Acadiens and li'l' plunder inside — few kittle' and pan',— cast-net, fish-line', two, t'ree gun', and — my wife' grave, yond' in graveyard. But I got Claude,— my boy, my son. You t'ink God want me give my son to whole worl'?"

The schoolmaster took the woodsman's brown wrist tenderly into both his hands and said, scarce above a whisper, "He gave His, first. He started it. Who can refuse, He starting it? And thou will not refuse." The voice rose —"I see, I see the victory! Well art thou nominated 'St Pierre'! for on that rock of giving —"

"Naw, sir! Stop!" The swamper dashed the moisture from his eyes and summoned a look of stubborn resolve. "Mo' better you call me St. Pierre because I 'm a fisherman what cuss when I git mad. Look! You dawn't want me git Claude back in Gran' Point'. You want me to give, give. Well, all right! I goin' *quit* Gran' Point' and give myself, me, to Claude. I kin read, I kin write, I t'ink kin do better 'long wid Claude dan livin' all 'lone wid snake' and alligator'. I t'ink dass mo' better for everybody; and anyhow, I dawn't care; I dawn't give my son to nobody; I give myself to Claude."

Bonaventure and his friend gazed into each other's wet eyes for a moment. Then the schoolmaster turned, lifted his eyes and one arm toward the west, and exclaimed:

"Ah, Claude! thou receivest the noblest gift in Gran' Point'!"

VI.

CONVERGING LINES.

On the prairies of Vermillion and Lafayette winter is virtually over by the first week in February. From sky to sky, each tree and field, each plain and plantation grove, are putting on the greenery of a northern May. Even on Côte Gelée the housewife has persuaded *le vieux* to lay aside his gun, and the early potatoes are already planted. If the moon be at the full much ground is ready for the sower; and those plowmen and pony teams and men working along behind them with big, clumsy hoes, over in yonder field, are planting corn. Those silent, tremulous strands of black that in the morning sky come gliding, high overhead, from the direction of the great sea marshes and fade into the northern blue, are flocks that have escaped the murderous gun of the pot-hunter. Spring and summer are driving these before

them as the younger and older sister, almost abreast, come laughing, and striving to outrun each other across the Mexican Gulf.

Those two travelers on horseback, so dwarfed by distance, whom you see approaching out of the north-west, you shall presently find have made, in their dress, no provision against cold. At Carancro, some miles away to the north-east, there is a thermometer; and somewhere in Vermillionville, a like distance to the south-east, there might possibly be found a barometer; but there is no need of either to tell that the air to-day is threescore and ten and will be more before it is less. Before the riders draw near you have noticed that only one is a man and the other a woman. And now you may see that he is sleek and alert, blonde and bland, and the savage within us wants to knock off his silk hat. All the more so for that she is singularly pretty to be met in his sole care. The years count, on her brows, it is true, but the way in which they tell of matronhood — and somehow of widowhood too — is a very fair and gentle way. Her dress is plain, but its lines have a grace that is also dignity; and the lines of her face — lines is too hard a word for them — are not those of time, but of will and of care, that have chastened, refined, one another. She speaks only now and then. Her companion's speech fills the wide intervals.

"Yesterday morning," he says, "as I came along here a little after sunrise, there was a thin fog lying only two or three feet deep, close to the level ground as far as you could see, hiding the whole prairie and making it look for all the world like a beautiful lake, with every here and there a green grove standing out of it like a real little island."

She replies that she used to see it so in her younger days. The Acadian accent is in her words. She lifts her black eyes, looks toward Carancro, and is silent.

"You 're thinking of the changes," says her escort.

"Yass; *'t is* so. Dey got twenty time' many field' like had befo'. Peop' don't raise cattl' no mo'; raise crop'. Dey say even dat land changin'."

"How changing?"

"I dunno. I dunno if *'t is* so. Dey say prairie risin' mo' higher every year. I dunno if *'t is* so. I t'ink dat land don't change much; but de peop', yass."

"Still, the changes are mostly good changes," responds the male rider. "'T is n't the prairie, but the people that are rising. They 've got the school-house, and the English language, and a free, paid labor system, and the railroads, and painted wagons, and Cincinnati furniture, and sewing-machines, and melodeons, and Horsford's Acid Phosphate; and they 've caught the spirit of progress!"

"Yass, *'t is* so. Dawn't see nobody seem satisfied — since de army — since de railroad."

"Well, that 's right enough; they ought n't to be satisfied. You 're not satisfied, are you? And yet you 've never done so well before as you have this season. I wish I could say the same for the 'Album of Universal Information'; but I can't. I tell you that, Madame Beausoleil; I would n't tell anybody else."

Zoséphine responds with a dignified bow. She has years ago noticed in herself that, though she has strength of will, she lacks clearness and promptness of decision. She is at a loss, now, to know what to do with Mr. Tarbox. Here he is for the seventh time. But there is always a plausible explanation of his presence, and a person of more tactful propriety, it seems to her, never put his name upon her tavern register or himself into her company. She sees nothing shallow or specious in his dazzling attainments; they rekindle the old ambitions in her that Bonaventure lighted; and although Mr. Tarbox's modest loveliness is not visible, yet a certain fundamental rectitude, discernible behind all his nebulous gaudiness, confirms her liking. Then, too, he has earned her gratitude. She has inherited not only her father's small fortune, but his thrift as well. She can see the sagacity of Mr. Tarbox's advice in pecuniary matters, and once and once again, when he has told her quietly of some little operation into which he and the ex-governor — who "thinks the world of me," he says — were going to dip, and she has accepted his invitation to venture in also, to the extent of a single thousand dollars, the money has come back handsomely increased. Even now, the sale of all her prairie lands to her former kinsmen-in-law, which brought her out here yesterday and lets her return this morning, is made upon his suggestion, and is so advantageous that somehow, she does n't know why, she almost fears it is n't fair to the other side. The fact is, the country is passing from the pastoral to the agricultural life, the prairies are being turned into countless farms, and the people are getting wealth. So explains Mr. Tarbox, whose happening to come along this morning bound in her direction is pure accident — pure accident.

"No, the 'A. of U. I.' has n't done its best," he says again. "For one thing, I 've had other fish to fry. You know that." He ventures a glance at her eyes, but they ignore it, and he adds, "I mean other financial matters."

"*'T is* so," says Zoséphine; and Mr. Tarbox hopes the reason for this faint repulse is only the nearness of this farm-house peeping at

them through its pink veil of blossoming peach-trees, as they leisurely trot by.

"Yes," he says; "and, besides, 'Universal Information' is n't what this people want. The book 's too catholic for them."

"Too Cat'oleek!" Zoséphine raises her pretty eyebrows in grave astonishment — "'Cadian' is all Cat'oleek."

"Yes, yes, ecclesiastically speaking, I know. That was n't my meaning. Your smaller meaning puts my larger one out of sight; yes, just as this Cherokee hedge puts out of sight the miles of prairie fields, and even that house we just passed. No, the 'A. of U. I.,'—I love to call it that; can you guess why?" There is a venturesome twinkle in his smile, and even a playful permission in her own as she shakes her head.

"Well, I 'll tell you; it 's because it brings you and I so near together."

"Hah!" exclaims Madame Beausoleil, warningly, yet with sunshine and cloud on her brow at once. She likes her companion's wit, always so deep and yet always so delicately pointed! His hearty laugh just now disturbs her somewhat, but they are out on the wide plain again, without a spot in all the sweep of her glance where an eye or an ear may ambush them or their walking horses.

"No," insists her fellow-traveler; "I say again, as I said before, the 'A. of U. I.'—" he pauses at the initials, and Zoséphine's faint smile gives him ecstasy—"has n't done its best. And yet it has done beautifully! Why, when did you ever see such a list as this? He dexterously draws from an extensive inner breast-pocket, such as no coat but a book-agent's or a shoplifter's would be guilty of, a wide, limp, morocco-bound subscription book. "Here!" He throws it open upon the broad Texas pommel. "Now, just for curiosity, look at it — Oh! you can't see it from away off there, looking at it sideways!" He gives her a half-reproachful, half-beseeching smile and glance and gathers up his dropped bridle. They come closer. Their two near shoulders approach each other, the two elbows touch, and two dissimilar hands hold down the leaves. The two horses playfully bite at each other; it is their way of winking one eye.

"Now, first, here 's the governor's name; and then his son's, and his nephew's, and his other son's, and his cousin's. And here Pierre Cormeaux, and Baptiste Clement, you know, at Carancro; and here 's Bazilide Sexnailder, and Joseph Cantrelle, and Jacques Hebert; see? And Gaudin, and Laprade, Blouin, and Roussel,— old Christofle Roussel of Beau Bassin,— Duhon, Roman and Simonette Le Blanc, and Judge Landry, and Thériot,— Colonel Thériot,— Martin, Hebert again, Robichaux, Mouton, Mouton again, Robichaux again, Mouton — oh, I 've got 'em all! — Castille, Beausoleil — cousin of yours? Yes, he said so; good fellow, thinks you 're the greatest woman alive." The two dissimilar hands, in turning a leaf, touch, and the smaller one leaves the book. "And here 's Guilbeau, and Latiolais, and Thibodeaux, and Soudrie, and Arcenaux — flowers of the community — 'I gather them in' — and here 's a page of Côte Gelée people, and — Joe Jefferson had n't got back to the Island yet, but I 've got his son; see? And here 's — can you make out this signature? It 's written so small —"

Both heads,— with only the heavens and the dear old earth-mother to see them,— both heads bend over the book; the hand that had retreated returns, but bethinks itself and withdraws again; the eyes of Mr. Tarbox look across their corners at the sedate brow so much nearer his than ever it has been before, until that brow feels the look and slowly draws away. Look to your mother, Marguerite; look to her! But Marguerite is not there, not even in Vermillionville; nor yet in Lafayette parish; nor anywhere throughout the wide prairies of Opelousas or Attakapas. Triumph fills Mr. Tarbox's breast.

"Well," he says, restoring the book to its hiding-place, "seems like I ought to be satisfied with that; does n't it to you?"

It does; Zoséphine says so. She sees the double meaning, and Mr. Tarbox sees that she sees it, but must still move cautiously. So he says:

"Well, I 'm not satisfied. It 's perfect as far as it goes, but don't expect me to be satisfied with it. If I 've seemed satisfied, shall I tell you why it was, my dear — friend?"

Zoséphine makes no reply; but her dark eyes meeting his for a moment, and then falling to her horse's feet, seem to beg for mercy.

"It 's because," says Mr. Tarbox, while her heart stands still, "it 's because I 've made" — there is an awful pause — "more money without the 'A. of U. I.' this season than I 've made with it."

Madame Beausoleil catches her breath, shows relief in every feature, lifts her eyes with sudden brightness, and exclaims:

"Dass good! Dass mighty good, yass! *'T is* so."

"Yes, it is; and I tell you, and you only, because I 'm proud to believe you 're my sincere friend. Am I right?"

Zoséphine busies herself with her riding-skirt, shifts her seat a little, and with studied carelessness assents.

"Yes," her companion repeats; "and so I tell you. The true business man is candid to

all, communicative to none. And yet I open my heart to you. I can't help it; it won't stay shut. And you must see, I 'm sure you must, that there 's something more in there besides money; don't you?" His tone grows tender.

Madame Beausoleil steals a glance toward him,—a grave, timid glance. She knows there is safety in the present moment. Three horsemen, strangers, far across the field in their front, are coming toward them, and she feels an almost proprietary complacence in a suitor whom she can safely trust to be saying just the right nothings when those shall meet them and ride by. She does not speak; but he says:

"You know there is, dear Jos—— friend!" He smiles with modest sweetness. "G. W. Tarbox does n't run after money, and consequently he never runs past much without picking it up." They both laugh in decorous moderation. The horsemen are drawing near; they are Acadians. "I admit I love to make money. But that 's not my chief pleasure. My chief pleasure is the study of human nature.

"'The proper study of mankind is man.
. . . . . .
Sole judge of truth, in endless error hurled,
The glory, jest, and riddle of the world.'

"This season I 've been studying these Acadian people. And I like them! They don't like to be reminded that they 're Acadians. Well, that 's natural; the Creoles used to lord it over them so when the Creoles were slave-holding planters and they were small farmers. That 's about past now. The Acadians are descended from peasants, that 's true, while some Creoles are from the French nobility. But, hooh! would n't any fair-minded person"—the horsemen are within earshot; they are staring at the silk hat—"Adjieu."

"Adjieu." They pass.

"—Would n't any fair-minded person that knows what France was two or three hundred years ago—show you some day in the 'Album'—about as lief be descended from a good deal of that peasantry as from a good deal of that nobility? I should smile! Why, my dear—friend, the day 's coming when the Acadians will be counted as good French blood as there is in Louisiana! They 're the only white people that ever trod this continent—island or mainland—who never on their own account oppressed anybody. Some little depredation on their British neighbors, out of dogged faithfulness to their king and church,—that 's the worst charge you can make. Look at their history! all poetry and pathos! Look at their character! brave, peaceable, loyal, industrious, home-loving—"

But Zoséphine is looking at the speaker. Her face is kindled with the inspiration of his praise. His own eyes grow ardent.

"Look at their women! Ah, Josephine, I 'm looking at one! Don't turn away.

"'One made up
Of loveliness alone;
A woman, of her gentle sex
The seeming paragon.'

"'The reason firm, the temperate will,
Endurance, foresight, strength, and skill;
A perfect woman, nobly planned,
To warn, to comfort, and command.'

"You can't stop me, Josephine; it 's got to come, and come right now. I 'm a homeless man, Josephine, tired of wandering, with a heart bigger and weaker than I ever thought I had. I want you! I love you! I 've never loved anybody before in my life except myself, and I don't find myself as lovely as I used. Oh, take me, Josephine! I don't ask you to love as if you 'd never loved another. I 'll take what 's left, and be perfectly satisfied! I know you 're ambitious, and I love you for that! But I do think I can give you a larger life. With you for a wife, I believe I could be a man you need n't be ashamed of. I 'm already at the head of my line. Best record in the United States, Josephine, whether by the day, week, month, year, or locality. But if you don't like the line, I 'll throw up the 'A. of U. I.' and go into anything you say; for I want to lift you higher, Josephine. You 're above me already, by nature and by rights, but I can lift you, I know I can. You 've got no business keeping tavern; you 're one of Nature's aristocrats. Yes, you are! and you 're too young and lovely to stay a widow—in a State where there 's more men than there 's women. There 's a good deal of the hill yet to climb before you start down. Oh, let 's climb it together, Josephine! I 'll make you happier than you are, Josephine; I have n't got a bad habit left; such as I had, I 've quit; it don't pay. I don't drink, chew, smoke, tell lies, swear, quarrel, play cards, make debts, nor belong to a club—be my wife! Your daughter 'll soon be leaving you. You can't be happy alone. Take me! take me!" He urges his horse close—her face is averted—and lays his hand softly but firmly on her two, resting folded on the saddle-horn. They struggle faintly and are still; but she slowly shakes her hanging head.

"O Josephine! you don't mean no, do you? Look this way! you don't mean no?" He presses his hand passionately down upon hers. Her eyes do not turn to his; but they are lifted tearfully to the vast, unanswering sky, and as she mournfully shakes her head again, she cries,

"I dunno! I dunno! I can't tell! I got to see Marguerite."

"Well, you 'll see her in an hour, and if she —"

"Naw, naw! 't is not so; Marguerite is in New Orleans since Christmas."

Very late in the evening of that day Mr. Tarbox entered the principal inn of St. Martinville, on the Teche. He wore an air of blitheness which, though silent, was overdone. As he pushed his silk hat back on his head and registered his name with a more than usual largeness of hand, he remarked:

> "'Man wants but little here below,
> Nor wants that little long.'

"Give me a short piece of candle and a stumpy candlestick — and

> "'Take me up, and bear me hence
> Into some other chamber —'"

"Glad to see you back, Mr. Tarbox," responded the host; and as his guest received the candle and heard the number of his room,— "Books must 'a' went well this fine day."

Mr. Tarbox fixed him with his eye, drew a soft step closer, said in a low tone:

> "'My only books
> Were woman's looks,
> And folly 's all they 've taught me.'"

The landlord raised his eyebrows, rounded his mouth, and darted out his tongue. The guest shifted the candle to his left hand, laid his right softly upon the host's arm, and murmured:

"List! Are we alone? If I tell thee something, wilt thou tell it never?"

The landlord smiled eagerly, shook his head, and bent toward his speaker.

"Friend Perkins," said Mr. Tarbox, in muffled voice —

> "'So live, that when thy summons comes to join
> The innumerable caravan which moves
> To that mysterious realm where each shall take
> His chamber in the silent halls of death,
> Thou go not like the quarry-slave at night,
> Scourged to his dungeon, but, sustained and soothed
> By an unfaltering trust, approach thy grave
> Like one that wraps the drapery of his couch
> About him, and lies down to pleasant dreams —'

"Don't let the newspapers get hold of it— good-night."

But it was only at daybreak that Mr. Tarbox disordered the drapery of his couch to make believe he had slept there, and at sunrise he was gone to find Claude.

VII.

'THANASE'S VIOLIN.

Had Marguerite gone to New Orleans the better to crush Claude out of her heart? No, no! Her mother gave an explanation interesting and reasonable enough, and at the same time less uncomfortably romantic. Marguerite had gone to the city to pursue studies taught better there than in Opelousas; especially music.

Back of this was a reason which she had her mother's promise not to mention: the physician's recommendation — a change of scene. He spoke of slight malarial influences and how many odd forms they took; of dyspepsia and its queer freaks; of the confining nature of house cares, and of how often they "ran down the whole system." His phrases were French, but they had all the weary triteness of these; while Marguerite rejoiced that he did not suspect the real ailment, and Zoséphine saw that he divined it perfectly.

A change of scene. Marguerite had treated the suggestion lightly, as something amusingly out of proportion to her trivial disorder, but took pains not to reject it. Zoséphine had received it with troubled assent, and mentioned the small sugar farm and orangery of the kinsman Robichaux, down on Bayou Terrebonne. But the physician said, "If that would not be too dull"; mentioned, casually, the city, and saw Marguerite lighten up eagerly. The city was chosen; the physician's sister, living there, would see Marguerite comfortably established. All was presently arranged.

"And you can take your violin with you and study music," he said. Marguerite had one, and played it with a taste and skill that knew no competitor in all the surrounding region.

It had belonged to her father. Before she was born, all Lafayette parish had known it tenderly. Before she could talk she had danced — courtesied and turned, tiptoed and fallen and risen again, latter end first, to the gay strains he had loved to ring from it. Before it seemed safe, for the instrument, to trust it in her hands, she had learned to draw its bow; and for years, now, there had been no resident within the parish who could not have been her scholar better than to be her teacher.

When Claude came she had shut the violin in its case, and left the poor thing hidden away, despising its powers to charm, lost in self-contempt, and helpless under the spell of a chaste passion's first enchantment. When he went she still forgot the instrument for many days. She returned with more than dutiful energy to her full part in the household cares, and gave every waking hour not so filled to fierce study. If she could not follow him,— if a true maiden must wait upon faith,— at least she would be ready if fate should ever bring him back.

But one night, when she had conned her simple books until the words ran all together on the page, some good angel whispered,

"The violin!" She took it and played. The music was but a song, but from some master of song. She played it, it may be, not after the best rules, yet as one may play who, after life's first great billow has gone over him, smites again his forgotten instrument. With tears, of all emotions mingled, starting from her eyes, and the bow trembling on the strings, she told the violin her love. And it answered her:

"Be strong! be strong! you shall not love for naught. He shall — he shall come back — he shall come back and lead us into joy." From that time the violin had more employment than ever before in all its days.

So it and Marguerite were gone away to the great strange city together. The loneliness they left behind was a sad burden to Zoséphine. No other one thing had had so much influence to make so nearly vulnerable the defenses of her heart when Mr. Tarbox essayed to storm them. On the night following that event, the same that he had spent so sleeplessly in St. Martinville, she wrote a letter to Marguerite, which, though intended to have just the opposite effect, made the daughter feel that this being in New Orleans, and all the matter connected with it, were one unmixed mass of utter selfishness. The very written words that charged her to stay on seemed to say, "Come home!"— Her strong little mother! always quiet and grave, it is true, and sometimes sad; yet so well poised, so concentrated, so equal to every passing day and hour!— she to seem — in this letter — far out of her course, adrift, and mutely and dimly signaling for aid! The daughter read the pages again and again. What could they mean? Here, for instance, this line about the mother's coming herself to the city, if, and if, and if!

The letter found Marguerite in the bosom of a family that dwelt in the old rue Bourbon, only a short way below Canal street, the city's center. The house stands on the street, its drawing-room windows opening upon the sidewalk, and a narrow balcony on the story above shading them scantily at noon. A garden on the side is visible from the street through a lofty, black, wrought-iron fence. Of the details within the inclosure, I remember best the vines climbing the walls of the tall buildings that shut it in, and the urns and vases, and the evergreen foliage of the Japan plum-trees. A little way off, and across the street, was the pleasant restaurant and salesroom of the Christian Women's Exchange.

The family spoke English. Indeed, they spoke it a great deal; and French — also a great deal. The younger generation, two daughters and a son, went much into society. Their name was that of an ancient French noble house, with which, in fact, they had no connection. They took great pains to call themselves Creoles, though they knew well enough they were Acadians. The Acadian caterpillar often turns into a Creole butterfly. Their great-grandfather, one of the children of the Nova Scotian deportation, had been a tobacco farmer on the old Côte Acadian in St. John the Baptist parish. Lake des Allemands lay, there, just behind him. In 1815, his son, their grandfather, in an excursion through the lake and bayou beyond, discovered, far south-eastward in the midst of the Grande Prairie des Allemands, a "pointe" of several hundred acres extent. Here, with one or two others, he founded the Acadian settlement of "La Vacherie," and began to build a modest fortune. The blood was good, even though it was not the blood of ancient robbers; and the son in the next generation found his way, by natural and easy stages, through Barataria and into the city, and became the "merchant" of his many sugar and rice planting kinsmen and neighbors.

It was a great favor to Marguerite to be taken into such a household as this. She felt it so. The household felt it so. Yet almost from the start they began to play her, in their social world, as their best card — when they could. She had her hours of school and of home study; also her music, both lessons and practice; was in earnest both as to books and violin, and had teachers who also were in earnest; and so she found little time for social revels. Almost all sociability is revel in New Orleans society, and especially in the society she met.

But when she did appear, somehow she shone. A native instinct in dress — even more of it than her mother had at the same age — and in manners and speech left only so little rusticity as became itself a charm rather than a blemish, suggested the sugar-cane fields; the orange grove; the plantation house with pillared porch, half-hidden in tall magnolias and laurestines and bushes of red and white camellias, higher and wider than arms can reach, and covered with their regal flowers from the ground to their tops; and the bayou front lined with moss-draped live-oaks, their noon-day shadows a hundred feet across. About her there was not the faintest hint of the country tavern. She was but in her seventeenth year; but on her native prairies, where girls are women at fourteen, seventeen was almost an advanced stage of decay. She seemed full nineteen, and a very well-equipped nineteen as social equipments went in the circle she had entered. Being a school-girl was no drawback; there are few New Orleans circles where it is; and especially not in her case, for

she needed neither to titter nor chatter,— she could talk. And then, her violin made victory always easy and certain.

Sometimes the company was largely of down-town Creoles; sometimes of uptown people,— "Americans"; and often equally of the two sorts, talking French and English in most amusing and pleasing confusion. For the father of the family had lately been made president of a small bank, and was fairly boxing the social compass in search of depositors. Marguerite had not yet discovered that — if we may drag the metaphor ashore — to enter society is not to emerge upon an unbroken tableland, or that she was not on its highest plateau. She noticed the frequency with which she encountered unaccomplished fathers, stupid mothers, rude sons and daughters, and ill-distributed personal regard; but she had the common sense not to expect more of society than its nature warrants, guessed rightly that she would find the same thing anywhere else, and could not know that these elements were less mixed with better here than in any other of the city's circles, of whose existence she had not even heard. However:

Society, at its very best, always needs, and at its best or worst always contains, a few superior members who make themselves a blessing by working a constant, tactful redistribution of individuals by their true values, across the unworthy lines upon which society ever tends to stratify. Such a person, a matron, sat with Marguerite one April evening under a Chinese lantern in the wide, curtained veranda of an Esplanade street house whose drawing-room and Spanish garden were filled with company.

Marguerite was secretly cast down. This lady had brought her here, having met her but a fortnight before and chosen her at once, in her own private counsels, for social promotion. And Marguerite had played the violin. In her four months' advanced training she had accomplished wonders. Her German professor made the statement, while he warned her against enthusiastic drawing-room flattery. This evening she had gotten much praise and thanks. Yet these had a certain discriminative moderation that was new to her ear, and confirmed to her, not in the pleasantest way, the realization that this company was of higher average intelligence and refinement than any she had met before. She little guessed that the best impression she had ever made she made here to-night.

Of course it was not merely on account of the violin. She had beauty, not only of face and head, but of form and carriage. So that, when she stood with her instrument, turning, as it were, every breath of air into music, and the growing volume of the strains called forth all her good Acadian strength of arms and hand, she charmed not merely the listening ear, but the eye, the reason, and the imagination in its freest range.

But, indeed, it was not the limitations of her social triumphs themselves that troubled her. Every experience of the evening had helped to show her how much wider the world was than she had dreamed, and had opened new distances on the right, on the left, and far ahead; and nowhere in them all could eye see, or ear hear, aught of that one without whom to go back to old things was misery, and to go on to new was mere weariness. And the dear little mother at home! — worth nine out of any ten of all this crowd — still at home in that old tavern-keeping life, now intolerable to think of, and still writing those yearning letters that bade the daughter not return! No wonder Marguerite's friend had divined her feelings, and drawn her out to the cool retreat under the shadow of the veranda lanterns.

A gentleman joined them, who had "just come," he said. Marguerite's companion and he were old friends. Neither he nor Marguerite heard each other's name, nor could see each other's face more than dimly. He was old enough to be twitted for bachelorhood, and to lay the blame upon an outdoor and out-of-town profession. Such words drew Marguerite's silent but close attention.

The talk turned easily from this to the ease with which the fair sex, as compared with the other, takes on the graces of the drawing-room. "Especially," the two older ones agreed, "if the previous lack is due merely to outward circumstances." But Marguerite was still. Here was a new thought. One who attained all those graces and love's prize also might at last, for love's sake, have to count them but dross, or carry them into retirement, the only trophies of abandoned triumphs. While she thought, the conversation went on.

"Yes," said her friend, replying to the bachelor, "we acquire them more easily; but why? Because most of us think we must. A man may find success in one direction or another, but a woman has got to be a social success or she 's a complete failure. She can't snap her fingers at the drawing-room."

"Ah!" exclaimed Marguerite, "she can if she want!" She felt the strength to rise that moment and go back to Opelousas, if only — and did not see, until her companions laughed straight at her, that the lady had spoken in jest.

"Still," said the bachelor, "the drawing-room is woman's element — realm — rather than man's, whatever the reasons may be. I had a young man with me last winter —"

"I knew it!" thought Marguerite.

"— until lately, in fact; he 's here in town now,— whom I have tried once or twice to decoy into company in a small experimental way. It 's harder than putting a horse into a ship. He seems not to know what social interchange is for."

"Thinks it 's for intellectual profit and pleasure!" interrupted the ironical lady.

"No, he just does n't see the use or fun of it. And yet, really, that 's his only deficiency. True, he listens better than he talks — overdoes it; but when a chap has youth, intelligence, native refinement, integrity, and good looks, as far above the mean level as many of our society fellows are below it, it seems to me he ought to be —"

"Utilized," suggested the lady, casting her eyes toward Marguerite and withdrawing them as quickly, amused at the earnestness of her attention.

"Yes," said the bachelor, and mused a moment. "He 's a talented fellow. It 's only a few months ago that he really began life. Now he 's outgrown my service."

"Left the nest," said the lady.

"Yes, indeed. He has invented —"

"Oh! dear!"

The bachelor was teased. "Ah! come, now; show your usual kindness; he has, really, made a simple, modest agricultural machine that — meets a want long felt. Oh! you may laugh; but he laughs last. He has not only a patent for it, but a good sale also, and is looking around for other worlds to conquer."

"And yet spurns society? Ours!"

"No, simply develops no affinity for it; would like to, if only to please me; but can't. Does n't even make intimate companions among men; simply clings to his fond, lone father, and the lone father to him, closer than any pair of twin orphan girls that ever you saw. I don't believe anything in life could divide them."

"Ah, don't you trust him! Man proposes, Cupid disposes. A girl will stick to her mother; but a man? Why, the least thing — a pair of blue eyes, a yellow curl —"

The bachelor gayly shook his head, and, leaning over with an air of secrecy, said: "A pair of blue eyes have shot him through and through, and a yellow curl is wound all round him from head to heel, and yet he sticks to his father."

"He can't live," said the lady. Marguerite's hand pressed her arm, and they rose. As the bachelor drew the light curtain of a long window aside, that they might pass in, the light fell upon Marguerite's face. It was entirely new to him. It seemed calm. Yet instantly the question smote him, "What have I done? — what have I said?" She passed, and turned to give a parting bow. The light fell upon him. She was right; it was Claude's friend, the engineer. When he came looking for them a few minutes later, he only caught, by chance, a glimpse of them, clouded in light wraps and passing to their carriage. It was not yet twelve.

Between Marguerite's chamber and that of one of the daughters of the family there was a door that neither one ever fastened. Somewhere downstairs a clock was striking three in the morning, when this door softly opened and the daughter stole into Marguerite's room in her night-robe. With her hair falling about her, her hands unconsciously clasped, her eyes starting, and an outcry of amazement checked just within her open, rounded mouth, she stopped and stood an instant in the brightly lighted chamber.

Marguerite sat on the bedside exactly as she had come from the carriage, save that a white gossamer web had dropped from her head and shoulders and lay coiled about her waist. Her tearless eyes were wide and filled with painful meditation, even when she turned to the alarmed and astonished girl before her. With suppressed exclamations of wonder and pity the girl glided forward, cast her arms about the sitting figure, and pleaded for explanation.

"It is a headache," said Marguerite, kindly but firmly lifting away the entwining arms.— "No, no, you can do nothing.— It is a headache.— Yes, I will go to bed presently; you go to yours.— No, no —"

The night-robed girl looked for a moment more into Marguerite's eyes, then sank to her knees, buried her face in her hands, and wept. Marguerite laid her hands upon the bowed head and looked down with dry eyes. "No," she presently said again, "'t is a headache. Go back to your bed.— No, there is nothing to tell; only I have been very, very foolish and very, very selfish, and I am going home tomorrow. Good-night."

The door closed softly between the two. Then Marguerite sank slowly back upon the bed, closed her eyes, and, rocking her head from side to side, said again and again, in moans that scarcely left the lips:

"My mother! my mother! Take me back! Oh! take me back, my mother! my mother!"

At length she arose, put off her attire, lay down to rest, and, even while she was charging sleep with being a thousand leagues away,— slept.

When she awoke, the wide, bright morning filled all the room. Had some sound wakened her? Yes, a soft tapping came again upon her door. She lay still. It sounded once more. For all its softness it seemed nervous and eager. A low voice came with it:

"Marguerite!"
She sprang from her pillow.—"Yes!"
While she answered, it came again:
"Marguerite!"

With a low cry she cast away the bed-coverings, threw back the white mosquito-curtain and the dark masses of her hair and started up, lifted and opened her arms, cried again, but with joy, "My mother! my mother!" and clasped Zoséphine to her bosom.

VIII.

THE SHAKING PRAIRIE.

MANIFESTLY it was a generous overstatement for Claude's professional friend to say that Claude had outgrown his service. It was true only that by and by there had come a juncture in his affairs where he could not, without injustice to others, make a place for Claude which he could advise Claude to accept, and they had parted, with the mutual hope that the separation would be transient. But the surveyor could not but say to himself that such incidents, happening while we are still young, are apt to be turning-points in our lives, if our lives are going to have direction and movement of their own at all.

St. Pierre had belted his earnings about him under the woolen sack that always bound his waist, shouldered his rifle, taken one last, silent look at the cabin on Bayou des Acadiens, stood for a few moments with his hand in Bonaventure's above one green mound in the church-yard at Grande Pointe, given it into the schoolmaster's care, and had gone to join his son. Of course, not as an idler; such a perfect woodsman easily made himself necessary to the engineer's party. The company were sorry enough to lose him when Claude went away; but no temptation that they could invent could stay him from following Claude. Father and son went one way, and the camp another.

I must confess to being somewhat vague as to just where they were. I should have to speak from memory, and I must not make another slip in topography. The changes men have made in southern Louisiana these last few years are great. I say nothing again of the vast widths of prairie stripped of their herds and turned into corn and cane fields: when I came, a few months ago, to that station on Morgan's Louisiana and Texas railroad where Claude first went aboard a railway train, somebody had actually moved the bayou, the swamp, and the prairie apart!

However, the exact whereabouts of the St. Pierres is not important to us. Mr. Tarbox, when, in search of the camp, he crossed the Teche at St. Martinville, expected to find it somewhere north-eastward, between the stream and Atchafalaya. But at the Atchafalaya he found that the work in that region had been finished three days before and that the party had been that long gone to take part in a new work down in the *prairies tremblantes* of Terrebonne parish. The Louisiana Land Reclamation Company — I think that was the name of the concern projecting the scheme. This was back in early February, you note.

Thither Mr. Tarbox followed. The "Album of Universal Information" went along and "did well." It made his progress rather slow, of course; but one of Mr. Tarbox's many maxims was, never to make one day pay for another when it could be made to pay for itself, and during this season — this Louisiana Campaign, as he called it — he had developed a new art,— making each day pay for itself several times over.

"Many of these people," he said,— but said it solely and silently to himself,—"are ignorant, shiftless, and set in their ways; and even when they 're not, they 're out of the current, as it were; they have n't headway; and so they never — or seldom ever — see any way to make money except somehow in connection with the plantations. There 's no end of chances here to a man that 's got money, sense, and nerve to use it." He wrote that to Zoséphine; but she wrote no answer. A day rarely passed that he did not find some man making needless loss through ignorance or inactivity; whereupon he would simply put in the sickle of his sharper wit and garner the neglected harvest. Or seeing some unesteemed commodity that had got out of, or had never been brought into, its best form, time, or place, he knew at sight just how, and at what expense, to bring it there, and brought it.

"Give me the gains other men pass by," he said, "and I 'll be satisfied. The saying is, 'Buy wisdom'; but I sell mine. I like to sell. I enjoy making money. It suits my spirit of adventure. I like an adventure. And if there 's anything I love, it 's an adventure with money in it! But even that is n't my chief pleasure; my chief pleasure 's the study of human nature.

> "'The proper study of mankind is man.
> . . . . .
> Sole judge of truth, in endless error hurled,
> The glory, jest, and riddle of the world.'"

This spoiling of Assyrian camps, so to speak, often detained Mr. Tarbox within limited precincts for days at a time; but "is n't that what time is for?" he would say to those he had been dealing with, as he finally snapped the band around his pocket-book; and they would respond, "Yes, that 's so."

And then he would wish them a hearty farewell, while they were thinking that at least he might know it was his treat.

Thus it was the middle of February when at Houma, the parish seat of Terrebonne, he passed the last rootlet of railway, and, standing finally under the blossoming orange-trees of Terrebonne bayou far down toward the Gulf, heard from the chief of the engineering party that Claude was not with him.

"He did n't leave us; we left him; and up to the time when we left he had n't decided where he would go or what he would do. His father and he are together, you know, and of course that makes it harder for them to know just how to move."

The speaker was puzzled. What could this silk-hatted, cut-away-coated, empearled free lance of a fellow want with Claude? He would like to find out. So he added, "I may get a letter from him to-morrow; suppose you stay with me until then." And, to his astonishment, Mr. Tarbox quickly jumped at the proposition.

No letter came. But when the twenty-four hours had passed, the surveyor had taken that same generous — not to say credulous — liking for Mr. Tarbox that we have seen him show for St. Pierre and for Claude. He was about to start on a tour of observation eastward through a series of short canals that span the shaking prairies from bayou to bayou, from Terrebonne to Lafourche, Lafourche to Des Allemands, so through Lake Ouacha into and up Barataria, again across prairie and at length, leaving Lake Cataouaché on the left, through cypress swamp to the Mississippi River, opposite New Orleans. He would have pressed Mr. Tarbox to bear him company; but before he could ask twice Mr. Tarbox had consented. They went in a cat-rigged skiff, with a stalwart negro rowing or towing whenever the sail was not the best.

"It 's all of sixty miles," said the engineer; "but if the wind does n't change or drop we can sleep to-night in Achille's hut, send this man and skiff back, and make Achille, with his skiff, put us on board the Louisiana avenue ferry-launch to-morrow afternoon."

"Who is Achille?"

"Achille? Oh! he 's merely 'Cajun pot-hunter living on a shell bank at the edge of Lake Cataouaché — with an Indian wife. Used to live somewhere on Bayou des Allemands, but last year something or other scared him away from there. He 's odd — seems to be a sort of self-made outcast. I don't suppose he 's ever done anybody any harm; but he just seems to be one of that kind that can't bear to even try to keep up with the rest of humanity; the sort of man swamps and shaking prairies were specially made for, you know. He 's living on a bank of fossil shells now,— thousands of barrels of them,— that he knows would bring him a little fortune if only he could command the intelligence and the courage to market them in New Orleans. There 's a chance for some bright man who is n't already too busy. Why did n't I think to mention it to Claude? But then neither he nor his father have got the commercial knowledge they would need. Now—" The speaker suddenly paused and, as the two men sat close beside each other under an umbrella in the stern of the skiff, looked into Mr. Tarbox's pale blue eyes, and smiled, and smiled.

"I 'm here," said Mr. Tarbox.

"Yes," responded the other, "and I 've just made out why! And you 're right, Tarbox; you and Claude, with or without his father, will make a strong team. You 've got no business to be canvassing books, you —"

"It 's my line," said the canvasser, smiling fondly and pushing his hat back,— it was wonderful how he kept that hat smooth,—"and I 'm the head of the line —

"'A voice replied far up the height,
Excelsior!'

"I was acquainted with Mr. Longfellow."

"Tarbox," persisted the engineer, driving away his own smile, "you know what you are; you are a born contractor! You 've found it out, and "— smiling again —"that 's why you 're looking for Claude."

"Where is he?" asked Mr. Tarbox.

"Well, I told you the truth when I said I did n't know; but I have n't a doubt he 's in Vermillionville."

"Neither have I," said the book-agent; "and if I had, I would n't give it room. If I knew he was in New Jersey, still I 'd think he was in Vermillionville, and go there looking for him. And wherefore? For occult reasons."

The two men looked at each other smilingly in the eye, and the boat glided on.

The wind favored them. With only now and then the cordelle, and still more rarely the oars, they moved all day across the lands and waters that were once the fastnesses of the Baratarian pirates. The engineer made his desired observations without appreciable delays, and at night they slept under Achille's thatch of rushes.

As the two travelers stood alone for a moment next morning, the engineer said:

"You seem to be making a study of my pot-hunter."

"It 's my natural instinct," replied Mr. Tarbox. "The study of human nature comes just as natural to me as it does to a new-born duck to scratch the back of its head with its hind foot; just as natural — and easier. The pot-hunter is a study; you 're right."

"But he reciprocates," said the engineer; "he studies you."

ST. PIERRE AND BONAVENTURE IN THE CHURCH-YARD.

The student of man held his smiling companion's gaze with his own, thrust one hand into his bosom, and lifted the digit of the other: "The eyes are called the windows of the soul.—

> "'And looks commercing with the skies,
> Thy rapt soul sitting in thine eyes—'

"Have you tried to look into his eyes? You can't do it. He won't let you. He 's got something in there that he does n't want you to see."

In the middle of the afternoon, when Achille's skiff was already reëntering the shades of the swamp on his way homeward, and his two landed passengers stood on the levee at the head of Harvey's Canal with the Mississippi rolling by their feet and on its farther side the masts and spires of the city, lighted by the western sun, swinging round the long bend of her yellow harbor, Mr. Tarbox offered his hand to say good-bye. The surveyor playfully held it.

"I mean no disparagement to your present calling," he said, "but the next time we meet I hope you 'll be a contractor."

"Ah!" responded Tarbox, "it 's not my nature. I cannot contract; I must always expand. And yet — I thank you.

> "'Pure thoughts are angel visitors. Be such
> The frequent inmates of thy guileless breast.'

"Good luck! Good-bye!"

One took the ferry; the other, the westbound train at Gretna.

(To be continued.)

George W. Cable.

DURHAM CATHEDRAL.

SEAL OF THE SEE OF DURHAM.

FROM the east we turn now to the north-east of England. Here again we find a great Norman church, but one which differs widely from the three Norman sister-churches at Ely, Peterborough, and Norwich.

Among all the cathedrals of England, Durham is perhaps the most imposing, and its situation is magnificent past rivalry. We have seen that Ely stands well; but Durham stands well in an opposite sense. At Ely nature seems to have suppressed herself that there might be no scale by which the immeasurable dignity of man's work could be computed. At Durham she seems to have built a great work of her own just that man's work might complete and crown it; not a pinnacled hill, but a broad promontory with a level summit — a lordly pedestal where sits the lordly group of structures as kings sit upon thrones the single end of whose splendor is to enhance and show their own. Lincoln's site is as grand as Durham's, but Lincoln's only; and at Lincoln beauty does not aid and soften grandeur as it does at Durham.

I.

THE history of the choosing of this site takes us very far back in time.

I have spoken of that early church which had christianized a great part of the British Islands under Roman rule. I have said that with the gradual progress of the English conquest in the fifth and sixth centuries it was swept out of sight and almost out of memory in the south and center of England; but that in the far west it lingered on, and that when the good seed from Rome had begun to bear fruit among the heathen English, it too awoke to missionary effort and played its part in the re-christianizing of the realm. Ireland was the chief nurse of this ancient faith during its long languor. But Irish monks were constantly at work in Scotland, and no early monastery was more famous than that which St. Columba established in the sixth century upon the island of Iona off the western Scottish coast.

The Northumbrian land seems not to have been christianized in British-Roman days. So far as we know, the gospel won its first conspicuous body of adherents when it was preached by Paulinus, one of the missionaries of Rome who came from Kent early in the seventh century with the daughter of Ethelbert when she married King Edwin of Northumbria. Nor was this evangelization final. In 633 Edwin was slain by Penda and Cadwalla, heathens of vigorous arm; Paulinus was obliged to flee, and the district was left again

DURHAM CATHEDRAL FROM THE NORTH-WEST.

to paganism. But when Oswald conquered it in his turn he brought back the Christian faith, which he had imbibed in Scotland, and sent to Iona for priests to help him teach his people. Among those who answered his call was Aidan, whom he made the first bishop of the new diocese he established — the diocese which is now of Durham, but was then called of Bernicia and had its first seat at Lindisfarne.

From Scotland too a little later came the great patron saint of Durham — Cuthbert. An evangelist who preached far and wide in a savage and desolate country, a hermit who lived for nine years in a rude cell on the island of Farne, and then in his turn became bishop of Bernicia, Cuthbert shares with Oswald and Aidan the honor of the final christianizing of the great north-eastern land. Thus we see it owes its faith of to-day not to St. Augustine's mission, but to the old pre-English establishment.

Cuthbert, Oswald, and Aidan were all canonized by Rome; and in their case at least the halo was worthily given, for Oswald was a kingly and a truly Christian king, and Aidan and Cuthbert were saints of the true saintly pattern. Aidan's name is less well remembered now; but St. Oswald the king and St. Cuthbert the monk are still alive in men's minds, not only at Durham, which is their monument, but wherever the outlines of Christian history are read. Oswald was slain by Penda, and his head and arms were exposed on stakes on the battle-field. But they afterwards came into ecclesiastical keeping, and the head was buried in Cuthbert's coffin.*

To Northumbria, as well as to the fen-lands, the Danes in the ninth century brought their swords and torches. The monks of Lindisfarne fled before them carrying the holy coffin. For eight years they wandered until, in 883, they settled at an old Roman station — Chester-le-Street — which was given them by a christianized Danish king. Thence they removed again, and again for fear of the rovers, about a century later. First they sat at Ripon for a few months, and then they turned back northward, doubtless encouraged to think once more of Chester-le-Street. But when they reached a spot a little to the eastward of Durham, St. Cuthbert caused his coffin to remain immovable for three days and then made known his

* One of the "incorruptible arms" we have already heard of at Peterborough.

wish to be sepultured where the cathedral now stands. The first church constructed here was of wood. But at the end of four years it had already been replaced by one of stone, which stood until after the Conquest and the stones of which, perhaps, now form a part of the Normans' reconstruction.

II.

THERE were times and places when the first thought of a monastic colony was for comfort and retirement, for fertile surroundings and facilities of access. But in the north of England in Danish days inaccessibility, impregnability, was the thing to be desired; and St. Cuthbert showed wonderful posthumous sagacity in selecting the final home of his perplexed, itinerant "congregation."

There is a large town now where there was then a wilderness; a wide-spreading, busy town overhung, though faintly, by that gray smoke-cloud which is the invariable sign in England of commercial life; a town so modern in mood that it is hard to think of it as but an alien growth from an old monastic root. It lies chiefly to the eastward of the church, stretching out far to north and south, and divided again and again by the quick S-like curves of the River Wear — a stream which is not a sluggish canal like the Ouse at Ely, but even to American eyes a fine little river bordered by woods that have a true forest look. All along the western bank these woods extend, and up the face of that great steep rock on the eastern bank which supports the church, jutting out like a bold promontory and clasped on three sides by a horse-shoe curve of the stream. Where the cliff is steepest towards the west rises the front of the cathedral, close above the thick clambering trees. To the south its long side overlooks the monastic buildings and the shady gardens which touch the Wear. To the northward, at some distance but still on the same plateau, springs sheer with the face of the rock a great castle founded by the Conqueror.

Castle and church together form a group and hold a station which we sometimes find paralleled on the Continent but nowhere in England. And I think there can be nothing else in England, or in all the world, quite like the walk which we may take along the river's opposite bank, following its many bends, passing its high-arched bridges, having the forest on the one hand and on the other the matchless panorama man has worked from nature's bold and fine suggestions.

The usual approach to the promontory is, of course, from the town behind it. Through a steep, narrow street we come up near the castle, and thence, beyond the broad flat Castle Green, we see the north side of the church filling the whole view from left to right — from the crowding houses about its eastern to the crowding trees about its western end.

III.

THE old monastic "congregation of St. Cuthbert" had lapsed into "secular" ways before the Normans came. But the second Norman bishop, William of Carilef, made radical changes, bringing in monks from Wearmouth and Jarrow, and establishing a great Benedictine house at Durham. On his return from a three-years exile — the price he paid for his share in the rebellion against William Rufus — he set about building himself a new cathedral too. Its foundation stones were laid beneath the eastern end of the choir in 1093, and in the four short years which remained to him Carilef seems to have completed the choir, the eastward wall of the transepts, the crossing with its tower, the adjacent first bay of the nave-arcade, and the two long outer (aisle) walls of the nave.

Three years after his death Ralph Flambard, William Rufus's famous chancellor, was appointed bishop. During these years the monks had nearly completed the transepts, and Flambard completed the whole of the nave and its aisles (excepting the roofs) and the western towers up to the same height as the walls. During another interregnum, which followed his death in 1128, the monks roofed-in his nave and aisles; and the western towers were finished in the Transitional period.

The windows throughout the church have been enlarged from time to time. The east end of the choir was conspicuously changed in the thirteenth century, and the vaulting of its central alley was renewed. In the fifteenth century the central tower was injured by lightning, and its upper portions had to be rebuilt. But with these exceptions the whole vast Norman body remains as first constructed. The Puritans dealt gently with it too — almost all the damage wrought by the passage of eight centuries stands accredited to the "restorations" of the last hundred years.

IV.

APPROACHING the church across the Castle Green, we enter by what has been the chief doorway since the thirteenth century — a doorway towards the western end of the north aisle. Thence we see at once how greatly the interior design of Durham differs from that of the typical Norman church.

The vertical proportioning is quite unlike what we have seen in the eastern districts — the main arcade is much higher and the triforium arcade relatively lower. Instead of a

THE WEST FRONT OF THE CATHEDRAL, WITH THE CASTLE TO THE LEFT.

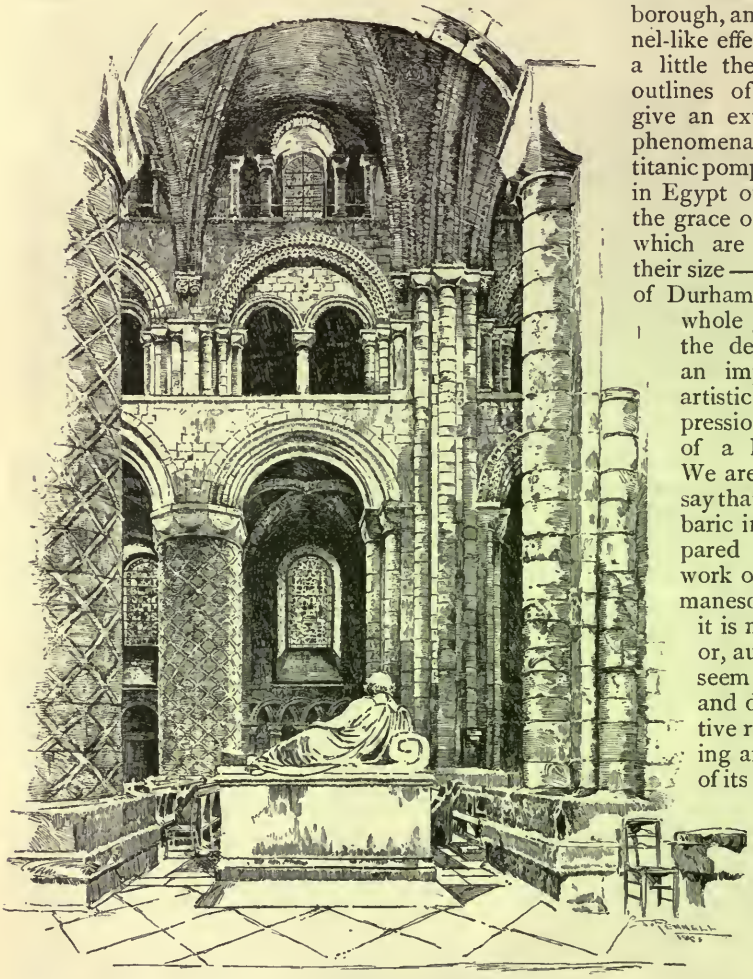
succession of rectangular piers with attached semi-shafts, such piers alternate with immense cylindrical ones, not shafted or molded, but merely decorated with deep incised lines forming various patterns — spirals, flutings, and reticulations. From end to end the design is the same: Flambard did but carry on the scheme of St. Carilef with minor constructive improvements and a richer amount of detail.

Circular piers occur not seldom in the Romanesque work of every land; but they were nowhere so grandly used as in England, and nowhere in England so grandly and so beautifully as in this north-eastern district. Nowhere else was the rest of the scheme so well designed with regard to them; nowhere else were their own proportions so fine, or were they decorated by these strong incised patterns. Dur-

ham itself is the supreme example of their possibilities of power and splendor.

A circular pier like one of these is not a column. Its body is far too sturdy to be called a shaft, and is built up, moreover, of a multitude of small stones; and its capital is of such relative insignificance as hardly to deserve the name. A round pier, in fact, is but a circular mass of walling, and its capital is little more than a cornice or impost curved around it. Such a pier, if perfectly plain, is more satisfactory to the eye than a perfectly plain rectangular pier; and it is much easier to design and build than a shafted rectangular pier. Some have thought, therefore, that it may have been the primitive English device here in the barbarous north — that Carilef may have got his idea for it from those old-English churches which he and his fellow-countrymen so utterly swept away. It is much more certain, however, that the peculiar decoration he applied to it was a survival of old-English fashions.

The thing that is very sure indeed is that by its aid Carilef and Flambard succeeded in making their interior the most imposing, the most magnificent, of its time. The greater height of the main arcade, which involves, of course, a greater height in the aisles beyond, gives a much nobler air of space and size and vigor than is seen at Ely or at Peterborough, and takes away that tunnel-like effect which distresses one a little there. The contrasting outlines of the alternated piers give an extraordinary majesty, a phenomenal force and dignity, a titanic pomp which can be matched in Egypt only. There is none of the grace of Egyptian columns — which are true columns, despite their size — in the cylindrical piers of Durham; and the design as a whole gives perhaps less than the design of Peterborough an impression of complete artistic development, an impression as of the final word of a long-developing style. We are somewhat tempted to say that Durham is almost barbaric in its grandeur as compared either with Egyptian work or with much other Romanesque work. But in reality it is not barbaric. If its vigor, audacity, and immensity seem to speak of the likings and darings of some primitive race, its fine proportioning and the reticent dignity of its decorations speak very clearly of cultivated, practiced builders, clever of hand and sensitive of eye. It is so splendid, so triumphantly impressive, solemn, awful, and yet beautiful, that when possessed by the spell of its presence we feel as though it had no peer in all the world.



FLAMBARD'S WORK IN THE NAVE.

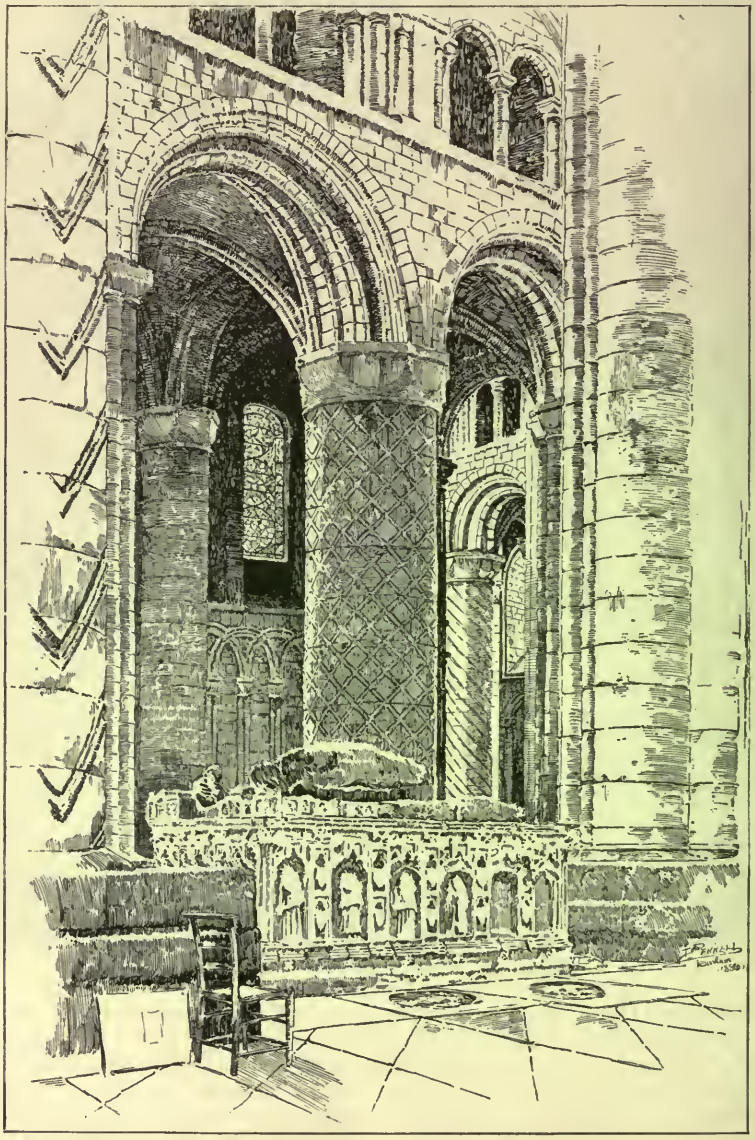
In one way it is not only grander but more perfect, more complete, than any other Anglo-Norman church. All its parts are vaulted. The choir-vault was renewed in the thirteenth century. But the nave-vault is still the same that was built in late-Norman days; and though its main ribs are pointed, it has a thoroughly Norman look, owing to the massive simplicity of its design and the bold zigzags

THE WEST END OF THE NAVE FROM THE SOUTH AISLE.

which enrich its ribs. Of course such a vault is not only finer in itself than a flat ceiling but makes the whole effect far finer, giving added height and greater unity as well as an infinitely nobler look of strength. An impression of "rocky solidity and indeterminate duration" is what Dr. Johnson said he received at Durham when starting on his Scottish tour; but all his most sesquipedalian adjectives could not have translated the impression it really produces.

It is worth noting, too, that its effect must always have been pretty much what it is today. So few remains of paint have been found upon Durham's walls that it seems improbable that any general scheme of chromatic decoration was ever applied to them. Nor is the eye impelled, as in so many other cases, to clothe them with imagined hues. Color could hardly add to the beauty of this interior where the stone is so softly warm in tone and where the design is so complete, in spite of its boldness and simplicity, that nakedness is the last word which could come to mind. It is wonderful to see what extraordinary decorative emphasis is given by so simple a device as the incising of the circular piers — what an accent of richness and vivacity it brings to the seriousness of the immense design. It has been thought that the lines may once have been filled with metal or with colored pastes; but no traces of a filling have been found. The incisions are far deeper than a preparation for

it would have dictated; and, again, the eye does not imagine it desirable. No colored lines, however brilliant, could be so effective as the absolute black lines of shadow which are now contrasted with the gradually shading,



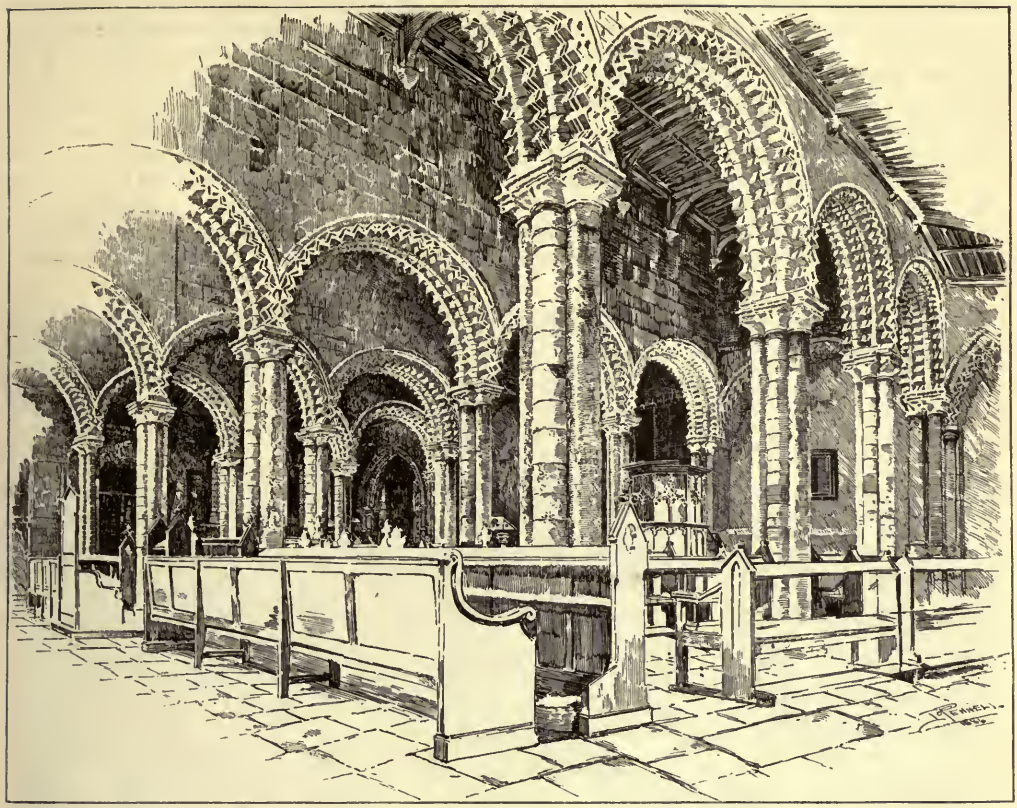
ACROSS THE NAVE AND THE TRANSEPT.

pale-yellow tones of the rounded surfaces. *The minimum of means with the maximum of effect* is always a sentence of praise, and I have rarely seen it quite so well deserved as by these decorations at Durham.

V.

THE western doors were originally the main entrances to the church, opening from the flat margin of the cliff; but soon after 1150 Bishop Hugh de Puiset (who was a nephew of King Stephen and is commonly called Bishop Pudsey) covered this part of the rock, quite out to the embowering trees which thence descend the steep slope to the Wear, by a large and lovely Galilee-chapel of a single story in height.

Galilees — narthexes, "Galilees of the Gentiles," sacred spots only less sacred than the church itself — are of frequent occurrence; but usually they are mere porches or vestibules, like the one before the west door of Ely. Durham's Galilee, however, is not a porch, for it has no entrance save from the church



THE GALILEE-CHAPEL.

itself; and it is a Lady-Chapel as well as a narthex. The reason for its peculiar composite character is to be found in the single fault which tradition fastens upon Cuthbert. He had a very pronounced hatred or contempt for women,— or may we not give gentler explanation to the foible of so gentle a saint and think that he had a very godly fear of them for which he felt some good human excuse deep down within his holy bosom? Centuries after his death his susceptibilities were guarded by the builders of Durham. Far away from his shrine, near the west end of the nave, they worked a white line across the pavement and with almost Mohammedan scorn forbade a feminine foot to cross it. When at last men threatened to forget his jealousy, the saint himself remonstrated. Bishop Pudsey tried first to build the Blessed Virgin's chapel in the usual place (eastward of the choir); but the foundations refused to bear their load, and this was, of course, "a manifest sign" that the work "was not acceptable to God and to his servant Cuthbert." So he piously began again westward of the nave where, as the foundations rested upon the rock itself, no supernatural mandate checked him; and, seeming to have thought the ewes of his flock harshly treated, he made his chapel a Galilee as well, "into which women might lawfully enter." Why, indeed, should he not have been more sympathetically minded than St. Cuthbert?— since the first body which claimed interment within his walls was that of his own illegitimate son, another Hugh de Puiset who had been Chancellor to Louis VII. of France.

But the most famous tomb in this chapel is that of the Venerable Bede. Few saints or sinners so far away in time as Bede are of so vital an interest and value to modern men; and with regard to few have we such good reason to believe that their bones really rest in their reputed sepulcher. Bede was a monk at Jarrow, and his bones reposed there from the eighth to the early eleventh century, when they were most piously stolen by the sacrist of Durham and placed in Cuthbert's hospitable coffin. Pudsey built for them a separate and splendid shrine which, two hundred years later, was removed into his chapel. The Reformers destroyed it, but reburied the bones beneath a square plain tomb; and here they were found, upon examination, in the year 1830. Not until this time was cut the epitaph we now may read:

"HAC SUNT IN FOSSÆ BEDÆ VENERABILIS OSSA."

But its words are of high traditional antiquity, and, of course, not of a mere man's inditing. When the early sculptor paused to search for a fitting adjective, an angel supplied the one which is now invariably coupled with the historian's name.

It is a singular and very beautiful chapel beneath which he sleeps. Built in the Transitional period, it has round-arched arcades which divide it into five aisles of almost equal height. The arches are elaborately molded and carved with many rows of zigzags, and they rested at first upon coupled columns of dark marble, the bases and capitals of which were joined, but not the shafts. So tall and slender are the forms, so fragile and airy-looking, so graceful and charming, that despite the round arches and the zigzags, their effect is not truly Romanesque. Nor is it truly Gothic. It is an effect nowhere exactly matched in English or any Northern work — an effect which by a scarcely strained comparison more than one writer has called "almost Saracenic." To-day it is not so light and delicate as when the eye could pass between the coupled shafts, for in later years two other shafts, not of dark marble, like the old ones, but of stone, were added to each group, forming a solid, molded pier. Originally, too, the chapel had lower side walls and much smaller windows than we see to-day. No west window gives an unobstructed outward view; but by effort we may get a partial glimpse of the splendid panorama that stretched out before the doorways of the church ere this chapel was constructed.

THE CATHEDRAL FROM THE NORTH.

For the sake of this panorama the chapel came very nigh to perishing a hundred years ago. The thrice-notorious "restorer," Wyatt, proposed to pull it down and run a driveway round the cliff, and the Dean had no thought of objecting until the Society of Antiquaries interfered.

VI.

THE next addition to the church was that great construction which is called the Eastern Transept, or the Chapel of the Nine Altars. Begun in the Early-English period, and fin-

ished in the Decorated, its design is among the most beautiful results of the earlier style, and its details are among the loveliest both of the earlier and the later. It was to connect this chapel with the church that the eastern end of the choir was pulled down. In place of the original apse and the aisle-ends, three huge arches now open out, giving a full view of the newer building.

Its floor lies lower than the floor of the aisles, which itself is lower than that of the choir proper. Its width is greater than the whole width of the church, and its height as great as that of the choir-ceiling. No rows of columns break this vast and soaring space, and the simply designed but delicately enriched vault sweeps overhead in magnificent wide curves. The long eastern and the shorter southern wall are divided into bays of different widths by great clusters of shafts which bear the vaulting-ribs; and in all the bays are tall lancet windows. Three stand together in the wide bay which forms the center of the east wall. Above these is a great rose-window, ninety feet in circumference, and above all the others are large clere-story lights. The north side is filled instead with a single great Decorated window with admirable geometric tracery.

To the west, towards the church, the central archway rises to the ceiling, and is blocked below by the choir-floor, which projects as a high square platform. Upon this platform, within the choir but visible from the chapel, stood St. Cuthbert's shrine. Beneath the aisle-arches are the steps by which we enter from the church. Above them are triforium-arcades and clere-story windows looking out over the aisle-roofs, and beyond them again are tall lancet windows in double ranges.

All around the chapel beneath the windows and across the face of the platform runs a graceful arcade with trefoiled arches and dark marble shafts, its rich details having grown from lovely Early-English to lovelier Decorated as the work grew from east to west. Beneath the arcade against the eastern wall stood the nine altars from which the chapel took its name, some dedicated to a single saint and some to two together.

It would be hopeless to try to paint the beauty of this chapel where the simplicity of the design was so exquisitely enriched, yet so well preserved, by the decorations. The ancient figured glass has perished and the ancient painted color. Many of the lancets still keep the traceries with which they were filled in the Perpendicular period, and the rose-window — clearly seen through the great choir-arch from the very west end of the church — was rebuilt by Wyatt. But the traceries do not really hurt the effect save to a purist's eye. The modern glass is unusually good, except in one window where it is phenomenally bad. Most of the sculptor's work remains, and all the striking color which the architect produced by setting against his pale-yellow stone great shafts and capitals of black polished marble beautifully flecked with fossil shells. To the modern architect the most remarkable points about the chapel are the way in which the vaulting-ribs were made to unite and harmonize the alien western and eastern walls, and the way in which the end of the church was altered so that the transition between plain massive Norman and light elaborate Pointed work might not be too abrupt. Among all the examples of constructive ingenuity and of artistic feeling that I saw in England there was none which impressed me quite so forcibly as the management of this transition.

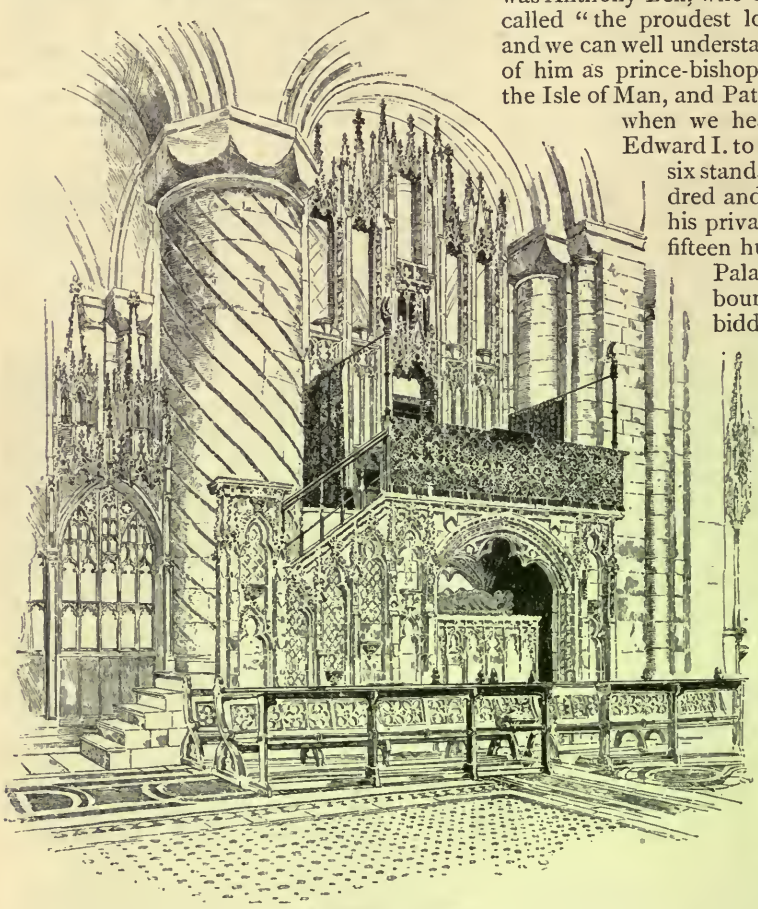
"The Nine Altars" was proposed and prepared for by Bishop Le Poore, begun in 1248 by Melsanby, the prior of the convent under Bishop Farnham, and finished probably under Bishop Robert of Holy Island — about forty years having gone to its perfecting. Who was its actual designer it were hard to say, but the name of one architect concerned with it has been accidentally preserved. Local documents always call it the *nova fabrica;* and in one such document, a real-estate conveyance now in the chapter-library, a witness is written down as *Magister Ricardus de Farinham tunc architector novæ fabricæ Dunelm.* It is more than possible that this Richard Farnham may have been a relative of Bishop Farnham. But whoever he was, and however great or small his share in the chapel, we are glad for him that he has thus fortuitously emerged from that medieval limbo which is filled by so many great artists' nameless shades.

VII.

DURHAM'S site is something more than the grandest and most beautiful in England. The picture made by rocky pedestal and rock-like church and castle is uniquely interesting not only as a painter's subject but as an historical illustration too; for it clearly expresses a combination of temporal with spiritual might and dignity which was unique in the kingdom of England.

In Norman days the bishops of Durham were made palatine-princes as well — were allowed to rule over a wide surrounding district with almost autocratic powers and privileges. Thenceforward for four hundred years they were the judicial and military as well as the spiritual lords of their people. They owed the king feudal service, but they owed him little else. Those who did wrong within their borders were said to have broken not the peace

of the king but the peace of the bishop; and with the bishop rested the power of life and death even when murder or when treason itself was in question. The bishops of Ely were the only other prelates in England to whom palatine powers were given; and at Ely these powers meant very much less in practice than they did among the successors of Cuthbert. No English lords save the palatine-counts of Chester equaled in degree of independent authority and local influence the palatine-bishops of Durham. Far from the center of royal rule, the king was content to let them do as they liked with their own, asking in return that they should keep a keen eye and a strong hand upon the ever threatening, often flaming Scottish Border.



THE BISHOP'S THRONE.

As a consequence, the bishops of Durham figure on history's page more like great military than like great ecclesiastical rulers. Sometimes they were high-placed functionaries at the court of the king, as were so many of the bishops of Ely; but more often they remained in their own diocese, lording it in that great castle which served them instead of a palace, or fighting the Scotch, now single-handed and now beneath the banner of the king.

The most powerful and splendid of them all was Anthony Bek, who died in 1310. He was called "the proudest lord in Chrestientie"; and we can well understand why when we read of him as prince-bishop of Durham, king of the Isle of Man, and Patriarch of Jerusalem — when we hear how he went with Edward I. to Scotland with twenty-six standard-bearers and a hundred and sixty-four knights as his private following and with fifteen hundred soldiers of the Palatinate who were also bound to do his personal bidding, and when we learn how the "court of Durham" exhibited in his day all the pomp and etiquette of a royal household. "Nobles addressed the palatine sovereign kneeling, and instead of menial servants knights waited in his presence-chamber and at his table bareheaded and standing. . . . . His liberality knew no bounds, and he regarded no expenses, however enormous, when placed in competition with any object of pleasure or magnificence." Even the great king Edward was moved to fear or envy by his wealth and power and, perhaps, ambition. But Edward II. took him back into favor, and he remained bishop and prince till his death. He spent much on buildings as well as in every other way; yet he left greater riches behind him than any of his forerunners. Despite his extravagance and pomp he is described as an active, industrious, and singularly temperate man.

It is impossible here to hint at even the most remarkable bishops who filled this potent chair, or at even the most important wars in which they played conspicuous parts — wars which sometimes eddied about the very foot of the pedestal where their church and castle stood. Even the private history of the monastery might furnish forth a long and lively chapter,

for the monks of Durham seem to have been almost as turbulent as the people of the Border; or else the bishops ruled them with a hand made heavy by long wielding of temporal weapons. Feuds within the convent were constantly occurring, and long and bitter disputes about the episcopal succession; and more than once there was riot, if not bloodshed, within the very walls of the church.

History and poetry have done even more than constructive art to make the name of this cathedral famous. "Half house of God, half castle 'gainst the Scot," it is constantly pictured by bards and chroniclers from those of the earliest time down to that modern singer.

THE NORTH SIDE OF THE CATHEDRAL FROM DUN COCO LANE.

who interweaves its grandeur with the tale of Marmion. Whenever, wherever we find it referred to, it is not as the mere resting-place of some saint beloved of pilgrims, or as the mere sponsor of some prelate whose life was not in close actual connection with its own, but as the veritable as well as the spiritual home of mighty rulers, as itself a mighty stronghold and the center of local military life. Truly the records of these English sees are as diverse among themselves as each is in itself picturesquely varied. Far more than was the case with any other English see, the power of Durham *made* the power of the men who sat on its throne. For a parallel to the rôle it played in history we must look abroad — to the great episcopal fortress-towns of France or to the great electoral bishoprics of Germany. Thus, I repeat, its marvelously beautiful position — set on its truculent rock and supported by its frowning castle — has an even greater historic than pictorial value.

VIII.

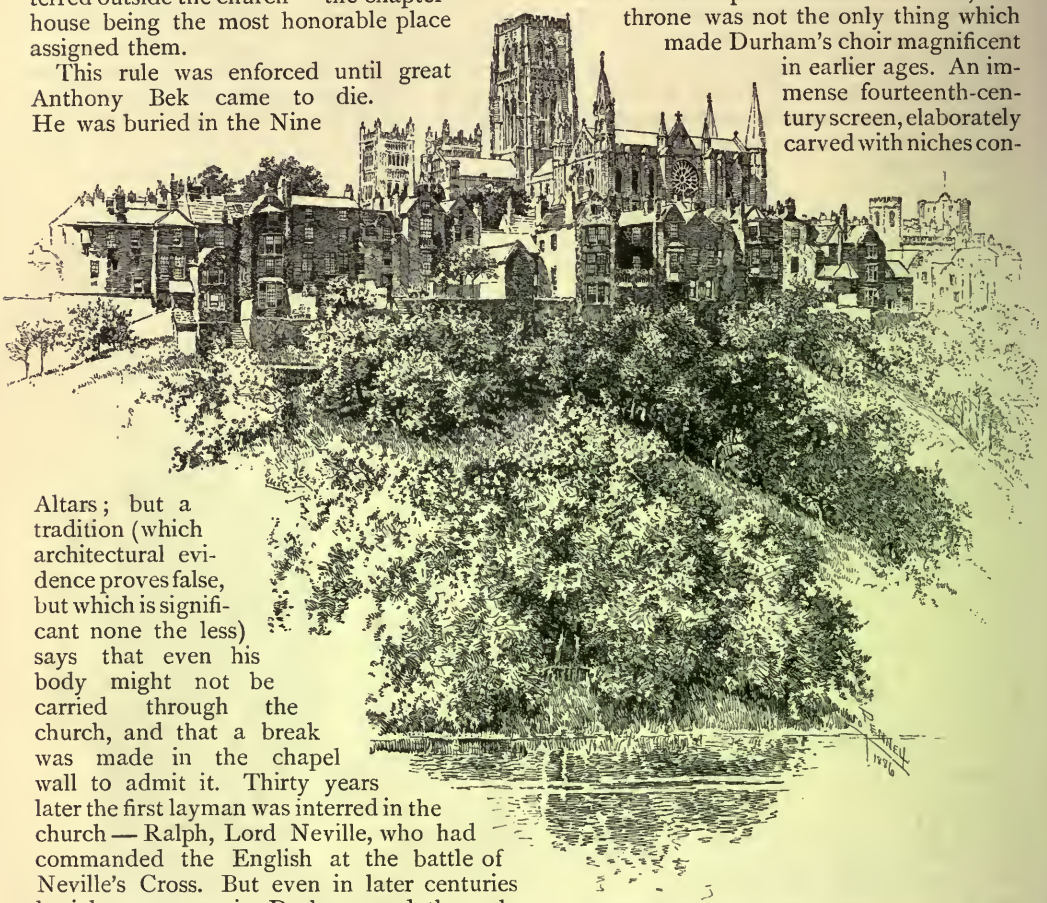
At Canterbury primate, abbot, and warrior, prince and king, were sepultured close about St. Thomas, the posthumous association being thought to honor and to profit them and in no way to dishonor or displease the martyr. It was thus at Westminster around the shrine of Edward the Confessor, and in almost all medieval churches in all countries. But it was

very different at Durham. Never was a dead saint so "exclusive" as St. Cuthbert. Not only all feet of living women but all bones of departed men were strictly forbidden to approach his thrice-holy shrine or even to rest beneath the wide-stretching roof which covered it. Naturally no king or prince sought burial at Durham; and local dignitaries, even though as potent as Flambard himself, were interred outside the church — the chapter-house being the most honorable place assigned them.

This rule was enforced until great Anthony Bek came to die. He was buried in the Nine Altars; but a tradition (which architectural evidence proves false, but which is significant none the less) says that even his body might not be carried through the church, and that a break was made in the chapel wall to admit it. Thirty years later the first layman was interred in the church — Ralph, Lord Neville, who had commanded the English at the battle of Neville's Cross. But even in later centuries burials were rare in Durham, and the only monument which now stands in its choir is that of Bishop Hatfield, who died in 1381. It was built by himself, and is surely one of the most self-asserting of all such anticipatory memorials.

The tomb proper is low and modest enough — a mere sarcophagus, upon which lies an alabaster figure of the prelate. But above this, forming a vast structure which seems to exist simply to protect and honor it, rises the episcopal throne. Here every subsequent bishop has sat, and with each must have seemed to sit the spirit of Hatfield. No such splendid *cathedra* was ever built elsewhere in England; but its splendor is wholly appropriate as expressing the paramount temporal power of Durham's incumbents. This is the throne not of a bishop merely but of a prince-palatine as well. Now that the old palatine powers and privileges have gone to the Crown, one may think perhaps that Queen Victoria has a better right to sit in it than the ecclesiastic who preserves so scant a shred of temporal authority.

But despite the lack of tombs, this throne was not the only thing which made Durham's choir magnificent in earlier ages. An immense fourteenth-century screen, elaborately carved with niches containing more than a hundred figures, rose behind the high altar. Lines of carved stalls encircled the "singers' choir." At the end of the north aisle, near the Nine Altars, "was the goodliest fair porch, which was called the Anchorage, having a marvelous fair rood with the most exquisite pictures of Mary and John, with an altar for a monk to say daily mass, being in ancient times inhabited with an anchorite. . . ." Opposite, at the end of the south aisle, was a screen "all adorned with fine wainscot work and curious painting," in front of which stood the "Black Rood of Scotland," taken from King David



THE CATHEDRAL AND THE CANONS' HOUSES FROM THE WEAR.

at the battle of Neville's Cross, made of silver and "being, as it were, smoked all over." At the western end of the north aisle stood another "porch" and rood; and, of course, the greatest screen of all shut off the choir proper from the rest of the church, standing just west of the crossing, flanked by the great Neville chantry.

English Puritans seem to have spared the furnishings as well as the body of Durham. But much damage was done by Scottish prisoners who were confined within it in 1650; more was done by renovations in the last century; and still more by "restorations" in our own. Everything has gradually been swept out of the choir except the throne, which has lost its color and gilding; the altar-screen, which now lacks its hundred figures; and the stalls, which were sadly cut and altered some forty years ago. At this time too a splendid Renaissance choir-screen (built by Bishop Cosin, in 1660, to replace the ruined ancient one of stone) was ruthlessly destroyed. Its superb carvings of black oak seemed to modern purists out of keeping with a medieval interior, though in reality they must have harmonized well with the heavy Norman forms about them; and modern eyes thought it a pity that there should not be a "clear view" from end to end of the great church, though no such view would have been tolerated by its builders — the choir being the monks' and the nave the laity's place of worship. The present screen is a fragile, undignified tracery of silvered metal — "pure" pseudo-Gothic, very likely, but very certainly a more inappropriate feature than was the massive wooden structure of which a few fragments may be studied in the castle.

IX.

But the supreme ornament of Durham's choir was St. Cuthbert's shrine.

This stood, as has been said, back of the high altar on a floor raised above the pavement of the aisles and projecting like a platform into the Nine Altars. Steps for the use of pilgrims led up from the aisles, and doors in the altar-screen admitted the ecclesiastics. The shrine, as we read of it, was rebuilt in 1380. A base of green marble was worked into four seats where cripples or invalids might get rest and healing; and upon this base stood a great work of enamel and gold sprinkled with princely jewels, containing "the treasure more precious than gold or topaz" and shadowed by that banner of St. Cuthbert which went so often over the Border, and by many another flag dedicated by an English or captured from a Scottish hand.

At the time of the dissolution of the monasteries, Henry's "visitors" broke open the shrine and within it found St. Cuthbert "lying whole, uncorrupt, with his face bare, and his beard as of a fortnight's growth, and all his vestments about him. . . ." They destroyed the shrine, but respected the body and reburied it beneath the floor — and this by express order of the king, the saint of Durham having incited to superstition merely and not, like the saint of Canterbury, to treason too.

In 1827 the tomb was again opened, and in the presence of more scientific observers. In it was found the coffin which had been made by Henry's officers in 1542; within this, the successive fragments of two other coffins, evidently by their decorations those of the second interment at Durham in Flambard's time (1104), and of the original interment at Lindisfarne in 698; and then a skeleton wrapped in the rags of once-rich robes, and a second skull. The bones were reverentially replaced, but the various other objects found in the tomb may now be seen in the chapter-library — an ivory comb; a tiny oaken portable altar plated with silver; an exquisitely embroidered stole and maniple of old English workmanship; another, later, maniple; part of a girdle and two bracelets woven of gold and scarlet threads; a gold cross set with garnets, at least as ancient as St. Cuthbert's own time; and pieces of rich figured robes of Byzantine or Sicilian origin. The altar and the comb agree with a description given of the contents of the coffin when it was examined in 1104; and the more ancient embroideries have been identified by the lettering they bear as those which Athelstan is recorded to have given to the shrine when he visited it at Chester-le-Street, in the year 934. Can the most skeptical doubt that here again, as by the tomb of Bede, such sentiment as he may have to spend will not be wasted on mendacious bones? Surely here beneath the pavement of Durham's choir must veritably sleep the body of St. Cuthbert the monk and the head of St. Oswald the king.

A DOOR-KNOCKER.

X.

The west front of Durham is one of the very finest in England. Its rich yet simple Norman and Transitional features are enliv-

DURHAM FROM THE RAILROAD STATION.

ened but not disturbed by the great middle window that was inserted in the Decorated period; and the projecting Galilee seems not at all out of place, as the nearness and the steepness of the cliff hardly lead one to expect that here the main entrance will be found.

The huge imperial majesty, though not the beauty, of the building is best realized from the Castle Green, where the whole north side lies unshrouded before us. But here too we most clearly see, on near approach, how fortunate it would have been had Wyatt and others like him never been born. In ignorant distrust of the effects which the "weathering" of seven centuries had wrought, they flayed and cut and pared the mighty surface with a pitiless hand, removing in many places several inches' depth of stone and actually casing the central tower with cement! As much as possible has been done in recent years to repair their ravage. But the beautiful color and texture which time alone can give have perished, and the planed-off inches have left the moldings and window-jambs so shallow that the old accent of massiveness and force is hopelessly impaired.

No one but an Englishman, and no Englishman born earlier than the Perpendicular period, would have built a great church-tower like this central one at Durham — so tall and massive yet so simple in outline, and finished by a parapet with no thought of a spire or of any visible sort of roof. The earlier western towers had been given wooden spires covered with lead; but in the seventeenth century these were removed, and in the eighteenth their turreted battlements were added. Continental critics would tell us that such a group as we now behold has far too military an air to be ecclesiastically appropriate. The question is one for taste, not argument, to decide. But I may say that if spireless battlemented towers can ever be appropriate upon a church it is surely upon Durham's. If ever a house of God could lawfully assume a semi-military, half-forbidding, wholly stern and uncompromising air, this was surely the one.

Yet it was the shrine of the peaceful Cuthbert as well as the seat of the warlike Bek, and it played a rôle of gentle ecclesiastical ministrance as well as of stern ecclesiastical control in its far-off greatest years. Many a blood-stained foot has fled wildly towards it over this broad Castle Green, and many an inno-

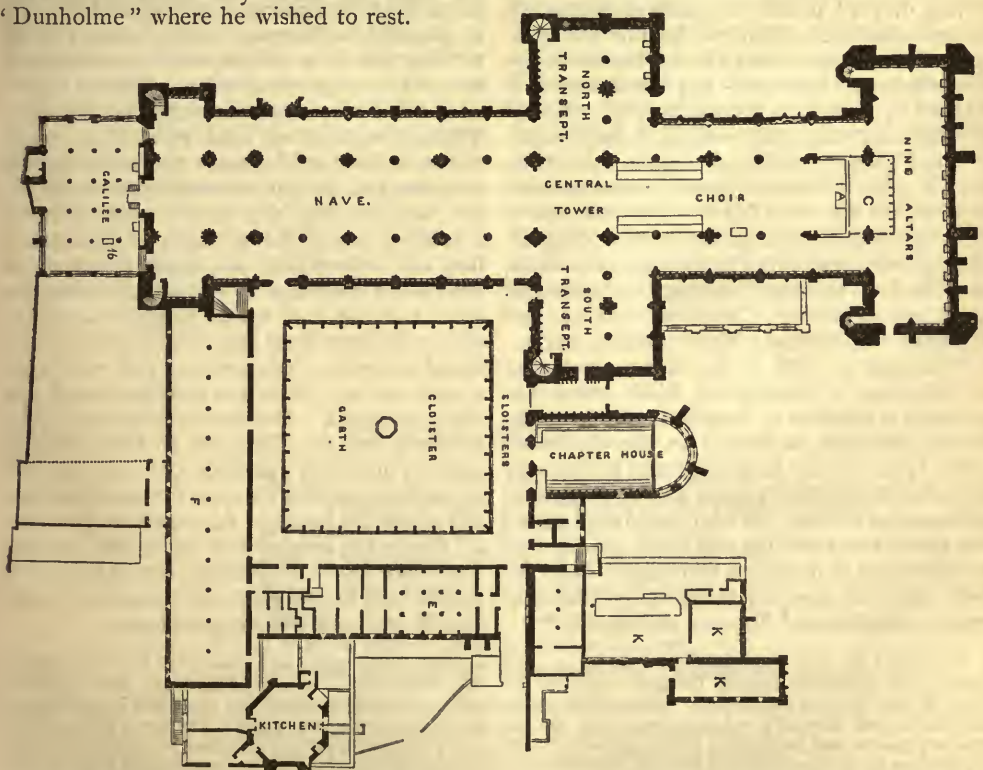
cent foot hounded by accusing cries. It was a famous "sanctuary" where any culprit charged with any crime could find inviolable shelter, kindly entertainment for thirty-seven days, and then, if still unjustified or unpardoned, safe transportation to the coast and passage overseas — giving in return but his full confession and his solemn oath never to seek English soil again. From a chamber over the north porch a monk watched ceaselessly to give immediate entrance; and even before entrance was given, as soon as the knocker on the door was grasped, "St. Cuthbert's peace" was won. The chamber was destroyed, alas! by Wyatt, but the knocker hangs where it has hung since late-Norman days. The empty eye-sockets of the grotesque yet splendid mask of bronze were once filled perhaps with crystal eye-balls; or perhaps — and this is what we prefer to fancy — a flame was set behind them that even he might not lack for guidance whose flight should be in the darkness.

High up on the northern end of the Nine Altars stand the sculptured figures of a milk-maid and a cow. The group is comparatively modern, but the legend it perpetuates is most ancient. It was a woman seeking her strayed beast who guided the bearers of St. Cuthbert's coffin when they could not find the "Dunholme" where he wished to rest.

XI.

On the south side of the cathedral we find the great aggregate of once-monastic buildings in a singularly complete condition. When the monastery was "resigned" to King Henry VIII. its last prior peaceably became the first dean of the newly constituted chapter, and his successors peaceably kept their homes with all their precious contents in the time of Cromwell. In consequence, there is no place in England where we can so well understand what a great monastery looked like in pre-Reformation days, or how its populous colony lived. We should find the picture still more complete but for the demon of last-century renovation.

The chapter-house, for instance, kept its Norman form uninjured until the year 1791 — a great room finished towards the east with a semicircular apse, vaulted throughout, encircled by a tall arcade with intersecting arches, below which was a stone bench for the monks in council and at the east end a stone chair where the long line of prelate-princes had sat for consecration, and paved with many sepulchral slabs bearing famous ecclesiastical names. No such fine Norman chapter-house remained in England, and no other building whatsoever



PLAN OF DURHAM CATHEDRAL AND MONASTIC BUILDINGS. (FROM MURRAY'S "HAND-BOOK TO THE CATHEDRALS OF ENGLAND.")
A. High altar. C. Site of St. Cuthbert's tomb. E. Refectory. F. Dormitory. K. Prior's (now dean's) house. 16. Bede's tomb.

to show how the Normans had vaulted their apses. Yet, to make things "more comfortable" for modern dean and canon, the apse and the adjacent walls for about half the length of the room were pulled down, and the mutilated remainder was inclosed and floored and plastered so that not a sign of its splendid stones remained. A few years ago, however, these stones were again exposed to view, and the ground outside, once covered by the apse, was carefully examined. Several very ancient tombs were then identified, and in the library may now be seen three episcopal rings which were found within them — one, set with a great sapphire, having been Ralph Flambard's.

Our plan will show how the chapter-house opens upon one side of the cloisters and how its other sides are built against the church itself, the dormitory, and the refectory. From the earliest ages the arrangement was the same; but almost all parts of the buildings were more than once renewed. The cloister walks, now greatly modernized, date from the Perpendicular period, and so also do the dormitory and the refectory, though each of them is raised upon a much older vaulted basement. The dormitory formed for many years part of a canon's house, but has now been brought back as nearly as possible to its old estate. The wooden partitions which divided it into separate sleeping-cells have disappeared, of course; but one hardly regrets their absence, since it leaves free to the eye the whole vast interior — 194 feet in length — lighted by ranges of noble traceried windows and covered by an oaken ceiling, rude yet massive and grand in effect, the great tree-trunks which form its beams having scarcely been squared by the axe. The room is now used to hold a portion of the large and valuable chapter-library and sundry other interesting collections, — of brilliant episcopal vestments, of coins and seals, and of Roman, Celtic, old-English, and Norman antiquities of Northumbrian origin.

The main portion of the library, including a collection of illuminated MSS. which has scarcely a superior in England outside of the British Museum, is housed in the old refectory. Here too are kept the relics which were found in St. Cuthbert's grave and the fragments of his earlier coffins. He who would understand the far-off roots and the first crude growths of medieval art in the north of England finds his best place of study in these richly filled and wisely administered libraries at Durham.*

Many minor rooms and buildings lie around or near these cloisters, chief among them in interest the old priors' kitchen. I think there is but one other kitchen of the sort still intact in England, and that one — at Glastonbury — now stands isolated in a field and never knows the warmth of useful fires, while this one still serves the household of the dean. It is a great octagonal structure with a steep roof which covers a remarkable vaulted ceiling — so stately a structure that a passer-by used to modern ways of living and modern architectural devices would (but for its chimneys) surely say, A baptistery or a chapel — never, A kitchen. The old priors' house also remains as the dwelling of the modern deans — altered, of course, and in the usual practical, irreverent way, the private chapel forming now three chambers.

Beyond all these lies the dean's lovely garden, the quiet circle of the canons' houses and the quiet sweep of their own outer gardens looking down upon the Wear. So much remains at Durham, in short, that it is hard to remember that certain things have perished even here — for example, the great hall of the monastery and its church-like hospital.

The picture is not quite so exquisite as that which greater ruin has wrought at Canterbury. But it is as beautiful in a soberer fashion, and it has the added charm of a lifted outlook over a splendid landscape. Surely there can be nothing like it in all the world — nothing at once so homogeneous and so infinitely varied, so old in body yet so alive and fresh in mood. There is no class or kind of building which is not represented between the castle on the northern and the garden walls upon the southern verge of this rich promontory. There is scarcely a year of the last eight hundred which has not somewhere left some traces on it. And there is no sort of life which it has not seen, and the sort which rules to-day is as wholly different from the ancient sorts as fancy could conceive. Yet nowhere can we choose a date and say, Here the old life ceased and the new began. Nowhere can we put finger on stone and say, This was to serve religion only, or material existence only, or only war or ostentation; or, This was for use alone, and this alone for beauty. All times are here and all things are here, and all aims and motives have here found expression; but all things are intertwined in one great entity, and all times join in one vast historic panorama.

* I should be very ungrateful did I forget to note that in one important respect Durham stands at the head of the English cathedrals. Here of all places the tourist feels himself a welcome guest and one for whose pleasure and instruction infinite pains are willingly taken by all dignitaries and officials, from the highest to the humblest. The local hand-book, written by Canon Greenwell, is a pearl of its kind. And I find I am but one of many who remember the head-verger, Mr. Wetherell, as a pearl of his kind. More than one widely traveled architect has cited him in my hearing as the best guide he had met in Europe — fully and correctly informed, patient and clear in exposition, interesting to the ignorant, yet instructive even to the professional sight-seer, and filled with an enthusiasm as wise and discriminating as it is warm and contagious.

This means that *this* is England. Not in some new Birmingham hot with money-making fires, black with art-destroying cinders, and deaf to the voice of long-dead years; not in some old deserted Kenilworth or Fountains, beautiful only, useful no longer, a monument of death and destruction, a milestone to show how wide a space may lie between the currents of medieval and of modern life — not there do we find the real England really pictured; but here in this Durham which was once military and monastic and feudal, and is now commercial, collegiate, domestic, and in politics boldly liberal, yet where there has been neither sudden change nor any forgetting and very little abandonment or loss — only slow, natural growth and development and the wear and tear and partial retrogressions which all growth, all development must involve. Modern life standing upon ancient life as on a worn but puissant and respected pedestal; learning alive despite the hurry of trade; religion alive despite the widening of the moral horizon; Protestantism grown from Catholicism yet not harshly dissevered from its rituals or traditions, nor scornful of its artistic legacy; things monastic supplanted by things domestic within the Church yet the Church still served with reverence and dignity and grace; the aristocrat, the soldier, and the prelate still keeping some shreds of civil power notwithstanding the upgrowth of the plebeian layman's power — this is what England means to those who see her land and her living as a whole. This and all of this is what Durham means to those who study its stones and its records together. All this is typified in that splendid throne of its bishop-princes in which a bishop still sits but a prince no longer. As this throne still stands in use and honor, so the old order of things is still revered in the land, while the loss of the color and gold which once adorned it may seem to tell of the gradual perishing away of England's old artistic gift, and the mutilation of the effigy it covers, of the shorn authority of that class which once had no rivals in its ruling.

XII.

It is needless to try to tell which are the best points for seeing Durham from a distance — they are so many and each in turn seems so supremely good. Some of the very best, moreover, we are very sure to get — from the railroad station which lies a little out of the town to the north-west and from the road which thence brings us into it over a great bridge near the castle.

It would be hopeless to try to describe the outward view which may be had from the cathedral's central tower. It is not a very pleasant task to climb to the top of any such old construction. Medieval builders had little care for the life or limbs of sight-seers; or perhaps medieval sight-seers did not seek for "views" as do we to-day. It is like a bad dream to clamber up this tower — up a narrow winding staircase to the church's roof and then up a still narrower and steeper and darker staircase to the roof of the tower, turning about on exiguous steps uneven from the tread of centuries, and feeling our way by the rough convex stones. But it is like another sort of dream to come out at last, after more than three hundred painful mountings, upon the broad parapeted platform and see the magnificent wide panorama undulating away into the hilly distance and enlivened beneath the church's feet by the silver twistings of the rock-bound Wear. Hence, only a mile away, we can see where the battle of Neville's Cross was fought; and here the monks crowded to see it, in terror, doubtless, lest defeat might mean an instant siege within their home.

M. G. van Rensselaer.

ENDLESS RESOURCE.

NEW days are dear, and cannot be unloved,
Though in deep grief we cower and cling to death:
Who has not known, in living on, a breath
Full of some gladness that life's rapture proved?

If I have felt that in this rainbow world
The very best was but a preface given
To tell of infinite greater tints in heaven,
And, life or no, heaven yet would be unfurled:—

I did belie the soul-wide joys of earth,
And feelings deep as lights that dwell in seas.
Can heaven itself outlove such depths as these?
Live on! Life holds more than we dream of worth.

Rose Hawthorne Lathrop.

THE DUSANTES.

A SEQUEL TO "THE CASTING AWAY OF MRS. LECKS AND MRS. ALESHINE."

BY FRANK R. STOCKTON,

Author of "Rudder Grange," "The Lady, or the Tiger?" etc.

PART I.

WHEN the little party, consisting of Mrs. Lecks and Mrs. Aleshine, Mr. Enderton, my newly made wife, and myself, with the red-bearded coxswain and the two sailor men, bade farewell to that little island in the Pacific where so many happy hours had been passed, where such pleasant friendships had been formed, and where I had met my Ruth and had made her my wife, we rowed away with a bright sky over our heads, a pleasant wind behind us, and a smooth sea beneath us. The long-boat was comfortable and well-appointed, and there was even room enough in it for Mr. Enderton to stretch himself out and take a noonday nap. We gave him every advantage of this kind, for we had found by experience that our party was happiest when my father-in-law was best contented.

Early in the forenoon the coxswain rigged a small sail in the bow of the boat, and with this aid to our steady and systematic work at the oars we reached, just before nightfall, the large island whither we were bound, and to which, by means of the coxswain's pocket compass, we had steered a direct course. Our arrival on this island, which was inhabited by some white traders and a moderate population of natives, occasioned great surprise, for when the boats containing the crew and passengers of our unfortunate steamer had reached the island, it was found that Mrs. Lecks, Mrs. Aleshine, and myself were missing. There were many suppositions as to our fate. Some persons thought we had been afraid to leave the steamer, and, having secreted ourselves on board, had gone down with her. Others conjectured that in the darkness we had fallen overboard, either from the steamer or from one of the boats; and there was even a surmise that we might have embarked in the leaky small boat—in which we really did leave the steamer—and so had been lost. At any rate, we had disappeared, and our loss was a good deal talked about, and, in a manner, mourned.

In less than a week after their arrival the people from the steamer had been taken on board a sailing vessel and carried westward to their destination.

We, however, were not so fortunate, for we remained on this island for more than a month. During this time but one ship touched there, and she was western bound and of no use to us, for we had determined to return to America. Mrs. Lecks and Mrs. Aleshine had given up their journey to Japan, and were anxious to reach once more their country homes, while my dear Ruth and I were filled with a desire to found a home on some pleasant portion of the Atlantic seaboard. What Mr. Enderton intended to do we did not know. He was on his way to the United States when he left the leaking ship on which he and his daughter were passengers, and his intentions regarding his journey did not appear to have been altered by his mishaps.

By the western bound vessel, however, Mrs. Aleshine sent a letter to her son.

Our life on this island was monotonous, and to the majority of the party uninteresting; but as it was the scene of our honeymoon, Mrs. Craig and I will always look back to it with the most pleasurable recollections. We were comfortably lodged in a house belonging to one of the traders, and although Mrs. Lecks and Mrs. Aleshine had no household duties to occupy their time, they managed to supply themselves with knitting materials from the stores on the island, and filled up their hours of waiting with chatty industry. The pipes of our sailor friends were always well filled, while the sands of the island were warm and pleasant for their backs, and it was only Mr. Enderton who showed any signs of impatient repining at our enforced stay. He growled, he grumbled, and he inveighed against the criminal neglect of steamship companies and the owners of sailing craft in not making it compulsory in every one of their vessels to stop on every voyage at this island, where, at any time, intelligent and important personages might be stranded.

At last, however, we were taken off by a three-masted schooner bound for San Fran-

cisco, at which city we arrived in due time and in good health and condition.

We did not remain long in this city, but soon started on our way across the continent, leaving behind us our three sailor companions, who intended to ship from this port as soon as an advantageous opportunity offered itself. These men heard no news of their vessel, although they felt quite sure that she had reached Honolulu, where she had probably been condemned and the crew scattered. As some baggage belonging to my wife and my father-in-law had been left on board this vessel, I had hopes that Mr. Enderton would remain in San Francisco and order it forwarded to him there; or that he would even take a trip to Honolulu to attend to the matter personally. But in this I was disappointed. He seemed to take very little interest in his missing trunks, and wished only to press on to the East. I wrote to Honolulu, desiring the necessary steps to be taken to forward the baggage in case it had arrived there; and soon afterwards our party of five started eastward.

It was now autumn, but, although we desired to reach the end of our journey before winter set in, we felt that we had time enough to visit some of the natural wonders of the California country before taking up our direct course to the East. Therefore, in spite of some petulant remonstrances on the part of Mr. Enderton, we made several trips to points of interest.

From the last of these excursions we set out in a stage-coach, of which we were the only occupants, towards a point on the railroad where we expected to take a train. On the way we stopped to change horses at a small stage station at the foot of a range of mountains; and when I descended from the coach I found the driver and some of the men at the station discussing the subject of our route. It appeared that there were two roads, one of which gradually ascended the mountain for several miles, and then descended to the level of the railroad, by the side of which it ran until it reached the station where we wished to take the train. The other road pursued its way along a valley or notch in the mountain for a considerable distance, and then, by a short but somewhat steep ascending grade, joined the upper road.

It was growing quite cold, and the sky and the wind indicated that bad weather might be expected; and as the upper road was considered the better one at such a time, our driver concluded to take it. Six horses, instead of four, were now attached to our stage, and as two of these animals were young and unruly and promised to be unusually difficult to drive in the ordinary way, our driver concluded to ride one of the wheel horses, postilion fashion, and to put a boy on one of the leaders. Mr. Enderton was very much afraid of horses, and objected strongly to the young animals in our new team. But there were no others to take their places, and his protests were disregarded.

My wife and I occupied a back seat, having been ordered to take this comfortable position by Mrs. Lecks and Mrs. Aleshine, who had constituted themselves a board of instruction and admonition to Mrs. Craig, and, incidentally, to myself. They fancied that my wife's health was not vigorous and that she needed coddling; and if she had had two mothers she could not have been more tenderly cared for than by these good women. They sat upon the middle seat with their faces towards the horses, while Mr. Enderton had the front seat all to himself. He was, however, so nervous and fidgety, continually twisting himself about, endeavoring to get a view of the horses or of the bad places on the road, that Mrs. Lecks and Mrs. Aleshine found that a position facing him and in close juxtaposition was entirely too uncomfortable; and consequently, the back of their seat being adjustable, they turned themselves about and faced us.

The ascent of the mountain was slow and tedious, and it was late in the afternoon when we reached the highest point in our route, from which the road descended for some eight miles to the level of the railroad. Now our pace became rapid, and Mr. Enderton grew wildly excited. He threw open the window and shouted to the driver to go more slowly, but Mrs. Lecks seized him by the coat and jerked him back on his seat before he could get any answer to his appeals.

"If you want your daughter to ketch her death o' cold you 'll keep that window open!" As she said this, she leaned forward and pulled the window down with her own strong right arm. "I guess the driver knows what he is about," she continued, "this not bein' the first time he 's gone over the road."

"Am I to understand, madam," said Mr. Enderton, "that I am not to speak to my driver when I wish him to know my will?"

To this question Mrs. Lecks made no answer, but sat up very straight and stiff, with her back square upon the speaker. For some time she and Mr. Enderton had been "out," and she made no effort to conceal the fact.

Mr. Enderton's condition now became pitiable, for our rapid speed and the bumping over rough places in the road seemed almost to deprive him of his wits, notwithstanding my assurance that stage-coaches were generally driven at a rapid rate down long inclines. In a short time, however, we reached a level spot in the road, and the team was drawn up and

stopped. Mr. Enderton popped out in a moment, and I also got down to have a talk with the driver.

"These hosses won't do much at holdin' back," he said, "and it worries 'em less to let 'em go ahead with the wheels locked. You need n't be afraid. If nothin' breaks, we 're all right."

Mr. Enderton seemed endeavoring to satisfy himself that everything about the running-gear of the coach was in a safe condition. He examined the wheels, the axles, and the whiffle-trees, much to the amusement of the driver, who remarked to me that the old chap probably knew as much now as he did before. I was rather surprised that my father-in-law subjected the driver to no further condemnation. On the contrary, he said nothing except that for the rest of this down-hill drive he should take his place on the driver's unoccupied seat. Nobody offered any objection to this, and up he climbed.

When we started again Ruth seemed disturbed that her father should be in such an exposed position, but I assured her that he would be perfectly safe, and would be much better satisfied at being able to see for himself what was going on.

We now began to go down hill again at a rate as rapid as before. Our speed, however, was not equal. Sometimes it would slacken a little where the road was heavy or more upon a level, and then we would go jolting and rattling over some long downward stretch. After a particularly unpleasant descent of this kind the coach seemed suddenly to change its direction, and with a twist and an uplifting of one side it bumped heavily against something and stopped. I heard a great shout outside, and from a window which now commanded a view of the road I saw our team of six horses, with the drivers pulling and tugging at the two they rode, madly running away at the top of their speed.

Ruth, who had been thrown by the shock into the arms of Mrs. Aleshine, was dreadfully frightened, and screamed for her father. I had been pitched forward upon Mrs. Lecks, but I quickly recovered myself, and as soon as I found that none of the occupants of the coach had been hurt, I opened the door and sprang out.

In the middle of the road stood Mr. Enderton, entirely uninjured, with a jubilant expression on his face, and in one hand a large closed umbrella.

"What has happened?" I exclaimed, hurrying around to the front of the coach, where I saw that the pole had been broken off about the middle of its length.

"Nothing has happened, sir," replied Mr. Enderton. "You cannot speak of a wise and discreet act, determinately performed, as a thing which has happened. We have been saved, sir, from being dashed to pieces behind that wild and unmanageable team of horses; and I will add that we have been saved by my forethought and prompt action."

I turned and looked at him in astonishment. "What do you mean?" I said. "What could you have had to do with this accident?"

"Allow me to repeat," said Mr. Enderton, "that it was not an accident. The moment that we began to go down hill I perceived that we were in a position of the greatest danger. The driver was reckless, the boy incompetent, and the horses unmanageable. As my remonstrances and counsels had no effect upon the man, and as you seemed to have no desire to join me in efforts to restrain him to a more prudent rate of speed, I determined to take the affair into my own hands. I knew that the first thing to be done was to rid ourselves of those horses. So long as we were connected with them disaster was imminent. I knew exactly what ought to be done. The horses must be detached from the coach. I had read, sir, of inventions especially intended to detach runaway horses from a vehicle. To all intents and purposes our horses were runaways, or would become so in a very short time. I now made it my object to free ourselves from those horses. I got out at our first stop and thoroughly examined the carriage attachments. I found that the movable bar to which the whiffle-trees were attached was connected to the vehicle by two straps and a bolt, the latter having a ring at the top and an iron nut at the bottom. While you and that reckless driver were talking together and paying no attention to me, the only person in the party who thoroughly comprehended our danger, I unbuckled those straps, and with my strong nervous fingers, without the aid of implements, I unscrewed the nut from the bolt. Then, sir, I took my seat on the outside of the coach and felt that I held our safety in my own hands. For a time I allowed our vehicle to proceed, but when we approached this long slope which stretches before us, and our horses showed signs of increasing impetuosity, I leaned forward, hooked the handle of my umbrella in the ring of the bolt, and with a mighty effort jerked it out. I admit to you, sir, that I had overlooked the fact that the other horses were attached to the end of the pole, but I have often noticed that when we are discreet in judgment and prompt in action we are also fortunate. Thus was I fortunate. The hindermost horses, suddenly released, rushed upon those in front of them, and, in a manner, jumbled up the whole team,

which seemed to throw the animals into such terror that they dashed to one side and snapped off the pole, after which they went madly tearing down the road, entirely beyond the control of the two riders. Our coach turned and ran into the side of the road with but a moderate concussion, and as I looked at those flying steeds, with their riders vainly endeavoring to restrain them, I could not, sir, keep down an emotion of pride that I had been instrumental in freeing myself, my daughter, and my traveling companions from their dangerous proximity."

The speaker ceased, a smile of conscious merit upon his face. For the moment I could not say a word to him, I was so angry. But had I been able to say or do anything to indicate the wild indignation that filled my brain, I should have had no opportunity, for Mrs. Lecks stepped up to me and took me by the arm. Her face was very stern, and her expression gave one the idea of the rigidity of Bessemer steel.

"I 've heard what has been said," she remarked, "and I wish to talk to this man. Your wife is over there with Mrs. Aleshine. Will you please take a walk with her along the road? You may stay away for a quarter of an hour."

"Madam," said Mr. Enderton, "I do not wish to talk to you."

"I did n't ask you whether you did or not," said Mrs. Lecks. "Mr. Craig, will you please get your wife away as quick and as far as you can?"

I took the hint, and, with Ruth on my arm, walked rapidly down the road. She was very glad to go, for she had been much frightened, and wanted to be alone with me to have me explain to her what had occurred. Mrs. Lecks, imagining from the expression of his countenance that Mr. Enderton had, in some way, been at the bottom of the trouble, and fearing that she should not be able to restrain her indignation when she found how he had done it, had ordered Mrs. Aleshine to keep Ruth away from her father. This action had increased the poor girl's anxiety, and she was glad enough to have me take her away and tell her all about our accident.

I did tell her all that had happened, speaking as mildly as I could of Mr. Enderton's conduct. Poor Ruth burst into tears.

"I do wish," she exclaimed, "that father would travel by himself! He is so nervous, and so easily frightened, that I am sure he would be happier when he could attend to his safety in his own way; and I know, too, that we should be happier without him."

I agreed most heartily with these sentiments, although I did not deem it necessary to say so, and Ruth now asked me what I supposed would become of us.

"If nothing happens to the driver and the boy," I replied, "I suppose they will go on until they get to the station to which we were bound, and there they will procure a pole, if such a thing can be found, or, perhaps, get another coach, and come back for us. It would be useless for them to return to our coach in its present condition."

"And how soon do you think they will come back?" she said.

"Not for some hours," I replied. "The driver told me there were no houses between the place where we last stopped and the railroad station, and I am sure he will not turn back until he reaches a place where he can get either a new pole or another vehicle."

Ruth and I walked to a turn at the bottom of the long hill down which our runaway steeds had sped. At this point we had an extended view of the road as it wound along the mountain-side, but we could see no signs of our horses nor of any living thing. I did not, in fact, expect to see our team, for it would be foolish in the driver to come back until he was prepared to do something for us, and even if he had succeeded in controlling the runaway beasts, the quicker he got down the mountain, the better.

By the time we had returned we had taken quite a long walk, but we were glad of it, for the exercise tranquillized us both. On our way back we noticed that a road which seemed to come up from below us joined the one we were on a short distance from the place where our accident occurred. This, probably, was the lower road which had been spoken of when we changed horses.

We found Mr. Enderton standing by himself. His face was of the hue of wood ashes, his expression haggard. He reminded me of a man who had fallen from a considerable height, and who had been frightened and stupefied by the shock. I comprehended the situation without difficulty, and felt quite sure that had he had the choice he would have much preferred a thrashing to the plain talk he had heard from Mrs. Lecks.

"What is the matter, father?" exclaimed Ruth. "Were you hurt?"

Mr. Enderton looked in a dazed way at his daughter, and it was some moments before he appeared to have heard what she said. Then he answered abruptly: "Hurt? Oh, no! I am not hurt in the least. I was just thinking of something. I shall walk on to the village or town, whichever it is, to which that man was taking us. It cannot be more than seven or eight miles away, if that. The road is down hill, and I can easily reach the place before

nightfall. I will then personally attend to your rescue, and will see that a vehicle is immediately sent to you. There is no trusting these ignorant drivers. No," he continued, deprecatingly raising his hand, "do not attempt to dissuade me. Your safety and that of others is always my first care. Exertion is nothing."

Without further words, and paying no attention to the remonstrances of his daughter, he strode off down the road.

I was very glad to see him go. At any time his presence was undesirable to me, and under the present circumstances it would be more objectionable than ever. He was a good walker, and there was no doubt he would easily reach the station, where he might possibly be of some use to us.

Mrs. Lecks was sitting on a stone by the roadside. Her face was still stern and rigid, but there was an expression of satisfaction upon it which had not been there when I left her. Ruth went to the coach to get a shawl, and I said to Mrs. Lecks:

"I suppose you had your talk with Mr. Enderton?"

"Talk!" she replied. "I should say so! If ever a man understands what people think of him, and knows what he is, from his crown to his feet, inside and outside, soul, body, bones, and skin, and what he may expect in this world and the next, he knows it. I did n't keep to what he has done for us this day. I went back to the first moment when he began to growl at payin' his honest board on the island, and I did n't let him off for a single sin that he has committed since. And now I feel that I 've done my duty as far as he is concerned; and havin' got through with that, it 's time we were lookin' about to see what we can do for ourselves."

It was indeed time, for the day was drawing towards its close. For a moment I had thought that we would give Mr. Enderton a good start, and then follow him down the mountain to the station. But a little reflection showed me that this plan would not answer. Ruth was not strong enough to walk so far; and although Mrs. Aleshine had plenty of vigor, she was too plump to attempt such a tramp. Besides, the sky was so heavily overcast that it was not safe to leave the shelter of the coach.

As might have been expected, Mrs. Lecks and Mrs. Aleshine took immediate charge of the personal comfort of the party, and the first thing they did was to make preparations for a meal. Fortunately, we had plenty of provisions. Mrs. Aleshine had had charge of what she called our lunch-baskets, which were, indeed, much more like market-baskets than anything else; and having small faith in the resources of roadside taverns, and great faith in the unlimited capabilities of Mr. Enderton in the matter of consuming food on a journey, she had provided bounteously and even extravagantly.

One side of the road was bordered by a forest, and on the ground was an abundance of dead wood. I gathered a quantity of this, and made a fire, which was very grateful to us, for the air was growing colder and colder. When we had eaten a substantial cold supper and had thoroughly warmed ourselves at the fire, we got into the coach to sit there and wait until relief should come. We sat for a long time; all night, in fact. We were not uncomfortable, for we each had a corner of the coach, and we were plentifully provided with wraps and rugs.

Contrary to their usual habit, Mrs. Lecks and Mrs. Aleshine did not talk much. When subjected to the annoyances of an ordinary accident, even if it should have been the result of carelessness, their disposition would have prompted them to take events as they came, and to make the best of whatever might happen to them. But this case was entirely different. We were stranded and abandoned on the road, on the side of a lonely, desolate mountain, on a cold bleak night; and all this was the result of what they considered the deliberate and fiendish act of a man who was afraid of horses and who cared for no one in the world but himself. Their minds were in such a condition that if they said anything they must vituperate, and they were so kindly disposed towards my wife, and had such a tender regard for her feelings, that they would not, in her presence, vituperate her father. So they said very little, and, nestling into their corners, were soon asleep.

After a time Ruth followed their example, and, though I was very anxiously watching out of the window for an approaching light, and listening for the sound of wheels, I, too, fell into a doze. It must have been ten or eleven o'clock when I was awakened by some delicate but cold touches on my face, the nature of which, when I first opened my eyes, I could not comprehend. But I soon understood what these cold touches meant. The window in the door of the coach on my side had been slightly lowered from the top to give us air, and through the narrow aperture the cold particles had come floating in. I looked through the window. The night was not very dark, for, although the sky was overcast, the moon was in its second quarter, and I could plainly see that it was snowing, and that the ground was already white.

This discovery sent a chill into my soul, for

I was not unfamiliar with snows in mountain regions, and knew well what this might mean to us. But there was nothing that we could now do, and it would be useless and foolish to awaken my companions and distress them with this new disaster. Besides, I thought our situation might not be so very bad after all. It was not yet winter, and the snow-fall might prove to be but a light one. I gently closed the window, and made my body comfortable in its corner, but my mind continued very uncomfortable for I do not know how long.

When I awoke, I found that there had been a heavy fall of snow in the night, and that the flakes were still coming down, thick and fast. When Ruth first looked out upon the scene she was startled and dismayed. She was not accustomed to storms of this kind, and the snow frightened her. Upon Mrs. Lecks and Mrs. Aleshine the sight of the storm produced an entirely different effect. Here was a difficulty, a discomfort, a hardship, but it came in a natural way, and not by the hand of a dastardly coward of a man. With naturally happening difficulties they were accustomed to combat without fear or repining. They knew all about snow, and were not frightened by this storm. The difficulties which it presented to their minds actually raised their spirits, and from the grim and quiet beings of the last evening they became the same cheerful, dauntless, ready women that I had known before.

"Upon my word," exclaimed Mrs. Aleshine, as she clapped her face to a window of the coach, "if this is n't a reg'lar old-fashioned snow-storm! I 've shoveled my own way through many a one like it to git to the barn to do my milkin' afore the men folks had begun makin' paths, an' I feel jus' like as though I could do it agin."

"Now, Barb'ry Aleshine," said Mrs. Lecks, "if you 're thinkin' of shovelin' your way from this place to where your cows is, you 'd better step right out and get at it, and I really do think that if you felt they was sufferin' for want of milkin' you 'd make a start."

"I don't say," answered Mrs. Aleshine, with an illuminating grin, "that if the case was that way I might n't have the hankerin' though not the capableness, but I don't know that there 's any place to shovel our way to jus' now."

Mrs. Lecks and I thought differently. Across the road, under the great trees, the ground was comparatively free from snow, and in some places, owing to the heavy evergreen foliage, it was entirely bare. It was very desirable that we should get to one of these spots and build a fire, for, though we had been well wrapped up, we all felt numbed and cold. In the boot at the back of the coach I knew that there was an ax, and I thought I might possibly find there a shovel. I opened the coach door and saw that the snow was already above the lower step. By standing on the spokes of the back wheel I could easily get at the boot, and I soon pulled out the ax, but found no shovel. But this did not deter me. I made my way to the front wheel and climbed up to the driver's box, where I knocked off one of the thin planks of the foot-board, and this, with the ax, I shaped into a rude shovel with a handle rather too wide but serviceable. With this I went vigorously to work, and soon had made a pathway across the road. Here I chopped off some low dead branches, picked up others, and soon had a crackling fire, around which my three companions gathered with delight.

A strong wind was now blowing, and the snow began to form into heavy drifts. The fire was very cheery and pleasant, but the wind was cutting, and we soon returned to the shelter of the coach, where we had our breakfast. This was not altogether a cold meal, for Mrs. Aleshine had provided a little tea-kettle, and, with some snow-water which I brought in boiling from the fire in the woods, we had all the hot and comforting tea we wanted.

We passed the morning waiting and looking out and wondering what sort of conveyance would be sent for us. It was generally agreed that nothing on wheels could now be got over the road, and that we must be taken away in a sleigh.

"I like sleigh-ridin'," said Mrs. Aleshine, "if you 're well wropped up, with good horses, an' a hot brick for your feet, but I must say I don't know but what I 'm goin' to be a little skeery goin' down these long hills. If we git fairly slidin', horses, sleigh, an' all together, there 's no knowin' where we 'll fetch up."

"There 's one comfort, Barb'ry," remarked Mrs. Lecks, "and that is that when we do fetch up it 'll be at the bottom of the hills and not at the top, and as the bottom is what we want to get to, we ought n't to complain."

"That depends a good deal whether we come down hindpart foremost, or forepart front. But nobody 's complainin' so fur, specially as the sleigh is n't here."

I joined in the outlooking and the conjectures, but I could not keep up the cheerful courage which animated my companions; for not only were the two elder women bright and cheery, but Ruth seemed to be animated and encouraged by their example, and showed herself as brave and contented as either of them. She was convinced that her father must have reached the railroad station before it began to snow, and therefore she was troubled by no

fears for his safety. But my mind was filled with many fears.

The snow was still coming down, thick and fast, and the wind was piling it into great drifts, one of which was forming between the coach and a low embankment on that side of the road near which it stood.

About every half-hour I took my shovel and cleared out the path across the road from the other side of the coach to the woods. Several times after doing this I made my way among the trees, where the snow did not impede my progress, to points from which I had a view some distance down the mountain, and I could plainly see that there were several places where the road was blocked up by huge snow-drifts. It would be a slow, laborious, and difficult undertaking for any relief party to come to us from the station, and who was there, at that place, to come? This was the question which most troubled me. The settlement at the station was, probably, a very small one, and that there should be found at that place a sleigh or a sledge with enough men to form a party sufficiently strong to open a road up the mountain-side was scarcely to be expected. Men and vehicles might be obtained at some point farther along the railroad, but action of this kind would require time, and it was not unlikely that the railroad itself was blocked up with snow. I could form no idea, satisfactory to myself, of any plan by which relief could come to us that day. Even the advent of a messenger on horseback was not to be expected. Such an adventurer would be lost in the storm and among the drifts. On the morrow relief might come, but I did not like to think too much about the morrow; and of any of my thoughts and fears I said nothing to my companions.

At intervals, after I had freshly cleared out the pathway, the three women, well bundled up, ran across the road to the fire under the trees. This was the only way in which they could keep themselves warm, for the coach, although it protected us from the storm, was a very cold place to sit in. But the wind and the snow which frequently drove in under the trees made it impossible to stay very long by the fire, and the frequent passages to and from the coach were attended with much exposure and wetting of feet. I therefore determined that some better way must be devised for keeping ourselves warm; and, shortly after our noonday meal, I thought of a plan, and immediately set to work to carry it out.

The drift between the coach and the embankment had now risen higher than the top of the vehicle, against one side of which it was tightly packed. I dug a path around the back of the coach, and then began to tunnel into the huge bank of snow. In about an hour I had made an excavation nearly high enough for me to stand in, and close to the stage door on that side; and I cleared away the snow so that this door could open into the little cavern I had formed. At the end opposite the entrance of my cave, I worked a hole upwards until I reached the outer air. This hole was about a foot in diameter, and for some time the light unpacked snow from above kept falling in and filling it up; but I managed, by packing and beating the sides with my shovel, to get the whole into a condition in which it would retain the form of a rude chimney.

Now I hurried to bring wood and twigs, and having made a hearth of green sticks, which I cut with my ax, I built a fire in this snowy fireplace. Mrs. Lecks, Mrs. Aleshine, and Ruth had been watching my proceedings with great interest; and when the fire began to burn, and the smoke to go out of my chimney, the coach door was opened, and the genial heat gradually pervaded the vehicle.

"Upon my word," exclaimed Mrs. Aleshine, "if that is n't one of the brightest ideas I ever heard of! A fire in the middle of a snow-bank, with a man there a'tendin' to it, an' a chimney! 'Tis n't every day that you kin see a thing like that!"

"I should hope not," remarked Mrs. Lecks, "for if the snow drifted this way every day I 'd be ready to give up the seein' business out-an'-out! But I think, Mr. Craig, you ought to pass that shovel in to us so that we can dig you out when the fire begins to melt your little house and it all caves in on you."

"You can have the shovel," said I, "but I don't believe this snow-bank will cave in on me. Of course the heat will melt the snow, but I think it will dissolve gradually, so that the caving-in, if there is any, won't be of much account, and then we shall have a big open space here in which we can keep up our fire."

"Oh, dear!" exclaimed Ruth, "you talk as if you expected to stay here ever so long, and we certainly can't do that. We should starve to death for one thing."

"Don't you be afraid of that," said Mrs. Aleshine. "There 's plenty of victuals to last till the people come for us. When I pack baskets for travelin' or picnicin', I don't do no scrimpin'. An' we 've got to keep up a fire, you know, for it would n't be pleasant for those men, when they 've cut a way up the mountain to git at us, to find us all froze stiff."

Mrs. Lecks smiled. "You 're awful tender of the feelin's of other people, Barb'ry," she said, "and a heart as warm as yourn ought to keep you from freezin'."

"Which it has done, so far," said Mrs. Aleshine complacently.

As I had expected, the water soon began to drip from the top and the sides of my cavern, and the chimney rapidly enlarged its dimensions. I made a passage for the melted snow to run off into a hollow, back of the coach; and as I kept up a good strong fire, the drops of water and occasional pieces of snow which fell into it were not able to extinguish it. The cavern enlarged rapidly, and in a little more than an hour the roof became so thin that while I was outside collecting wood it fell in and extinguished the fire. This accident, however, interrupted my operations but for a short time. I cleared away the snow at the bottom of the excavation, and rebuilt my fire on the bare ground. The high snow walls on three sides of it protected it from the wind, so that there was no danger of the flames being blown against the stage-coach, while the large open space above allowed a free vent for the smoke.

About the middle of the afternoon, to the great delight of us all, it stopped snowing, and when I had freshly shoveled out the path across the road, my companions gladly embraced the opportunity of walking over to the comparatively protected ground under the trees and giving themselves a little exercise. During their absence I was busily engaged in arranging the fire, when I heard a low crunching sound on one side of me, and, turning my head, I saw, in the side of my excavation opposite to the stage-coach and at a distance of four or five feet from the ground, an irregular hole in the snow, about a foot in diameter, from which protruded the head of a man. This head was wrapped, with the exception of the face, in a brown woolen comforter. The features were those of a man of about fifty, a little sallow and thin, without beard, whiskers, or mustache, although the cheeks and chin were darkened with a recent growth.

The astounding apparition of this head projecting itself from the snow wall of my cabin utterly paralyzed me, so that I neither moved nor spoke, but remained crouching by the fire, my eyes fixed upon the head. It smiled a little, and then spoke.

"Could you lend me a small iron pot?" it said.

I rose to my feet, almost ready to run away. Was this a dream? Or was it possible that there was a race of beings who inhabited snow-banks?

The face smiled again very pleasantly. "Do not be frightened," it said. "I saw you were startled, and spoke first of a familiar pot in order to reassure you."

"Who, in the name of Heaven, are you?" I gasped.

"I am only a traveler, sir," said the head, "who has met with an accident similar, I imagine, to that which has befallen you. But I cannot further converse with you in this position. Lying thus on my breast in a tunnel of snow will injuriously chill me. Could you conveniently lend me an iron pot?"

I was now convinced that this was an ordinary human being, and my courage and senses returned to me, but my astonishment remained boundless. "Before we talk of pots," I said, "I must know who you are and how you got into that snow-bank."

"I do not believe," said my visitor, "that I can get down, head foremost, to your level. I will therefore retire to my place of refuge, and perhaps we can communicate with each other through this aperture."

"Can I get through to your place of refuge?" I asked.

"Certainly," was the answer. "You are young and active, and the descent will not be so deep on my side. But I will first retire, and will then project towards you this sheep-skin rug, which, if kept under you as you move forward, will protect your breast and arms from direct contact with the snow."

It was difficult to scramble up into the hole, but I succeeded in doing it, and found awaiting me the sheep-skin rug, which, by the aid of an umbrella, the man had pushed towards me for my use. I was in a horizontal tunnel barely large enough for the passage of my body, and about six feet in length. When I had worked my way through this and had put my head out of the other end, I looked into a small wooden shed, into which light entered only through a pane of glass set in a rude door opposite to me. I immediately perceived that the whole place was filled with the odor of spirituous liquors. The man stood awaiting me, and by his assistance I descended to the floor. As I did so I heard something which sounded like a titter, and looking around I saw in a corner a bundle of clothes and traveling-rugs, near the top of which appeared a pair of eyes. Turning again, I could discern in another corner a second bundle, similar to, but somewhat larger than, the other.

"These ladies are traveling with me," said the man, who was now wrapping about him a large cloak, and who appeared to be of a tall though rather slender figure. His manner and voice were those of a gentleman extremely courteous and considerate. "As I am sure you are curious—and this I regard as quite natural, sir—to know why we are here, I will at once proceed to inform you. We started yesterday in a carriage for the railway station, which is, I believe, some miles beyond this point. There were two roads from the last place at which we stopped, and we chose the one which ran along a valley and which we

supposed would be the pleasanter of the two. We there engaged a pair of horses which did not prove very serviceable animals, and at a point about a hundred yards from where we now are, one of them gave out entirely. The driver declared that the only thing to be done was to turn loose the disabled horse, which would be certain, in time, to find his way back to his stable, and for him to proceed on the other animal to the station to which we were going, where he would procure some fresh horses and return as speedily as possible. To this plan we were obliged to consent, as there was no alternative. He told us that if we did not care to remain in the carriage, there was a shed by the side of the road, a little farther on, which was erected for the accommodation of men who are sometimes here in charge of relays of horses. After assuring us that he would not be absent more than three hours, he rode away, and we have not seen him since. Soon after he left us I came up to this shed, and finding it tight and comparatively comfortable, I concluded it would give us relief from our somewhat cramped position in the carriage, and so conducted the ladies here. As night drew on it became very cold, and I determined to make a fire, a proceeding which of course would have been impossible in a carriage. Fortunately I had with me, at the back of the carriage, a case of California brandy. By the aid of a stone I knocked the top off this case, and brought hither several of the bottles. I found in the shed an old tin pan which I filled with the straw coverings of the bottles, and on this I poured brandy, which, being ignited, produced a fire without smoke, but which, as we gathered around it, gave out considerable heat."

As the speaker thus referred to his fuel, I understood the reason of the strong odor of spirits which filled the shed, and I experienced a certain relief in my mind.

The gentleman continued: "At first I attributed the delay of the driver's return to those ordinary hindrances which so frequently occur in rural and out-of-the-way places; but, after a time, I could not imagine any reasonable cause for his delay. As it began to grow dark I brought here our provision-baskets, and we partook of a slight repast. I then made the ladies as comfortable as possible and awaited with much anxiety the return of the driver.

"After a time it began to snow, and feeling that the storm might interrupt communication with the carriage I brought hither, making many trips for the purpose, the rest of the brandy, our wraps and rugs, and the cushions of the carriage. I did not believe that we should be left here all night, but thought it prudent to take all precautions and to prepare for remaining in a place where we could have a fire. The morning showed me that I had acted wisely. As you know, sir, I found the road in either direction completely blocked up by snow, and I have since been unable to visit the carriage."

"Have you not all suffered from cold?" I inquired. "Have you food enough?"

"I will not say," replied the gentleman, "that in addition to our anxiety we have not suffered somewhat from cold, but for the greater part of this day I have adopted a plan which has resulted in considerable comfort to my companions. I have wrapped them up very closely and warmly, and they hold in each hand a hard-boiled egg. I thought it better to keep these for purposes of warmth than to eat them. About every half-hour I reboil the eggs in a little traveling-teapot which we have. They retain their warmth for a considerable period, and this warmth in a moderate degree is communicated through the hands to the entire person."

As he said this a low laugh again burst forth from the bundle in one corner of the room, and I could not help smiling at this odd way of keeping warm. I looked toward the jocose bundle and remarked that the eggs must be pretty hard by this time.

"These ladies," said the gentleman, "are not accustomed to the cold atmosphere of these regions, and I have, therefore, forbidden them to talk, hoping thus to prevent injury from the inhalation of frosty air. So far we have not really suffered, and we still have some food left. About noon I noticed smoke floating over this shed, and I forced open the door and made my way for some little distance outside, hoping to discover whence it came. I then heard voices on the other side of the enormous snow-drift behind us, but I could see no possible way of getting over the drift. Feeling that I must, without fail, open communication with any human beings who might be near us, I attempted to shout, but the cold had so affected my voice that I could not do so. I thereupon set my wits to work. At the back of this shed is a square window closed by a wooden shutter. I opened this shutter and found outside a wall of snow packed closely against it. The snow was not very hard, and I believed that it would not be difficult to tunnel a way through it to the place where the voices seemed to be. I immediately set to work, for I feared that if we were obliged to remain here another night without assistance we should be compelled to-morrow morning to eat those four hard-boiled eggs which the ladies are holding, and which, very shortly, I must boil again."

"How did you manage to cut through the snow?" I asked. "Had you a shovel?"

"Oh, no," replied the other. "I used the tin pan. I found it answered very well as a scoop. Each time that I filled it I threw the contents out of our door."

"It must have been slow and difficult work," I said.

"Indeed it was," he replied. "The labor was arduous and occupied me several hours. But when I saw a respectable man at a fire, and a stage-coach near by, I felt rewarded for all my trouble. May I ask you, sir, how you came to be thus snow-bound?"

I then briefly related the circumstances of our mishap, and had scarcely finished when a shrill sound came through the tunnel into the shed. It was the voice of Mrs. Aleshine.

"Hello!" she screamed, "are you in there? An' you don't mean to tell me there are other people in that hole?"

Feeling quite certain that my wife and her companions were in a state of mental agitation on the other side of the drift, I called back that I would be with them in a moment, and then explained to the gentleman why I could not remain with him longer. "But before I go," I said, "is there anything I can do for you? Do you really want an iron pot?"

"The food that remains to us," he answered, "is fragmentary and rather distasteful to the ladies, and I thought if I could make a little stew of it, it might prove more acceptable to them. But do not let me detain you another instant from your friends, and I advise you to go through that tunnel feet foremost, for you might otherwise experience difficulties in getting out at the other end."

I accepted his suggestion, and by his assistance and the help of the rough window-frame, I got into the hole feet first, and soon ejected myself into the midst of my alarmed companions. When they heard where I had been, and what I had seen, they were naturally astounded.

"Another party deserted at this very point!" exclaimed Ruth, who was both excitable and imaginative. "This looks like a conspiracy! Are we to be robbed and murdered?"

At these words Mrs. Aleshine sprang towards me. "Mr. Craig," she exclaimed, "if it 's robbers, don't lose a minute! Never let 'em git ahead of you! Pull out your pistol and fire through the hole!"

"Gracious me, Barb'ry Aleshine," said Mrs. Lecks, "you don't suppose the robbers is them poor unfortunates on the other side of the drift! And I must say, Mrs. Craig, that if there was any such thing as a conspiracy, your father must have been in it, for it was him who landed us just here. But of course none of us supposes nothin' of that kind, and the first thing we 've got to think of is what we can do for them poor people."

"They seem to have some food left, but not much," I said, "and I fear they must be suffering from cold."

"Could n't we poke some wood to them through this hole?" said Mrs. Aleshine, whose combative feelings had changed to the deepest compassion. "I should think they must be nearly froze with nothin' to warm 'em but hard-biled eggs."

I explained that there was no place in their shed where they could build a fire, and proposed that we should give them some hot tea and some of our provisions.

"That 's so!" said Mrs. Aleshine. "An' jus' shout in to them that if they 'll shove them eggs through the hole, I 'll bile 'em fur 'em as often as they want 'em."

"I 've just got to say this," ejaculated Mrs. Lecks, as she and Mrs. Aleshine were busily placing a portion of our now very much reduced stock of provisions in the smallest of our baskets: "This is the first time in my life that I ever heard of people warmin' themselves up with hens' eggs and spirits, excep' when mixed up into egg-nog, and that they resisted that temptation and contented themselves with plain honest heat, though very little of it, shows what kind of people they must be. And now do you suppose we could slide this basket in without upsettin' the little kittle?"

I called to the gentleman that we were about to send him a basket, and then, by the aid of an umbrella, I gently pushed it through the snow-tunnel to a point where he could reach it. Hearty thanks came back to us through the hole, and when the basket and kettle were returned we prepared our own evening meal.

"For the life of me," said Mrs. Lecks, as she sipped a cup of tea, "I can't imagine, if there was a shed so near us, why we did n't know it."

"That has been puzzling me," I replied; "but the other road, on which the shed is built, is probably lower than this one, so that the upper part of the shed could not have projected far above the embankment between the two roads, and if there were weeds and dead grasses on the bank, as there probably were, they would have prevented us from noticing the top of a weather-worn shed."

"Especially," said Mrs. Lecks, "as we was n't lookin' for sheds, and, as far as I know, we was n't lookin' for anythin' on that side of the coach, for all my eyes was busy starin' about on the side we got in and out of, and down the road."

"Which mine was too," added Mrs. Ale-

shine. "An' after it begun to snow we could n't see nothin' anyhow, partic'larly when everything was all covered up."

"Well," added Mrs. Lecks in conclusion, "as we did n't see the shed, it 's a comfort to think there was reasons for it, and that we are not born fools."

It was now growing dark, and but few further communications took place through the little tunnel.

"Before we get ready to go to sleep," said Mrs. Aleshine, "for, havin' no candles, I guess we won't sit up late, had n't we better rig up some kind of a little sled to put in that hole, with strings at both ends, so that we kin send in mustard-plasters and peppermint to them poor people if they happen to be sick in the night?"

This little project was not considered necessary, and after receiving assurances from the gentleman on the other side that he would be able to keep his party warm until morning, we bade each other good-night, and after having replenished the fire, I got into the stage, where my companions had already established themselves in their corners. I slept very little, while I frequently went out to attend to the fire, and my mind was racked by the most serious apprehensions. Our food was nearly gone, and if relief did not come to us very soon I could see nothing but a slow death before us, and, so far as I could imagine, there was no more reason to expect succor on the following day than there had been on the one just passed. Where were the men to be found who could cut a road to us through those miles of snow-drifts?

Very little was said during the night by my companions, but I am sure that they felt the seriousness of our situation, and that their slumbers were broken and unrefreshing. If there had been anything to do Mrs. Lecks and Mrs. Aleshine would have been cheered up by the prospect of doing it: but we all felt that there was nothing we could do.

: (To be continued.)

Frank R. Stockton.

THE UNITED CHURCHES OF THE UNITED STATES. NO. II.

A REVIEW OF THE CENTURY LETTERS ON CHRISTIAN UNITY.

THE readers of THE CENTURY will remember that the article published in THE CENTURY for Nov., 1885, entitled "The United Churches of the United States" was in no sense representative of denominational views, as held in any church or party, but was simply an independent survey of all Christian denominations with their existing grounds of organic unity in doctrine, polity, and worship. The essay was written with no thought whatever of the criticism which has been converged upon it in these pages by champions of the different churches. It has been under discussion for some months past, until nearly all the interested parties have been fully heard. In now offering a brief reply, I might regret the seeming odds of a battle with so many giants at once, did I not hope to stay out of the battle as much as possible, and keep to the main question, in which alone the public can be interested. A mere controversy on Christian unity would indeed be but a sorry absurdity.

As it has been strangely assumed that the essay put forth some new-made scheme of denominational union, in particular a formal coalition on the basis of the Anglican prayer-book, I beg to recall with emphasis my introductory statement:

> "*We are not yet ready for such schemes, and it would only be a waste of time to discuss them.* The first lesson to be learned is that the unification of the American churches, if it is ever to come at all, cannot be precipitated by platforms, coalitions, compromises, in short by any mere external association of the different denominations, which leaves them still without internal modification and vital connection, as true and living branches of the Vine of Christ."

In pursuance of this statement, the former paper was a mere historical sketch of the unconscious growth of leading American churches towards organic likeness and oneness, as seen especially in their liturgical communion. The plain facts presented in that sketch have not been denied by any of the distinguished respondents, and all the objections to some supposed liturgical scheme of union have, therefore, been but so many formidable javelins hurled into the air. The position taken was briefly this: Our chief historical churches have long been reacting towards the Protestant catholicism expressed in the English prayer-book. That position has not even been assailed or questioned. Here the case might rest, if the aim had been to succeed in an argument rather than to arrive at the truth.

But while the critics of the essay have seemed

somewhat to differ from it, they have much more largely agreed with it, and with one another, and have thus revealed a remarkable consensus of opinions, upon which we may now build up a constructive argument for the continued growth of church unity in the future. To this task the present paper is mainly devoted. If it shall be performed even imperfectly, the protracted discussion will not have been in vain.

We have seen that the various ecclesiastical and quasi-ecclesiastical or pseudo-ecclesiastical bodies of which our American Christianity is composed may be studied in three general groups or classes, according to the principles prevailing in their structure: The *Episcopal*, including the Roman Catholic, Methodist, and Protestant Episcopal churches; the *Presbyterial*, including the Lutheran, Reformed, and Presbyterian churches; the *Congregational*, including the Baptist, Orthodox, and Unitarian churches. Representative divines in each group have spoken through these columns on the question of Christian union or church unity, and thus furnished the materials for a full comparison of views. Let us take them in the order which we have adopted.

EPISCOPALIAN OPINIONS.

THE Right Rev. Bishop Dudley and the Rev. Dr. J. H. Hopkins, of the *Protestant Episcopal Church*, have treated the essay with great kindness, justice, and clearness. They both admit substantially its general conclusions — that full dogmatic agreement is still a long way off, and that the liturgical fusion, which has begun, is but a desirable first step towards true church unity. But, as to the matter of polity, they consistently hold that Episcopacy affords the only basis or form of organic oneness. Against this opinion will be urged several considerations:

First. That forms of doctrine and worship, as well as polity, are ecclesiastical elements affording grounds or germs of organic unity, and are much more important than any mere polity, though it were imagined to be of the most perfect Episcopal form.

Second. That as a matter of fact the Episcopal polity, though common to the Greek, Roman, and Anglican churches, is but little known in the Protestant churches of Europe and America.

Third. That Presbytery, rather than Episcopacy, is the one polity which by common consent has continued historically, from the apostles' time until the present day, in all the chief churches of Christendom, both Catholic and Protestant.

Fourth. That the claim to an Apostolate, as maintained in these letters, is not allowed by other Protestant churches, nor by the Roman Catholic Church, and is practically viewed by both as involving organized schism rather than organic unity.

Fifth. That instead of seeking a remote alliance with the Greek and Latin churches, it were better to begin with some organic connection of the kindred English-speaking Protestant churches, Congregational, Presbyterial, and Episcopal, and on the basis of their common Anglo-Saxon Christianity to aim at the more general unity of Christendom.

Whether these views be right or wrong, they are existing matters of opinion which must enter into the present discussion, as may appear hereafter. It is a very pleasing feature of both of these letters that they breathe an earnest Christian desire and hope of ultimate church unity.

The Rev. Dr. George R. Crooks, of the *Methodist Episcopal Church*, also writes in a union spirit and is in accord with the essay on some essential points, with differences which seem mainly verbal. Mistaking the word organic, as hitherto defined and used, he applies it to that figurative organism or mystical body of Christ in which all true Christians are joined as members, rather than to those ecclesiastical organizations or organized churches which are not one, but many, and more or less hostile to each other. Organic oneness, in the former sense of one Christian body, is indeed an established fact, and happily a fact that goes without the saying in these papers, since they would scarcely be possible but for its tacit assumption; but organic oneness, in the common sense of one church organization, is unhappily not a fact; and though such unity be not deemed vital or fundamental, yet it may be important, if not indispensable, as will hereafter be shown. Doctor Crooks also mistakes the term Catholic for "Roman Catholic," and is thereby led into a view of the relations of Protestantism and Catholicism which may be modified by one or two suggestions.

First. True Catholicism, if defined to be historic Christianity as freed from Roman errors, is not inconsistent with "New Testament Christianity," but is the choicest fruit of its own divine development in history. The Protestants themselves, as their name implies, did not wholly renounce it; nor can we renounce it, unless we are ready for the frightful theory that during fifteen centuries from the apostles' time until the Reformation there was no church or Providence, but only one long reign of sin and Satan.

Second. Such Catholic Christianity is in fact more or less fully retained by Protestant churches in their forms of doctrine, polity, and

worship, which are not to be found clearly set forth in the New Testament, but are very largely an outgrowth from it in church history under divine Providence. The Methodist Church, for example, has a modified episcopate, liturgy, and articles, which it inherited directly from the Church of England, remotely from the Church of Rome, though without other accompanying dogmas held in those churches.

Third. The Protestant body in its recoil from Romanism may have gone too far away from Catholicism into such extremes as sectarianism, rationalism, and revivalism; but a healthy reaction has already begun, as we have shown, in regard to the historic liturgy, and it may yet extend to the other diseases or abuses of Protestantism, until a true church unity shall have taken the place of our sectarianism, and our latest rationalism at length give way to the vindicated Catholic faith.

Fourth. The Roman Church and the chief Protestant churches, notwithstanding their wide differences, rest primarily upon the same Holy Scriptures and share largely the same Catholic Christianity; and it is at least conceivable that in the lapse of time, by the transmuting force of American institutions, and under the pressure of common dangers, they may be brought slowly together from their present extremes, having shed their respective errors until at last they join in the one essential faith of Protestant Catholicism as the full flower of New Testament Christianity. Professor Crooks himself argues very forcibly that the chief Roman dogma of sacerdotal supremacy is doomed to die out, both in Church and State, in the wake of political causes; and he may thus refute his own imaginary picture of an immediate crude coalition of "Romanists and Protestants in one ecclesiastical government."

Fifth. The English liturgy, as we have seen, affords the grounds and germs of such a gradual coalescence of Protestant with Catholic Christianity in the American churches; and when the Methodist Episcopal Church completes its reaction with the rest, the Wesleyan prayer-book, instead of lying a nullity, will serve to bring it into more visible communion and organic connection with the other great historic churches of Christendom.

Dr. Crooks, as a representative of episcopacy without apostolical succession, finds no organic bond between the Greek, Latin, and Anglican churches, but hopes for some closer union of the Protestant churches, to be reached by recognizing their essential spiritual unity as a divine fact, by acknowledging one another's churchly standing in their intercourse, and by coming into more organic coöperation for the great ends of their common Christianity.

PRESBYTERIAN OPINIONS.

THE two representatives of the *Presbyterian Church* have reviewed the essay from different standpoints. The late Dr. Archibald Alexander Hodge, as if with a prophetic utterance, and in an elevated Christian tone befitting the theme, discussed the doctrine of the invisible Catholic Church, and set forth in glowing terms its unbroken unity, as including not merely all true believers on earth, but the whole company of the redeemed in heaven. The surviving disputants may well recognize such doctrine as common ground, while still taking to themselves the reproach that the visible church as yet so little reflects the glorious oneness of the church invisible. Unhappily, our existing denominations cannot be viewed merely as so many harmonious groups of organized churches, or legitimate varieties of church organization, dwelling together in manifest unity. Having been largely produced by warring sects and factions, excommunicating and unchurching one another, they exhibit an apparent dismemberment of the very body of Christ, which has become the great flagrant scandal of our age and country, and has made it the plain duty as well as impulse of all Christian people to seek for more outward organic unity, as well as to hail the providential signs of its inward growth and expression. In any other view, we could only adjourn our questions of doctrine to the millennium, and wait until we may all join in the perfect liturgy of heaven. Practically, indeed, this is the course taken by some extremists who would consecrate mere denominationalism, extenuate sectarianism, and make schism itself chronic, in the face of their own false dormant ideal of an invisible Catholic Church.

In contrast with such errors, Dr. Hodge has impressively shown that the various church organizations, through the indwelling Spirit, will yet grow together toward a true organic unity, consistent with due variety, as but so many members in the one mystical body of Christ. And the latter part of his letter refers to such unity in the three organic spheres of doctrine, polity, and worship. As to the first, his hopeful view of the dogmatic consensus of Protestant Trinitarian churches is a most valuable and timely contribution to the general argument for church unity, and would be only more complete could it include, on the basis of a common American Christianity, those Unitarian churches which express the flower of Puritan culture, as well as that great Roman Catholic Church which is already in the lead on such social questions as marriage, temperance, education, and property. As to the second opinion, that unity in polity would be

more difficult than unity in dogma, I have nothing to add to the former paper, except what may be found in the sequel. As to the third, it may be said that the argument from numbers against the growth of liturgical communion, like most statistical arguments, can be used on both sides of the question, and will probably be met from the other side by such answers as the following:

First. That the liturgical churches of Christendom outnumber in membership the non-liturgical churches as three or four to one.

Second. That in this country it is the least ecclesiastical denominations, the evanescent sects, that are without liturgical tendencies, as they are also crude in their doctrine and polity; while only the historical churches, of European origin, can yield the proper data of the church problem, and these are vitally connected with the contents of the English liturgy in a ratio of forty or fifty to one. Moreover, as we have seen, they are already, knowingly or unknowingly, resuming elements and portions of that liturgy in their worship, and logically tend to it as the best devotional formulary of Catholic and Protestant Christianity.

This starts the only question in the other letter demanding attention. In meeting it, I must reluctantly forsake, for the moment, an independent position, and come down to the denominational ground which the critic has taken. The Rev. Dr. Howard Crosby, declaring himself an out-and-out Presbyterian, offers seven objections to the prayer-book as received opinions in the Presbyterian Church. With due respect, I am obliged to say that not one of them has any foundation in the recognized standards of that body. My replies must be brief.

First. The Directory for Public Worship (ch. v.) does not "object to the stereotyped prayer, however excellent," but does object to "mean, irregular, or extravagant effusions, as a disgrace of Divine service." Such effusions, becoming themselves stereotyped, are worse than any "open-eyed reading of prayer," and in fact sometimes open the eyes of the unhappy listeners.

Second. The Larger Catechism (Q. 186–188) does not object to the invocation, peroration, and well-ordered brief petitions which it finds in the Lord's Prayer as being "too artificial and tending to a mechanical mode of worship"; but it does prescribe the right use of that liturgical form and didactic model of common prayer. To repeat it at least once in each public office is not treating it "as a mere magical formula," but is keeping strictly within the scriptural rubric, When ye pray, say Our Father.

Third. The Shorter Catechism (Q. 99) also enjoins the whole word of God as a rule of prayer; and if therefore any "Presbyterians object to the Litany *in toto* as putting the believer far off from God and calling on Him to spare him as a miserable sinner," they simply object with the Pharisee to the very words of the contrite Publican, as well as to the penitential prayers of priest and people weeping between the porch and the altar. If they object to its devout repetitions as "unmeaning," they must object to the like repetitions in Holy Scripture. If they could object to its solemn pleadings and tender entreaties and manifold intercessions as "having no feature suited to the child of God or joint heir with Christ," they would object to the supplications of the prophets and apostles themselves. But before they object to its scriptural petition against sudden death as "a relic of Romanism," they should consult the Roman original (*a subitanea et improvisa morte*) or the Anglo-Saxon version (*a subita et eterna morte*). They might also profitably consider the beams in their own extempore litanies, the "irreverent," the "sarcastic," the "tedious prayers," etc., of which that accomplished Presbyterian divine, Dr. Samuel Miller, speaks in his useful treatise.

Fourth. The Form of Government (ch. iii. v.) does not "hold that all believers are priests" in the sense of being ministers, or that "a minister is only an ordained ruler and leader of the people, with no more authority to pronounce absolution upon the penitent than any one who is not a minister"; but it does most plainly distinguish him from the mere representatives of the people as a minister of Christ and ambassador from God, declaring pardon in Christ's stead. The Confession also (ch. xxx.) names among his high functions, "power to open the kingdom of heaven unto penitent sinners by the ministry of the Gospel, and by absolution from censures, as occasion shall require." Consistently with such teaching, the declarative Absolution, prefixed to the English daily service, is simply an authoritative proclamation of the Gospel, made solemn and direct by a special act of worship on the part both of minister and people. If any Presbyterians are thoughtless enough to object to that formula as "a remnant of the Roman Absolution," they should be informed that its very motive was as Protestant as its meaning; that it was first suggested by Calvin himself; that it was taken very largely from a Calvinistic liturgy; and that it was alternatively called the Absolution or Remission of sins, in deference to Puritan scruples against a word of Popish sound.

Fifth. The Confession of Faith (ch. xxviii.) does not "abhor the doctrine of baptismal regeneration" as rightly stated, but does de-

clare it a "great sin to contemn this ordinance," guards carefully against the abuse of it, and defines it as a "sign and seal of regeneration even unto infants" (Q. 177). And the Baptismal Offices merely express the substantial sense of this definition in strong liturgical terms. Any Presbyterians who abhor such doctrine may find it discreetly maintained by that saintly man, the late Dr. Archibald Alexander, in the second chapter of his work on religious experience. As to the Holy Supper, the Confession takes some higher views of the Real Presence than can anywhere be found in the English communion office. In fact, the only "remnant of transubstantiation" that appears in that office is a solemn ordinance against it as "idolatry to be abhorred of all faithful Christians." Presbyterians who are horrified at such a rag of popery will have their horror increased on learning that the stringent rubric was first procured by that uncompromising reformer, John Knox, in 1552, and fully confirmed at the last revision in 1661, according to Mr. Procter's history of the prayer-book, "in compliance with the wishes of the Presbyterians."

Sixth. The chief framers of the above-named standards, though certainly "not in love with the Episcopal liturgy" as it was imposed upon them by the Act of Uniformity two centuries ago, protested that they had "not the least thought of depraving or reproaching the Book of Common Prayer," but wished only to "avoid both the extreme that would have no forms and the contrary extreme that would have nothing but forms";* and their exceptions to the prayer-book, in matters of mere usage and taste as well as principle, like some of the objections before us, have long since been fully met by the changed conditions of American Presbyterianism, which now neither enjoins nor forbids the use of a liturgy.

Seventh. The Presbyterian Book of Common Prayer affords a summary refutation to Dr. Crosby's objections, all and each of them. Among the legal revisers of the English liturgy in 1661 were the very authors of the Presbyterian formularies, such as Anthony Tuckney, Regius Professor of Divinity at Cambridge, who had written nearly the whole of the Larger Catechism; John Wallis, Savilian Professor of Geometry at Oxford, who had been secretary to the Westminster divines, and had himself prepared the Shorter Catechism; Edward Reynolds, afterwards Bishop of Norwich and author of the General Thanksgiving, who had composed the most important parts of the Confession of Faith; Edmund Calamy, the very leader of the Presbyterian clergy, who with Spurstow, Newcomen, and Arrowsmith had been in the Assembly's committees that framed the Directory of Worship and Church Government; to say nothing of the learned Lightfoot, the silver-tongued Bates, the saintly Baxter, and other great Presbyterian scholars and martyrs whose praise is in all the churches. The emendations and exceptions of such men, duly modified by American authorities, precedents, and usages, yield an edition† of the prayer-book to which no Presbyterian can bring any objections whatever without taking the ground from under his feet. Dr. Crosby, as an out-and-out Presbyterian, will henceforth become a valiant champion, not merely of the prayer-book, but of that church unity which is an essential principle of Presbyterian polity as well as the flower of Christian charity.

Resuming now our task, we may sum up Presbyterian opinion, according to the teaching of Dr. Hodge, as based upon the inward spiritual oneness of the churches, yet looking forward to their outward organic oneness, still to be attained through the slow ripening of their knowledge, love, and zeal, and other graces of the Holy Spirit.

CONGREGATIONALIST OPINIONS.

THE letters of the two learned divines representing the *Orthodox Congregational* churches, though making no allusion to the essay, admit of a logical connection with it as affording valuable opinions needed to complete this survey. President Seelye, of Amherst College, gives a profoundly spiritual view of the fellowship of saints and of churches, and likens the universal church to the universal state, as being one in its essence, though manifold in its forms, Congregational, Presbyterial, Episcopal, and as tending finally to a Christian theocracy, in which the autonomy of the particular church shall be consistent with the autocracy of the universal church.

Professor Fisher, of Yale College, in his more practical and very suggestive letter, maintains that, since the decree of Papal infallibility, Christian union is practicable only among Protestant denominations; and he finds three obstacles to such union — in the reigning dogmatic intolerance, in the prevalent ritual diversity, especially as to the rite of baptism, and in the divine-right theory of church government as held by Episcopalians, Presbyterians, and some Congregationalists. At the same time, he admits that a mere governmental, as

* Documents of Revision, 1661.

† The Book of Common Prayer, as amended by the Presbyterian Divines in the Royal Commission of 1661, and in agreement with the Directory for Public Worship of the Presbyterian Church in the United States. With a supplementary treatise.

distinguished from a sacerdotal Episcopacy, would not be repugnant to other Protestants, and that an optional liturgy, used alternatively with spontaneous worship, might in some cases prove an advantage.

Although both of these writers say but little of any organization beyond the limits of the local church or parish, yet it is well known that such organization exists, more or less ecclesiastical in its tendencies and without destroying the self-government of congregations, as is seen in their voluntary association for some church purposes, as well as in that practical congregationalism which prevails under presbyterial and episcopal systems.

Two eloquent divines have spoken for the *Unitarian Congregational* churches. We can all agree with the Rev. Dr. Edward Everett Hale, when he asserts that Christian unity exists in America now, in the sense in which he understands it. But church unity, the fusion of Christian sects into the one church, does not exist; nor can "people who want it find it by going out-of-doors," by simply mingling together in humane recreations, however good and healthful. The civilized Christian of this epoch does not always live out-of-doors. Church organizations, with creed and ritual rooted far back in history, have earned their right to be; and just now they are reasserting that right. Dr. Hale very aptly likens them to the independent colonies before they had become compacted in the national union; and denies that "the work of the church is better done by its several sections when they keep up a strict organization among themselves, and each lets the other sections severely alone." That was once the war cry, we remember, of a large section of the United States; and now and then we hear something like it among the united churches. But if ever we get a good working constitution for them, it will harmonize the local with the general church in all forms of Christian well-doing, and, unlike that lost formula which our accomplished critic describes, it can neither be mislaid nor burned in a Boston fire.

With a generous largeness of view, Professor A. P. Peabody, of Harvard University, reveals the ground common to Unitarianism and Orthodoxy in the divine humanity of Christ; though he maintains, like other correspondents, that full agreement in the realm of metaphysical divinity is not attainable, nor desirable. His practical conclusion is that Christians should unite in recognizing heartily their common Christ-likeness, in promoting Christian righteousness, and in maintaining Christian worship so far as the common faith will allow. These are not only important grounds of Christian union, but may also be ranked among the conditions precedent to church unity.

As an able representative of the *Baptist Congregational* churches, the Rev. Dr. R. S. MacArthur, of New York City, dwells upon the growth of union in worship by means of liturgies as well as revivals, and upon the large amount of essential unity in doctrine which already exists in default of anything like organic union. But when Dr. MacArthur so intrepidly maintains that "organic union can only be reached at the baptistery," because many scholars have admitted that immersion is a scriptural mode of baptism, he forgets what an insignificant minority have held that it is the only scriptural mode, and how prevalent infant baptism has been in the universal church. The spread of open communion in his own denomination is one of the most cheering signs of the times, and affords practical ground for the hope that pedobaptist and anabaptist congregations might yet be embraced within the same denominational or ecclesiastical system. The need of the hour is not concession, but toleration.

Of all the Congregationalist letters, Orthodox, Unitarian, Baptist, it may now be summarily remarked that not one of them has exhibited congregationalism as hostile to church unity or as wholly inconsistent with some ecclesiastical organization of congregations, which did not trench upon their local rights and privileges.

Such are the three chief sets of opinions now before us for comparison. At first sight the differences might seem to be very great; but it will be found that some of them are greater within the same denomination than between different denominations, or greater within the same group than between different groups of churches. And it will also be found that all the differences are much less vital and important than the agreements.

In the first place, there is a consensus of Congregationalist, Presbyterian, and Episcopalian opinions in regard to the spiritual oneness of all true Christians, however variously they may be organized in their different churches and denominations. This unity has been described with more or less clearness as a communion of saints, a universal fellowship of believers, a spiritual unity of churches, an invisible Catholic Church; but, however expressed, it is a note of essential harmony amid the apparent discord. It enables the strictest churchman, whether he be an Episcopalian, a Presbyterian, or a Congregationalist, to recognize heartily the Christian character of multitudes, now attached to organized forms of Christianity, which he believes to be false and pernicious, and cannot by any official act recognize as

regular or valid; and it affords a broad platform on which our churches may combine, more or less consciously and formally, in the confession of the same catholic creed, and largely in the use of the same historic liturgy. Underneath all existing structures of church polity ever remains this common Christianity, this united faith in Christ, as their one divine foundation.

In the second place, even as to the remaining differences in polity, the writers are agreed that such barriers are not fixed and final, but shall yet, somehow, disappear in the church of the future. The Episcopalian may hope to see the episcopate supersede all other systems, or become their unifying bond and center. The Presbyterian may look forward to some further extension of the presbyterial principle through existing church organizations. The Congregationalist may anticipate self-governing congregations even under presbytery or episcopacy, as stripped of hierarchical claims. Each may project his ideal church into a millennium, more or less distant; may behold in that church a unity consistent with more or less diversity; and may see that church unity at length attained through causes more or less divine or human. But all will consent to view the present sectarian condition of Christianity, especially of Protestant Christianity, as abnormal and transient, and stand ready to welcome any hopeful means of promoting greater oneness and harmony.

In the third place, the remaining differences in mere church polity admit, even now, of a theoretical adjustment. Without wandering off into a vague future, we can fancy an ecclesiastical system in which Congregationalism, Presbyterianism, and Episcopalianism, as we know them in this country, might so limit and modify each other as to co-exist without conflict, each in its own beneficent sphere of action. In such a complete polity presbytery would keep the equipoise between the centrifugal tendencies of congregationalism and the centripetal tendencies of episcopacy, ever preserving particular congregations in their due autonomy, and at the same time combining them in a true cathedral system of schools, missions, and charities. It may be the destiny of the American church thus to bring into normal connection and organic life three ecclesiastical elements, which in the Anglican establishment were forced together in false relations or driven out of it into hurtful extremes, but which in this new world have had full scope and development until now they are ready for a just coalescence. In this manner might be reached what was described in the former essay as "some comprehensive polity, which shall be at once Congregational, Presbyterial, and Episcopal, and wherein Protestant freedom and intelligence shall appear reconciled with Catholic authority and order." By this means the very terms Presbyterial, Congregational, Episcopal would lose their polemic sense, and all sectarian titles vanish in an organization which would be in fact, even if not in name, the American Catholic Church.

In the fourth place, such an ideal adjustment of differences in church polity has long been becoming actual in the history of the American churches. As we have seen, the old issues between them are all but dead, if not ready for honorable burial. The Cavalier, the Covenanter, and the Puritan now live only in history and romance. Their hot blood has become peacefully blended in their American descendants, and we now dwell upon their virtues rather than upon their faults. He must simply fight against himself who would fight against any one of them. In other words, the unconscious assimilation of churches, after a hundred years of intermarriage and social fusion, has reached a point where they differ more in names than in things. Congregationalists have now and then an extemporized presbytery called an association, and here and there a truly episcopal divine without the title of bishop. Presbyterians in emergencies practice the most independent congregationalism, and love to speak of their pastors as parochial bishops, lacking only the excellent rite of confirmation. Episcopalians, after having been also without that rite during the two hundred years of their colonial history, may now boast of presbyterian elements in their polity and a congregationalist freedom in their ritual. And all three are not only professing the same essential doctrines, but singing the same hymns and beginning to say the same prayers. Let such changes go on, and after awhile we may wake out of our useless strifes to find that we have only been viewing the same shield from different standpoints, the same church under different phases; becoming Presbyterians, Congregationalists, Episcopalians, by turns, without knowing it.

In the fifth place, this gradual fusion of such ecclesiastical differences has at length come into public consciousness as an avowed aim for concerted action. Christian people all over the land are trying to find how much they agree, rather than how much they differ. Leading minds in the various churches from their several points of view are approaching the great problem of compacting our American Christianity against the gathering foes which menace it. Union in Church as well as in State is looming high and large as the question of questions before which all others must sink into insignificance. Not union for the mere

sake of union — that is but a sectarian sneer; but union as the very heart in the body of Christ and crown of all the graces; union as a duty no less than as a sentiment; union for the maintenance of truth and religion and virtue; union to prevent so immense a waste and friction in our charities and missions; union for the preservation of Christianity itself amid dangers hitherto unknown; union against the materialism that is corrupting the life of the nation; against the socialism that is assailing property, marriage, government, law, and order; against the agnosticism that is undermining all creeds, codes, and manners; against the sectarianism that is parleying and wrangling in full view of such enemies; union, if need be, against the very disunion that would keep the churches, as it would have kept the States, discordant and dismembered, in the supreme hour of peril.

Never were the signs, as well as the needs, of such union more apparent. Never was the feeling so deep and growing that the divisions in the Christian Church must somehow come to an end. It will not be stopped by such adjectives as "sentimental," "romantic," "utopian." Sectarian interests may throw obstacles in the way, a false conservatism may raise alarms, and veteran divines draw the sword to fight their battles over again,— but in vain. In this movement the people are more determined than their rulers, and the church universal will prove stronger than any sect or party. Look at the progress made since the question was opened in these columns a few months ago. The chief denominations of the country have been taking practical steps towards church unity in distinction from mere Christian union. The Congregational churches of New England have been removing the walls which separate Baptists from Pedobaptist communions. The Presbyterian churches of the Middle States have been settling the vexed question of their psalmody, while those of the South and the North are adjusting their political differences, and those of the East are in conference with the Reformed churches, Dutch and German. The Cumberland Presbyterian and Methodist churches of the West are blending Calvinism with Arminianism. The great Lutheran churches give signs of becoming more homogeneous and American. The Baptist churches have declared for union of denominations. The Episcopal Church has been inwardly moved as never before towards other Protestant churches. The Evangelical Alliance is taking the form of a national league. And as a visible presage of the new era, we have already had what might be called a provisional congress of the "United Churches of the United States."

In the midst of these remarkable movements, the House of Bishops of the Protestant Episcopal Church has sent forth a noble and far-reaching declaration seeking to embrace all branches of Christendom in the bonds of a true church unity. The four terms proposed are so large and fair that they will almost carry consent in their statement.

The *Holy Scriptures* are already the accepted basis of all Christian churches, besides affording the consensus of Christianity with Judaism, and with heathenism in the work of missions.

The *Nicene Creed* was simply the faith of the undivided early Church and still expresses the most essential consensus of nearly all modern churches, with room for their later creeds, such as the Thirty-nine Articles, the Westminster, Augsburg, and Heidelberg confessions.

The *Divine Sacraments*, whenever and wherever rightly administered, cannot but exhibit the communion of that Catholic visible Church which includes all baptized Christians and their children.

The *Historic Episcopate* might become an added bond among existing church systems, if viewed according to the meaning of the phrase, as a fact rather than as a doctrine, without raising the question whether it has been a development of the apostolate or of the presbyterate of the early Church.

It is this last proposal which is likely to stir the keenest debate, and all eyes are now turned towards one point as the focus of the discussion. If the unifying movement is to go forward, it is plain that it should be led and guided by those churches or systems which are historically and logically most nearly allied in doctrine, polity, and worship, as well as providentially fitted to represent the Protestant and Catholic wings of Christendom. Now these conditions are met by *Presbytery* and *Episcopacy:* by Presbytery as included in the Lutheran, Reformed, Congregational, Presbyterian, and Methodist churches; and by Episcopacy as found in the Greek, Latin, Anglican and Protestant Episcopal churches — not Presbytery and Episcopacy, viewed merely as complemental institutions in an ideal polity, but also as kindred ecclesiastical elements, with the same roots in Scripture and in history, and having a true and vital affinity for each other.

Here we touch the embers of smoldering controversies, which a breath might kindle into a flame. It would be easy enough to recall old grievances and revive dying prejudices which arose in another age and country, when Presbyterians and Episcopalians made martyrs of each other by turns, in a

fierce and sectarian warfare, until, like two combatants chained apart, they were forced by the civil arm to settle down into the established churches of England and Scotland. There are those who would be in haste to import the waning castes of churchman and dissenter into a free republic, to apply the effete policy of the seventeenth century to the nineteenth, and to measure the wants of a hemisphere by those of an island. But the large hearts and noble minds on both sides will resolutely keep dead issues out of sight, will rise above sects and parties to the view of general and lasting interests, and will seek to minimize their trivial differences in order to gain the maximum amount of sincere and honorable agreement.

Approaching the question in this spirit, we shall be at no loss for favorable signs and arguments. Not only do the mother-churches of England and Scotland bear an original likeness as twin daughters of the Reformation, descended from the same Catholic Church, with the same historical continuity from the apostles' time, and only different lines of succession since they parted; not only may their existing standards be correlated and blended, the Book of Common Prayer as but a liturgical expression of the Directory for Public Worship, the Confession of Faith as but a logical expansion of the Articles of Religion, and the diocesan Episcopate as but a fit complement of the synodical Presbytery,—but, besides all this, the two forms of polity, as transplanted to our shores, have developed new types of church life and culture, which would be especially valuable in combination, and have already become leading factors in our Anglo-American civilization, the one as expressive of the best Protestant, and the other of the most Catholic Christianity. Add still further: that for a hundred years past they have been unconsciously coming together, and growing like each other. At the very outset, when they became independent of the mother-churches, the American Directory was enriched with liturgical rules and suggestions, and the American Ordinal was enlarged by an alternative form of authorization. Ever since then American Presbyterianism has been steadily reacting from the narrow views of the Puritans and Covenanters towards a larger Christian culture and more liturgical mode of worship, as well as producing a pure theology and a learned ministry unsurpassed in the country; while American Episcopacy, having escaped from the Anglican establishment with its Catholic faith and noble liturgy, has been admitting presbyterial government, lay and clerical, into its dioceses and combining extempore prayers with its liturgy, until it has surrendered the very points on which the Presbyterian party in the Church of England was defeated two centuries ago. We have lived to see Episcopalian prayer-meetings as well as Presbyterian prayer-books. The two hereditary foes have not merely met halfway, but actually crossed the lines as in friendly rivalry on the battle-fields of former generations.

Now it seems worth while to ask if the ancient family feud might not somehow be effaced and forgotten. Both churches, after long estrangement, have come back to ground where they may well recognize and respect their common lineage, their organic likeness, and their reciprocal interests. Each of them, in fact, has long since conceded enough, and more than enough, for a full and frank understanding. Had such concessions been made in the beginning, no separation could have occurred. Were such concessions now more generally known, a reunion might soon follow. Even that last barrier to reunion, the vexed question of orders, when fairly met and sifted, may but disclose a ground or link of organic connection in the one simple fact that Episcopal ordination could take nothing from, but only add something to, Presbyterian ordination, howsoever either may be viewed by either party. Presbyterians do not differ from Episcopalians more than Episcopalians differ from one another in estimating that rite. In such a state of opinion the differences are no longer worth weighing against the agreements and accruing advantages. As it might prove a great gain to American Episcopacy to be reënforced with Presbyterian orthodoxy and churchliness, so it might prove a great gain to American Presbytery to recover the Episcopal order and liturgy. The reunion would be as organic to each as the original rupture was disorganizing to both. Indeed, it could easily be shown that the chief authors of the Presbyterian standards, if now living, would find their ideal in our Protestant Episcopacy; or, in other words, that the American Episcopacy of to-day has recovered English Presbytery of a classic type, and so fully recovered it that the two systems, at fit times and places, especially in our large cities and great missions, might wisely and well be conjoined or confederated, if not at length merged in one organization.

How far such union or fusion is now feasible need not here be discussed. Whatever changes of church law or practice might be needed, the way to them could be found as soon as there is the will to find them. Presbyterian usage already concedes the validity of episcopal ordination, and the Episcopal Ordinal enjoins no polemic theory of presby-

terial ordination, but is even held to involve presbyterial coördination. Why not begin at once to act upon these facts and principles? Why should there be a so-called hypothetical ordination on the one side or a covert conditional acceptance of it on the other. Let both parties openly and generously recognize each other in concurrent ordinations or reordinations, as occasion requires. By such means all question of valid ministrations would at length die out, as in a marriage of rival houses. The most extreme Episcopalian, from his own point of view, would only be sanctioning orthodox learning, churchly aims, and evangelical labors; and the most extreme Presbyterian, from his own point of view, would only be gaining more authority or grace for a larger service; and the two together would simply be honoring both episcopacy and presbytery in the one catholic and apostolic Church of Christ.

Without claiming to speak for others, but looking at the question from a strictly undenominational point of view, I venture to hope that in any union to be devised the historic episcopate can be retained, if only as one remaining bulwark against the well-meant but lawless evangelism which is running wild in our churches and bringing all the divine institutions of the Christian religion into contempt. The great revivalists, Whitefield and Wesley, were trained clergymen and ever appeared as such, even when driven from the pulpit into the field. But our lay evangelists are pressed from the field into the pulpit, and a divine success is claimed for them on the very ground that they are not clergymen but mere laymen. When earnest and gifted preachers of the Gospel, like Mr. Moody, decline to become ordained ministers of any church, while everywhere exercising ministerial functions, with learned divines and faithful pastors sitting at their feet, and the whole order of God's house set aside, can we wonder if the popular inference should be that the ministry itself is but a human convenience, if not already a failure. Is any transient good done by them to be weighed for one moment against the lasting evil of overthrowing the most sacred ordinances and institutions, to say nothing of feverish excitements, whose track is often that of the simoon through the fairest pastures of Christ? Our chief danger in this land and age of freedom is not hierarchy. Instead of too much ecclesiasticism, there is too little. The clergy are fast losing their normal rank and influence. The time may yet come when pure presbytery and true episcopacy shall appear not only congruous but inseparable, and together essential in maintaining that "catholic visible church unto which Christ hath given the ministry, oracles, and ordinances of God."

There is also a large and growing class of minds in all churches for whom the historic episcopate, as now associated with the prayer-book, seems practically the only guarantee of a pure scriptural worship. Time was indeed when that liturgy had been so rigorously enforced as to extinguish all other forms of devotion. No wonder Milton could then cry out against it: "To imprison and confine by force, within a pin-fold of set words, those two most unimprisonable things, our prayers and that divine spirit of utterance which moves them, is a tyranny that would want longer hands than those giants who threatened bondage to heaven." But out of that tyranny we have long since fought our way to a ruinous victory. The time has now come to distinguish liberty from license in the worship of God and to assert order and decency against confusion in the assemblies of saints. Keep for fit times and places the free, extempore service which has been so dearly won; but keep also that historic liturgy which has come down to us from all the Christian ages. Let the people have pure English and sound doctrine at least in their devotions; let them learn the whole word of God in appointed lessons; let them offer up prayers which they can call their own; let them follow their Lord, from his cradle to his cross, through each year of his grace; let them receive holy sacraments and rites, in the meet words of apostles, saints, and martyrs; let them thus worship with angels and archangels and the whole company of the redeemed on earth and in heaven. Already, indeed, some of these things have been reclaimed for them as their just heritage, and we are beginning to find that the prayer-book can co-exist with the prayer-meeting as easily as episcopacy can concur with presbytery.

Besides these advantages, the historic episcopate might also bring a valuable conservative force into our presbyterial systems of church government. Aside from the claim of apostolical succession, it is appreciated as a scriptural and ancient institution of the Christian religion, as fitted to secure the choicest wisdom, learning, and piety of the Church in the direction of its affairs, and as demanded by new exigencies which have arisen in our time and country. Since it became detached from the English peerage and monarchy, it has grown into harmony with our republican institutions, while supplying needed checks upon their radical tendencies. Moreover, it is certain that episcopacy as well as presbytery would have a voice in any Provisional Congress or General Council of the Lutheran, Reformed, Congregational, Presbyte-

rian, Methodist and Protestant Episcopal churches which could be duly called; and should the time ever come for the federation or consolidation of these bodies, it might be found that a House of Bishops and House of Presbyters, like the Senators and Representatives in our national legislature, would support and balance each other, reconciling rival claims and interests and ever securing the new popular institutions of the American church as well as keeping it in the line of historic Christianity. He would be a bold prophet who would strike out either presbytery or episcopacy from the future Christian civilization of this continent.

The chief obstacles to a reunion of our episcopal and presbyterial systems are not so much any doctrinal differences inhering in those systems as the mere accidental influences of denominational pride, inherited prejudice, and general ignorance — an ignorance largely enveloping the clergy as well as the people. Nothing would seem plainer than that both parties left their grievances behind them three thousand miles away, two hundred years ago; and yet the memory of them so rankles in our blood that we still shudder at them as if we might encounter another Laud in some good bishop of an American diocese, or provoke some Janet Geddes to hurl her tripod in response to a Presbyterian liturgy. The political, social, and religious conditions which once kindled so fierce a strife between Presbytery and Episcopacy, and drove them asunder to so rash extremes, could not be transferred to this free land and can never arise among its free churches; but we seem often to fancy that the same battle is still raging, and fill the air with the old familiar slogans and cheer on our champions to new encounters, though all the while no lordly prelates are sitting in our legislatures, and no bloody Claverhouse is abroad pursuing our peaceful worshipers — though no psalm-singing Puritans are despoiling our new cathedrals and no outlawed Covenanters are waylaying our excellent bishops. On the one side, we are ever boasting of a church lineage which we espoused but yesterday; and, on the other side, of a line of martyrs whom we no longer follow. We forget that those honored Anglican prelates would have dispersed our Episcopal conventions as so many rebels, schismatics, and dissenters, and those revered Scottish worthies would have made swift bonfires of our Presbyterian hymnals, organs, and service-books. And should some candid investigator expose to us, in the clear light of history, how groundless are our prejudices and how foolish our divisions, we can do nothing perhaps but accept his statements, as highly interesting but very useless, and scarcely know whether to frown or smile upon him as, by turns, he provokes admiration or indignation on both sides of the question.

The writer cannot hope to escape such influences. By some of his most respected readers this paper may be viewed as a pure speculation. It will be easy to call it the dream of a recluse or say that the time is not ripe for it. Nevertheless, the present generation might see it becoming real, if only events move forward as fast as they have moved since the former paper was written. And no prophet is needed to tell us what would be the issue. Let the day ever come for a general reunion of Presbytery and Episcopacy, either by formal agreement or by practical fusion, and it would mark the turning-point in the problem of an American Catholic Church. It would be but the forming nucleus of a wide confederation and consolidation of churches and denominations, which are already in ministerial communion and more or less organic connection. Presbytery would include the German, Dutch, French, Scotch, and English types of Protestantism; Episcopacy would involve the Greek, Latin, Anglican, and American germs of Catholicity; and all these varied elements would come into new and vital relations, correcting and molding each other. Our best American Christianity would react upon our whole American civilization against the crying evils of sectarianism, infidelity, and vice. The great vanguard churches of the land, no longer idly saying one to another in the very front of battle, "I have no need of thee," would stand compact together, and grow up in Christ the Head as his living members, and at length, it may be, lead on to one United Church of the United States.

Charles W. Shields.

TWILIGHT.

THE soft voluptuous opiate-shades,
The sun just gone, the eager light dispelled — (I too
will soon be gone, dispelled),
A haze — nirvana — rest and night — oblivion.

Walt Whitman.

ABRAHAM LINCOLN: A HISTORY.*

LINCOLN'S INAUGURATION.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

SPRINGFIELD TO WASHINGTON.

AS the date of inauguration approached, formal invitations, without party distinction, came from the legislatures of Indiana, Ohio, Pennsylvania, New York, New Jersey, and Massachusetts, tendering Mr. Lincoln the hospitalities of those States and their people, and inviting him to visit their capitals on his journey to Washington. Similar invitations also came to him from the municipal authorities of many cities and towns on the route, and railroads tendered him special trains for the use of himself and family. Mr. Lincoln had no fondness for public display, but in his long political career he had learned the importance of personal confidence and live sympathy between representatives and constituents, leaders and people. About to assume unusual duties in extraordinary times, he doubtless felt that it would not only be a gracious act to accept, so far as he could, these invitations, in which all parties had freely joined, but that both people and executive would be strengthened in their faith and patriotism by a closer acquaintance, even of so brief and ceremonial a character. Accordingly he answered the governors and committees that he would visit the cities of Indianapolis, Columbus, Cincinnati, Cleveland, Pittsburg, Buffalo, Albany, New York, Trenton, Philadelphia, and Harrisburg, while to the governor of Massachusetts he replied that the want of time alone constrained him to omit that State from his route of travel.

Monday, the 11th day of February, was fixed as the time of departure, and a programme and schedule of special trains from point to point were arranged, extending to Saturday, the 23d, the time of arrival in Washington. Early Monday morning (the 11th) found Mr. Lincoln, his family, and suite at the rather dingy little railroad station in Springfield, with a throng of at least a thousand of his Springfield neighbors who had come to bid him goodbye. It was a cloudy, stormy morning, which served to add gloom and depression to the spirits. The leave-taking became a scene of subdued anxiety, almost of solemnity. Mr. Lincoln took a position in the waiting-room, where his friends filed past him, often merely pressing his hand in silent emotion.

The half-finished ceremony was broken in upon by the ringing bells and the rushing train. The crowd closed about the railroad car into which the President-elect and his party * made their way. Then came the central incident of the morning. Once more the bell gave notice of starting; but as the conductor paused with his hand lifted to the bell-rope, Mr. Lincoln appeared on the platform of the car, and raised his hand to command attention. The bystanders bared their heads to the falling snow-flakes, and standing thus, his neighbors heard his voice for the last time, in the city of his home, in a farewell address † so chaste and pathetic, that it reads as if he already felt the tragic shadow of forecasting fate:

"My friends: no one, not in my situation, can appreciate my feeling of sadness at this parting. To this place, and the kindness of these people, I owe everything. Here I have lived a quarter of a century, and have passed from a young to an old man. Here my children have been born, and one is buried. I now leave, not knowing when or whether ever I may return, with a task before me greater than that which rested upon Washington. Without the assistance of that Divine Being who ever attended him, I cannot succeed. With that assistance, I cannot fail. Trusting in Him, who can go with me, and remain with you, and be everywhere for good, let us confidently hope that all will yet be well. To His care commending you, as I hope in your prayers you will commend me, I bid you an affectionate farewell."

* The presidential party which made the whole journey consisted of the following persons: Mr. Lincoln, Mrs. Lincoln, their three sons, Robert T., William, and Thomas, Lockwood Todd, Doctor W. S. Wallace, John G. Nicolay, John Hay, Hon. N. B. Judd, Hon. David Davis, Colonel E. V. Sumner, Major David Hunter, Captain George W. Hazard, Captain John Pope, Colonel Ward H. Lamon, Colonel E. E. Ellsworth, J. M. Burgess, George C. Latham, W. S. Wood, and B. Forbes. Besides these a considerable number of other personal friends and dignitaries accompanied the President from Springfield to Indianapolis, and some of them to places farther on the route.

† This address is here correctly printed for the first time, from the original manuscript, having been written down immediately after the train started, partly by Mr. Lincoln's own hand and partly by that of his private secretary from his dictation.

A proper description of the presidential tour which followed would fill a volume. It embraced two weeks of official receptions by committees, mayors, governors, and legislatures; of crowded evening receptions and interminable hand-shakings; of impromptu or formal addresses at every ceremony; of cheers, salutes, bonfires, military parades, and imposing processions, amid miles of spectators.

Political dissension was for the moment hushed in the general curiosity to see and hear the man who by the free and lawful choice of the nation had been called to exercise the duties of the presidential office. The universal eagerness was perhaps heightened by the fact that during the same two weeks the delegates from the States in insurrection were in session at Montgomery, Alabama, occupied with the temporary organization of a government openly pledged to rebellion, and whose doings were daily reported by the telegraph and printed in every newspaper. Personal curiosity was thus supplemented by growing political anxiety, and every word of the President-elect was scanned for some light by which to read the troubled and uncertain future. Mr. Lincoln was therefore obliged to measure his public utterances with unusual caution; and while he managed to avoid any announcement of policy, the country was nevertheless able to read between the lines that it had made no mistake in the man to whom it had confided the preservation of the Government. It would, of course, be impossible in a single chapter to cite his many speeches on this journey, in which there occurred, of necessity, a great deal of repetition. It will, perhaps, give a better idea of their general tenor to reproduce passages from a few of the most noteworthy. In reading these the critic must constantly bear in mind that they were reported and printed under such circumstances of haste and confusion that verbal accuracy could not be expected, and that they are but abstracts, in which the full structure of his sentences is often abridged or transposed to permit the whole to be brought within the limits of an ordinary press dispatch.

The train which left Springfield in the morning arrived in Indianapolis before nightfall, where, in response to an address from Governor Morton, Mr. Lincoln said:

"Most heartily do I thank you for this magnificent reception, and while I cannot take to myself any share of the compliment thus paid, more than that which pertains to a mere instrument, an accidental instrument, perhaps, I should say, of a great cause, I yet must look upon it as a most magnificent reception, and as such most heartily do I thank you for it. You have been pleased to address yourself to me chiefly in behalf of this glorious Union in which we live, in all of which you have my hearty sympathy, and, as far as may be within my power, will have, one and inseparably, my hearty coöperation. While I do not expect, upon this occasion, or until I get to Washington, to attempt any lengthy speech, I will only say that to the salvation of the Union, there needs but one single thing, the hearts of a people like yours. The people, when they rise in mass in behalf of the Union and the liberties of this country, truly may it be said, 'The gates of hell cannot prevail against them.' In all trying positions in which I shall be placed, and doubtless I shall be placed in many such, my reliance will be upon you and the people of the United States; and I wish you to remember, now and forever, that it is your business, and not mine; that if the union of these States and the liberties of this people shall be lost, it is but little to any one man of fifty-two years of age, but a great deal to the thirty millions of people who inhabit these United States, and to their posterity in all coming time. It is your business to rise up and preserve the Union and liberty for yourselves, and not for me. . . . I appeal to you again to constantly bear in mind that not with politicians, not with Presidents, not with office-seekers, but with you, is the question, Shall the Union and shall the liberties of this country be preserved to the latest generations?"

The ceremonies during his stay here called out another address from him in which he asked the following pertinent questions:

"I am here to thank you much for this magnificent welcome, and still more for the generous support given by your State to that political cause which I think is the true and just cause of the whole country and the whole world. Solomon says there is 'a time to keep silence,' and when men wrangle by the month with no certainty that they *mean* the same *thing*, while using the same *word*, it perhaps were as well if they would keep silence. The words 'coercion' and 'invasion' are much used in these days, and often with some temper and hot blood. Let us make sure, if we can, that we do not misunderstand the meaning of those who use them. Let us get exact definitions of these words, not from dictionaries, but from the men themselves, who certainly appreciate the *things* they would represent by the use of words. What, then, is 'Coercion'? What is 'Invasion'? Would the marching of an army into South Carolina, without the consent of her people, and with hostile intent towards them, be 'invasion'? I certainly think it would; and it would be 'coercion' also if the South Carolinians were forced to submit. But if the United States should merely hold and retake its own forts and other property, and collect the duties on foreign importations, or even withhold the mails from places where they were habitually violated, would any or all of these things be 'invasion' or 'coercion'? Do our professed lovers of the Union, but who spitefully resolve that they will resist coercion and invasion, understand that such things as these on the part of the United States would be coercion or invasion of a State? If so, their idea of means to preserve the object of their affection would seem exceedingly thin and airy. If sick, the little pills of the homeopathist would be much too large for them to swallow. In their view, the Union, as a family relation, would seem to be no regular marriage, but a sort of 'free-love' arrangement, to be maintained only on 'passional attraction.' By the way, in what consists the special sacredness of a State? I speak not of the position assigned to a State in the Union, by the Constitution; for that, by the bond, we all recognize. That position, however, a State cannot carry out of the Union with it. I speak of that assumed primary right of a State to rule all which is *less* than itself, and ruin all which is larger than itself. If a State and a county, in a given case, should be equal in extent of territory, and equal in number of inhabitants, in what, as a matter of principle, is the State better than the

county? Would an exchange of names be an exchange of *rights* upon principle? On what rightful principle may a State, being not more than one-fiftieth part of the nation, in soil and population, break up the nation and then coerce a proportionally larger subdivision of itself, in the most arbitrary way? What mysterious right to play tyrant is conferred on a district of country, with its people, by merely calling it a State? Fellow-citizens, I am not asserting anything; I am merely asking questions for you to consider."

At Columbus, Ohio, he said to the legislature of that State, convened in joint session in the hall of the Assembly:

"It is true, as has been said by the President of the Senate, that very great responsibility rests upon me in the position to which the votes of the American people have called me. I am deeply sensible of that weighty responsibility. I cannot but know what you all know, that without a name, perhaps without a reason why I should have a name, there has fallen upon me a task such as did not rest even upon the Father of his Country; and so feeling, I cannot but turn and look for that support without which it will be impossible for me to perform that great task. I turn, then, and look to the American people, and to that God who has never forsaken them. Allusion has been made to the interest felt in relation to the policy of the new Administration. In this I have received from some a degree of credit for having kept silence, and from others some deprecation. I still think that I was right. . . . I have not maintained silence from any want of real anxiety. It is a good thing that there is no more than anxiety, for there is nothing going wrong. It is a consoling circumstance that when we look out, there is nothing that really hurts anybody. We entertain different views upon political questions, but nobody is suffering anything. This is a most consoling circumstance, and from it we may conclude that all we want is time, patience, and a reliance on that God who has never forsaken this people."

During a brief halt of the train at Steubenville, where a large crowd was assembled, he made the following short statement of the fundamental question at issue:

"I fear that the great confidence placed in my ability is unfounded. Indeed, I am sure it is. Encompassed by vast difficulties as I am, nothing shall be wanting on my part, if sustained by the American people and God. I believe the devotion to the Constitution is equally great on both sides of the river. It is only the different understanding of that instrument that causes difficulty. The only dispute on both sides is, 'What are their rights?' If the majority should not rule, who would be the judge? Where is such a judge to be found? We should all be bound by the majority of the American people — if not, then the minority must control. Would that be right? Would it be just or generous? Assuredly not. I reiterate, that the majority should rule. If I adopt a wrong policy, the opportunity for condemnation will occur in four years' time. Then I can be turned out, and a better man with better views put in my place."

Necessarily omitting any description of the magnificent demonstrations, and the multiplied speeches in the great State and city of New York, his addresses in the capital of New Jersey must be quoted, because they show a culminating earnestness of thought and purpose. To the Senate he said:

"I am very grateful to you for the honorable reception of which I have been the object. I cannot but remember the place that New Jersey holds in our early history. In the revolutionary struggle few of the States among the Old Thirteen had more of the battle-fields of the country within their limits than New Jersey. May I be pardoned if, upon this occasion, I mention that away back in my childhood, the earliest days of my being able to read, I got hold of a small book, such a one as few of the younger members have ever seen, 'Weems' Life of Washington.' I remember all the accounts there given of the battle-fields and struggles for the liberties of the country, and none fixed themselves upon my imagination so deeply as the struggle here at Trenton, New Jersey. The crossing of the river; the contest with the Hessians; the great hardships endured at that time, all fixed themselves on my memory more than any single revolutionary event; and you all know, for you have all been boys, how these early impressions last longer than any others. I recollect thinking then, boy even though I was, that there must have been something more than common that these men struggled for. I am exceedingly anxious that that thing — that something even more than National Independence; that something that held out a great promise to all the people of the world to all time to come — I am exceedingly anxious that this Union, the Constitution, and the liberties of the people shall be perpetuated in accordance with the original idea for which that struggle was made, and I shall be most happy indeed if I shall be an humble instrument in the hands of the Almighty, and of this, his almost chosen people for perpetuating the object of that great struggle. You give me this reception, as I understand, without distinction of party. I learn that this body is composed of a majority of gentlemen who, in the exercise of their best judgment in the choice of a chief magistrate, did not think I was the man. I understand, nevertheless, that they came forward here to greet me as the constitutionally elected President of the United States — as citizens of the United States — to meet the man who, for the time being, is the representative of the majesty of the nation — united by the single purpose to perpetuate the Constitution, the Union, and the liberties of the people. As such, I accept this reception more gratefully than I could do did I believe it were tendered to me as an individual."

Passing then to the Assembly Chamber, he addressed the members of the lower house in conclusion:

. . . "You, Mr. Speaker, have well said that this is a time when the bravest and wisest look back with doubt and awe upon the aspect presented by our national affairs. Under these circumstances, you will readily see why I should not speak in detail of the course I shall deem it best to pursue. It is proper that I should avail myself of all the information and all the time at my command, in order that when the time arrives in which I must speak officially, I shall be able to take the ground which I deem the best and safest, and from which I may have no occasion to swerve. I shall endeavor to take the ground I deem most just to the North, the East, the West, the South, and the whole country. I take it, I hope, in good temper, certainly with no malice toward any section. I shall do all that may be in my power to promote a peaceful settlement of all our difficulties. The man does not live who is more devoted to peace than I am, none who would do more to preserve it, but it may be necessary to put the foot down firmly. [Here the audience broke out into cheers so loud and long, that for some moments it was impossible to hear Mr. Lincoln's voice.] And if I do my duty and do right, you will sustain me, will you not? [Loud cheers, and cries of 'Yes, yes, we will.'] Received as I am by the

members of a legislature, the majority of whom do not agree with me in political sentiments, I trust that I may have their assistance in piloting the ship of State through this voyage, surrounded by perils as it is; for if it should suffer wreck now, there will be no pilot ever needed for another voyage."

Perhaps in no one of the many addresses delivered during his tour was he so visibly moved and affected by his surroundings as when he spoke in Independence Hall in Philadelphia, which he visited on the 22d of February, the anniversary of Washington's birthday. He said:

"I am filled with deep emotion at finding myself standing in this place, where were collected together the wisdom, the patriotism, the devotion to principle from which sprang the institutions under which we live. You have kindly suggested to me that in my hands is the task of restoring peace to our distracted country. I can say in return, sirs, that all the political sentiments I entertain have been drawn, so far as I have been able to draw them, from the sentiments which originated in and were given to the world from this hall. I have never had a feeling, politically, that did not spring from the sentiments embodied in the Declaration of Independence. I have often pondered over the dangers which were incurred by the men who assembled here and framed and adopted that Declaration. I have pondered over the toils that were endured by the officers and soldiers of the army who achieved that independence. I have often inquired of myself what great principle or idea it was that kept this Confederacy so long together. It was not the mere matter of separation of the colonies from the motherland, but that sentiment in the Declaration of Independence which gave liberty, not alone to the people of this country, but hope to all the world, for all future time. It was that which gave promise that in due time the weight would be lifted from the shoulders of all men and that all should have an equal chance. This is the sentiment embodied in the Declaration of Independence. Now, my friends, can this country be saved on that basis? If it can, I will consider myself one of the happiest men in the world if I can help to save it. If it cannot be saved upon that principle, it will be truly awful. But if this country cannot be saved without giving up that principle, I was about to say I would rather be assassinated on this spot than surrender it. Now, in my view of the present aspect of affairs, there is no need of bloodshed and war. There is no necessity for it. I am not in favor of such a course; and I may say in advance that there will be no bloodshed unless it be forced upon the Government. The Government will not use force, unless force is used against it.

"My friends, this is wholly an unprepared speech. I did not expect to be called on to say a word when I came here. I supposed it was merely to do something towards raising a flag — I may, therefore, have said something indiscreet. [Cries of 'No, No.'] But I have said nothing but what I am willing to live by, and, if it be the pleasure of Almighty God, die by."

In his last speech of the series, delivered in Harrisburg, before the assembled legislature of Pennsylvania, he happily described another interesting ceremony which had taken place that same morning before leaving Philadelphia:

"I appear before you only for a very few, brief remarks, in response to what has been said to me. I thank you most sincerely for this reception, and the generous words in which support has been promised me upon this occasion. I thank your great commonwealth for the overwhelming support it recently gave, not me personally, but the cause which I think a just one, in the late election. Allusion has been made to the fact — the interesting fact, perhaps, we should say — that I for the first time appear at the capital of the great commonwealth of Pennsylvania upon the birthday of the Father of his Country. In connection with that beloved anniversary connected with the history of this country, I have already gone through one exceedingly interesting scene this morning in the ceremonies at Philadelphia. Under the conduct of gentlemen there, I was for the first time allowed the privilege of standing in the old Independence Hall, to have a few words addressed to me there, and opening up to me an opportunity of expressing, with much regret that I had not more time to express something of my own feelings, excited by the occasion, somewhat to harmonize and give shape to the feelings that had really been the feelings of my whole life. Besides this, our friends there had provided a magnificent flag of the country. They had arranged it so that I was given the honor of raising it. And when it went up, I was pleased that it went to its place by the strength of my own feeble arm. When, according to the arrangement, the cord was pulled, and it floated gloriously to the wind, without an accident, in the bright, glowing sunshine of the morning, I could not help hoping that there was, in the entire success of that beautiful ceremony, at least something of an omen of what is to come. Nor could I help feeling then, as I often have felt, in the whole of that proceeding I was a very humble instrument. I had not provided the flag; I had not made the arrangements for elevating it to its place; I had applied but a very small portion of my feeble strength in raising it. In the whole transaction I was in the hands of the people who had arranged it, and if I can have the same generous coöperation of the people of the nation, I think the flag of our country may yet be kept flaunting gloriously. I recur for a moment but to repeat some words uttered at the hotel, in regard to what has been said about the military support which the general government may expect from the commonwealth of Pennsylvania in a proper emergency. To guard against any possible mistake do I recur to this. It is not with any pleasure that I contemplate the possibility that a necessity may arise in this country for the use of the military arm. While I am exceedingly gratified to see the manifestation upon your streets of your military force here, and exceedingly gratified at your promise to use that force upon a proper emergency — while I make these acknowledgments I desire to repeat, in order to preclude any possible misconstruction, that I do most sincerely hope that we shall have no use for them; that it will never become their duty to shed blood, and most especially never to shed fraternal blood. I promise that so far as I may have wisdom to direct, if so painful a result shall in anywise be brought about, it shall be through no fault of mine."

LINCOLN'S SECRET NIGHT JOURNEY.

On the morning of February 23d the whole country was surprised at the telegraphic announcement, coupled with diverse and generally very foggy explanations, that the President-elect, after his long and almost triumphal journey in the utmost publicity and with well-nigh universal greetings of good-will, had suddenly abandoned his announced programme and made a quick and secret night journey through Baltimore to the Federal capital. Public opinion at the time, and for years afterward, was puzzled by the event, and the utmost contra-

riety of comment, ranging from the highest praise to the severest detraction which caricature, ridicule, and denunciation could express, was long current. In the course of time, the narratives of the principal actors in the affair have been written down and published,* and a sufficient statement of the facts and motives involved may at length be made. The newspapers stated (without any prompting or suggestion from Mr. Lincoln) that an extensive plot to assassinate him on his expected trip through Baltimore about midday of Saturday had been discovered, which plot the earlier and unknown passage on Friday night disconcerted and prevented. This theory has neither been proved nor disproved by the lapse of time; Mr. Lincoln did not entertain it in this form† nor base his course upon it. But subsequent events did clearly demonstrate the possibility and probability of attempted personal violence from the fanatical impulse of individuals, or the sudden anger of a mob, and justified the propriety of his decision.

The threats of secession, revolution, plots to seize Washington, to burn the public buildings, to prevent the count of electoral votes and the inauguration of the new President, which had for six weeks filled the newspapers of the country, caused much uneasiness about the personal safety of Mr. Lincoln, particularly among the railroad officials over whose lines he was making his journey; and to no one of them so much as to Mr. S. M. Felton, the President of the Philadelphia, Wilmington, and Baltimore Railway, whose line formed the connecting link from the North to the South, from a free to a slave State, from the region of absolute loyalty to the territory of quasi-rebellion. Independently of politics, the city of Baltimore at that time bore a somewhat unenviable reputation as containing a dangerous and disorderly element; her "roughs" had a degree of newspaper notoriety by no means agreeable to quiet and non-combative strangers. But Baltimore and Maryland were also profoundly moved by the incipient rebellion. Governor Hicks had been plied with persuasion, protest, and even threats of personal violence, to induce him to convene the Maryland legislature, so that secession might begin under a legal pretext. The investigation of the Howard Congressional Committee, though it found no organized plot to seize the capital, gave abundant traces of secession conspiracy of various degrees — especially of half-formed military companies, organizing to prevent Northern troops from passing through Baltimore to Washington or the South. As part and parcel of this scheme, the railroads were to be destroyed and the bridges burned. The events of April, as they actually occurred, had already been planned, informally at least, in January.

Aside from patriotism, the duty of protecting the tracks and bridges of the railroad of which he was president induced Mr. Felton to call to his aid Mr. Allan Pinkerton, chief of a Chicago detective agency, whom he had before employed on an important matter.

"He was a man of great skill and resources," writes Mr. Felton. "I furnished him with a few hints and at once set him on the track with eight assistants. There were then drilling upon the line of the railroad some three military organizations, professedly for home defense, pretending to be Union men, and in one or two instances tendering their services to the railroad in case of trouble. Their propositions were duly considered; but the defense of the road was never intrusted to their tender mercies. The first thing done was to enlist a volunteer in each of these military companies. They pretended to come from New Orleans and Mobile, and did not appear to be wanting in sympathy for the South. They were furnished with uniforms at the expense of the road, and drilled as often as their associates in arms; became initiated into all the secrets of the organizations, and reported every day or two to their chief, who immediately reported to me the designs and plans of these military companies. One of these organizations was loyal; but the other two were disloyal, and fully in the plot to destroy the bridges, and march to Washington, to wrest it from the hands of the legally constituted authorities. Every nook and corner of the road and its vicinity was explored by the chief and his detectives, and the secret working of secession and treason laid bare and brought to light. Societies were joined in Baltimore, and various modes known to and practiced only by detectives were resorted to, to win the confidence of the conspirators and get into their secrets. The plan worked well; and the midnight plottings and daily consultations of the conspirators were treasured up as a guide to our future plans for thwarting them. . . . It was made as certain as strong circumstantial and positive evidence could make it, that there was a plot to burn the bridges and destroy the road, and murder Mr. Lincoln on his way to Washington, if it turned out that he went there before troops were called. If troops were first called, then the bridges were to be destroyed, and Washington cut off and taken possession of by the South. I at once organized and armed a force of about two hundred men, whom I distributed along the line between the Susquehanna and Baltimore, principally at the bridges. These men were drilled secretly and regularly by drill-masters, and were apparently employed in whitewashing the bridges, putting on some six or seven coats of whitewash, saturated with salt and alum,

* See narrative of S. M. Felton, in Schouler, "Massachusetts in the Civil War," Vol. I., pp. 59–65; Judd to Pinkerton, Nov. 3d, 1867, Edwards, "Life of N. B. Judd," pamphlet, pp. 11–17; Pinkerton, "The Spy of the Rebellion," pp. 45–103; Kennedy to Lossing, embracing narrative of Colonel Stone, Lossing, "Civil War," Vol. II., pp. 147–149; Lincoln's statement to Lossing, Ib., Vol. I., pp. 279, 280; Lincoln's statement to Arnold, Arnold, "Lincoln and Slavery," p. 171; and MS. letters printed in this chapter. Also Lamon, "Life of Lincoln," pp. 511–526.

† Mr. Lincoln, long afterward, declared: "I did not then, nor do I now, believe I should have been assassinated, had I gone through Baltimore as first contemplated; but I thought it wise to run no risk, where no risk was necessary." Hon. I. N. Arnold, in his work, "Lincoln and Slavery," adds in a note, p. 171, that the above was "stated to the author by Mr. Lincoln."

to make the outside of the bridges as nearly fire-proof as possible. This whitewashing, so extensive in its application, became the nine-days' wonder of the neighborhood. Thus the bridges were strongly guarded, and a train was arranged so as to concentrate all the forces at one point in case of trouble. The programme of Mr. Lincoln was changed; and it was decided by him that he would go to Harrisburg from Philadelphia, and thence over the Northern Central road by day to Baltimore, and thence to Washington. We were then informed by our detective that the attention of the conspirators was turned from our road to the Northern Central, and that they would there await the coming of Mr. Lincoln." *

It appeared from the reports of Pinkerton's detectives that among the more suspicious indications were the very free and threatening expressions of a man named Ferrandini, an Italian, sometime a barber at Barnum's Hotel in Baltimore, but who had become captain of one of the military companies organized in that city to promote secession. Ferrandini's talk may not have been conclusive proof of a conspiracy, but it showed his own intent to commit assassination, and conveyed the inference of a plot.† Coupled with the fact that the Baltimore air was full of similar threats, it established the probability of a mob and a riot. Add to this Ferrandini's testimony before the Howard Committee (February 5th, 1861), that he was then drilling a company (fifteen members) of "Constitutional Guards" in Baltimore, formed for the express purpose "to prevent Northern volunteer companies from passing through the State of Maryland . . . to come here [Washington] to help the United States troops, or anybody else, to invade the South in any shape whatever"; also that another corps, called the National Volunteers, had formed, "to protect their State," and began drilling the previous Saturday; also that he had "heard that the Minute Men have fifteen companies in Baltimore"—and we have the direct evidence of extensive organization, and strong presumption of the uses to which it could be turned.‡ Then, if we remember that riot, murder, and bridge-burning actually took place in Baltimore two months later, in exact accordance with the plans and ideas formulated, both in the loose talk and the solemn testimony by Ferrandini and others, we are unavoidably driven to the conclusion that Mr. Felton, General Scott, Governor Hicks, and others had abundant cause for the very serious apprehensions under which they acted.

Hon. N. B. Judd, a resident of Chicago, of peculiar prominence in Illinois politics and the intimate personal friend of Lincoln, was perhaps the most active and influential member of the suite of the President-elect. Pinkerton the detective knew Judd personally, and, as the presidential party approached, notified him by letter at Buffalo, and by special messenger at New York, of the investigations he was making in Baltimore. Judd as yet said nothing of the matter to any one. When the party arrived in Philadelphia, however, he was instantly called to a conference with Mr. Felton and the detective. Pinkerton laid his reports before the two, and, after an hour's examination, both were convinced that the allegation of a plot to assassinate the President-elect was as serious and important as in the nature of things such evidence can ever be found. He immediately took Pinkerton with him to Mr. Lincoln's room at the Continental Hotel, to whom the whole story was repeated, and where Judd advised that, in the opinion both of Mr. Felton and himself, Mr. Lincoln's safety required him to proceed that same evening on the 11 o'clock train. "If you follow the course suggested," continued Judd, "you will necessarily be subjected to the scoffs and sneers of your enemies, and the disapproval of your friends, who cannot be made to believe in the existence of so desperate a plot." Mr. Lincoln replied that he appreciated these suggestions, but that he could stand anything that was necessary. Then rising from his seat he said: "I cannot go to-night; I have promised to raise the flag over Independence Hall to-morrow morning, and to visit the legislature at Harrisburg. Beyond that I have no engagements."§

Hitherto, all Lincoln's movements had been made under the invitation, arrangements, direction, and responsibility of committees of legislatures, governors of States, and municipal authorities of towns and cities. No such call or greeting, however, had come from Maryland; no resolutions of welcome from her legislature, no invitation from her governor, no municipal committee from Baltimore. The sole proffers of friendship and hospitality out of the commonwealth came from two citizens in their private capacity — Mr. Gittings, President of the Northern Central Railroad, who tendered a dinner to Mr. Lincoln and his family; and Mr. Coleman, of the Eutaw House, who extended a similar invitation to the President-elect and his suite. Appreciating fully these acts of personal courtesy, Mr. Lincoln yet felt that there was no evidence before him that the official and public authority of the city would be exercised to restrain the unruly elements which would on such an occasion densely pack the streets of Baltimore. During their ten-days' experience on the journey thus

§ Judd to Pinkerton, November 3d, 1867.

far, both he and his suite had had abundant evidence as to how completely exposed and perfectly helpless every individual of the party, and especially Mr. Lincoln, was at times, even amid the friendliest feeling and the kindest attention. He had been almost crushed in the corridor of the State-house at Columbus; arriving after dark in the Pittsburg depot, a stampede of the horses of a small cavalry escort had seriously endangered his carriage and its occupants; at Buffalo, Major Hunter, of his suite, had his arm broken by a sudden rush of the crowd. If with all the good-will and precautions of police and military such perils were unavoidable in friendly cities, what might happen where authorities were indifferent, where municipal control and public order were lax, and where prejudice, hostility, and smoldering insurrection animated the masses of people surging about the carriages of an unprotected street procession? Yet with all these considerations Mr. Lincoln could not entirely convince himself that a deliberate plot to murder him was in existence.

"I made arrangements, however, with Mr. Judd for my return to Philadelphia the next night, if I should be convinced that there was danger in going through Baltimore. I told him that if I should meet at Harrisburg, as I had at other places, a delegation to go with me to Baltimore, I should feel safe, and go on." *

Mr. Judd devoted the remainder of the afternoon and nearly the whole of the night of February 21st to the discussion and perfection of arrangements for a night journey through Baltimore, as suggested by himself and Mr. Felton, and as conditionally accepted by the President-elect. Only four persons joined in this discussion, — Mr. Judd, Mr. Pinkerton, Mr. Franciscus, General Manager of the Pennsylvania Railroad, and Mr. Henry Sanford, representing Colonel E. S. Sanford, President of the American Telegraph Company. At 4 o'clock A. M. the party separated, having agreed on the following plan: † that after the reception at Harrisburg, a special train consisting of a baggage car and one passenger car, starting at 6 P. M., should convey Mr. Lincoln and one companion back to Philadelphia, the track between the two cities to be kept clear of everything; that Mr. Felton at Philadelphia should detain the 11 o'clock P. M. Baltimore train until the arrival of the special train from Harrisburg; that Pinkerton should have a carriage ready in which to proceed through Philadelphia from one depot to the other; that a Mrs. Warne, an employee of his, should engage berths in the sleeping-car of the Baltimore train; that Mr. Sanford should so disconnect the wires as to make any telegraphing between the several points within certain hours impossible; and that Mr. Lincoln should have for his single escort and companion Colonel Ward H. Lamon, of his suite, a devoted personal friend from Illinois — young, active, and of almost herculean frame and strength.

At 6 o'clock on the morning of February 22d, the appointed flag-raising by the President-elect, over Independence Hall in Philadelphia, was duly celebrated, and on the trip to Harrisburg, which followed as soon as possible, Mr. Judd communicated the details of his plan to Mr. Lincoln. Before this, however, Lincoln had received at the Continental Hotel the visit of Mr. Frederick W. Seward, who came as a special messenger from his father, in Washington, to place the following correspondence in his hands:

[Seward to Lincoln.]

"WASHINGTON, February 21st, 1861.

"MY DEAR SIR: My son goes express to you. He will show you a report made by our detective to General Scott, and by him communicated to me this morning. I deem it so important as to dispatch my son to meet you wherever he may find you.

"I concur with General Scott in thinking it best for you to reconsider your arrangement. No one here but General Scott, myself, and the bearer is aware of this communication.

"I should have gone with it myself, but for the peculiar sensitiveness about my attendance at the Senate at this crisis. Very truly yours,

"WILLIAM H. SEWARD." ‡

[General Scott to Seward.]

"February 21st, 1861.

"MY DEAR SIR: Please receive my friend, Colonel Stone, chief of General Wightman's staff, and a distinguished young officer with me in Mexico. He has an important communication to make.

"Yours truly, WINFIELD SCOTT." ‡

[Colonel Stone's Report.]

"February 21st, 1861.

"A New York detective officer who has been on duty in Baltimore for three weeks past reports this morning that there is serious danger of violence to, and the assassination of, Mr. Lincoln in his passage through that city, should the time of that passage be known. He states that there are banded rowdies holding secret meetings, and that he has heard threats of mobbing and violence, and has himself heard men declare that if Mr. Lincoln was to be assassinated they would like to be the men. He states further that it is only within the past few days that he has considered there was any danger, but now he deems it imminent. He deems the danger one which the authorities and people in Baltimore cannot guard against. All risk might be easily avoided by a change in the traveling arrangements which would bring Mr. Lincoln and a portion of his party through Baltimore by a night train without previous notice." ‡

* Lincoln's statement to Lossing. Lossing, "Civil War," Vol. I., p. 280.

† Judd to Pinkerton, November 3d, 1867.

‡ Unpublished MS.

Here was a new and most serious additional warning. The investigation on which it was based was altogether independent of that made by Pinkerton, and entirely unknown to him. Colonel Stone, it will be remembered, was the officer to whom General Scott intrusted the organization and command of the District Militia for the defense of Washington and the general supervision and control of the city. The detectives, three in number, were from New York, and at the request of Colonel Stone had been selected and placed on duty by Mr. Kennedy, superintendent of police of New York city.* In both cases similar observations had been made, and similar conclusions arrived at.

Warned thus of danger by concurrent evidence too grave to be disregarded, and advised to avoid it, not only by Judd and Felton in Philadelphia, but now also by Mr. Seward, the chief of his new Cabinet, and by General Scott, the chief of the army, Mr. Lincoln could no longer hesitate to adopt their suggestion. Whether the evidence would prove ultimately true, or whether violence upon him would be attempted, was not the question. The existence of the danger was pointed out and certified by an authority he had no right to disregard; the trust he bore was not merely the personal safety of an individual, but the fortune and perhaps the fate of the Government of the nation. It was his imperative duty to shun all possible and unnecessary peril. A man of less courage would have shrunk from what must inevitably appear to the public like a sign of timidity; but Lincoln on this and other occasions concerned himself only with the larger issues at stake, leaving minor and especially personal consequences to take care of themselves. Mr. Frederick W. Seward was therefore informed by Judd "that he could say to his father that all had been arranged, and that, so far as human foresight could predict, Mr. Lincoln would be in Washington at 6 o'clock the next morning."† With this message Mr. Seward returned to Washington, while Mr. Lincoln and his suite proceeded to Harrisburg, where on that same Friday, the 22d of February, he was officially received by the governor and the legislature of Pennsylvania.

No other member of Mr. Lincoln's suite had as yet been notified of anything connected with the matter; but Mr. Judd had suggested to him that he felt exceedingly the responsibility of the advice he had given and the steps he had taken, and that he thought it due to the age and standing of the leading gentlemen of the President-elect's party that at least they should be informed and consulted. "To the above suggestions," writes Judd, "Mr. Lincoln assented, adding: 'I reckon they will laugh at us, Judd, but you had better get them together.' It was arranged that after the reception at the State-house, and before dinner, the matter should be fully laid before the following gentlemen of the party: Judge David Davis, Colonel E. V. Sumner, Major David Hunter, Captain John Pope, and Ward H. Lamon."

Mr. Judd's narrative then further recites what occurred:

"The meeting thus arranged took place in the parlor of the hotel, Mr. Lincoln being present. The facts were laid before them by me, together with the details of the proposed plan of action. There was a diversity of opinion, and some warm discussion, and I was subjected to a very rigid cross-examination. Judge Davis, who had expressed no opinion, but contented himself with asking rather pointed questions, turned to Mr. Lincoln, who had been listening to the whole discussion, and said: 'Well, Mr. Lincoln, what is your own judgment upon this matter?' Mr. Lincoln replied: 'I have thought over this matter considerably, since I went over the ground with Pinkerton last night. The appearance of Mr. Frederick Seward, with warning from another source, confirms Mr. Pinkerton's belief. Unless there are some other reasons besides fear of ridicule, I am disposed to carry out Judd's plan.' Judge Davis then said: 'That settles the matter, gentlemen.' Colonel Sumner said: 'So be it, gentlemen; it is against my judgment, but I have undertaken to go to Washington with Mr. Lincoln, and I shall do it.' I tried to convince him that any additional person added to the risk; but the spirit of the gallant old soldier was up, and debate was useless.

"The party separated about 4 P. M., the others to go to the dinner table, and myself to go to the railroad station and the telegraph office. At a quarter to 6 I was back at the hotel, and Mr. Lincoln was still at the table. In a few moments the carriage drove up to the side door of the hotel. Either Mr. Nicolay or Mr. Lamon called Mr. Lincoln from the table. He went to his room, changed his dinner dress for a traveling suit, and came down with a soft hat sticking in his pocket, and his shawl on his arm.‡ As the party passed through the hall I said, in a low tone, 'Lamon, go ahead. As soon as Mr. Lincoln is in the carriage, drive off; the crowd must not be allowed to identify him.' Mr. Lamon went first to the carriage; Colonel Sumner was following close after Mr. Lincoln; I put my hand gently on his shoulder; he turned to see what was wanted, and before I could explain, the carriage was off. The situation was a little awkward, to use no stronger terms, for a few moments, until I said to the Colonel: 'When we get to Washington, Mr. Lincoln shall determine what apology is due to you.'"

It is needless to describe the various stages of Mr. Lincoln's journey. The plan arranged

* See Lossing, "Civil War," Vol. II., pp. 147–149, a letter from Kennedy, and the narrative of Colonel Stone.

† Judd to Pinkerton, November 3d, 1867.

‡ Many caricatures and comments of that day were based upon the following sentence in a dispatch to the "New York Times": "He wore a Scotch plaid cap and a very long military cloak, so that he was entirely unrecognizable." This description was the pure invention of a newspaper correspondent understood to be Joseph Howard, Jr., who later in the war was imprisoned in Fort Lafayette for publishing a forged proclamation, about the draft, in the New York newspapers.

by the railroad and telegraph officials was carried out to the smallest detail, without delay or special incident, and without coming to the knowledge of any person on the train or elsewhere, except those to whom the secret was confided. The President-elect and his single companion were safely and comfortably carried from Harrisburg to Philadelphia, and at midnight took their berths in the sleeping-

WARD H. LAMON. (FROM A PHOTOGRAPH BY BRADY.)

car of the regular train from New York, passing through Baltimore unrecognized and undisturbed, and arriving in Washington at 6 o'clock on the morning of February 23d. Here they were met by Mr. Seward and Mr. Washburne, member of Congress from Illinois, and conducted to Willard's Hotel. The family and the suite made the journey direct from Harrisburg to Baltimore, according to the previously published programme, arriving in Washington late that evening. They encountered in Baltimore no incivility, nor any unusual disorder, though, as elsewhere, dense crowds, very inadequately controlled by the police, surrounded the railroad depots and filled the streets through which their carriages passed. All temptation, however, to commit an assault was now past, since it was everywhere known that Mr. Lincoln was not with the party, but had already arrived at his destination.

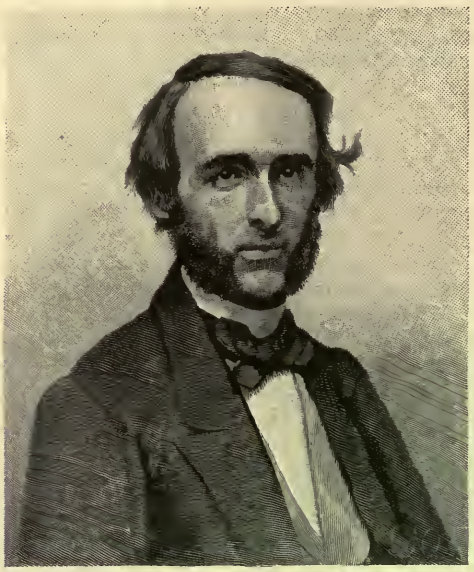
LINCOLN'S INAUGURATION.

ARRIVED in Washington, and installed in the spacious parlors on the second floor of Willard's Hotel, fronting on Pennsylvania Avenue, Mr. Lincoln had a little more than a week to prepare for the inauguration. Of this a part was taken up with the customary introductory visits,—to the outgoing President and Cabinet, where Mr. Buchanan and his counselors received him with cordial politeness; to the two houses of Congress, where he was enthusiastically welcomed by friends and somewhat sullenly greeted by foes; and to the Supreme Court of the United States, whose venerable chief and associate justices extended to him an affable recognition as the lawful successor in constitutional rulership. In his own parlors, also, the President-elect received numerous demonstrations of respect. President Buchanan and his Cabinet officially returned his visit. The Peace Conference, embracing distinguished delegates from all the free States and the border slave-States, and headed by their chairman, ex-President Tyler, waited upon him in a body, in pursuance of a formal and unanimous resolution.* His presidential rivals, Douglas and Breckinridge, each made him a call of courtesy. The mayor and the municipal council came in an official visit of welcome. Several delegations and many high functionaries repeated these ceremonial calls, which again were supplemented by numerous cordial invitations to private hospitality. While all these tokens of respect were sincere and loyal, there was no concealment of a deep anxiety in public feeling, and a curiosity to learn how the new President would deal with an organized rebellion, which had been allowed by his predecessor to establish itself without the least hindrance, and which, while committing repeated acts of war, had as yet perpetrated no violence or bloodshed,— only, however, because it had met neither official nor military resistance.

Mr. Lincoln's chief labor during this interim was his consultation with the more influential leaders of the Republican party, who, either as members of Congress, delegates in the Peace Conference, or as casual or special visitors to the capital at this moment, had a final word to say to him about the composition of his Cabinet or the policy of his Administration. Thus from the 23d of February to the 4th of March, every moment of the day and many hours of the night were occupied. As his doors were at all times freely opened,

*"Proceedings of Peace Conference," pp. 336–337.

and as his life-long habit was to listen patiently to counsel from all quarters, it is safe to say that no President ever approached his task better informed of the temper of his followers, and none decided more deliberately upon his



FREDERICK W. SEWARD. (FROM A PHOTOGRAPH BY BRADY.)

general course of conduct. Yet, here as afterwards, he followed the practice of holding his convictions open to the latest moment, and of not irrevocably committing himself to specific acts till the instant of their execution.

Neither in the formation of his Cabinet nor in his proposed administrative policy, however, did this final consultation with his party friends work any essential alteration of his own well-formed opinions. His executive counselors were chosen upon plans long since matured in his own mind; and his inaugural address, composed and privately printed at Springfield, received on the last days several slight changes in the text, and a number of verbal changes, mainly suggested by the very few individuals to whom he submitted it. Judge David Davis read it while in Springfield. Hon. O. H. Browning read it in Indianapolis after the presidential journey was begun, and suggested perhaps the most important modification which he made. Hon. Francis P. Blair, Sr., read it in Washington, and highly commended it, suggesting no changes. As would be natural in any great political leader scanning his successful rival's first act of practical statesmanship, the most careful scrutiny of the document was made by Mr. Seward. The President-elect handed him a copy some time during the day of his arrival; and the next day being Sunday, Mr. Seward seems to have spent the greater part of it in examining the inaugural and in writing out the list of alterations and amendments which he thought advisable. On Sunday evening he wrote the following letter, which with his list of suggestions he sent to Mr. Lincoln:

"SUNDAY EVENING, February 24th, 1861.

"MY DEAR SIR: I have suggested many changes of little importance severally, but in their general effect tending to soothe the public mind. Of course the concessions are, as they ought to be, if they are to be of avail, at the cost of the winning, the triumphant party. I do not fear their displeasure. They will be loyal, whatever is said. Not so the defeated, irritated, angered, frenzied party. I, my dear sir, have devoted myself singly to the study of the case here — with advantages of access and free communication with all parties of all sections. I have a common responsibility and interest with you, and I shall adhere to you faithfully in every case. You must, therefore, allow me to speak frankly and candidly. In this spirit, I declare to you my conviction, that the second and third paragraphs, even if modified as I propose in my amendments, will give such advantages to the Disunionists that Virginia and Maryland will secede, and we shall within ninety, perhaps within sixty, days be obliged to fight the South for this capital, with a divided North for our reliance, and we shall not have one loyal magistrate or ministerial officer south of the Potomac.

"In that case the dismemberment of the Republic would date from the inauguration of a Republican administration. I therefore most respectfully counsel the omission of those paragraphs. I know the tenacity of party friends, and I honor and respect it. But I know also that they know nothing of the real peril of the crisis. It has not been their duty to study it, as it has been mine. Only the soothing words which I have spoken have saved us and carried us along thus far. Every loyal man, and indeed every disloyal man, in the South will tell you this.

"Your case is quite like that of Jefferson. He brought the first Republican party into power against and over a party ready to resist and dismember the Government. Partisan as he was, he sank the partisan in the patriot in his inaugural address, and propitiated his adversaries by declaring: 'We are all Federalists, all Republicans.' I could wish that you would think it wise to follow this example in this crisis. Be sure that while all your administrative conduct will be in harmony with Republican principles and policy, you cannot lose the Republican party by practicing in your advent to office the magnanimity of a victor.

"Very faithfully your friend,

"[WM. H. SEWARD.]

"THE HONORABLE ABRAHAM LINCOLN.

"General Remarks:

"The argument is strong and conclusive, and ought not to be in any way abridged or modified.

"But something besides or in addition to argument is needful — to meet and remove prejudice and passion in the South, and despondency and fear in the East.

"Some words of affection — some of calm and cheerful confidence." *

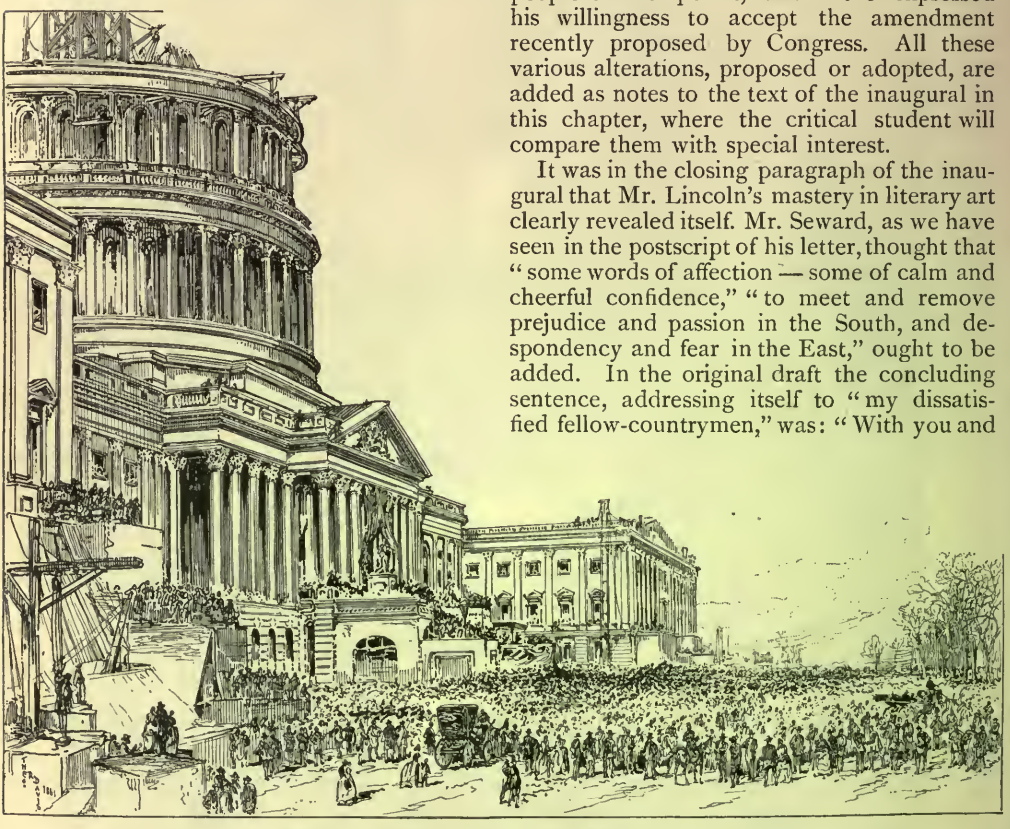
Mr. Seward only suggested two important changes: (1) To omit the reference to the Chicago platform mentioned in his letter, with the announcement that the President would

* Unpublished MS. For the copy of this letter and other valuable manuscripts, we are indebted to Hon. Frederick W. Seward.

follow the principles therein declared. (2) Instead of a declaration of intention to reclaim, hold, occupy, and possess the places and property belonging to the Government, to speak ambiguously about the exercise of power, and to hint rather at forbearance. The other modifications in his list were simple changes of phraseology — affecting only the style, but changing no argument or proposition of policy. Whether these were on the whole an improvement depends perhaps upon the taste of the reader and critic, whether he prefers a full and formal or a direct and sententious diction. The literary styles of Mr. Seward and Mr. Lincoln differed essentially. Mr. Seward was strongly addicted to and unusually felicitous in long, sonorous sentences, amplifying his thought to general application and to philosophic breadth. Mr. Lincoln liked to condense his idea into a short sentence, with legal conciseness and specific point. In the present crisis Mr. Seward's policy, as announced in his 12th of January speech, was "to meet prejudice with conciliation, exaction with concession which surrenders no principle, and violence with the right hand of

WILLIAM H. SEWARD.

peace." * Mr. Lincoln's policy was, without prejudice or passion to state frankly and maintain firmly the position and doctrines assumed by the American people in the late presidential election. Mr. Seward believed himself to be the past and the coming peacemaker; and thus his whole effort was to soften, to postpone, to use diplomacy. His corrections of the inaugural were in this view: a more careful qualification of statement, a greater ambiguity of phrase, a gain in smoothness, but a loss in brevity and force. Mr. Lincoln adopted either in whole or in part nearly all the amendments proposed by Mr. Seward. But those which he himself modified, and such further alterations as he added of his own accord, show that whatever the inaugural gained in form and style in these final touches came as much through his own power of literary criticism as from the more practiced pen of Mr. Seward. The most vital change in the document was in adopting a suggestion of his friend Browning, not to announce a purpose to recapture Sumter and other forts and places seized by the rebels, but for the present to declare only that he would hold those yet in possession of the Government. One other somewhat important change Mr. Lincoln himself made. In the original draft any idea of an amendment of the Constitution was rather repelled than invited. In the revision Mr. Lincoln said he should "favor rather than oppose a fair opportunity being afforded the people to act upon it," and further expressed his willingness to accept the amendment recently proposed by Congress. All these various alterations, proposed or adopted, are added as notes to the text of the inaugural in this chapter, where the critical student will compare them with special interest.



THE INAUGURATION OF LINCOLN. (FROM A SKETCH BY THEODORE R. DAVIS, MADE AT THE TIME.)

It was in the closing paragraph of the inaugural that Mr. Lincoln's mastery in literary art clearly revealed itself. Mr. Seward, as we have seen in the postscript of his letter, thought that "some words of affection — some of calm and cheerful confidence," "to meet and remove prejudice and passion in the South, and despondency and fear in the East," ought to be added. In the original draft the concluding sentence, addressing itself to "my dissatisfied fellow-countrymen," was: "With you and not with me is the solemn question, Shall it be peace or a sword?" This ending Mr. Seward proposed to strike out, and submitted two drafts of a closing paragraph to take its place. One of them was long and commonplace; under the other lurked a fine poetic thought awkwardly expressed. This Mr. Lincoln took, but his more artistic sense transformed it into an illustration of perfect and tender beauty.

The acts of the last ten days of Mr. Buchanan's administration were entirely colorless and negative. The deliberations and recommendations of the much-vaunted Peace Conference proved as barren and worthless as Dead Sea fruit. The concluding labors of Congress were of considerable importance, but of no immediate effect. There was, therefore, as little in pub-

* Seward, Senate Speech, January 12th, 1861. Globe, 343.

lic affairs as in public advice to cause the President-elect to reconsider or remodel his thoughts and purposes.

Inauguration Day fell on Monday, and the ceremonies took place with somewhat unusual attention to display and very uncommon precautions to insure public order and the safety of all the participants. General Stone, who had charge of the military arrangements, has related them with some minuteness.

"On the afternoon of the 3d of March, General Scott held a conference at his headquarters, there being present his staff, General Sumner, and myself; and then was arranged the programme of the procession. President Buchanan was to drive to Willard's Hotel and call upon the President-elect. The two were to ride in the same carriage, between double files of a squadron of the District of Columbia cavalry. The company of sappers and miners were to march in front of the presidential carriage, and the infantry and riflemen of the District of Columbia were to follow it. Riflemen in squads were to be placed on the roofs of certain commanding houses which I had selected along Pennsylvania Avenue, with orders to watch the windows on the opposite side, and to fire upon them in case any attempt should be made to fire from those windows on the presidential carriage. The small force of regular cavalry which had arrived was to guard the side-street crossings of Pennsylvania Avenue, and to move from one to another during the passage of the procession. A battalion of District of Columbia troops were to be placed near the steps of the Capitol, and riflemen in the windows of the wings of the Capitol. On the arrival of the presidential party at the Capitol the troops were to be stationed so as to return in the same order after the ceremony."*

General Stone does not mention another item of preparation,—that on the brow of the hill, not far from the north entrance to the Capitol, commanding both the approach and the broad plateau of the east front, was stationed a battery of flying artillery, in the immediate vicinity of which General Scott remained a careful observer of the scene during the entire ceremonies, ready to take personal command and direction should any untoward occurrence render it necessary.

The closing duties of the session, which expired at noon, kept President Buchanan at the Capitol till the last moment. Accompanied by the committee of the Senate, he finally reached Willard's and conducted the President-elect to his carriage, in which, side by side, they rode in the procession, undisturbed by the slightest disorder. When they reached the Senate Chamber, already densely packed with officials and civilians, the ceremony of swearing-in the Vice-President was soon performed. Then in a new procession of dignitaries Mr. Lincoln was escorted through the corridor of the great edifice to the east portico, where below the platform stood an immense throng in waiting. The principal actors — the Senate Committee of Arrangements, the out-going President, the President-elect and his family, the Chief-Justice in his robe, the Clerk of the Court with the Bible — took their places in a central group on the front of the platform, in full view of the waiting multitude. Around this central group other judges in their robes, senators, representatives, officials, and prominent guests crowded to their seats.

To the imaginative spectator there might have been something emblematic in the architectural concomitants of the scene. The construction of the great dome of the Capitol was in mid-progress, and huge derricks held by a network of steel ropes towered over the incomplete structure. In the grounds in front stood the bronze statue of Liberty, not then lifted to the pedestal from which she now greets the rising sun. At that moment, indeed, it required little poetic illusion to fancy her looking with a mute appeal for help to the man who was the center of all eyes and hearts; and could she have done so, her gaze would already have been rewarded with a vision of fateful prophecy. For in the central group of this inauguration ceremony there confronted each other four historic personages in the final act of a political drama which in its scope, completeness, and consequence will bear comparison with those most famous in human record,— Senator Douglas, the author of the repeal of the Missouri Compromise, representing the legislative power of the American Government; Chief-Justice Taney, author of the Dred Scott decision, representing the influence of the judiciary; and President Buchanan, who by his Lecompton measures and messages had used the whole executive power and patronage to intensify and perpetuate the mischiefs born of the repeal and the dictum. Fourth in the group stood Abraham Lincoln, President-elect, illustrating the vital political truth announced in that sentence of his Cincinnati speech in which he declared:

"The people of these United States are the rightful masters of both Congresses and Courts, not to overthrow the Constitution, but to overthrow the men who pervert the Constitution." †

When the cheers which greeted his appear-

* General C. P. Stone, "Washington on the Eve of the War." THE CENTURY, July, 1883.

† The dramatic element of the scene in another view has been noticed by Dr. Holland, in his "Life of Lincoln," p. 278, where he says: "Mr. Lincoln himself must have wondered at the strange conjunction of personages and events. The 'Stephen' of his first speech in the old senatorial campaign was a defeated candidate for the presidency, who then stood patriotically at his side, holding the hat of the republican President, which he had politely taken at the beginning of the inaugural address; 'James' had just walked out of office to make room for him; 'Franklin' had passed into comparative obscurity or something worse; and 'Roger' had just administered to him the oath of office."

ance had somewhat abated, Senator Baker of Oregon rose and introduced Mr. Lincoln to the audience; and stepping forward, the President-elect, in a firm, clear voice, thoroughly practiced in addressing the huge open-air assemblages of the West, read his inaugural, to which every ear listened with the most intense eagerness.

THE INAUGURAL ADDRESS.

FELLOW-CITIZENS OF THE UNITED STATES: In compliance with a custom as old as the Government itself, I appear before you to address you briefly, and to take in your presence the oath prescribed by the Constitution of the United States to be taken by the President "before he enters on the execution of his office."[1]

I do not consider it necessary at present for me to discuss those matters of administration about which there is no special anxiety or excitement.

Apprehension seems to exist among the people of the Southern States that by the accession of a Republican Administration their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of those speeches when I declare that "I have no purpose, directly or indirectly, to interfere with the institution of slavery in the States where it exists. I believe I have no lawful right to do so, and I have no inclination to do so." Those who nominated and elected me did so with full knowledge that I had made this and many similar declarations, and had never recanted them. And, more than this, they placed in the platform for my acceptance, and as a law to themselves and to me, the clear and emphatic resolution which I now read:

"Resolved, that the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend, and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as among the gravest of crimes."

I now reiterate these sentiments; and, in doing so, I only press upon the public attention the most conclusive evidence of which the case is susceptible, that the property, peace, and security of no section are to be in anywise endangered by the now incoming Administration. I add, too, that all the protection which, consistently with the Constitution and the laws, can be given, will be cheerfully given[2] to all the States when lawfully demanded, for whatever cause — as cheerfully to one section, as to another.

There is much controversy about the delivering up of fugitives from service or labor. The clause I now read is as plainly written in the Constitution as any other of its provisions:

"No person held to service or labor in one State, under the laws thereof, escaping into another, shall in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due."

It is scarcely questioned that this provision was intended by those who made it for the reclaiming of what we call fugitive slaves; and the intention of the lawgiver is the law. All members of Congress swear their support to the whole Constitution — to this provision as much as to any other. To the proposition then, that slaves, whose cases come within the terms of this clause, "shall be delivered up" their oaths are unanimous. Now, if they would make the effort in good temper, could they not, with nearly equal unanimity, frame and pass a law by means of which to keep good that unanimous oath?

There is some difference of opinion whether this clause should be enforced by national or by State authority; but surely that difference is not a very material one. If the slave is to be surrendered, it can be of but little consequence to him, or to others, by which authority it is done. And should any one, in any case, be content that his oath shall go unkept, on a merely unsubstantial controversy as to *how* it shall be kept?

Again, in any law upon this subject, ought not all the safeguards of liberty known in civilized and humane jurisprudence to be introduced so that a free man

---

[1] Mr. Lincoln's original draft contained at this point the following paragraphs:

"The more modern custom of electing a Chief Magistrate upon a previously declared platform of principles supersedes in a great measure the necessity of re-stating those principles in an address of this sort. Upon the plainest grounds of good faith, one so elected is not at liberty to shift his position. It is necessarily implied, if not expressed, that in his judgment the platform which he thus accepts binds him to nothing either unconstitutional or inexpedient.

"Having been so elected upon the Chicago platform, and while I would repeat nothing in it, of aspersion or epithet, or question of motive, against any man or party, I hold myself bound by duty, as well as impelled by inclination, to follow, within the Executive sphere, the principles therein declared. By no other course could I meet the reasonable expectations of the country."

Mr. Seward proposed either to omit the whole, or to amend them as follows:

"The more modern custom of nominating a Chief Magistrate upon a previously declared summary of principles supersedes in a great measure the necessity of re-stating those principles in an address of this sort. It is necessarily implied, if not expressed, that the summary binds the officer elected to nothing either unconstitutional or inexpedient. With this explanation I deem it my duty, as I am disposed in feeling, to follow, so far as they apply to the Executive sphere, the principles on which I was brought before the American People."

Mr. Lincoln adopted Mr. Seward's preference of the alternative suggestions made, and omitted the whole.

[2] In the original draft this sentence stood: "The protection which, consistently with the Constitution and the laws, can be given will be cheerfully given to all the States," etc.

Mr. Seward proposed to amend it thus: "will be cheerfully given in every case and under all circumstances to all the States," etc.

Mr. Lincoln did not adopt the suggestion, but himself modified it so as to read: "will be cheerfully given to all the States when lawfully demanded, for whatever cause —"

be not, in any case, surrendered as a slave?[3] And might it not be well at the same time to provide by law for the enforcement of that clause in the Constitution which guarantees that "the citizen of each State shall be entitled to all privileges and immunities of citizens in the several States?"

I take the official oath to-day with no mental reservations and with no purpose to construe the Constitution or laws by any hypercritical rules. And while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepealed, than to violate any of them trusting to find impunity in having them held to be unconstitutional.

It is seventy-two years since the first inauguration of a President under our National Constitution. During that period fifteen different and greatly distinguished citizens have, in succession, administered the Executive branch of the Government. They have conducted it through many perils, and generally with great success.[4] Yet, with all this scope of precedent, I now enter upon the same task for the brief constitutional term of four years, under great and peculiar difficulty. A disruption of the Federal Union, heretofore only menaced, is now formidably attempted.[5]

I hold that, in contemplation of universal law, and of the Constitution, the union of these States is perpetual. Perpetuity is implied, if not expressed, in the fundamental law of all National Governments. It is safe to assert that no Government proper ever had a provision in its organic law for its own termination. Continue to execute all the express provisions of our National Constitution, and the Union will endure forever — it being impossible to destroy it except by some action not provided for in the instrument itself.

Again, if the United States be not a Government proper, but an association of States in the nature of contract merely, can it, as a contract, be peaceably unmade by less than all the parties who made it? One party to a contract may violate it — break it, so to speak, but does it not require all to lawfully rescind it?

Descending from these general principles, we find the proposition that, in legal contemplation, the Union is perpetual, confirmed by the history of the Union itself. The Union is much older than the Constitution. It was formed, in fact, by the Articles of Association in 1774. It was matured and continued by the Declaration of Independence in 1776. It was further matured,[6] and the faith of all the then thirteen States expressly plighted and engaged that it should be perpetual, by the Articles of Confederation in 1778. And, finally, in 1787, one of the declared objects for ordaining and establishing the Constitution was, "*to form a more perfect Union.*"

But if destruction of the Union by one, or by a part only, of the States be lawfully possible, the Union is *less* perfect than before the Constitution, having lost the vital element of perpetuity.[7]

It follows from these views, that no State, upon its own mere motion, can lawfully get out of the Union; that *resolves* and *ordinances* to that effect are legally void; and that acts of violence, within any State or States, against the authority of the United States, are insurrectionary or revolutionary, according to circumstances.[8]

I therefore consider that, in view of the Constitution and the laws, the Union is unbroken; and to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States.[9] Doing this I deem to be only a simple duty on my part; and I shall perform it, so far as practicable, unless my rightful masters, the American people, shall withhold the requisite means, or in some authoritative manner direct the contrary.[10] I trust this will not be regarded as a menace, but only as the declared purpose of the Union that it will constitutionally defend and maintain itself.[11]

In doing this there needs to be no bloodshed or violence; and there shall be none, unless it be forced upon

---

[3] The remainder of this paragraph was not in the original draft. Mr. Lincoln added it of his own accord.

[4] This sentence stood in the original: "They have conducted it through many perils; and on the whole, with great success."

Mr. Lincoln adopted Mr. Seward's suggestion to make it read: "and generally with great success."

[5] In the original this sentence read: "A disruption of the Federal Union is menaced, and, so far as can be on paper, is already effected. The particulars of what has been done are so familiar and so fresh, that I need not waste any time in recounting them."

Mr. Seward proposed to change it as follows: "A disruption of the Federal Union, heretofore only menaced, is now formidably attempted."

Mr. Lincoln adopted the suggestion.

[6] This sentence originally stood: "It was further matured and expressly declared and pledged to be perpetual," etc.

Mr. Lincoln of his own accord amended it as follows: "It was further matured, and the faith of all the then thirteen States expressly plighted and engaged that it should be perpetual," etc.

[7] In the original, this paragraph concluded as follows: "The Union is less perfect than before, which contradicts the Constitution, and therefore is absurd."

Mr. Seward proposed to strike out the words "and therefore is absurd." Mr. Lincoln adopted this suggestion, and in addition remodeled the whole sentence, so as to read: "The Union is *less* perfect than before the Constitution, having lost the vital element of perpetuity."

[8] The first half of this sentence originally closed: "ordinances to that effect are legally nothing," and the second half, "are insurrectionary or treasonable, according to circumstances." Mr. Seward's suggestions to strike out the word "nothing" and substitute the word "void," and to strike out the word "treasonable" and substitute the word "revolutionary," were adopted.

[9] In the original this sentence stood: "I therefore consider that the Union is unbroken; and, to the extent of my ability, I shall take care that the laws of the Union be faithfully executed in all the States."

Mr. Seward proposed to amend it as follows: "I therefore consider that, in view of the Constitution and the laws, the Union is unbroken; and to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States."

Mr. Lincoln adopted the change.

[10] This phrase originally stood: "or in some tangible way direct the contrary."

Mr. Seward's suggestion, to strike out the words "tangible way" and substitute therefor the words "authoritative manner," was adopted.

[11] This sentence originally closed: "will have its own and defend itself." Mr. Seward's suggestion, to strike out these words and insert "will constitutionally defend and maintain itself," was adopted.

the national authority.[12] The power confided to me will be used to hold, occupy, and possess the property and places belonging to the Government, and to collect the duties and imposts; but beyond what may be necessary for these objects, there will be no invasion, no using of force against or among the people anywhere. Where hostility to the United States, in any interior locality, shall be so great and universal as to prevent competent resident citizens from holding the Federal offices, there will be no attempt to force obnoxious strangers among the people for that object. While the strict legal right may exist in the Government to enforce the exercise of these offices, the attempt to do so would be so irritating, and so nearly impracticable withal, that I deem it better to forego for the time the uses of such offices.

The mails, unless repelled, will continue to be furnished in all parts of the Union.[13] So far as possible, the people everywhere shall have that sense of perfect security which is most favorable to calm thought and reflection. The course here indicated will be followed unless current events and experience shall show a modification or change to be proper, and in every case and exigency my best discretion will be exercised according to circumstances actually existing, and with a view and a hope of a peaceful solution of the national troubles, and the restoration of fraternal sympathies and affections.[14]

That there are persons in one section or another who seek to destroy the Union at all events, and are glad of any pretext to do it, I will neither affirm nor deny; but if there be such, I need address no word to them.[15] To those, however, who really love the Union, may I not speak?

Before entering upon so grave a matter as the destruction of our national fabric, with all its benefits, its memories, and its hopes, would it not be wise to ascertain precisely why we do it?[16] Will you hazard so desperate a step while there is any possibility that any portion of the ills you fly from have no real existence? Will you, while the certain ills you fly to are greater than all the real ones you fly from — will you risk the commission of so fearful a mistake?

All profess to be content in the Union, if all constitutional rights can be maintained. Is it true, then, that any right, plainly written in the Constitution, has been denied?[17] I think not. Happily the human mind is so constituted,[18] that no party can reach to the audacity of doing this. Think, if you can, of a single instance in which a plainly written provision of the Constitution

---

[12] In the original draft this paragraph, after the first sentence, stood as follows:

"All the power at my disposal will be used to reclaim the public property and places which have fallen: to hold, occupy, and possess these, and all other property and places belonging to the Government and to collect the duties and imposts; but beyond what may be necessary for these objects, there will be no invasion of any State. Where hostility to the United States, in any interior locality, shall be so great and so universal as to prevent competent resident citizens from holding the Federal offices, there will be no attempt to force obnoxious strangers among the people for that object. While the strict legal right may exist in the Government to enforce the exercise of these offices, the attempt to do so would be so irritating, and so nearly impracticable withal, that I deem it better to forego for the time the uses of such offices."

Mr. Seward proposed to strike out all the above, and to insert the following:

"The power confided to me shall be used indeed with efficacy, but also with discretion in every case and exigency, according to the circumstances actually existing, and with a view and a hope of a peaceful solution of the national troubles, and the restoration of fraternal sympathies and affections. There are in this government as in every other, emergencies when the exercise of power lawful in itself is less certain to secure the just ends of administration, than a temporary forbearance from it, with reliance on the voluntary though delayed acquiescence of the people in the laws which have been made by themselves and for their own benefit. I shall not lose sight of this obvious maxim."

Mr. Lincoln, however, did not adopt this proposal, but made a slight change which had been suggested by another friend. At Indianapolis he gave a copy of his original draft to Hon. O. H. Browning, who after carefully reading it on his return, wrote to Mr. Lincoln (February 17th, 1861) referring to this paragraph: "Would it not be judicious so to modify this as to make it read, 'All the power at my disposal will be used to hold, occupy, and possess the property and places belonging to the Government, and to collect the duties and imposts, etc,' omitting the declaration of the purpose of reclamation, which will be construed into a threat or menace, and will be irritating even in the border States? On principle the passage is right as it now stands. The fallen places ought to be reclaimed. But cannot that be accomplished as well or even better without announcing the purpose in your inaugural?"

Mr. Lincoln adopted Mr. Browning's advice, and modified his own phraseology as proposed.

He also made in this paragraph another slight change of phraseology. For, "there will be no invasion of any State," he substituted, "there will be no invasion, no using of force against or among the people anywhere."

[13] This phrase originally was, "The mails, unless refused, will continue to be furnished," etc. Mr. Lincoln himself changed this to read: "The mails, unless repelled."

[14] This paragraph originally closed with the following sentence: "This course will be pursued until current experience shall show a modification or change to be proper." Mr. Lincoln himself changed this so as to read: "The course here indicated will be followed, unless current events and experience shall show a modification or change to be proper." He also added a part of the language proposed by Mr. Seward for the previous paragraph, as will be seen by comparison.

[15] This sentence originally stood: "That there are persons who seek to destroy the Union," etc. Mr. Seward proposed to amend so as to make it read: "That there are persons in one section as well as in the other, who seek to destroy the Union," etc. Mr. Lincoln changed the amendment to, "That there are persons in one section or another who seek," etc.

Mr. Seward also proposed to add to the last clause of the sentence, after the word "them," the following: "because I am sure they must be few in number and of little influence when their pernicious principles are fully understood."

Mr. Lincoln did not adopt the suggestion.

[16] Mr. Lincoln himself struck out the word "Union" as it originally appeared in this sentence, and inserted in lieu the words "fabric, with all its benefits, its memories, and its hopes."

[17] Mr. Seward proposed to insert the word "distinct" after the words, "Is it true, then, that any," in the second sentence of this paragraph.

Mr. Lincoln did not adopt the suggestion.

[18] In this sentence Mr. Lincoln himself changed the word "constructed" to "constituted."

has ever been denied. If, by the mere force of numbers, a majority should deprive a minority of any clearly written constitutional right, it might, in a moral point of view, justify revolution — certainly would, if such right were a vital one. But such is not our case. All the vital rights of minorities and of individuals are so plainly assured to them by affirmations and negations, guarantees and prohibitions,[19] in the Constitution, that controversies never arise concerning them. But no organic law can ever be framed with a provision specifically applicable to every question which may occur in practical administration.[20] No foresight can anticipate, nor any document of reasonable length contain, express provisions for all possible questions. Shall fugitives from labor be surrendered by national or by State authority? The Constitution does not expressly say. *May* Congress prohibit slavery in the Territories? The Constitution does not expressly say. *Must* Congress protect slavery in the Territories? The Constitution does not expressly say.

From questions of this class spring all our constitutional controversies, and we divide upon them into majorities and minorities. If the minority will not acquiesce, the majority must, or the Government must cease. There is no other alternative; for continuing the Government is acquiescence on one side or the other.[21] If a minority in such case will secede rather than acquiesce, they make a precedent which in turn will divide and ruin them; for a minority of their own will secede from them whenever a majority refuses to be controlled by such minority.[22] For instance, why may not any portion of a new confederacy, a year or two hence, arbitrarily secede again, precisely as portions of the present Union now claim to secede from it?[23] All who cherish disunion sentiments are now being educated to the exact temper of doing this.

Is there such perfect identity of interests among the States to compose a new Union as to produce harmony only, and prevent renewed secession?[24]

Plainly, the central idea of secession is the essence of anarchy. A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people.[25] Whoever rejects it does, of necessity, fly to anarchy or to despotism. Unanimity is impossible; the rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy or despotism in some form is all that is left.

I do not forget the position, assumed by some, that constitutional questions are to be decided by the Supreme Court; nor do I deny that such decisions must be binding, in any case, upon the parties to a suit, as to the object of that suit, while they are also entitled to very high respect and consideration in all parallel cases by all other departments of the Government.[26] And while it is obviously possible that such decision may be erroneous in any given case, still the evil effect following it, being limited to that particular case, with the chance that it may be overruled, and never become a precedent for other cases, can better be borne than could the evils of a different practice.[27] At the same time, the candid citizen must confess that if the policy of the Government, upon vital questions, affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made in ordinary litigation between parties in personal actions, the people will have ceased to be their own rulers, having to that extent practically resigned their government into the hands of that eminent tribunal.[28] Nor is there in this view any assault upon the

---

[19] The phrase, "by affirmations and negations," Mr. Seward proposed to make, "by affirmations and negations, guarantees and prohibitions."

Mr. Lincoln adopted the suggestion.

[20] The phrase, "applicable to every question," Mr. Seward proposed to change to, "applicable to every possible question."

Mr. Lincoln did not adopt the change.

[21] In this paragraph Mr. Seward proposed to substitute the words "acquiesce" and "acquiescence" for "submit" and "submission."

Mr. Lincoln adopted the suggestion.

[22] The original phrase, "a minority of their own number will secede from them," Mr. Lincoln himself changed to, "a minority of their own will secede from them."

[23] In the original these sentences ran as follows: "For instance, why may not South Carolina, a year or two hence, arbitrarily secede from a new Southern Confederacy, just as she now claims to secede from the present Union? Her people, and, indeed, all secession people, are now being educated to the precise temper of doing this."

Mr. Seward proposed to substitute the names "Alabama or Florida" for "South Carolina"; and the word "communities" for "people."

Instead of adopting this, Mr. Lincoln re-wrote the whole, as follows: "For instance, why may not any portion of a new confederacy, a year or two hence, arbitrarily secede again, precisely as portions of the present Union now claim to secede from it? All who cherish disunion sentiments are now being educated to the exact temper of doing this."

[24] For the original phrase, "a Southern Union," Mr. Lincoln himself substituted, "a new Union."

[25] The original sentence, "A constitutional majority is the only true sovereign of a free people," Mr. Seward proposed to change to, "A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign," etc.

Mr. Lincoln adopted the change.

[26] In this sentence the final clause, "while they are also entitled to very high respect and consideration in all parallel cases by all other departments of the Government," was suggested by Mr. Seward and adopted by Mr. Lincoln.

[27] In the original this phrase ran: "the greater evils of a different rule." Mr. Seward proposed to substitute "practice" for "rule," and Mr. Lincoln struck out the word "greater," making it read, "the evils of a different practice."

[28] In the original this sentence stood: "But if the policy of the Government, upon vital questions affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, it is plain that the people will have ceased to be their own rulers, having turned their government over to the despotism of the few life officers composing the court."

Mr. Seward proposed to amend it as follows: "At the same time the candid citizen must confess that if the policy of the Government, upon vital questions affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, made in the ordinary course of litigation between parties in personal actions,

court or the judges. It is a duty from which they may not shrink to decide cases properly brought before them, and it is no fault of theirs if others seek to turn their decisions to political purposes.[29]

One section of our country believes slavery is *right*, and ought to be extended, while the other believes it is *wrong*, and ought not to be extended.[30] This is the only substantial dispute. The fugitive-slave clause of the Constitution, and the law for the suppression of the foreign slave-trade, are each as well enforced,[31] perhaps, as any law can ever be in a community where the moral sense of the people imperfectly supports the law itself.[32] The great body of the people abide by the dry legal obligation in both cases, and a few break over in each. This, I think, cannot be perfectly cured; and it would be worse in both cases *after* the separation of the sections, than before. The foreign slave-trade, now imperfectly suppressed, would be ultimately revived without restriction in one section;[33] while fugitive slaves, now only partially surrendered, would not be surrendered at all by the other.

Physically speaking, we cannot separate. We cannot remove our respective sections from each other, nor build an impassable wall between them. A husband and wife may be divorced, and go out of the presence and beyond the reach of each other; but the different parts of our country cannot do this. They cannot but remain face to face, and intercourse, either amicable or hostile, must continue between them. Is it possible, then, to make that intercourse more advantageous or more satisfactory *after* separation than *before?* Can aliens make treaties easier than friends can make laws? Can treaties be more faithfully enforced between aliens, than laws can among friends? Suppose you go to war, you cannot fight always; and when, after much loss on both sides, and no gain on either, you cease fighting, the identical old questions as to terms of intercourse are again upon you.

This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing Government they can exercise their *constitutional* right of amending it, or their *revolutionary* right to dismember or overthrow it.[34] I cannot be ignorant of the fact that many worthy and patriotic citizens are desirous of having the National Constitution amended. While I make no recommendation of amendments, I fully recognize the rightful authority of the people over the whole subject, to be exercised in either of the modes prescribed in the instrument itself; and I should, under existing circumstances, favor rather than oppose a fair opportunity being afforded the people to act upon it. I will venture to add that, to me the convention mode seems preferable, in that it allows amendments to originate with the people themselves, instead of only permitting them to take or reject propositions originated by others, not especially chosen for the purpose, and which might not be precisely such as they would wish to either accept or refuse. I understand a proposed amendment to the Constitution — which amendment, however, I have not seen — has passed Congress, to the effect that the Federal Government shall never interfere with the domestic institutions of the States, including that of persons held to service. To avoid misconstruction of what I have said, I depart from my purpose, not to speak of particular amendments, so far as to say that, holding such a provision to now be implied constitutional law, I have no objection to its being made express and irrevocable.

The Chief Magistrate derives all his authority from the people, and they have conferred none upon him to fix terms for the separation of the States. The people themselves can do this also if they choose;[35] but the Executive, as such, has nothing to do with it. His duty is to administer the present Government, as it came to his hands, and to transmit it, unimpaired by him, to his successor.

Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world? In our present differences

---

the people will have ceased to be their own rulers, having practically resigned their government into the hands of that eminent tribunal."

Mr. Lincoln adopted the amendment, first changing the phrase, "made in the ordinary course of litigation," to, "the instant they are made in ordinary litigation," and also the phrase, "having practically resigned," to, "having to that extent practically resigned."

[29] The original draft here contained the following paragraph:

"The Republican party, as I understand, have avowed the purpose to prevent, if they can, the extension of slavery under the national auspices; and upon this arises the only dispute between the sections."

Mr. Seward proposed to strike out the whole paragraph, and Mr. Lincoln adopted the suggestion.

[30] In the original this phrase stood: "One section believes slavery is right," etc. Mr. Seward proposed to make it read: "One section of our country believes slavery is right," etc.

Mr. Lincoln adopted the amendment.

[31] The phrase, "as well enforced as any law," Mr. Seward suggested should read: "as well enforced, perhaps, as any law," etc.

The suggestion was adopted.

[32] The phrase, "where the moral sense of the people is against the law itself," Mr. Seward suggested should read: "where the moral sense of the people imperfectly supports the law itself."

The suggestion was adopted.

[33] The phrase, "would be revived," Mr. Seward suggested should read: "would be ultimately revived."

The suggestion was adopted.

[34] Following the words, "dismember and overthrow it," the original continued:

"As I am not much impressed with the belief that the present Constitution can be improved, I make no recommendations of amendments. I am rather for the old ship, and the chart of the old pilots. If, however, the people desire a new or an altered vessel, the matter is exclusively their own, and they can move in the premises, as well without as with an executive recommendation. I shall place no obstacle in the way of what may appear to be their wishes."

Mr. Seward proposed to change the first sentence of the above to the following: "While so great a diversity of opinion exists on the question what amendments, if indeed any, would be effective in restoring peace and safety, it would only tend to aggravate the dispute if I were to attempt to give direction to the public mind in that respect."

Mr. Lincoln did not adopt Mr. Seward's suggestion; but struck out all the above, and remodeled the whole paragraph to the form in which it now stands in the text.

[35] The original phrase "can do this if they choose," Mr. Lincoln himself changed to read, "can do this also if they choose."

is either party without faith of being in the right?[36] If the Almighty Ruler of Nations, with his eternal truth and justice, be on your side of the North, or on yours of the South,[37] that truth and that justice will surely prevail by the judgment of this great tribunal of the American people.

By the frame of the Government under which we live, this same people have wisely given their public servants but little power for mischief; and have, with equal wisdom, provided for the return of that little to their own hands at very short intervals. While the people retain their virtue and vigilance, no administration, by any extreme of wickedness or folly, can very seriously injure the Government in the short space of four years.[38]

My countrymen, one and all, think calmly and *well* upon this whole subject.[39] Nothing valuable can be lost by taking time.[40] If there be an object to *hurry* any of you, in hot haste, to a step which you would never take *deliberately*, that object will be frustrated by taking time; but no good object can be frustrated by it. Such of you as are now dissatisfied, still have the old Constitution unimpaired, and, on the sensitive point, the laws of your own framing under it; while the new Administration will have no immediate power, if it would, to change either. If it were admitted that you who are dissatisfied hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land are still competent to adjust, in the best way, all our present difficulty.

In *your* hands, my dissatisfied fellow-countrymen, and not in *mine*, is the momentous issue of civil war. The Government will not assail *you*.[41] You can have no conflict, without being yourselves the aggressors. *You* have no oath registered in Heaven to destroy the government, while *I* shall have the most solemn one to "preserve, protect and defend it."[42]

I am loth to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battle-field, and patriot grave, to every living heart and hearth-stone, all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

---

[36] The original phrase, "is either party without faith in the right?" Mr. Lincoln himself changed to, "is either party without faith of being in the right?"

[37] The original phrase, "be on our side or on yours," Mr. Seward suggested should read: "be on the side of the North, or of the South, of the East, or of the West."

Mr. Lincoln changed it to read: "be on your side of the North, or on yours of the South."

[38] The original phrase, "While the people remain patient and true to themselves, no man, even in the presidential chair, can," etc., Mr. Seward proposed to change, to "While the people retain their virtue and vigilance, no legislature and no administration can," etc.

Mr. Lincoln changed it to read as follows: "While the people retain their virtue and vigilance, no administration, by any extreme of wickedness or folly, can," etc.

[39] The original phrase, "take time and think well," Mr. Seward suggested should read: "think calmly and think well."

Mr. Lincoln changed it to, "think calmly and *well*."

[40] The original sentences: "Nothing valuable can be lost by taking time. Nothing worth preserving is either breaking or burning," Mr. Seward proposed to strike out.

Mr Lincoln retained the first, and struck out the second.

[41] In the original sentence, "The Government will not assail you, unless you first assail it," Mr. Seward suggested striking out the last clause.

Mr. Lincoln adopted the suggestion.

[42] The original draft, after the words, "preserve, protect, and defend it," concluded as follows, addressing itself to "my dissatisfied fellow-countrymen": "You can forbear the assault upon it, I cannot shrink from the defense of it. With you, and not with me, is the solemn question of 'Shall it be peace or a sword?'"

Mr. Seward did not like this termination; his letter, previously quoted, suggested that "something besides or in addition to argument is needful — to meet and remove prejudice and passion in the South, and despondency and fear in the East. Some words of affection — some of calm and cheerful confidence." Accordingly he submitted two separate drafts for a closing paragraph, from which Mr. Lincoln might choose one to substitute for the two sentences which he proposed to strike out.

Suggestions for a closing paragraph:

NO. I.

"However unusual it may be at such a time to speak of sections or to sections, yet in view of the misconceptions and agitations which have strained the ties of brotherhood so far, I hope it will not be deemed a departure from propriety, whatever it may be from custom, to say that if in the criminations and misconstructions which too often imbue our political contests, any man south of this capital has been led to believe that I regard with a less friendly eye his rights, his interests, or his domestic safety and happiness, or those of his State, than I do those of any other portion of my country, or that I would invade or disturb any legal right or domestic institution in the South, he mistakes both my principles and feelings, and does not know me. I aspire to come in the spirit, however far below the ability and wisdom, of Washington, of Madison, of Jackson, and of Clay. In that spirit I here declare that in my administration I shall know no rule but the Constitution, no guide but the laws, and no sentiment but that of equal devotion to my whole country, east, west, north, and south."

NO. II.

"I close. We are not, we must not be, aliens or enemies, but fellow-countrymen and brethren. Although passion has strained our bonds of affection too hardly, they must not, I am sure they will not, be broken. The mystic chords which, proceeding from so many battle-fields and so many patriot graves, pass through all the hearts and all hearths in this broad continent of ours, will yet again harmonize in their ancient music when breathed upon by the guardian angel of the nation."

The first of these drafts, containing 139 words in its opening sentence, and made up of phrases which had become extremely commonplace by iteration in the six years' slavery discussion, was clearly inadmissible. The second draft, containing the germ of a truly poetic thought amid its somewhat chaotic rhetoric, Mr. Lincoln took, and, in a new development and perfect form, gave it the life and spirit and beauty which have made it celebrated in the text.

I close. We are not we must not be aliens or enemies but ~~country~~ fellow countrymen and brethren. Although passion has strained our bonds of affection too hardly they must not be ~~broken~~ they will not. I am sure they will not be broken. The mystic chords which proceeding from every battle field and patriot grave to every living heart ~~and~~ hearth stone all over this ~~broad~~ land will yet again harmonize in their ancient music when touched as they surely will be ~~again~~ by the ~~better~~ angels guardian angel of the nation

SEWARD'S SUGGESTION FOR CLOSE OF INAUGURAL ADDRESS. (FROM THE ORIGINAL MS.)

You can have no conflict, without being yourselves the aggressors. *You* have no oath registered in Heaven to destroy the government, while I shall have the most solemn one to "preserve, protect and defend" it. [redacted] I am loth to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battle-field, and patriot grave, to every living heart and hearth-stone, all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

CLOSING PARAGRAPH. (FROM ORIGINAL FROM WHICH THE ADDRESS WAS DELIVERED.)

A cheer greeted the conclusion. Chief-Justice Taney arose, the clerk opened his Bible, and Mr. Lincoln, laying his hand upon it, with deliberation pronounced the oath:

"I, Abraham Lincoln, do solemnly swear that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

Then, while the battery on the brow of the hill thundered its salute, citizen Buchanan and President Lincoln returned to their carriage, and the military procession escorted them from the Capitol to the Executive Mansion, on the threshold of which Mr. Buchanan warmly shook the hand of his successor, with heartfelt good wishes for his personal happiness and the national peace and prosperity.

PRISON LIFE OF THE RUSSIAN REVOLUTIONISTS. I.

EVERY American reader who takes an intelligent interest in the affairs of Russia, but who is compelled to depend for his information upon the meager and unsatisfactory accounts of Russian events which are telegraphed to this country, must have asked himself many times the question, "What is the specific nature of the wrongs which call forth, especially among the youth of Russia, such manifestations of fierce passionate hatred for the Tsar, and which inspire such persistent and desperate attempts to take his life?" In vain we seek, in the reports which come to us, for causes that seem adequate to explain the white-heat intensity of feeling which must lie back of such extraordinary social phenomena. We are told that Russia is badly governed; that the press is gagged; that the right of public assembly is denied; and that every free impulse is rigorously repressed by a corrupt and despotic bureaucracy. But these evils, even if fully admitted, do not furnish a perfectly satisfactory explanation of the fact that scores — perhaps hundreds — of young men and women in Russia are willing and ready to die a violent and shameful death on the scaffold if they can only kill, before they die, the man who sits on the throne. At the meeting of "terrorist" leaders held in the town of Lipetsk in June, 1879, when the assassination of Alexander II. was decided upon, forty-seven young men and women offered themselves as volunteers to carry the decision of the council into execution.* Bad government, in any sense which we ordinarily attach to the words, is not adequate to explain a fact so extraordinary and so abnormal as this. Men do not, as a rule, fight press censorship with murder, nor seek to enforce by assassination their demand for civil rights. A feeling of terrible personal outrage must be added to the sense of oppression before the average human being can be wrought up to a state of mind in which he will give his own life for an opportunity to kill another. Unless, therefore, there is something peculiarly ferocious and fanatical in the character of the "terrorist" assassins,— unless there is in the Russian blood a strain of homicidal insanity which renders it impossible to judge a man of that race by the same rules of conduct which govern other races,— there must be something more than ordinarily bad government behind the abnormal phenomena of contemporary Russian life.

I purpose to set forth, in this and subsequent papers, what seems to me one of the most important and efficient of the causes which led the Russian revolutionists to adopt in 1878 the unfortunate, mistaken, and criminal policy of "terror"; namely, the treatment of political offenders in the Russian prisons. Whatever view may be taken of the phases through which the Russian revolutionary movement has passed since 1870, there can, I think, be no question that its last phase,— organized assassination — is largely the result of what the revolutionists regard as the cruel and inhuman treatment of "politicals" in the fortress of Petropavlovsk, the castle of Schlusselburg, and the prisons of Moscow, Kiev, and Odessa. Before proceeding, therefore, to consider such crimes as the assassination of Alexander II., or to pass judgment upon such characters as those which came into prominence with the adoption of the terroristic policy, it is absolutely necessary to have a clear conception of the life of the Russian revolutionists in prison.

The material upon which these articles are based has been derived mainly from three sources: First, the personal examination of a large number of Russian prisons; second, the statements of three or four hundred men and women who have been shut up in those prisons for terms ranging from six months to seven years and at various times from 1874 to 1885; and, third, the statements of Russian officials who are now, or have been at some time, connected with the prison administration. To the collection and the verification of the facts herein set forth I have devoted many laborious days and nights, at the mines and in the penal settlements of Siberia, as well as in the cities of European Russia, and I have every reason to feel confident that my statements are worthy of trust.

There was some discussion in the English periodicals two or three years ago, between Prince Krapotkine and Mr. C. M. Wilson on one side, and the Rev. Henry Lansdell and an anonymous correspondent of the "Pall Mall Gazette" on the other, with regard to the conditions of life and the treatment of politicals in the fortress of Petropavlovsk. I was denied permission to visit that prison, and am not able, therefore, to describe it from personal in-

* Official Stenographic Report of the Trial of the Regicides in St. Petersburg, in 1881; Statement of Zheliaboff, p. 32.

spection; but my opportunities for obtaining information with regard to the conditions of life therein have been of an exceptional character. I made the acquaintance in Siberia of perhaps fifty exiles who had been shut up in the fortress, and whose overlapping terms of imprisonment covered the whole period between the years 1874 and 1884. These exiles were scattered all over Siberia; many of them had never seen one another, and there was no possibility of a preconcerted agreement among them as to the story which they should tell me. Most of them, moreover, were men of high intelligence and character, and as incapable, I believe, of wilful misrepresentation as any American gentleman of my acquaintance. They described to me, with the utmost possible minuteness, every detail of their prison experience; and I find, in looking over my note-books, that I have in some cases six or eight separate and independent accounts of the same event or state of facts, obtained from six or eight exiles who did not know one another, and who were living in penal settlements, hundreds — sometimes thousands — of miles apart. The statements of exiles, judicially considered, must, of course, be regarded as *ex-parte* evidence; but it is manifest, I think, that even *ex-parte* testimony, if concurrent, and if taken under the circumstances above described, is entitled to credence, unless it can be shown that there has been an opportunity for collusion. As far as it has been possible to do so, I have checked and verified the statements of these exiles by conversations with lawyers, judges, and prison officials. I cannot, for obvious reasons, give the names of the latter, but they are persons who had opportunities to know the facts. If the Government's side of the subjects discussed and the events described in these papers is not as fully set forth as would seem to be desirable, it is partly because I reserve the Government's case against the revolutionists for fuller and more careful treatment in a subsequent paper, and partly because General Orzhefski, the Russian Chief of Gendarmes, did not appear disposed, when I called upon him last summer, either to furnish me with facts, or to give me facilities for making a personal examination. For permission to visit the great St. Petersburg prisons known as "The House of Preliminary Detention" and "The Litofski Zamok," I am indebted to Mr. Galkine-Vrasskoi, Chief of the Prison and Exile Department. He had, however, no control over the fortress of Petropavlovsk or the castle of Schlusselburg, and General Orzhefski, who might have allowed me to see those prisons, declined courteously but firmly to do so.

In order to understand much that I shall have to say, the reader must divest himself entirely of the idea that Russian prisons are managed upon any definite, well-ordered system, or that there is any consistent adherence to a predetermined policy in the treatment of prisoners. It would be hard, I think, to find in the civilized world another penal system in which personal whim and caprice play so important a part, and in which considerations of temporary convenience or expediency so often override law as they do in the Russian system. There are in the empire 884 prisons. They are all nominally under the same management, and are subject to the same laws and regulations, and yet it would be difficult to find a score that are governed exactly in the same way or precisely upon the same principles. It would be almost equally difficult to find a single prison which has been governed in the same way for three consecutive years. Privileges which are granted in one prison are denied in another; in one place severity is the rule, in another it is the exception; some prisoners are overfed, others are half starved; in one place a violation of the rules leads to nothing worse than a reprimand, while in another the same fault is punished with twenty lashes on the bare back. Everywhere there is irregularity, disorder, caprice, and more or less complete lack of method.

The reasons for this state of things are many, but among the most important of them are: First, the impracticability and self-contradictory character of much of the penal legislation; second, the distribution of responsibility for prison management among a large number of persons and administrative bureaus not properly subordinated to one another; third, the disposition of many Russian officials to decide and act, not in accordance with law, but in accordance with their own views of expediency, or in obedience to what they believe to be the wishes of their superior officers; and, fourth, the low grade of intelligence, executive ability, and morality which characterizes prison officials generally, and which is due to the fact that better men cannot be obtained for the compensation paid.*

I have a manuscript copy of a secret report made to the Tsar in 1881 by Governor-General Anutchin, in which that high officer, speaking of the "lamentable condition" of the

* The superintendent of The House of Preliminary Detention in St. Petersburg, one of the largest and most important prisons in the empire, receives only $900 a year, exclusive of table and quarters. His senior assistant receives only $400. In the St. Petersburg Forwarding Prison the superintendent receives $350, and his assistant $200. In the provincial prisons the salaries paid are still smaller. — [Report of the Central Prison Administration for 1884, pp. 83–4. St. Petersburg: Office of the Minister of the Interior. 1886.]

prisons and the regulation of imprisonment and exile, says: "Although the laws have laid down innumerable rules for the regulation of the subject, such laws have become for the most part dead letters from the very day of their enactment, on account of their impracticability and the lack of proper supervision."*

I have also in my possession a copy of an official circular letter dated August 25th, 1885, from the governor of a Russian province to "Prison Committees, Municipal Police Administrations, Circuit Police Administrations, and Bureaus of Prison Control," in which the governor calls attention to the existence in the provincial prisons of "innumerable violations of law of all possible sorts, practiced so openly as to make it seem almost incredible that the persons who permit them are really conscious of the illegality of their acts." In the long list of abuses which the governor then enumerates are corrupt agreements between prison officials and contractors to substitute an inferior quality of food and clothing for that which the law requires, and to divide the proceeds of the fraud; unchecked drunkenness, gambling, and disorder among the prisoners; the drawing of rations and clothing for criminals who have died, escaped, or been released, and the sale of such articles by the prison officials for their own benefit; the practice of setting convicts at liberty in order that they may engage in private employment upon condition that they shall divide their earnings with the prison official who releases them; the failure of prison authorities to keep a record of punishments, and the flogging of prisoners by the overseers of prisons without the knowledge or sanction of the *Ispravniks*, or Chiefs of Police, in whose districts the prisons are situated.

It appears from a simple inspection of this letter, and without any further investigation, that there are no less than seven different persons and groups of persons who have something to say about the management of provincial prisons; namely, first, the prison officials themselves; second, the Prison Committees; third, the Municipal Police Administrations; fourth, the Circuit Police Administrations; fifth, the Bureaus of Prison Control; sixth, the Ispravniks; and, seventh, the Governor. To this list, however, must be added: eighth, the Procureur; ninth, the town council of the town in which the prison is situated; tenth, the Governor-General; eleventh, the Central Prison Administration in St. Petersburg; and, twelfth, the Minister of the Interior. It further appears, from the official statement above referred to, that notwithstanding all this regulative machinery,—in spite of this apparent superfluity of "control,"—there are in the provincial prisons "innumerable violations of law, practiced so openly as to make it seem almost incredible that the persons who permit them are really conscious of the illegality of their acts."

In the prisons devoted exclusively to political offenders, there is, of course, less disorder and dishonesty than in the lower-grade prisons of the provinces; but even in the former, circumstances and official caprice play a much more important part than law does. Law, in fact, is rarely permitted to stand in the way of what a high official regards as the paramount interests of the State. If a Procureur like Strelnikoff, or a Chief of Gendarmes like Mezzentseff, believes that by subjecting a political prisoner to a certain kind of treatment he can extort from such prisoner a confession which will lead to the arrest of his companions in crime, or furnish a clew to undiscovered conspiracy, he does not hesitate to overstep the limits of his legal authority. To attain such an end he will even resort to methods which are in the highest degree base and dishonorable — methods which are as exasperating to the prisoners as they are discreditable to the Government which permits them.

The treatment of political prisoners is largely dependent also upon the temper of the official mind at various times and under various circumstances. After every fresh attempt at violence on the part of the conspirators who are still at liberty, there is increased severity in the treatment of their comrades in prison. At one time the officials, irritated by the success of a conspiracy which they have failed to discover, avenge their incompetency upon the conspirators who are in their power; while at another time, placated by apparent submission, or gratified by what seems to be the reëstablishment of social order, they modify the extreme rigor of their prison discipline. The natural result of this usurpation of the functions of law by official caprice or license is the complete overthrow of all systematic and consistent prison government. The treatment of prisoners becomes not what the law intended it to be, but what the Procureur or the Chief of Gendarmes thinks that it ought to be, in view of circumstances or events with which the prisoners themselves have perhaps nothing whatever to do.

Before proceeding to describe the daily life of the Russian revolutionists in prison, I desire to call attention to three classes of facts which are closely related to prison life, and which have an important bearing upon the state of mind and temper produced by it. The classes of facts to which I refer, and to which I shall devote the remainder of this article, are: First,

* Secret Report to the Tsar by Governor-General Anutchin, Chap. V., Section 3, entitled "Exile, Penal Servitude, and the Prison Department."

the custom of making indiscriminate arrests as a means of inspiring terror and with the hope of obtaining clews to secret revolutionary activity; second, the use of imprisonment as a species of torture to extort confession or compel the prisoner to betray friends; and, third, the illegal detention of political "suspects" in solitary confinement for months and years while the police scour the empire in search of criminating evidence upon which to base indictments. All of these methods have been practiced in Russia upon the most extensive scale, and perhaps nothing has done more to fan the smoldering fire of discontent into the fierce flame of terroristic activity.

In using the word "indiscriminate" to characterize political arrests, I do not mean, of course, to be understood as saying that the Russian police go through a city as a Malay runs amuck, laying hands upon everybody who happens to come in their way. Political arrests, no matter how sweeping and extensive they may be, are always confined to one class of the population — a class officially known in Russia as *neblagonadezhni*. This word has no equivalent in English, and the idea which it represents is so foreign to all our modes of thought that it can be expressed only by a circumlocution. *Blago* in Russian means "good"; *nadezhda* means "hope"; *blagonadezhnost* means the condition from which something good or gratifying is to be hoped or expected; *ne-blago-nadezhnost* is the negative form of the complex word, and as officially used may be approximately translated "a condition of political untrustworthiness." The term *neblagonadezhni* is applied by the Government to all persons whose political opinions are officially regarded as unsound, and whose behavior is therefore a proper subject for police supervision. Statistics of this "untrustworthy" class are, of course, not procurable; but in 1880, when the Liberal ministry of Loris Melikoff was in power, the number of persons who were under open police surveillance was officially stated as 2837, distributed throughout the provinces of the empire as follows: in St. Petersburg, 273; in Moscow, 101; in Kaluga, 315; in Riazan, 255; in Tver, 198; in Kostroma, 165; in Archangel, 96; and in other provinces, 1434.* The persons, however, who are under open police surveillance form a comparatively small part of the great *neblagonadezhni* or "untrustworthy" class. They are mostly persons who have been forcibly removed from their homes to other parts of the empire, in order to break up their local associations, and who are subjected at regular intervals to domiciliary visits. Thousands of others who have not been thus removed are under secret surveillance, and the names of thousands more are registered in the books of the gendarmes and the detective police. Whenever an act of violence is committed or attempted by the extreme revolutionary party, the police make a sudden descent upon the whole "untrustworthy" class in the town or province where the disorder has occurred, and drag to prison by scores both the innocent and the guilty, to be afterwards sorted at their leisure. When General Strelnikoff was intrusted by the Tsar with almost dictatorial power in order that he might extirpate sedition in the provinces of southern Russia, he arrested and threw into prison in the single city of Odessa no less than 118 persons in three days. He then went to Kiev and arrested 89 persons almost simultaneously, and ordered the imprisonment of hundreds of others in Kharkoff, Nikolaief, Pultava, Kursk, and other South Russian cities. Most of these arrests were made entirely without what is known as "probable cause," and for the sole purpose of obtaining clews to plots which the police believed to exist, but which they had not been able to discover. Many of the persons arrested were mere children — immature school boys and girls from fifteen to seventeen years of age — who could not possibly be regarded as dangerous conspirators, but who might, it was thought, be terrified into a confession of all they knew with regard to the movements, conversations, and occupations of their older relatives and friends.

General Strelnikoff's plan was to arrest simultaneously a large number of persons belonging to the "untrustworthy" class; throw them into prison; keep them for ten days or two weeks in the strictest solitary confinement, and then subject them to a terrifying inquisitorial examination with the hope of extorting scraps of information, here a little and there a little, which might be pieced together, like the parts of a dissected map, so as to reveal the outlines of a revolutionary plot. If, for example, a young girl belonged to an "untrustworthy" family, and a "suspicious" letter to her had been intercepted by the authorities; or if she had been seen coming out of a "suspicious" house at a late hour in the evening, she was arrested in one of these police raids, generally at night; conveyed in a close carriage to the Odessa prison; put into a small solitary-confinement cell and left to her own agonizing thoughts. No explanation was given her of this summary proceeding, and if she appealed to the sentinel on duty in the corridor, the only reply she obtained was "*Prikazano ne gavarit*" — "Talking is forbidden."

*"Regulations for the Preservation of Social Order": Aksakoff's newspaper, "Russ," No. 46; September 26th, 1881.

The effect produced upon a young, inexperienced, impressible girl, by the overwhelming shock of such a transition from the repose, quiet, and security of her own bedroom, in her own home, to a narrow, gloomy cell in a common criminal prison at night, can readily be imagined. Even if she were a girl of courage and firmness of character, her self-control might give way under the strain of such an ordeal. The sounds which break the stillness of a Russian criminal prison at night — the stealthy tread of the guard; the faintly heard cries and struggles of a drunken and disorderly "casual" who is being strapped to his bed in another part of the prison, cries which suggest to an inexperienced girl some terrible scene of violence and outrage; the occasional clang of a heavy door; the moaning and hysterical weeping of other recently arrested prisoners in cells on the same corridor, and the sudden and noiseless appearance now and then of an unknown human face at the little square port-hole in the cell door through which the prisoners are watched — all combine to make the first night of a young girl in prison an experience never to be forgotten while she lives. This experience, however, is only the beginning of the trial which her courage and self-control are destined to undergo. One day passes — two days — three days — ten days — without bringing any news from the outside world, or any information concerning the nature of the charges made against her. Twice every twenty-four hours food is handed to her through the square port-hole by the taciturn guard, but nothing else breaks the monotony and the solitude of her life. She has no books, no writing materials, no means whatever of diverting her thoughts or relieving the mental strain which soon becomes almost unendurable. Tortured by apprehension and by uncertainty as to her own fate and the fate of those dear to her, she can only pace her cell from corner to corner until she is exhausted, and then throw herself on the narrow prison bed and in sleep try to lose consciousness of her misery.

At last, two weeks perhaps after her arrest, when her spirit is supposed to be sufficiently broken by solitary confinement and grief, she is summoned to the *dopros*, a preliminary examination, without witnesses or counsel, conducted by General Strelnikoff in person. He begins by saying to her that she is

"charged with very serious crimes under such and such sections of the Penal Code, and that she stands in danger of exile to Siberia for a long term of years. In view, however, of her youth and inexperience, and of the probability that she has been misled by criminal associates, he feels authorized to say to her that if she will show repentance, and a sincere desire to reform, by making a 'chisto-serdechni.'—'clean-hearted' confession,—and will answer truthfully all questions put to her, she will be immediately released. If, on the contrary, she manifests an obdurate disposition and thus proves herself to be unworthy of clemency, it will become his duty, as prosecuting officer of the Crown, to treat her with all the rigor of the law."

The poor girl is well aware that the reference to Siberian exile is not an empty threat. Belonging as she does to an "untrustworthy" family, she has often heard discussed the case of Marie Prisedski, who was exiled before she was sixteen years of age because she would not betray her older sister, and the case of the Ivitchevitch children, one seventeen and the other fourteen years of age, who were arrested in Kiev and sent to Siberia in 1879 for no particular reason except that their two older brothers were revolutionists and had been shot dead while resisting arrest.*

It is not a matter for surprise if a young girl who has thus been torn from her home, who is depressed and disheartened by solitary confinement, who is without counsel, without knowledge of the law, without the support of a single friend in this supreme crisis of her life, breaks down at last under the strain of deadly fear, and tells the inquisitor all she knows. She is at once released, but only to suffer agonies of self-reproach and remorse as she sees her relatives and dearest friends arrested, imprisoned, and exiled to Siberia, upon information and clews which she herself has furnished. It frequently happens, however, that a girl remains steadfast and refuses to answer questions even after months of solitary confinement. The authorities then resort to other and even more discreditable methods.

In 1884 Marie Kaluzhnaya, a girl eighteen years of age, daughter of a merchant in Odessa, was arrested upon a charge of disloyalty, thrown into prison, and subjected to precisely the treatment which I have described. She was, however, a girl of spirit and character, and withstood successfully, for many months, all

* Ivan Maximovitch Prisedski is a wealthy landed proprietor in the district of Zinkofski, province of Pultava. His own loyalty to the Tsar has never been questioned, but all of his children — three girls and a boy — have been exiled to Siberia upon various political charges. Two of them are in Semipalatinsk on the frontier of central Asia; a third is in prison at the mines of Kara, on the head-waters of the Amur, and the fourth was, until recently, in the village of Tunka, near the boundary line between eastern Siberia and Mongolia. I made the acquaintance of three of them in their places of exile during my recent journey to Siberia, and was very favorably impressed by them. A traveler could not hope nor expect to meet in any country more refined, cultivated, and attractive young people.

The Ivitchevitch children — Christina, a girl of seventeen, and her brother, who was only fourteen — were exiled to Kirinsk in the province of Irkutsk, more than four thousand miles east of St. Petersburg.

attempts to persuade or frighten her into a confession or a betrayal of others. At last Colonel Katanski, a gendarme officer in Odessa, brought to her a skillfully forged statement, which purported to be the confession of her imprisoned revolutionary associates.

It was, in fact, a document prepared by the gendarmes themselves from information obtained through spies, supplemented by shrewd guesses and conjectures, and was part of an adroitly contrived scheme to elicit from Miss Kaluzhnaya evidence which could be used against certain of her friends who were in prison awaiting trial upon serious charges. Colonel Katanski, with cruel duplicity, said to Miss Kaluzhnaya that

"he came to her not as an officer of the Crown, but as a friend, to show her this confession of her associates and to urge her to save herself while there was yet time. Persistence in her refusal to answer questions could no longer protect or benefit her friends, since they had admitted their guilt. The Procureur would not know that he [Colonel Katanski] had showed her this confession and would suppose, if she announced her readiness to answer questions, that she had become repentant. There was no serious charge against her personally, and nothing but long-continued obduracy stood in the way of her immediate release. All that she had to do was to show a tractable and penitent disposition. It would not be necessary for her to testify to any facts not already known to the police through this confession,—facts which her friends themselves had admitted. Why should she wreck her young life upon a mistaken and quixotic sentiment of honor which no longer had any practical bearing upon the fate of her associates? They had confessed; they could not possibly be harmed if she merely repeated what they themselves had admitted. The Procureur would not know that she had been made aware of their confession; he would suppose that her offer to appear and testify was prompted by sincere penitence, and there could be no doubt that he would at once order her release."

Miss Kaluzhnaya fell into the trap. She sent word to the Procureur that she was ready to testify, and, upon examination, admitted facts which she supposed the police already knew through the confession, but of which, in reality, they had no proof whatever. Having thus unconsciously served at last the purpose for which she had been arrested, Miss Kaluzhnaya was released from prison and put again under police surveillance. When the case of her friends came up for trial, she discovered, of course, that none of them had made confession, and that there was no evidence against them of any importance except that which she had furnished. The terrible agony of such a discovery to a generous, affectionate, high-minded girl can be imagined. She saw her friends sent into penal servitude upon her testimony, while she herself could neither share their fate nor explain to them the fraud of which she had been a victim. She was in the attitude of a coward who had betrayed her associates in order to secure her own safety. For a time her remorse and despair seemed likely to result either in insanity or in suicide; but she finally recovered her self-control, and there gradually formed in her mind a determination to do something to avenge the intolerable wrong which she had suffered, and to show the world that if she had unwittingly betrayed her friends, she was not afraid to share their fate. She procured a revolver, and on the 21st of August, 1884, called upon Colonel Katanski, and fired at him as he entered the reception-room to meet her. The bullet grazed his head, slightly wounding one ear, and buried itself in the wall. Before she could fire again he sprang upon her and wrested the pistol from her hand. For this attempt at assassination Miss Kaluzhnaya was brought to trial before a court martial in Odessa on the 10th of September of the same year. As it was her only wish to be sent to Siberia with the friends whom she had betrayed, she refused the aid of counsel, and made no attempt at self-defense. The court found her guilty of premeditated assault with intent to kill, and sentenced her to twenty years' penal servitude.

I witnessed the beginning of the last act in this mournful tragedy. I happened to be present in the town of Chita, in eastern Siberia, on the 8th of December, 1885, when Marie Kaluzhnaya, in convict dress, left there on foot, with a gang of chained criminals, in a temperature of twenty degrees below zero, for the mines of Kara. It affords me a sort of melancholy satisfaction now to think that the unfortunate girl was at least aware, as she walked wearily away from the *étape* that bitterly cold December morning, that there was an American traveler there who knew her story, and who would some time explain to the world why she had attempted to commit murder.

It may be thought that cases of this kind are rare and exceptional, but I regret to say that I heard similar stories from exiles in all parts of Siberia and from some Russian officials. The deception which was practiced upon Marie Kaluzhnaya had been repeatedly tried before in the same city of Odessa. An attempt had been made, for example, only a year earlier to deceive, by means of a pretended confession, Miss Fanny Morenis, who is now in exile in the Trans-Baikal. The same plan was tried with Madame Kutitonskaya, who is now in the Irkoutsk prison. In these cases, however, the trap was set in vain.

When solitary confinement and deception fail to bring about the desired result, the gendarmes and the officers of the Department of Justice resort to other means, which are perhaps less dishonorable, but which are equally cruel. In March, 1882, General Strelnikoff, finding that solitary confinement in the gloomy

and badly ventilated prison of Kiev was not of itself sufficient to torture his prisoners into a confession of what he believed they knew with regard to the revolutionary movement, determined to make their life still more intolerable, and to break down, if possible, their obstinate resolution, by darkening their cells. Upon the pretext that he wished to make it impossible for them to talk with one another through their windows, he caused a sheet-iron hood to be put over the window of every cell in the prison occupied by a political offender. The hood was large enough to cover the entire window, and resembled in shape a shallow rectangular box with the cover and one end gone. It fitted the window closely on both sides and at the top, but was open at the bottom. The result of putting these shields over the windows was to deprive the prisoners almost entirely of light and air, and to turn every cell into a sort of cave or *oubliette*. The light which came in through the opening at the bottom of the hood was only sufficient to enable the prisoner to distinguish between night and day. The artisan who put up the hoods told General Strelnikoff that they would not answer the purpose for which they were designed,— that it would be as easy to talk from window to window as it had been before,— but he was sharply informed that that was none of his business. Of course the life of the prisoners under such conditions became almost intolerable. Young, nervous, and impressible girls walked their cells from corner to corner in the gloomy twilight until they became nearly insane. Even the prison officials expressed to the sufferers their sympathy and pity. At last the political prisoners addressed a petition to Governor-General Drenteln asking him to send an officer to see how they were situated, and, if possible, to intercede for them. In response to this petition the governor of the province of Kiev, acting under orders from General Drenteln, made a visit to the prison, entered the cell of a young student named X——, whom I afterward met in Siberia, and said to him, "What do you understand to be the object of these hoods?" Mr. X—— replied that they had been put up by order of General Strelnikoff to prevent oral communication between the prisoners. "Do they have the desired effect?" inquired the governor. "No," replied the young student. "I can show you, if you wish, that it is as easy to talk from window to window now as it was before." "Show me, please," said the governor. Mr. X—— went to the window and called to a prisoner in the cell below. His comrade answered, and they carried on a conversation until the governor expressed himself as satisfied. "I appreciate," he said to Mr. X——, "your situation, but I cannot give you any reason to hope for a change at present. General Strelnikoff is acting under instructions and authority given him by the Tsar in person, and he is therefore independent, not only of Governor-General Drenteln, but of the Minister of the Interior himself. This being the case, the authorities of the province cannot and dare not interfere."

On the next day after the visit of the governor to the prison, General Strelnikoff was assassinated in Odessa. The hoods were immediately removed from the windows, amid great excitement and rejoicing on the part of the political prisoners, who were so much encouraged and emboldened, that they suggested to the governor the use of the sheet-iron hoods as material for a monument to their inventor.

I have space only for a brief reference to the many other methods of extorting testimony from arrested persons which are practiced by the gendarmes and the officers of the Department of Justice. One of the most cruel of them, it seems to me, is the custom of terrifying old and feeble parents into the belief that their sons or daughters will inevitably be hanged unless they confess, and then sending the poor old people, trembling with terror and blinded with tears, to make an agonized appeal to their imprisoned children in their cells. The officials know very well that the children will not be hanged — that it is extremely doubtful whether they will even be brought to trial. They are kept in prison simply because the Procureur hopes ultimately to obtain information from them. If the torture of solitary confinement can be intensified by adding to it the entreaties of half frantic parents, so much the better. A little fright will benefit the old people and teach them to look after their children more closely, and the children's obstinate determination not to betray their friends will perhaps be broken down by a sight of the grief and misery of their parents. It is a plan which, to the official mind, works beneficently both ways.

The mother of a young student named Zhebunoff in Kiev, a lady sixty-five years of age, was so terrified by a vivid description from General Strelnikoff of the way in which her son, if he did not confess, would "dangle and kick in the air, his neck in a noose," that she fainted on the floor of the Procureur's office. Yet Strelnikoff knew very well that there was not evidence enough in his possession even to bring Zhebunoff to trial — much less to hang him. As a matter of fact the young student never was tried, but was sent to Siberia by "administrative process."

The aged mother of an exile whom I met in the Trans-Baikal was made to believe that her son would certainly be hanged unless he told all that he knew, and then, upon condi-

tion that she should try to persuade him to confess, she was allowed to go to his cell. A terrible scene followed, in which the white-haired mother, frenzied with fear and choking with sobs, knelt to her son, clung about his legs, and tried to press her tear-wet face to his feet, as she implored him, by his love for her — by her gray hairs — to promise that he would answer the questions of the gendarmes. The strain of such a scene upon the emotions and the resolution of a prisoner who is weakened and depressed by months of solitary confinement, who loves and reverences his mother, and who sees her for the first time since his arrest, and perhaps for the last time before he goes to Siberia, is simply heart-breaking. The mother finally departs in despair, bidding her son good-bye as she would bid good-bye to the dying, while the son lays up the memories of this bitter hour — the cruel deception of his mother, the torture of himself, and the attempt to make the most sacred of human feelings serve the purposes of the police — as memories which will steady his nerves and steel his heart when the time comes for vengeance.

This playing upon the deepest and most intense of human emotions as a means of extorting information from unwilling witnesses is practiced more or less in all Russian prisons where political offenders are confined. The details are of course varied according to the circumstances of the case or the ingenuity of the inquisitor. One prisoner, for example, after months of solitary confinement, is promised an interview with his mother. Filled with glad anticipations, he follows the guard out through the long, gloomy corridor into the prison court-yard, where the mother is sitting on a rude prison bench forty or fifty feet from the door through which he emerges. At the sight of the well-remembered, loving face, changed and aged by grief since he saw it last, his heart overflows with pity and tenderness, and he rushes toward her with the intention of taking her in his arms. He is at once stopped by the guard, who tells him that the interview is not to take place here, but in the reception-room of the prison, to which he is thereupon conducted. He waits impatiently ten minutes — fifteen minutes — half an hour — and at last the door opens. As he springs toward it he is met, not by his mother, but by the Procureur, who asks him whether, after this further period of reflection, he has changed his mind with regard to answering questions. He replies that he was brought there, as he supposed, to see his mother, not for examination. The Procureur, however, informs him that interviews with relatives are privileges not granted to obstinate and refractory prisoners, and that if he has nothing to add to his previous statements he will be taken to his cell. Disappointed and embittered, the young man goes back to solitary confinement with a new cause for hatred and an intensified thirst for vengeance, while the heart-broken mother, whose misery has only been increased by this brief glimpse of her son under guard and in prison dress, returns to her distant village home.

In another case which came to my knowledge in Siberia, the prisoner was a young married woman with a baby in her arms. She refused to answer questions intended to elicit criminating evidence against her friends, and the gendarme officer who was conducting the examination threatened, if she continued obstinate, to take her child from her. She made a pathetic appeal to the Procureur, and asked him whether there was any law under which the gendarme officer could deprive her of her child if she refused to testify. The Procureur, instead of giving her a direct answer, told her that "the prudent course for her to pursue would be not to raise a question as to the legal authority of the examining officer, but to tell him truthfully all she knew; then it was certain that he could not take her child from her." In the face of a threat so terrifying to a young mother, — she was not more than twenty-two years of age when I made her acquaintance in Siberia, — she adhered to her determination not to betray her friends. Her babe was finally left in her possession, but she suffered weeks of torturing apprehension, the mere remembrance of which bathed her face with tears as she told me the story.

I have devoted much space to these illustrations of the use of prison confinement as a means of torturing political prisoners into making confession, partly because my note-books are full of records of such cases which were everywhere forced upon my attention in Russia, and partly because it seems to me to explain, more clearly than any other fact or set of facts, the state of mind in which so-called "terroristic" activity originates. Whatever view one may take of the events in their moral aspect, one can see that such causes might be adequate to produce such results without the ascription to the Russian revolutionists either of homicidal insanity or inhuman ferocity.

It may be supposed that officials who are capable of treating prisoners in this way must be constitutionally cruel, cold-blooded, and heartless; but such a supposition would be, in many cases, perhaps in a majority of cases, an erroneous one. Many of the officials are naturally no worse than other men, but they have been trained under a system which is intolerant of opposition, and especially of that form of opposition which in Russia is called insubordination; they have been accustomed to

regard themselves rather as the rulers than as the servants of the people; they have not felt personally the full weight of the yoke of oppression; they have been irritated and embittered by a long contest with fearless and impetuous men whose motives and characters they misunderstand, and whom they regard as unreasonable fanatics and treacherous assassins; and, finally, their fortunes and prospects of advancement depend upon the success with which they carry on this contest.

I met in the town of Chita, in eastern Siberia, a Russian army officer — Colonel Novikoff — who had been the commander of the Cossack battalion which served as prison guard at the mines of Kara, and who in 1880 sat as one of the judges in the court martial which tried Madame Rossikova, Miss Anna Alexeieva, and other politicals at Odessa. He was a man about forty-five years of age; was devotedly attached to his family; seemed to have broad and humane views with regard to the treatment of common criminals, and did not appear to be naturally a cruel or vindictive man. Yet this personally amiable, courteous, intelligent army officer, speaking to me of the political offenders in whose trial he had participated as judge, said: "If I had my way, I would give them all the *shpitzruten*." The "shpitzruten," it must be explained, is a peculiarly cruel form of "running the gauntlet" which was formerly much used in Siberia as a disciplinary punishment for the worst class of convicts. The prisoner, stripped to the waist, was forced to walk slowly between two lines of soldiers armed with rods "not too large to go into a musket barrel," and, as he passed, received one blow on the bare back from every soldier. The number of blows inflicted was from two thousand to five thousand, two thousand being the lowest number mentioned in the law.* The sufferer, unless he was an exceptionally strong and vigorous man, usually fainted before he had received the prescribed number of blows, and was carried directly from the place of punishment to the hospital. This was the punishment which Colonel Novikoff said he would inflict upon political offenders, and which he had suggested and recommended to the court of which he was a member. "If," he added, "you punish in that way, you will soon put a stop to political agitation." When one considers the fact that such a method as this of dealing with politicals was actually suggested and advocated by a judge in his official capacity, and that he seemed utterly unconscious of the cruelty and barbarity of the proposed measure, one has little difficulty in understanding how gendarme officers and procureurs regard such comparatively trifling things as the arrest of the innocent with the guilty, the frightening of parents, and the deception of obstinate and refractory prisoners who refuse to testify.

But these are by no means all of the factors which must be taken into consideration in an attempt to explain the so-called policy of "terror." Another cause for the white-heat intensity of feeling which prompts violent retaliation is the illegal detention of political suspects in solitary confinement for months and years while the police scour the empire in search of evidence upon which to base indictments. In the trial of the regicides at St. Petersburg in 1881, Mr. Gerard, one of the ablest advocates at the Russian bar, and one of the boldest of the counsel for the prisoners, attempted to bring this cause to the attention of the court by referring to the well-known fact that out of more than a thousand persons arrested for alleged participation in the so-called "revolutionary propaganda" of 1872–75—out of more than a thousand persons held in solitary confinement for periods ranging from one to four years — only one hundred and ninety-three had ever been brought to trial, and even of that number ninety had been acquitted by a court of judges of the Government's own selection.†

In other words, more than nine hundred persons whose innocence was finally admitted by the Department of Justice had been subjected to from one to four years of solitary confinement, in the course of which eighty of them, or nearly ten per cent., had died, committed suicide, or become insane.‡ Before Mr. Gerard had finished making this statement he was stopped by the Court, and directed to confine himself to the facts of the case on trial.§

* Exile Statutes; Laws of the Russian Empire, Vol. XIV., Part II., Section 799.

† Official certified copy of the sentence of the Court in the trial of the 193, signed by Chief Secretary Lutofski, and dated February 15th, 1878. It is in my possession, as is also the "Accusatory Act," or indictment, in the same case, a document of about 350 folio pages, authenticated by the signature of V. Zhelekhofski, "Associate Chief-Procureur of the Department of Criminal Appeals of the Governing Senate."

‡ The bold and impetuous revolutionist Muishkin, who was one of the accused in this case, made a determined attempt to state these facts to the Court in a speech which he made in his own defense. He was promptly ordered to stop, and when he refused to do so, he was throttled by three or four gendarmes and dragged out of the court-room. For his obstinacy, and for insulting references to the Court, which were regarded as an aggravation of his original offense, his sentence was made ten years of penal servitude, with deprivation of all civil rights. [Sentence of the Court in the trial of the 193 above cited, p. 13.] In a subsequent paper I shall give an account of the life of Muishkin, who was one of the most remarkable characters that the Russian revolutionary movement has yet produced.

§ Official Stenographic Report of the Trial of the Regicides at St. Petersburg in 1881, pp. 213–219.

I could, if necessary,— and without going outside the limits of official documents in my possession,— fill many pages of THE CENTURY with the names of young men and women who were severally subjected to from one to four years of solitary confinement, and who were finally acquitted by a court, or discharged without trial, because the police, notwithstanding their unlimited power to arrest, imprison, and examine, had not been able to find so much evidence against them as would legally have justified their detention over night. I shall describe in another place the nature of the solitary confinement to which these innocent persons were subjected. I desire at present merely to call attention to the duration of their imprisonment, and to the fact that they were finally pronounced innocent by the Government itself. The above statements are made, it will be observed, not upon the *ex-parte* testimony of the sufferers, but upon the unimpeachable authority of official documents.

The question naturally arises, "What was the reason for the long delay in bringing these thousand or more prisoners to trial?" The reply of the Government is that the accused were engaged in a revolutionary conspiracy which had very extensive ramifications in all parts of the empire; that they were linked together in such a way as to render it practically impossible to try them separately, and that the prosecuting officers of the Crown could not do justice to the Government's case until all the proofs against all the prisoners had been collected, compared, and digested.* The persons accused in the case, however, deny the truth of these statements, severally and collectively. They say that they were not, as a body, engaged in a revolutionary conspiracy; that their actions at that time were not criminal; that more than three-fourths of them were unknown to one another, and had never had any relations with one another; that their cases, therefore, were easily separable, and that, as a matter of fact, the Government did separate into eighteen distinct groups the 193 who were finally tried.

Without expressing any opinion as to the merits of the prisoners' contention, it seems to me, and will doubtless seem to most unprejudiced persons, that the reply of the Government, regarded as a defense, is insufficient, even if it be true. The preface to the indictment in this case says: "By the autumn of 1874 most of the propagandists had been imprisoned, although a few succeeded in eluding arrest and continued their criminal activity until the beginning of 1875."† The trial did not begin until the 18th of October, 1877,‡ so that "most of the propagandists," including ninety persons admitted by the Court to be innocent, were held in solitary confinement without trial from the autumn of 1874 to October 18th, 1877, a period of three years. A large number of the accused were imprisoned in the gloomy casemates of the Petropavlovski fortress, and, according to the indictment, forty of them were there when the trial began.§ To say, as the Government does, that it held ninety innocent persons in prison for three years, and more than eight hundred other innocent persons for shorter periods of one or two years, because it could not try them separately and was unable in a shorter time to review the evidence against the whole thousand, does not seem to be a sufficient answer to a charge of injustice and cruelty based on more than eight hundred wrecked lives and eighty cases of death, suicide, and insanity in prison.

The case of the "propagandists" was of course an exceptional one. I do not know any other instance in which so many prisoners were held so long without trial, and in which the number of persons accused was so overwhelmingly out of proportion to the number actually found to be guilty. Judicial procedure in Russia, however, is always and everywhere slow, and the long interval of solitary confinement between arrest and trial causes great suffering to the prisoners, and creates a feeling of intense exasperation in the hearts of those who are finally declared to be innocent. As one of the 193 who was acquitted by the Court said to me bitterly, "They punish us first with three years of solitary confinement, and then try us to see whether we ought to have been punished."

The course of procedure in the case of a person accused of a political offense is, under average and normal conditions, about as follows: He is arrested without the least warning, generally at night, and thrown into prison. After a week or two of solitary confinement, he is subjected to a preliminary examination before an officer of gendarmes. In order that he may not prepare himself for this examination, he is not, as a rule, informed of the nature of the charge made against him. The theory of the gendarmes is that if the prisoner knows specifically of what he is accused, he can form at least a conjecture as to the direction and scope of the impending inquiry, and can prepare himself to baffle it. If, however, he is ignorant of the charge upon which he is held,— if he does not even know whether he is undergoing examination as a principal or as a witness, — he is not so quick to see the drift of ques-

* Sentence of the 193, certified copy, p. 15.

‡ Sentence in the same trial, p. 1.
§ Appendix to the Indictment in the trial of the 193, pp. 1–3.

tions; he is not so likely to be ready with a prepared story, and he is more apt to be surprised into incautious admissions. The gendarmes justify this course by saying that "if the prisoner is innocent, it cannot injure him; and if he is guilty, he is not entitled to any information which would make it easier for him to mislead the investigators and defeat the ends of justice. The object of the inquiry is, for the present at least, none of his business. All that he has to do is to answer questions truthfully." Of course, a prisoner who is thus kept in the dark defends himself and his friends at a terrible disadvantage. If he answers the questions put to him, he does so without knowledge of their purpose or bearing; and if he refuses to answer, he prolongs his prison confinement, perhaps unnecessarily, and gives the gendarmes an excuse for putting into operation against him some of the methods of extorting testimony which I have described.

Most prisoners take a middle course by answering some questions and refusing to answer others. The examination ends when the gendarme officer is satisfied that he cannot elicit anything more. The prisoner is then remanded to his cell, and another week elapses, in the course of which the gendarmes take the testimony of his acquaintances and friends, of the police, who perhaps have had him under secret surveillance for weeks, and of all other persons who know anything about him. This mass of testimony is then submitted to the Procureur, with a report and such comments as the examining officer may think necessary. The Procureur makes a careful study of all the evidence, compares the testimony of the accused with the statements of the witnesses in the light of the comments and suggestions of the gendarmes, and frames a new series of questions to be put to the prisoner at the "dopros," a more formal examination intended to complete the case for submission to the Ministry of Justice.

Up to this time, it will be observed, the accused has not been informed of the nature of the charge made against him; he does not know certainly whether he is held as a criminal or as a witness; he has heard none of the testimony upon which the questions in the "dopros" are to be based; he is without counsel, and he is ignorant of all that has happened in the outside world since his arrest. It would be hard to imagine a more completely defenseless situation.

The Procureur begins the "dopros" by informing the prisoner that he is accused of the crimes set forth and described in such and such sections of the Penal Code. Most political prosecutions are based upon sections 245, 249, and 250, which are as follows:

"SECTION 245. All persons found guilty of composing and circulating written or printed documents, books, or representations, calculated to create disrespect for the Supreme Authority, or for the personal character of the GOSSUDAR [the Tsar], or for the Government of his Empire, shall be condemned, as insulters of MAJESTY, to deprivation of all civil rights and to from ten to twelve years of penal servitude. [This punishment carries with it exile in Siberia for what remains of life after the expiration of the hard labor sentence.]

"SECTION 249. All persons who shall engage in rebellion against the Supreme Authority, that is, who shall take part in collective and conspirative insurrection against the GOSSUDAR and the Empire; and also all persons who shall plan the overthrow of the Government in the Empire as a whole, or in any part thereof; or who shall intend to change the existing form of government, or the order of succession to the throne established by law; all persons who for the attainment of these ends shall organize or take part in a conspiracy, either actively and with knowledge of its object, or by participation in a conspirative meeting, or by storing or distributing weapons, or by other preparations for insurrection; all such persons, including not only those most guilty, but their associates, instigators, prompters, helpers, and concealers, shall be deprived of all civil rights, and be put to death. Those who have knowledge of such evil intentions and of preparations to carry them into execution, and who, having power to inform the Government thereof, do not fulfill that duty, shall be subjected to the same punishment.

"SECTION 250. If the guilty persons have not manifested an intention to resort to violence, but have organized a society or association, intended to attain, at a more or less remote time in the future, the objects set forth in section 249, or have joined such an association, they shall be sentenced, according to the degree of their criminality, either to from four to six years of penal servitude with deprivation of all civil rights [including exile to Siberia for life]. . . . or to colonization in Siberia [without penal servitude], or to imprisonment in a fortress from one year and four months to four years."*

These sections, it will be observed, are tolerably comprehensive. They not only include all attempts to overthrow the government *vi et armis;* they not only cover all action "calculated to create disrespect for MAJESTY"; but they provide for the punishment of the mere intention to bring about a change of administration at a remote time in the future by means of peaceable discussion and the education of the people. Even this is not all. A man may be perfectly loyal; he may never have given expression to a single thought calculated to create disrespect for the Gossudar or the Gossudar's government, and yet, if he comes accidentally to know that his sister, or his brother, or his friend belongs to a society which contemplates a "change in the existing form of government," and if he does not go voluntarily to the Chief of Gendarmes and betray that brother, sister, or friend, the law is adequate to send him to Siberia for life.

When the prisoner, at the beginning of the "dopros," is informed that he is accused of "the crimes set forth and described in sections

* Russian Penal Code, Tagantseff's edition, pp. 172–174. St. Petersburg: 1886. The words in brackets are my own.—G. K.

245, 249, and 250 of the Penal Code," he is almost as much in the dark as ever with regard to the nature of his offense. He may be an "insulter of MAJESTY"; he may be held for an intention "to change the existing form of government". . . . "at some more or less remote time in the future"; or he may have rendered himself liable to penal servitude by his neglect to inform the Chief of Gendarmes that he thinks his sister belongs to a secret society. He can console himself, however, with the reflection that when he is finally sentenced, the nature of the punishment to which he is condemned will indicate approximately the offense for which he has been tried.

The "dopros" resembles in all respects the preliminary examination except that it is conducted by the Procureur in person, is based upon a much greater mass of data, and is consequently more severe and searching. At its conclusion the prisoner is required to sign his testimony, and is then remanded to his cell. The Procureur makes out, at his leisure, a statement of the case, showing what he thinks he can prove against the accused, and sends it with all the papers to the Ministry of Justice. After this time the prisoner, if he has not been obstinate and refractory, is granted certain privileges. He can have interviews with his relatives in the presence of an officer twice a week; he can write and receive open letters, and he is allowed books. Even these privileges, however, have their drawbacks. The relatives who come to see him may be arrested at the prison and exiled to Siberia by "administrative process"; * half the contents of his letters may be "blacked out" or erased by the police through whose hands they pass; † and the only books given him may be the Bible and the Penal Code. ‡

The papers in the prisoner's case reach the Ministry of Justice in from one to three months. They may lie there awaiting examination three months, or even six months, more. When they are finally reached and the Minister proceeds to act upon them, he may do any one of four things: *First*, if the evidence submitted does not seem to him sufficient to justify even the detention of the accused, he may order his release, as he did in the cases of nearly eight hundred of the "propagandists." *Second*, if the evidence, although insufficient, seems to indicate that a case can be made out, he may return the papers to the Procureur with instructions to continue the investigation. This results in a further delay of at least six months. *Third*, if the evidence is not sufficient to secure conviction in a court, if it probably cannot be supplemented, and if the Minister is nevertheless satisfied that the accused is a disloyal person, whom it would be dangerous to release, he may order his exile to Siberia by "administrative process" for a period not greater than five years. *Fourth*, if the evidence against the accused collected by the Procureur is probably adequate to secure conviction in a court, the prisoner is held for trial.

From the Ministry of Justice the papers go to the Ministry of the Interior, where they again await their turn for examination. The Minister of the Interior may approve the decision of the Minister of Justice, or he may disapprove it. In the former case the papers go to the Tsar for final action, and in the latter case they are "hung up" for further consideration, or sent back to the Procureur for amendment.

The result of this course of procedure, every step of which is marked by delay due to the overcrowded condition of the various departmental and ministerial files, is to prolong almost indefinitely the period of uncertainty which intervenes between the prisoner's arrest and his final release, trial, or exile. Most of the politicals whose cases I investigated spent from one year to two and a half years in prison before they were sent to Siberia. In exceptional instances the terms of imprisonment were much longer. Solomon Chudnofski, who is now in exile in Tomsk, awaited final action in his case from January 27th, 1874, to July 18th, 1878, a period of four years and six months. During nearly the whole of this time he was in solitary confinement, and for twenty months he was in one of the casemates of the Petropavlovski fortress.

Such delay is exasperating to the relatives and friends even of prisoners who are known to be guilty; it is maddening to persons who

* A young revolutionist by the name of Maidanski was hanged in Odessa in 1880. His mother, an aged peasant woman, when she heard that her son had been condemned to death, came to the prison to bid him good-bye. She was not allowed, however, to see him, but was herself arrested and exiled by "administrative process" to the province of Krasnoyarsk in eastern Siberia.

† I have such a letter now in my possession. It consisted originally of four closely written pages of commercial note paper. The police erased all except the following words:

"MEZEN, December 8th, 1880.

"MY DEAR IVAN IVANOVITCH: I send you eight roubles. It is all I can do at present. . . . [four pages crossed out]. . . . I kiss you warmly.

[Signed] "ALEXE."

‡ The Bible and the Penal Code were the only literature given, during the first part of his imprisonment, to a young exile from St. Petersburg whom I met in Siberia. The intention, doubtless, was to incite to virtue on the one hand and to warn against crime on the other. To most political prisoners, however, such a selection of books would have suggested an instructive — or, as the officials would probably say, seditious and incendiary — comparison between the laws of Russia and the laws of Christ, and would thus have defeated the object which the police had in view.

believe that their sons, daughters, sisters, or friends are innocent, and who lose them by death or suicide in prison before trial.

In 1886 there died in St. Petersburg a young girl not yet twenty years of age named Fedoteva, a student in one of the high schools for women in that city. She had been arrested nearly a year before upon some political charge and had been held in solitary confinement in the House of Preliminary Detention until her health had given way, and had then been removed, dangerously ill, to the hospital, where she died in the delirium of brain fever. Upon being apprised of the young girl's death, Mrs. Fedoteva went to the Chief of Police and asked at what time her daughter would be buried, as she desired to attend the funeral. She was told that the funeral would take place from the hospital at a stated hour on the following day.

The authorities do not allow the friends of a dead political prisoner to take charge of the body nor to conduct the funeral if there is any reason to apprehend what is known in the official world as a *demonstratsia* or public manifestation of sympathy. In this case it was feared that the school associates of the dead girl would follow her body to the grave in a procession, and that the more excitable of them would perhaps attempt to make speeches, or create in some way a scene which would call public attention to the fact that a young girl accused of a political offense had died in prison untried. If a public funeral were permitted, and if a demonstratsia should be attempted by the dead girl's friends, the police would be obliged to interfere, and such interference would not only "excite the public mind," but would necessarily result in the arrest of more young people. Furthermore, interference with a funeral would be disagreeable — it would look too much like striking the dead. Clearly, therefore, this was a case in which the maintenance of public order and tranquillity and the protection of hot-headed young people from the consequences of their possible rashness required, and would justify, the utmost secrecy.

Acting upon this reasoning, the Chief of Police directed that the young girl be buried quietly at night, without the knowledge of her relatives and friends; and she was so buried.

When, at the appointed hour on the following day, Mrs. Fedoteva came to the hospital to pay the last and only possible tribute of love to the lifeless body of her dead child by following it to the grave, she was informed that the funeral had already taken place. When she went to the Chief of Police and asked where her daughter had been buried, the only reply she received was "Etta nasha diella" — "That is our business."

This mournful story was first told to me by the managing editor of a well-known St. Petersburg newspaper, who, of course, did not dare to print it. I heard it afterwards from others, and was finally able to verify it completely and circumstantially by conversation with an official in the hospital where the young girl died.

In order to make clear the bearing of such a fact as this on the so-called policy of "terror," I will ask the reader of these pages the question which was put to me: "Imagine that your only daughter, a school-girl, still in her teens, had been arrested upon a vague charge of disloyalty; that she had been thrown into prison and kept there a year in solitary confinement without a trial; that she had died at last of brain fever brought on by grief, anxiety, apprehension, and solitude; that you had not been permitted to stand by her death-bed; that you had been deceived as to the time of her funeral; and that finally, when you went humbly and respectfully to the Chief of Police and asked where your murdered child had been buried, that you might at least wet the fresh earth of her grave with your tears, you had received the contemptuous answer, 'That is our business,' what would you have done?"

The fierce impulse to avenge such wrongs as these is morally unjustifiable; it is unchristian; it is, if you please, criminal; but, after all, it is human. A man is not necessarily a ferocious, blood-thirsty fanatic if, under such provocation, and in the absence of all means of redress, he strikes back with such weapons as lie nearest his hand. It is not my purpose, in setting forth this and other similar facts, to justify the policy of the "terrorists" nor to approve even by implication the resort to murder as a means of tempering despotism; but it is my purpose to explain, so far as I can, certain morbid social phenomena; and in making such explanation, circumstances seem to lay upon me the duty of saying to the world for the Russian revolutionists all that they might fairly say for themselves, if the lips of the dead had not already moldered into dust, and if the voices of the living were not stifled by prison walls. The Russian Government has its own press, and its own representatives abroad; it can explain, if it chooses, its methods and measures; and it can defend itself against charges which are without foundation. The Russian revolutionists, buried alive in remote Siberian solitudes, can only tell their story to an occasional traveler from a freer country, and ask him to lay it before the world for judgment.

BY EDWARD EGGLESTON,

Author of "The Circuit Rider," "The Hoosier Schoolmaster," "Roxy," etc.

IV.

LOCKWOOD'S PLAN.

GEORGE LOCKWOOD, being only mildly malicious, felt something akin to compensation at having procured for Tom so severe a loss. But he was before all things a man secretive and calculating: the first thing he did with any circumstance was to take it into his intellectual back-room, where he spent most of his time, and demand what advantage it could give to George Lockwood. When he had let all the boys out of the store at a quarter past twelve, he locked and barred the door. Then he put away the boxes and all other traces of the company, and carried his tallow candle into his rag-carpeted bedroom, which opened from the rear of the store and shared the complicated and characteristic odors of the shop with a dank smell of its own; this last came from a habit Lockwood had when he sprinkled the floor of the store, preparatory to sweeping it, of extending the watering process to the rag-carpet of the bedroom. His mind gave only a passing thought of mild exultation, mingled with an equally mild regret, to poor Tom Grayson's misfortune. He was already inquiring how he might, without his own hand appearing in the matter, use the occurrence for his own benefit. Tom had had presence of mind enough left to beg the whole party in the store to say nothing about the affair; but notwithstanding the obligation which the set felt to protect one another from the old fogies of their families, George Lockwood thought the matter would probably get out. He was not the kind of man to make any bones about letting it out, if he could thereby gain any advantage. The one feeling in his tepid nature that had ever attained sufficient intensity to keep him awake at night was his passion for Rachel Albaugh; and his passion was quite outside of any interest he might have in Rachel's reversionary certainty of the one-half of John Albaugh's lands. This, too, he had calculated, but as a subordinate consideration.

He reflected that Rachel might come to town next Saturday, which was the general trading-day of the country people. If she should come, she would be sure to buy something of him. But how could he tell her of Tom's unlucky gambling? To do so directly would be in opposition to all the habits of his prudent nature. Nor could he bethink him of a ruse that might excuse an indirect allusion to it; and he went to sleep at length without finding a solution of his question.

But chance favored him, for with the Saturday came rain, and Rachel regretfully gave over a proposed visit to the village. But as some of the things wanted were quite indispensable, Ike Albaugh was sent to Moscow, and he came into Wooden & Snyder's store about 4 o'clock in the afternoon. George Lockwood greeted him cordially, and weighed out at his request three pounds of tenpenny nails to finish the new corn-crib, a half-pound of cut tobacco to replenish the senior Albaugh's pipe from time to time, a dollar's worth of sugar, and a quarter of a pound of Epsom salts,— these last two for general use. He also measured off five yards of blue cotton drilling, six feet of half-inch rope for a halter, and two yards of inch-wide ribbon to match a sample sent by Rachel. Then he filled one of the Albaugh jugs with molasses and another with whisky, which last was indispensable in the hay harvest. These articles were charged to John Albaugh's account; he was credited at the same time with the ten pounds of fresh butter that Isaac had brought. George Lockwood also wrapped up a paper of "candy kisses," as they were called, which he charged Ike to give to Rachel from him, but which he forgot to enter to his own account on the day-book.

"By the way, Ike," he said, "did you know that Dave Sovine got back last week?"

"Yes," said Ike; "I hear the Sovine folks made a terrible hullabaloo over the returned prodigal,—killed the fatted calf, and all that."

"A tough prodigal *he* is!" said Lockwood, with a gentle smile of indifference. "You 'd better look out for him."

"Me? Why?" asked Ike. "He never had any grudge ag'inst me, as I know of."

"No," said Lockwood, laughing, "not that. But he 's cleaned all the money out of all the

* Copyright, 1887, by Edward Eggleston. All rights reserved.

boys about town, and he'll be going after you country fellows next, I guess. He 's the *darnedest* hand with cards!"

"Well, he won't git a-holt of *me*," said Ike, with boyish exultation. "I don't hardly more 'n know the ace f'um the jack. I never played but on'y just once; two or three games weth one of the harvest hands, four years ago. He was showin' me how, you know, one Sunday in the big haymow, an' jus' as I got somethin' 't he called high low jack, the old man took 't into his head to come up the ladder to see what was goin' on. You know father's folks was Dunkers, an' he don't believe in cards. I got high low jack that time, an' I won't fergit it the longest day I live." Ike grinned a little ruefully at the recollection. "Could n' draw on my roundabout fer a week without somebody helpin' me, I was so awful sore between the shoulders. Not any more fer me, thank you!"

"It 'u'd be good for some other young fellows I know, if they 'd had some of the same liniment," said Lockwood, beginning to see his way clear, and speaking in a languid tone with his teeth half closed. "Blam'd 'f I did n't see Sovine, a-settin' right there on that kag of sixp'ny nails the other night, win all a fellow's money, and then his handkerchief and his knife. The fellow — you know him well — got so excited that he put up his hat and his coat and his boots, an' Dave took 'em all. He 's got some cheatin' trick ur 'nother, but I stood right over 'im an' I can't quite make it out yet. I tried to coax 'im to give back the hat an' coat an' boots; but no, sir, he 's a regular black-leg. He would n't give up a thing till I lent the other fellow as much money as he 'd staked ag'inst them."

"Who wuz the other fellow?" asked Ike Albaugh, with lively curiosity.

"Oh! I promised not to tell"; but as Lockwood said this he made an upward motion with his pointed thumb, and turned his eyes towards the office overhead.

"Why, not Tom?" asked Ike, in an excited whisper.

"Don't you say anything about it," said George, looking serious. "He don't want his uncle's folks to know anything about it. And besides, I have n't mentioned any name, you know"; and he fell into a playful little titter between his closed teeth, as he shook his head secretively, and turned away to attend to a woman who, in spite of the rain, had brought on horseback a large "feed-basket" full of eggs, and three pairs of blue stockings of her own knitting, which she wished to exchange for a calico dress-pattern and some other things.

But Lockwood turned to call after the departing youth: "You won't mention that to anybody, will you, Ike?"

"To b' shore not," said Ike, as he went out of the door thinking how much it would interest Rachel.

Ike Albaugh was too young and too light-hearted to be troubled with forebodings. Rachel might marry anybody she pleased "f'r all of him." It was her business, and she was of age, he reflected, and he was n't her "gardeen." At most, if it belonged to anybody to interfere, "it was the ole man's lookout." But the story of Tom Grayson's losing all his money, and even part of his clothes, was something interesting to tell, and it did not often happen to the young man to have the first of a bit of news. A farm-house on the edge of an unsettled prairie is a dull place, where all things have a monotonous, diurnal revolution and a larger annual repetition; any event with a parabolic or hyperbolic orbit which intrudes into this system is a godsend; even the most transient shooting-star of gossip is a relief. But this would be no momentary meteor, and Isaac saw in the newly acquired information something to "tease Rache with," and teasing one's sister is always lawful sport. He owed her some good-natured grudges; here was one chance to be even with her.

Ike got home at half-past six, and Rachel had to spread for him a cold supper, chiefly of corn-bread and milk. He gave her the ribbon and the little package of square candy kisses from Lockwood. Rachel sat down at the table opposite her hungry brother, and, after giving him a part of the sweets, she amused herself with unfolding the papers that inclosed each little square of candy and reading the couplets of honeyed doggerel wrapped within.

"Did you hear anything of Tom?" Rachel asked.

"Yes."

"What was it?"

"Oh! I promised not to say anything about it."

"You need n't be afraid of making me jealous," said the sister, with a good-natured, half-defiant settling of her head on one side.

"Jealous? No, it 's not anything like that. You ain't good at guessin', Sis; girls never air."

"Not even Ginnie Miller," said Rachel. She usually met Ike's hackneyed allusions to the inferiority of girls by some word about Ginnie. It was plain her brother was in a teasing mood, and that her baffled curiosity would not find satisfaction by coaxing. She knew well enough that Ike was not such a fool as to keep an interesting secret long enough for it to grow stale and unmarketable on his hands.

"Let it go,— I don't care," she said, as she got up and moved about the kitchen.

"You would, if you knew," said Ike.

"But I don't, and so there 's an end of it"; and she began to hum a sentimental song of the languishing sort so much in vogue in that day. The melancholy refrain, which formed the greater part of this one, ran:

"Long, long ago, long ago."

It is one of the paradoxes of human nature that young women with all the world before them delight in singing retrospective melodies about an auld-lang-syne concerning which, in the very nature of the case, they cannot well know anything, but in regard to which they seem to entertain sentiments so excruciating.

"It was n't so very long ago, nuther," said Ike, whose dialect was always intensified when there were harvest hands on the place.

"What was n't?" said Rachel, with her back to him.

"Why, Tom's scrape, of course."

"Was it a very bad one? Did he get took up?" Rachel's face was still averted, but Ike noted with pleasure that her voice showed a keen interest in his news.

"Oh, no, 't 's not him 't ought to be took up; it 's Dave Sovine."

Rachel cleared her throat and waited a few seconds before speaking again.

"Did Dave hurt Tom much?" she asked, groping after the facts among the various conjectures that suggested themselves.

"Well, yes," said Ike, with a broad grin of delight at his sister's wide guessing; but by this time he was pretty well exhausted by the strain put upon his feeble secretiveness. "Yes, hurt him? I sh'd say so!" he went on. "Hurts like blazes to have a blackleg like Dave win all yer money an' yer knife, an' yer hankercher, an' yer hat an' coat an' boots in the bargain. But you mus' n't say anything about it, Sis. It 's a dead secret."

"Who told you?"

"Nobody," said Ike, feeling some compunction that he had gone so far. "I just heard it."

"Who 'd you hear it from?"

"George Lockwood kind uh let 't out without 'xactly sayin' 't wuz Tom. But he did n't deny it *wuz* Tom."

Having thus relieved himself from the uncomfortable pressure of his secret, Ike got up and went out whistling, leaving Rachel to think the matter over. It was not the moral aspect of the question that presented itself to her. If Tom had beaten Sovine she would not have cared. It was Tom's cleverness as well as his buoyant spirit that had touched her, and now her hero had played the fool. She had the wariness of one who had known many lovers; her wit was not profound, and she saw rather than contrived the course most natural to one of her prudent and ease-loving temperament; she would hold Tom in check, and postpone the disagreeable necessity for final decision.

V.

THE MITTEN.

NEXT to Tom's foreboding about his uncle was the dread of the effect of his bad conduct on Rachel. On that rainy Saturday afternoon he thought much about the possibility of making shipwreck with Rachel; and this led him to remember with a suspicion, foreign to his temper, the part that Lockwood had taken in his disgrace. By degrees he transferred much of his indignation from Sovine to George Lockwood. He resolved to see Rachel on his way back to town, and if possible by a frank confession to her to forestall and break the force of any reports that might get abroad. The bold course was always the easiest to one of so much propulsiveness. He remembered that there was a "singin'," as it was called in the country, held every Sunday afternoon in the Timber Creek school-house, half-way between his mother's house and Albaugh's. This weekly singing-school was attended by most of the young people of the neighborhood, and by Rachel Albaugh among the rest. Tom planned to stop, as though by chance, at the gathering and ride home with the ever-adorable Rachel.

When Tom reached the school-house, Bryant, the peripatetic teacher of vocal music, was standing in front of his class and leading them by beating time with his rawhide riding-whip. Esteeming himself a leader in the musical world, he was not restricted to the methods used by musicians of greater renown. It is easy for ignorance to make innovation,— the America of fifty years ago was seriously thinking of revising everything except the moral law. While Noah Webster in Connecticut was proposing single-handed to work over the English tongue so as to render it suitable to the wants of a self-complacent young nation, other reformers as far away as St. Louis were engaged in improving the world's system of musical notation. Of the new method Bryant was an ardent propagator; he made much of the fact that he was a musical new light, and taught the "square notes," a system in which the relative pitch was not only indicated by the position of the notes upon the clef, but also by their characteristic shapes. Any simpleton could here tell "do" from "me" at sight.

In the "Missouri Harmonist" the lines and spaces were decorated with quavers and semiquavers whose heads were circles, squares, and triangles, Old Hundred becoming a solemn procession of one-legged and no-legged geo-

metric figures. But Bryant understood his business too well to confine his Sunday classes of young people to Sunday tunes. When Tom, after tying his horse to the inner corner of a rail-fence, pushed back the school-house door, creaking on its wooden hinges, the four divisions of the class were chasing one another through a "round," the words of which ran:

"Now, Lawrence, take your bag,
And go right straight to mill,
And see, m—y b—o—y,
That not a bit you spill!"

This kind of music was naturally popular. Such a service relieves the tedium of a Sunday afternoon, and has something of the charm a dog finds in pursuing his own tail.

Some of the members of the class turned their heads and their vocal mouths towards the door when Tom came in, but in the midst of this jangle of voices singing different portions of the same air most of them had all they could do to keep their time by waving their heads or thumping their toes on the puncheon floor, while they alternately looked at their books and at Bryant, who thrashed away with his whip, his lips seeming to say, though the words were inaudible in the general din:

"Up, down, right, left, up," as he perpetually made right angles in the air. Rachel was in the act of drawing the word "boy" to the full length of a long note with a hold after it, but she looked up long enough to recognize the new arrival; then she dropped her eyes to the book again and gave the most severe attention to Bryant and the square notes thereafter, not once looking at Tom to the end. From this unwonted absorption in her music, Tom inferred that Rachel had somehow heard of his misconduct and was offended. But her charms enchanted him more than ever now that they were receding from him, and with a characteristic resolution he determined not to give her up without a sharp endeavor to regain his lost ground.

When the "singing" "let out," Tom availed himself of the first moment of confusion, while Rachel stood apart, to ask permission to go home with her, in the well-worn formula which was the only polite and proper word to use for the purpose; for it is strange how rigidly certain exact forms were adhered to among a people where intercourse was for the most part familiar and unconventional.

"May I see you safe home?" he asked, as he had often asked before, but never before with trepidation.

"No," said Rachel, with an evident effort, and without looking at Tom's face.

Such an answer is technically known as "the sack" and "the mitten," though it would take a more inventive antiquary than I to tell how it got these epithets. But it was one of the points on which the rural etiquette of that day was rigorous and inflexible, that such a refusal closed the conversation and annihilated the beau without allowing him to demand any explanations or to make any further advances at the time. But Tom was not easily snuffed out. He had to ride past Rachel's house, and it would be an addition to his disappointment that everybody would see his discomfiture. So he answered:

"Well, I 'll lead up your horse for you anyhow," and he went out before she could make up her mind to refuse him, and brought the sorrel filly alongside a tree-stump left standing in front of the school-house for a horse-block. The rest had by this time either mounted and gone, or were walking away afoot. Rachel felt a secret admiration for his audacity as she sprang into her saddle, while Tom held her bridle and adjusted the stirrup to her foot.

"What have I done, Rachel?"

"You know, well enough." Her voice was low and tremulous. She had dismissed other favorites, but never before had she found in herself so much reluctance.

"Do you mean my gambling with Dave Sovine?" said Tom, driving, as usual, point-blank at the very center of things.

"Yes."

"Who told you?" He still held on to her bridle-rein with his left hand,—somewhat as a highwayman does in romances.

"Oh! I guess everybody knows. Ike heard it yesterday, from George Lockwood or somebody."

"It was Lockwood got me into it," said Tom, shutting his teeth hard. "If you 'd let me go home with you, I could explain things a little."

But people accustomed to the balmy climate of flattery naturally dread a stiff breeze of ridicule. Rachel Albaugh did not like to bear any share of the odium that must come on Tom when his recklessness, and, above all, his bad luck, should become known. She drew the rein that Tom held, until he felt obliged to let it go, and said "No."

"I have got what I needed," said Tom, making the best of his defeat.

"What?" asked Rachel.

"Oh! one mitten is n't of any use alone; you 've given me a pair of them."

Tom felt now the exhilaration of desperation. He gayly mounted his horse, and bade Rachel a cheerful good-bye as he galloped past her; then, when he had overtaken a group of those ahead of Rachel, he reined up and turned in the saddle, leaning his left hand on the croup, while he joked and bantered with

one and another. Then he put his horse into a gallop again.

When he was well out of hearing, Henry Miller, who was one of the party, remarked to his companions that he did n't know what was up, but it seemed to him as though Tom Grayson had got something that looked like a mitten without any thumb. "That 's one more that Rache 's shed," he said. "But when she gets a chance to shed me, she 'll know it."

As Tom rode onward toward the village his spirits sank again, and he let his horse break down into an easy trot and then into a slow walk.

It was no longer Sovine that he cursed inwardly. George Lockwood, he reflected, had called him away from the Law of Common Carriers to play a little game with Dave, and it was Lockwood who had reported his discomfiture to the Albaughs. He brooded over these things, and put them together by multiplication rather than by addition. He concluded that Lockwood, from the first, had planned his ruin and his downfall before Rachel, which was giving that mediocre young man credit for a depth of forethinking malice that he was far from possessing.

Monday morning Tom went into Wooden & Snyder's store on the way to his office above. Lockwood had just finished sweeping out; the sprinkling upon the floor was not dry; it yet showed the figure 8's that he had made in swinging the sprinkler to and fro as he walked. The only persons in the store were two or three villagers; the country people rarely came in on Monday, and never at so early an hour. One frisky young man of a chatty temperament had stopped to exchange the gossip of the morning with George; but meaning to make his halt as slight as possible, he had not gone farther than the threshold, on which he now balanced himself, with his hands in his pockets, talking as he rocked nervously to and fro, like a bird on a waving bough in a high wind. Another villager had slouched in to buy a pound of nails, to repair the damage done to his garden fence by the pigs during Sunday; but as he was never in a hurry, he stood back and gave the first place to a carpenter who wanted a three-cornered file, and who was in haste to get to his day's work. When Lockwood had attended to the carpenter, Tom beckoned him to the back part of the store, and without saying a word counted out to him the money he had borrowed.

Something in Tom's manner gave Lockwood a sneaking feeling that his own share in this affair was not creditable. His was one of those consciences that take their cue from without. Of independent moral judgment he had little; but he had a vague desire to stand well in the judgment of others, and even to stand well in his own eyes when judged by other people's code. It was this half-evolved conscience that made him wish — (what shall I say? — to atone for the harm he had but half-intentionally done to Tom? or, to remove the unfavorable impression that Tom evidently had of his conduct?) At any rate, when he had taken his money again, he ventured to offer some confidential advice in a low tone. For your cool man who escapes the pitfalls into which better and cleverer men often go headlong is prone to rank his worldly wisdom, and even his sluggish temperament, among the higher virtues. Some trace of this relative complacency made itself heard perhaps in Lockwood's voice, when he said in an undertone:

"You know, Tom, if I were you, I 'd take a solemn oath never to touch a card again. You 're too rash."

This good counsel grated on the excited feelings of the recipient of it.

"I don't want any advice from you," said Tom in a bitter monotone.

I have heard it mentioned by an expert that a superheated steam-boiler is likely to explode with the first escape of steam, the slight relief of pressure precipitating the catastrophe. Tom had resolved not to speak a word to Lockwood, but his wounded and indignant pride had brooded over Rachel's rejection the livelong night, and now the air of patronage in Lockwood drew from him this beginning; then his own words aggravated his feelings, and speech became an involuntary explosion.

"You called me down-stairs," he said, "and got me into this scrape. Do you think I don't know what it was for? You took pains to have word about it go where it would do me the most harm."

"I did n't do any such thing," said Lockwood.

"You did," said Tom. "You told Ike Albaugh Saturday. You 're a cold-blooded villain, and if you cross my path again I 'll shoot you."

By this time he was talking loud enough for all in the store to hear. The villager who wanted nails had sidled a little closer to the center of explosion, the young man tilting to and fro on the threshold of the front door had come inside the store and was deeply engaged in studying the familiar collection of pearl buttons, colored sewing-silks, ribbons, and other knick-knacks in the counter show-case, while the carpenter had forgotten his haste, and turning about stood now with his tool-box under his arm, looking at Tom Grayson and Lockwood with blunt curiosity.

"That 's a nice way to treat me, I must say," said Lockwood, in a kind of whine of outraged friendship. "You 'd 'a' gone home bareheaded and in your shirt-sleeves and your stocking-feet, if 't had n't 'a' been fer me."

"I 'd 'a' gone home with my money in my pocket, if you and Dave Sovine had n't fixed it up between you to fleece me. I 'xpect you made as much out of it as Dave did. You 've got me out 'v your way now. But you look out! Don't you cross my track again, George Lockwood, or I 'll kill you!"

In a new country, where life is full of energy and effervescence, it is much easier for an enraged man to talk about killing than it is in a land of soberer thinking and less lawlessness. The animal which we call a young man was not so tame in Illinois two generations ago as it is now. But Tom's threat, having given vent to his wrath, lowered the pressure: by the time he had made this second speech his violence had partly spent itself, and he became conscious that he was heard by the three persons in the store, as well as by Snyder, the junior proprietor, who stood now in the back door. Tom Grayson turned and strode out of the place, dimly aware that he had again run the risk of bringing down the avalanche by his rashness. For if Tom was quickly brought to a white-heat, radiation was equally rapid. Long before noon he saw clearly that he had probably rendered it impossible to keep the secret of his gambling from his uncle. All the town would hear of his quarrel with Lockwood, and all the town would set itself to know to the utmost the incident that was the starting-point of a wrath so violent.

If Tom had not known by many frosty experiences his uncle's unimpressionable temper, he would have followed his instinct and gone directly to him with a frank confession. But there was nothing to be gained by such a course with such a man.

VI.

UNCLE AND NEPHEW.

Thomas Grayson the elder was one of those men who contrive to play an important part in a community without having any specific vocation. He had a warehouse in which space was sometimes let for the storage of other people's goods, but which also served to hold country produce whenever, in view of a probable rise in the market, he chose to enter the field as a cash buyer in competition with the "store-keepers," who bought only in exchange for goods. Sometimes, in the fall and the winter, he would purchase hogs and cattle from the farmers and have them driven to the most promising market. He also served the purpose of a storage reservoir in the village trade; for he always had money or credit, and whenever a house, or a horse, or a mortgage, or a saw-mill, or a lot of timber, or a farm, or a stock of goods was put on the market at forced sale, Grayson the elder could be counted on to buy it if no better purchaser were to be found. He had no definite place of business; he was generally to be found about the street, ready to buy or sell, or to exchange one thing for another, whenever there was a chance to make a profit.

He had married late; and even in marrying he took care to make a prudent investment. His wife brought a considerable addition to his estate and no unduly expensive habits. Like her husband, she was of a thrifty disposition and plain in her tastes. The temptations to a degree of ostentation are stronger in a village than in a city, but Mrs. Grayson was not moved by them; she lent herself to her husband's ambition to accumulate. Not that the Graysons were without pride; they thought, indeed, a good deal of their standing among their neighbors. But it was gratifying to them to know that the village accounted Grayson a good deal better off than some who indulged in a larger display. The taking of Tom had been one of those economic combinations which men like Grayson are fond of making. He knew that his neighbors thought he ought to do something for his brother's family. To pay the debt on the farm would be the simplest way of doing this, but it would be a dead deduction from the ever-increasing total of his assets. When, however, Barbara had come to him with a direct suggestion that he should help her promising brother to a profession, the uncle saw a chance to discharge the obligation which the vicarious sentiment of his neighbors and the censure of his own conscience imposed on him, and to do it with advantage to himself. He needed somebody "to do choores" at his house; the wood had to be sawed, the cow had to be milked, the horse must be fed, and the garden attended to. Like most other villagers, Grayson had been wont to look after such things himself, but as his wealth and his affairs increased, he had found the chores a burden on his time and some detraction from his dignity. So he, therefore, took his namesake into his house and sent him to the village school for three years, and then put him into the office of Lawyer Blackman, to whom he was wont to intrust his conveyancing and law business. This law business entailed a considerable expense, and Thomas Grayson the elder may have seen more than a present advantage in having his nephew take up the profession under his protection. But the young man's unsteadiness, late hours,

and impulsive rashness had naturally been very grievous to a cool-headed speculator who never in his life had suffered an impulse or a sentiment to obstruct his enterprises.

Of domestic life there was none in the house of Thomas Grayson, unless one should give that name to sleeping and waking, cooking and eating, cleaning the house and casting up accounts. With his wife Grayson talked about the diverse speculations he had in hand or in prospect, and canvassed his neighbors chiefly on the business side of their lives, pleasing his pride of superior sagacity in pointing out the instances in which they had failed to accomplish their ends from apathy or sheer blundering. The husband and wife had no general interest in anything; no playful banter, no interesting book, no social assemblage or cheerful game ever ameliorated the austerity of their lives. The one thread of sentiment woven into their stone-colored existence was a passionate fondness for their only child Janet, a little thing four years old when Tom came into the house to do chores and go to school,—a child of seven now that Tom was drifting into trouble that threatened to end his professional career before it had been begun. Janet was vivacious and interesting rather than pretty, though her mass of dark hair, contrasting with a fair skin and blue eyes, made her appearance noticeable. Strict in their dealings with themselves and severe with others, Janet's father and mother did not know how to refuse her anything; she had grown up willful and a little overbearing; but she was one of those children of abundant imagination and emotion that sometimes, as by a freak of nature, are born to commonplace parents. Those who knew her were prone to say that "the child must take back"; for the country people had observed this phenomenon of inheritance from remote ancestors and given it a name long before learned men discovered it and labeled it atavism.

A fellow like Tom, full of all sorts of impetuosities, could not help being in pretty constant conflict with his uncle and his aunt. On one pretext or another he contrived to escape from the restraints of the house, and to spend his evenings in such society as a village offers. A young man may avoid the temptations of a great city, where there are many circles of association to choose from; but in a village of a certain size, where there is but one group, and where all the youth are nearly on a level, demoralization is easier. Tom had a country boy's appetite for companionship and excitement; he had no end of buoyant spirits and cordial friendliness; and he was a good teller of amusing stories,—so that he easily came to be a leader in all the frolics and freaks of the town. His uncle administered some severe rebukes and threatened graver consequences; but rebukes and threats served only to add the spice of peril to Tom's adventures.

The austerity of acquisitiveness is more tedious to others, perhaps, than the austerity of religious conviction. To a child like Janet, endowed with passion and imagination, the grave monotony of the Grayson household was almost unbearable. From the moment of Tom's coming she had clung to him, rejoicing in his boyish spirits, and listening eagerly to his fund of stories, which were partly made up for her amusement, and partly drawn from romances which he had somewhat surreptitiously read. When he was away, Janet watched for his return; she romped with him in defiance of the stiff proprieties of the house, and she followed him at his chores. She cherished a high admiration for his daring and rebellious spirit, often regretting that she was not a boy: it would be fine to climb out of a bedroom window at night to get away to some forbidden diversion! On the other hand, the unselfish devotion of Tom to the child was in strange contrast with the headlong willfulness of his character. He made toys and planned surprises for her, and he was always ready to give up his time to her pleasure.

It is hardly likely that Grayson would have borne with his nephew a single year if it had not been for Janet's attachment to him. More than once, when his patience was clean tired out, he had said to his wife something to this effect:

"I think, Charlotte, I 'll have to send Tom back to his mother. He gets nothing but mischief here in town, and he worries me to death."

To which Mrs. Grayson would reply: "Just think of Janet. I 'm afraid she 'd pine away if Tom was sent off. The boy is kind to her, and I 'm sure that 's one good thing about him."

This consideration had always settled the question; for the two main purposes of life with Grayson and his wife were to accumulate property and to gratify every wish of their child. Having only one sentiment, it had acquired a tremendous force.

VII.

LOCKWOOD'S REVENGE.

When Tom, after his violent speech on that unlucky Monday morning, had gone out of Wooden & Snyder's store, George Lockwood turned to Snyder, the junior partner, and said, with his face a little flushed:

"What a fool that boy is, anyhow! He came in here the other night after the store was shut up and played cards with Dave Sovine till he lost all the money he had. I tried

my best to stop him, but I could n't do it. He went on and bet all the clo'es he could spare and lost 'em. I had to lend him the money to get 'em back. It seems Tom's girl — John Albaugh's daughter — heard of it, and now he will have it that I went in partnership with Sovine to get his money, and that I wanted to get Rachel Albaugh away from 'im."

"You ought n't to have any card-playing here," said Synder.

"I tole the boys then that if they come in here again they must n't bring any cards."

"Tom 's a fool to threaten you that way. You could bind him over on that, I suppose," said Snyder.

"I s'pose I could," said George.

But he did nothing that day. He prided himself on being a man that a body could n't run over, but he had his own way of resisting aggression; he was not Esau, but Jacob. He could not storm and threaten like Tom; there was no tempest in him. His sentiments, being of the cool and venomous kind, kept well, and did not lose their strength, as Tom's did, by exposure to the air. The day after Tom's outburst, Lockwood, having taken time to consider the alternatives, suggested to Snyder, that while he was n't afraid of Tom, there was no knowing what such a hot-head might do. Lockwood professed an unwillingness to bind Tom over to keep the peace, but thought some influence might be brought to bear on him that would serve the purpose. Snyder proposed that Lockwood should go to see Tom's uncle, but George objected. That would only inflame Tom and make matters worse. Perhaps Snyder would see Blackman, so that Lockwood need not appear in the matter? Then Blackman could speak to Grayson the elder, if he thought best.

The calculating temper, and the touch of craftiness, pliancy, and tact in Lockwood served the ends of his employers in many ways, and Snyder was quite willing to put his clerk under obligations of friendship to him. Therefore, when he saw Tom go out of the office, Snyder went up and had an interview with Blackman. As the lawyer was intrusted with all the bad debts and pettifogging business of Wooden & Snyder, any suggestion from a member of the firm was certain to receive attention. Snyder told the lawyer that Lockwood did n't want to drag Tom before a squire, and suggested that Blackman could settle it by getting the uncle to give the fellow a good admonition. He offered the suggestion as though it were quite on his own motion, he having overheard Tom's threat. The hand of George Lockwood was concealed; but it was only Lockwood who knew how exceedingly vulnerable Tom's fortunes were on the side of his relations with his uncle. That evening Blackman sat in Grayson's sitting-room. He was a man with grayish hair, of middle height, and rather too lean to fill up his clothes, which hung on his frame rather than fitted it; and if one regarded his face, there seemed too little substance to quite fill out his skin, which was not precisely wrinkled, but rather wilted. Grayson had turned around in his writing-chair and sat with one leg over the arm, but Blackman had probably never lolled in his life: he was possessed by a sort of impotent uneasiness that simulated energy and diligence. He sat, as was his wont, on the front rail of the chair-seat, as though afraid to be comfortable, and he held in his hand a high hat half full of papers, according to the custom of the lawyers of that day, who carried on their heads that part of their business which they could not carry in them. Blackman told the story of Tom's gambling as he had heard it, and of his threatening Lockwood, while the brows of Tom's uncle visibly darkened. Then the lawyer came to what he knew would seem to Grayson the vital point in the matter.

"You know," he said, "if George Lockwood was a-mind to, he could bind Tom to keep the peace; though I don't s'pose Tom meant anything more than brag by talking that way. But it would n't be pleasant for you to have Tom hauled up, and to have to go his bail. I told Snyder I thought you could fix it up without going before the squire." Blackman passed his heavily laden hat from his right hand to his left, and then with the right he nervously roached up his stiff, rusty hair, which he habitually kept standing on end. After which he took a red silk handkerchief from his hat and wiped his face, while Grayson got up and walked the floor.

"I should n't like to have to go anybody's bail," said the latter after awhile; "it 's against my principles to go security. I suppose the best thing would be to send him back to the country to cool off."

Blackman nodded a kind of half assent, but did not venture any further expression of opinion. He rose and deposited his silk handkerchief in a kind of coil on the papers in his hat, and then bent his head forward and downward so as to put on the hat without losing its contents; once it was in place he brought his head to a perpendicular position, so that all the mass of portable law business settled down on the handkerchief, which acted as a cushion between Blackman's affairs and his head.

Tom came in as Blackman went out, and something in the manner of the latter gave him a feeling that he had been the subject of conversation between the lawyer and his uncle. He went directly to his room, and de-

bated within himself whether or not he should go down and interrupt by a frank and full confession the discussion which he thought was probably taking place between Mr. and Mrs. Grayson. But knowing his uncle's power of passive resistance, he debated long — so long that it came to be too late, and he went to bed, resolved to have the first of it with his uncle in the morning.

There was a very serious conference between the two members of the Grayson firm that evening. Mrs. Grayson again presented to her husband the consideration that, if Tom should go away, she did n't see what she was to do with Janet. The child would cry her eyes out, and there 'd be no managing her. Grayson sat for some time helpless before this argument.

" I don't see," he said at length, " but we 've got to face Janet. We might as well teach her to mind first as last." It was a favorite theory with both of them, that some day Janet was to be taught to mind . So long as no attempt was made to fix the day on which the experiment was to begin, the thought pleased them and did no harm. But this proposition to undertake the dreadful task at once was a spurt of courage in Thomas Grayson that surprised his wife.

" Well, Mr. Grayson," she said, with some spirit, "the child 's as much yours as she 's mine; and if she 's to be taught to mind to-morrow, I only hope you'll stay at home and begin."

To this suggestion the husband made no reply. He got up and began to look under the furniture for the boot-jack, according to his custom of pulling off his boots in the sitting-room every night before going to bed.

"You see, Charlotte," he said deprecatingly, when he had fished his boot-jack out from under the bureau, " I don't know what to do. If I keep Tom, Lockwood 'll have him before the squire, and I 'll have to pay costs and go bail for him."

" I would n't do it," said Mrs. Grayson promptly. " We can't afford to have the little we 've got put in danger for him. I think you 'll have to send him home, and we 'll have to get on with Janet. I 'm sure we have n't any money to waste. People think we 're rich, but we don't feel rich. We 're always stinted when we want anything."

The consideration of the risk of the bail settled the matter with both of them. But, like other respectable people, they settled such questions in duplicate. There are two sets of reasons for any course: the one is the real and decisive motive at the bottom; the other is the pretended reason you impose on yourself and fail to impose on your neighbors. The minister accepts the call to a new church with a larger salary ; he tells himself that it is on account of opportunities for increased usefulness that he changes. The politician accepts the office he did n't want out of deference to the wishes of importunate friends. A widower marries for the good of his children. These are not hypocrites imposing on their neighbors; that is a hard thing to do, unless the neighbors really wish to be humbugged in the interest of a theory. But we keep complacency whole by little impostures devised for our private benefit. It is pleasant to believe that we are acting from Sunday motives, but we always keep good substantial week-day reasons for actual service. These will bear hard usage without becoming shiny or threadbare, and they are warranted not to lose their colors in the sunshine.

" I 'm sure," said Grayson, " Tom gets no good here. If anything will do him any good, it will be sending him to the country to shift for himself. It 'll make a man of him, maybe." No better Sunday reason for his action could have been found.

" I think it 's your duty to send him home," said his wife, who was more frightened the more she thought of the possible jeopardy of a few hundred dollars from the necessity her husband would be under of going Tom's bail. " A boy like Tom is a great deal better off with his mother," she went on ; " and I 'm sure we 've tried to do what we could for him, and nobody can blame us if he will throw away his chance."

Thus the question was doubly settled ; and as by this time Mr. Grayson's boots were off, and he had set them in the corner and pushed the boot-jack into its place under the bureau with his foot, there was no reason why they should not take the candle and retire.

But when morning came Grayson was still loth to face the matter of getting rid of Tom, and especially of contending with Janet. Tom found no chance to talk with him before breakfast, for the uncle did not come out of his bedroom till the coffee was on the table, and he was so silent and constrained that Tom felt his doom in advance. Janet tried to draw her father and then her mother into conversation, but failing, she settled back with the remark, " This is the *crossest* family ! " Then she made an attempt on Tom, who began by this time to feel that exhilaration of desperation that was usually the first effect of a catastrophe on his combative spirit, for no man could be more impudent to fate than he. When Janet playfully stole a biscuit from his plate, he pretended to search for it everywhere, and then set in a breakfast-table romp between the two which exasperated the feelings of Grayson and his wife. When they rose from the table the uncle turned severely on his nephew, and said:

"Tom —"

But before he could speak a second word, the nephew, putting Janet aside, interrupted him with:

"Uncle, I should like to speak with you alone a minute."

They went into the sitting-room together, and Tom closed the door. Tom was resolved to have the first of it.

"Uncle, I think I had better go home." Tom was looking out the window as he spoke. "I got into a row last week through George Lockwood, who persuaded me to play cards for money with Dave Sovine. I don't want to get you into any trouble, so I 'm off for Hubbard Township, if you don't object. There 's no use of crying over spilt milk, and that 's all there is about it."

"I 'm very sorry, Tom, that you won't pay attention to what I 've said to you about card-playing." The elder Grayson had seated himself, while Tom now stood nervously listening to his uncle's voice, which was utterly dry and business-like; there was not the slighest quiver of feeling in it. "I 've got on in the world without anybody to help me, but I never let myself play cards, and I 've always kept my temper. You never make any money by getting mad, and if you 're going to make any money, it 's better to have people friendly. Now, I have to stand a good deal of abuse. People try to cheat me, and if I take the law they call me a skinflint; but I should n't make a cent more by quarreling, and I might lose something. I can't keep you, and have you go on as you do. I 've told you that before. Now, you 'd better go home. Town will ruin you. A little hard work in the country 'll be better, and you won't be gambling away the last cent you 've got with a loafer like Dave Sovine, and then threatening to shoot somebody, as you did young Lockwood day before yesterday. Just think what you are coming to, Tom. I 've done my best for you, and you 'll never be anything but a gambler and a loafer, I 'm afraid."

These hard words sounded harder in the level and self-complacent voice of the senior Grayson, who spoke slowly and with hardly more intensity than there would have been in his depreciation of a horse he was trying to buy. "Just think what you 're coming to," he repeated, because he felt that the proper thing to do under the circumstances was to give Tom a good "talking to," and he could n't think of anything more to say.

"I don't need you to tell me what I 'm coming to," replied Tom, tartly; "I 'm coming to the plow-handle and the grubbing-hoe. I 'm sorry to give you trouble, but what I feel meanest about is mother and poor Barbara. I know what a fool I 've been. But I 'm no more a gambler and a loafer than you are. It 'll take me longer to work into the law by myself, but I 'll get there yet, and you 'll see it."

This was Tom's only adieu to his uncle, on whom confessions of wrong and expressions of gratitude, had he felt like uttering them, would have been wasted. Tom went to his room, thumping his feet defiantly on the stairs. He made a bundle of his clothes, while his uncle sneaked out of the house to avoid a collision with his little daughter, the only person in the house of whom he was really afraid.

Tom told his Aunt Charlotte good-bye with a high head; but when it came to Janet, he put both arms about the child and drew her to him with a fond embrace.

"You shan't go away, Tom," she said, disengaging herself. "What are you going for? Did they say you must?" By "they" Janet meant her parents, whom she regarded as the allied foes of poor Tom. She looked indignantly at her mother, who had turned her back on this scene of parting.

"I 'm going to help my mother," said Tom; "she 's poor, and I ought n't to have left her."

He again embraced the child, who began to cry bitterly. "What *shall* I do when you 're gone?" she sobbed on his shoulder. "This house won't be fit to live in. *Such a lot of old pokes!*" And she stamped her feet and looked poutingly at her mother.

Tom disengaged himself from her intermittent embraces, and went out with his bundle in his hand.

He went first to the law-office, and sat his bundle on a chair, and addressed himself to Blackman, who had already arrived, and who was apparently much preoccupied with his writing.

"Mr. Blackman, I 've made a fool of myself by gambling, and Uncle Tom has concluded I can't stay with him any longer. I don't much wonder at it, either. But I do hate to give up the study. Could n't you give me something to do, so that I could earn my board at your house?"

"No," said the lawyer, looking off horizontally, but not at Tom. "I was just going to tell you I could n't keep you in the office. You 've got altogether too much gunpowder for a lawyer. Better get into the regular army, Tom; that would suit your temper better." Then, after a moment's pause, he added: "I 've got young sons, and your example might ruin them if you should come to my house to live." And he leaned forward as though he would resume his writing. These were sound and logical reasons that Blackman gave for not keeping Tom, and the lawyer was sincere as far as he went. But had he discovered by this time that

Tom's mind was clearer and more acute than his own, and that if Tom should come to the bar with his uncle's backing he would soon be a formidable rival?

"Besides," resumed the lawyer, as Tom turned reluctantly away, "it 's better for you to go to the country. George Lockwood will have you bound over to keep the peace if you stay, and now you 're out with your uncle, who 's going your bail?"

"Always George Lockwood," Tom thought, as he took up his bundle.

"Good-bye, Mr. Blackman!" Tom's voice was husky now. But when he descended the stairs he went down the village street with a bold front, telling his old cronies good-bye, answering their questions frankly, and braving it out to the last. Put the best face upon it he could, his spirit was bitter, and to a group of old companions who followed him to the "corporation line," at the edge of the village, he said, almost involuntarily:

"George Lockwood got me into this scrape to upset me, and he 's purty well done it. If he ever crosses my path, I 'm going to get even with him."

Such vague threats do not bind one to any definite execution, and they are a relief to the spirit of an angry man.

Having broken with his uncle, Tom must walk the long ten miles to his mother's farm in Hubbard Township. Before he got there his head was down: the unwonted fatigue of his journey, the bitter sense of defeat, the dark picture his imagination made of his mother's disappointment and of the despair of the ambitious Barbara took all the heart out of him.

When he reached home he walked into the house and sat down without saying a word.

"Has Uncle Tom turned you off?" asked Barbara, faltering a little and putting down her knitting. She had been dreading this end of all her hopes.

"Yes," said Tom; "and I wish to the Lord I was dead and done for." And he leaned his head on his left hand.

"Oh, my poor boy!" began Mrs. Grayson, "and you did n't mean no harm neither. And you 're the only boy I 've got, too. All the rest dead and gone. They 's no end of troubles in this world!"

Tom's shoulders were heaving with feeling. After a moment or two of silence, Barbara went over and put her hand on him.

"Pshaw, Tom! what 's the use of giving up? You 're a splendid fellow in spite of all, and you 'll make your way yet. You only needed a settler, and now you 've got it. It won't look so bad by next week. You 'll take a school next winter, and after that go back to study law again."

Then she quietly went to the clothes-press by the chimney and got out a hank of yarn, and said to Tom:

"Here, hold this while I wind it. I was just wishing you were here when I saw my ball giving out. That 's like you used to do for me. Don't you remember? Mother, get Tom something to eat; he 's tired and hungry, I expect."

And choking down the disappointment which involved more than Tom suspected, the keen, black-eyed girl wound her yarn and made an effort to chat with Tom as though he had come home on a visit.

As the last strands were wound on the ball, Tom looked at his sister and said:

"Barbara, you 're one of a thousand. But I know this thing 's thundering hard on you. I 'm going to try to make it up to you from this time. I wish to goodness I had half of your steady sense."

(To be continued.)

Edward Eggleston.

"FROM OUT ETERNAL SILENCE DO WE COME."

FROM out eternal silence do we come,
Into eternal silence do we go;
For was there not a time, and swift or slow
Must come again, when all this world's loud hum
Was naught to us, and shall again grow dumb
Through all eternity? — Between two low,
Dark, stony portals, with much empty show
Of tinkling brass and sounding fife and drum,
The endless Caravan of Life moves on;
Or whence or whither, to what destiny,
But He who dwells beyond the farthest dawn
Knows, yet reveals not, evermore even He
In silence wrapt, for all the thunder's roll,
Save for His deathless message to our soul!

Stuart Sterne.

PICTORIAL SUCCESSES OF MR. IRVING'S "FAUST."

THE critics of Mr. Irving's "Faust," as given at the Lyceum Theater in London, have concerned themselves, as a rule, entirely with its intellectual and dramatic characteristics. When all the critical points had been discussed but little space remained to give to such secondary considerations as beauty of scenery and perfection of detail. Yet to this perfection and beauty was due the greater part of the success of the play.

The "Faust" pictures are fine not only in themselves but in their harmonious relations to the play. Though Mr. Irving believes that the first duty of one who mounts a piece is to produce a beautiful and pleasing effect, he shows that he thinks it equally necessary to make his audience feel the reality of the scenes before them. Beautiful as are his streets, full of color and richness; his quiet gardens, in the light of the setting sun or the soft afterglow; his wild storm-lit mountain-top, rugged and riven,—not one is given for the sake of its beauty alone. All are realizations either of Goethe's suggestions and descriptions, or of the life of the place and time in which the scenes are laid.

The only scenes to which Goethe gave definite locality are those in Auerbach's cellar in Leipzic and those on the Harz Mountains. Mr. Irving was therefore in a measure free to choose the place for the principal action of his play, and his choice fell upon Nuremberg. As for time, "Faust" is a legend of the Middle Ages, and so long as the medieval character was preserved there was no necessity for exact dates. The brocades and armor worn by the citizens of Nuremberg, if not copied from, are suggested by, old pictures; but for his own dress Mr. Irving conscientiously wears the scarlet coat, the tall cock's feather, and the long, sharp sword which Goethe borrowed from the Mephistopheles of the puppet play. The pointed mustache and short, forked beard of the operatic demon, not being authorized by Goethe, he has discarded,—unwisely we think, since he looks much more like a fallen Dante, as Mr. Hatton says, than like a mocking Mephistopheles. By respecting the traditional dress and disregarding the traditional face, he has given us neither the old Mephistopheles nor a new one.

The chief merit of Mr. Irving's pictures is not in his materials, those being at the disposal of all managers, but in the artistic way in which he uses them. The finest scenes from the pictorial standpoint are naturally the streets, the gardens, and the Brocken. Here Mr. Irving had the best chance to exercise his powers, and they are all excellent examples of his thoroughness and sincerity. *Faust's* study, though shown in semi-darkness, is as perfect in its details as if meant to be examined by electric light. The "drear accursed masonry" of the poem, the "vaulted ceiling," the "painted panes," the books in "toppling heap," are all here. The moonlight does not come in through the window in a great square splotch so that you know an electric moon is at work, but falls softly across the floor and touches with pale silver light the table near which *Faust* sits. The dim Gothic chamber, with its uncanny shapes hovering in corners and from the ceiling, is but a background for the red *Mephistopheles* who is ever the highest light and the center of interest, and for the somber *Faust* who is in such strong contrast to him. For Mr. Irving sees himself and Mr. Alexander not only as the chief characters in the tragedy, but as the principal figures in a picture rich in color, vigorous in composition. Their every pose is a subject for a painter, and the result of long and careful study. No consciousness is apparent in their movements, and probably the average English theater-goer, who understands difficulty only when he sees it, would think there was no art.

A more wonderful combination of beautiful pictures than is found in each of the two street scenes has probably never been put on any stage. The first of these is the place which Goethe names for *Faust's* meeting with *Margaret*. Mr. Irving shows a street strictly medieval in architecture and character, and fills it with all the rich and many-sided life of the time. *Margaret* is just coming from confession in a near cathedral when *Faust* sees her; therefore the most appropriate part of Nuremberg is the St. Lorenz Platz. Whether or no Mr. Irving's square is an exact copy of the real Platz makes little difference. A more important point is that, with the cathedral portal, the wine-shop, the bush hanging by wrought-iron-work scroll above the door, the men within drinking, the gabled, steep-roofed houses, and the crowd of citizens, it is perfect as a series of pictures and in true medieval feeling. There is perhaps no better proof of this than the fact that scarcely an artist has seen it without wanting to draw bits from it. Every one can see that the doorway, with its many statues, is a careful study from some old church or cathedral. In the

crowd there are great ladies in shining brocades, and peasant women in bodices and gay-colored aprons; knights in velvet and plush, swaggering soldiers in armor, and peasants in plain hose and jerkin; little girls in stiff brocades and broad-brimmed hats, and little girls in dark woolen gowns like the child in Rembrandt's picture of "Christ Blessing the Little Ones"; pages in silk attire, and a beggar in picturesque rags with pipes under his arm; brown-cowled monks in solemn procession, and white-veiled nuns who linger to talk to the women and children just beneath the shrine at the church door, where there is a blue Madonna with flowers at her feet. You wish they would stay long enough for you really to see them; but almost at once they have passed into the cathedral, to return only for another minute as short.

Throughout these pictures the color scheme as well as the grouping is beautifully carried out, for Mr. Irving is nothing if not a colorist. Just at the end, before the curtain falls and *Mephistopheles* is alone on the stage, the red of the sweeping roofs seems to reach its highest value in his more brilliant vermilion, as, doubled up and shrinking, he crouches against the tree near the wine-shop, his fingers in his ears to shut out the music of the cathedral chimes which it is agony for him to hear. You might, indeed, call the whole play an arrangement in red, for in all the scenes the color is toned so that it may lead up to his demon dress.

The second street scene, that of *Valentine's* death or duel, occurring much later in the play, in the third act, is no less realistic and beautiful. When the curtain goes up, there is still a faint color in the sky at the end of the long, twisting street to the left, but it quickly fades. The church rises, a great dark mass away above the stage, and you only see the heavy buttresses and one large window. The rest is in shadow, save in one corner where a lamp burns before a shrine. From out the gathering gloom and to the sound of distant drumming come the soldiers home from the wars,—wives, children, and sweethearts hanging to their arms, the halberds wreathed with green, and torches and cressets borne aloft. Each separate group is a study in itself. But the finest picture comes after *Mephistopheles* has sung his demon-song and flung away his mandolin, and *Valentine* is wounded, and all the townspeople hurry back through the long street and from every side, and *Margaret* and *Martha* come out from the house opposite the church. In the soldiers marching home there was the feeling of Rembrandt's "Night Watch." In this last group the feeling is not of a single picture, but of all the greatest pictures of this kind that have ever been painted. Mr. Irving himself has said that in its composition he had many of them constantly in his mind; and when you analyze his picture, you find that it is masterly. All the light from the torch held by the man who supports him is concentrated on the face of *Valentine:* the mass of faces behind peer out from a mysterious half-light, while *Margaret*, her crime typified by the dense black shadow falling on her, cowers in the foreground. Of course the effect is heightened by the electric light, but so skillfully that you are not made aware of it. One etching that suggests itself to us just now, Rembrandt's "Raising of Lazarus," is somewhat like this scene in the arrangement of light and shade. But Mr. Irving's picture is in no sense a copy: it is rather the work of a great master of composition.

If you compare these street scenes with those the opera has taught you to expect, you are not likely to underrate their merits. It is the same with the gardens, which are the perfection of realism. Even Nilsson's voice might seem sweeter if she, like Miss Terry, could have for background a pretty green space shut in with high brick wall, with near and distant gables and spires and towers showing above it, instead of the conventional scene, with its characterless house, and single tree and flowers from the nearest florist's. In just such gabled cottages, with latticed windows and projecting upper stories, would people of *Martha's* and *Margaret's* rank have lived; with just such flowers would their gardens have been filled. In *Martha's*, there is one low tree, and roses border the garden paths. Both are seen in the warm evening light. When *Faust* and *Margaret* first come out between *Martha's* tall rose-trees the cathedral spires are dark against a glowing sky, but before they part twilight has fallen upon the place. If you watch closely, the change from the colors of sunset to the dusk of twilight may seem too violent. If you see only its effect upon the garden, it is natural enough. Gradually the flowers stand out from the green leaves with that artificial look peculiar to real roses in the hour before night, when the west is still aflame; gradually the scene is filled with the strange mystery of evening, "when the earth is all rest, and the air is all love." Of the many pictures of *Faust* and *Margaret* that have been painted, not one has equaled this of the Lyceum, when, in the tender light, *Margaret*, the daisies in her hand, tells *Faust* the simple story of her life. In her garden the scene is fairer, as indeed it should be, as here love grows sweeter and passion more intense. In broad daylight one wonders would *Margaret's* heart be so heavy without her lover? O heart of lead! and her little Nuremberg world still so fair about her! The red fades, and the luminous green, that never comes but in the evening,

covers the sky beyond the spires, and *Faust* returns. Students pass in a neighboring street singing, and three girls come running in the gate, to stand still and watch, and then shut it softly, only to open it a second time and watch again. Some one within the little house lights the evening lamp. It is all as real and beautiful as life itself. In just such a garden many a trusting maiden has been wooed and won by twilight in Nuremberg.

On the Brocken Mr. Irving could not be realistic, as he could in the streets or gardens of Nuremberg. But in another sense realism was possible. Goethe, by the words of *Mephistopheles* and the witches, describes very vividly the scenes of the wild Walpurgis night, and many are the medieval legends on the subject. To reproduce his picture and to show the Blocksberg under the conditions peculiar to May-night revels, was therefore Mr. Irving's task.

When the curtain first rises it is dark along the labyrinth of vales and rocky ramparts. Great crags are to the right; to the left is an abyss overshadowed by rude fir-trees. As *Faust* and *Mephistopheles* appear and climb toilsomely upward from the cavern to the crag, the moon with its belated glow breaks through the clouds. Weird, uncanny creatures fly through the air. The tempest raves, the forest grinds and cracks; but above the whistling and surging of the storm voices ring high, singing now near, now far, until along the mountain-side the infuriate glamouring song sweeps as the witches, young and old, horrible and beautiful, in strange unearthly draperies, come slowly winding up from the depths below. They crowd and push and roar and clatter. *Faust* and *Mephistopheles* stand apart on the high cliff, and away above all loom up their shadows on the sky beyond, great specters of the Brocken. One dance ends only that another may begin, but at last *Mephistopheles* leaves the apes he has been caressing and bids the revelers begone. There is nothing more powerful than this single scene,—one minute a wild shrieking, singing crowd of misty shapes, moving hither and thither, clambering over the rocks and up the trees, dancing and turning; the next, after one last shriek, wilder, shriller than the rest, a silent, storm-beaten mountain-top deserted but for one flaming form. Then, summoning them once more, he himself plunges into the midst of the reveling. Now the dreary light, that has been strangely glimmering, here glows through film and haze, there sweeps in rolling vapor; now creeps like a thread, now leaps and plays, lighting up the great mountain and all the rugged slopes, and finally gushes forth, a shower of fiery rain, over the wild and howling crowd of witches, while the rocky ramparts on all their heights are set ablaze. Thus is the ideal Brocken of the poem realized on the stage, and, hardened play-goer that you are, you cannot but shudder as the curtain falls.

POSTSCRIPT.— Since the above was written, Mr. Irving has kept the promise he made on the evening of the first performance of "Faust," and has added the Witches' Kitchen to the other scenes. We do not, however, think this an improvement. The gradual transformation of *Faust*, it is true, is excellent. Instead of the sudden change to which the opera has accustomed us, we see, as in the Chippewa legend, old age by slow degrees disappear upon the advance of youth. There is one second when *Faust* stands with the fresh, beautiful face of a young man, while around his brow cling the snowy locks of age; then he throws off all the weight of years with his cloak. The effect is so much finer than the usual traditional transformation, that operatic managers would do well in this particular to imitate Mr. Irving. But from a pictorial standpoint the new scene has but little merit.

In the scene that immediately follows on the St. Lorenz Platz, the little wine-shop with its wrought-iron-work scroll and bush has gone, and the foreground is bare and uninteresting. It is only right to add that, on the other hand, the great buttress springing from the cathedral to the opposite house in the middle distance, and the hilly street beyond, are more effective than the back-ground which they have replaced. But all the lovely grouping, the meeting of the burghers, the lingering crowd at the cathedral door, the idle gossiping, which were by far the most beautiful of the Lyceum "Faust" pictures, have been sacrificed for a novelty unworthy of them.

Joseph and Elizabeth R. Pennell.

THE ACTING IN MR. IRVING'S "FAUST."

AS an assistance to making clear to ourselves some of the questions suggested by the wonderful modern art of "staging" a piece, and in particular the effect that traps and panoramas, processions and colored lights, may have in their exuberance, their obtrusiveness upon the personal interpretation, the manner in which, at the Lyceum, Mr. Henry Irving has produced a version of Goethe's "Faust" (for which he has been indebted to the fruitful pen of Mr. Wills) is greatly to be welcomed. Nothing lights up a subject like a good example, and Mr. Irving's examples are always excellent. His production of "Faust"

has been largely acclaimed and still more largely witnessed; it has had one of the longest of long runs, which, at the moment these words are written, shows no signs of abating. To the richness and ingenuity of the spectacle innumerable pens will have testified. The critic gives his impression, and that impression has been abundantly uttered. There is another one which also naturally has its turn. The *mise-en-scène* in the light of the acting, and the acting in the light of the *mise-en-scène*, are the respective halves of the interesting question. It is with the second half only that we ourselves are concerned.

In this connection the first thing that strikes us is a certain perversity in the manner in which Mr. Irving has approached and regarded his task, a perversity most singular on the part of a manager to whom the interests of the dramatic art have long appeared to be so dear. Saying to himself that he would give great attention to the machinery of the piece, he omitted to indulge at the same time in this indispensable reflection,—that to prevent the impression of triviality which might easily arise from an abuse of pantomimic effects, he should take care to put at the service of the great story a consummate interpretation; to see that *Faust* and *Margaret* and *Martha*, as well as *Mephistopheles*, were embodied in such a manner as to enable them to hold up their heads and strike their respective notes in the midst of the wilderness of canvas and paint. To the canvas and paint — since he feels Goethe's poem, or indeed simply the wondrous legend, in that way; or even, as we may say, since he feels in that way the manner in which Mr. Wills feels Goethe and the legend — he was perfectly welcome; but surely he ought to have perceived that, given the grandly poetic, ironic, but at the same time very scantily dramatic nature of his drama; given the delicacy and subtlety of a work of genius of the complexion of "Faust," special precautions should be taken against the accessories seeming a more important part of the business than the action. Evidently, however, Mr. Irving argued indirectly the opposite way. It is as if he had said that he would pile the accessories so high that the rest of the affair would n't matter, it would be regarded so little.

It would n't matter, in the first place, that Mr. Wills should have turned him out an arrangement of Goethe so meager, so common, so trivial (one really must multiply epithets to express its inadequacy), that the responsibility of the impresario to the poet increased tenfold, rather than diminished, with his accepting it, there being so much more, as it were, to make up for. It would n't matter that from the beginning to the end of the play, thanks to Mr. Wills's ingenious dissimulation of the fact, it might never occur to the auditor that he was listening to one of the greatest productions of the human mind. It would n't matter that Mr. Irving should have conceived and should execute his own part in the spirit of somewhat refined extravaganza; a manner which should differ only in degree from that of the star of a Christmas burlesque,—without breadth, without depth, with little tittering effects of low comedy. It would n't matter that *Faust* should be represented by a young actor, whose general weakness should prevent him, in spite of zealous effort, from giving stature and relief to his conception of the character, and whose unformed delivery should interfere in the same degree with his imparting variety of accent to his different speeches. It would n't matter that, with Mr. Wills's version and such an interpretation, the exquisite episode of the wooing of *Margaret* should hold no place in the play — should literally pass unperceived. It would n't matter that Miss Ellen Terry, as picturesque and pleasing a figure as usual, should give perhaps a stranger exhibition than she has ever given before of her want of art and style, and should play the divine, still, concentrated part of *Margaret* without apparently a suspicion of what it consists. If it would n't matter that Mr. Irving himself should be thin, that Mr. Alexander should be insignificant, that Miss Terry should be rough, and that Mr. Wills should be all three, of course it would matter still less that the two extremely mature actresses who were successively to attempt *Martha* should give the English public (so far at least as represented at the Lyceum) a really rare opportunity to respond to bad taste with bad taste, to greet with artless and irrepressible glee the strange gruntings and snortings with which the performers in question have seen fit to enrich the character. All these things, to our sense, *should* have mattered; it was far better that the overtopping scenery should have been sacrificed than that a concession should have been made in regard to the personal rendering of the piece. It was far better that the "points" should remain the points that Goethe made, even if the background had to be bare for it; that the immortal group of the scholar with his passions rekindled, the girl who trusts and suffers, and the mocking, spell-weaving fiend should hold itself well together, detach itself, and stamp itself strongly, even if the imagination had to do the work of putting in the gardens and spires of the German city, the mists and goblins of the Brocken, and the blue fire that plays about *Mephistopheles*. Of course if Mr. Irving could both have mounted the play and caused the acting of it to be an equal feature, that would have

been best of all; but since the personal representation of a work at once so pregnant poetically and so faulty as a dramatic composition was the problem to challenge by its very difficulties an artist of his high reputation,—an artist universally acclaimed as leading the public taste, not as waiting behind its chair,—he would have consulted best the interests of that reputation by "going in" for a dramatic as distinguished from a spectacular success.

We may as well confess frankly that we attach the most limited importance to the little mechanical artifices with which Mr. Irving has sought to enliven "Faust." We care nothing for the spurting flames which play so large a part, nor for the importunate lime-light which is perpetually projected upon somebody or something. It is not for these things that we go to see the great Goethe, or even (for we must, after all, allow for inevitable dilutions) the less celebrated Mr. Wills. We even protest against the abuse of the said lime-light effect: it is always descending on some one or other, apropos of everything and of nothing; it is disturbing and vulgarizing, and has nothing to do with the author's meaning. That blue vapors should attend on the steps of *Mephistopheles* is a very poor substitute for his giving us a moral shudder. That deep note is entirely absent from Mr. Irving's rendering of him, though the actor, of course, at moments presents to the eye a remarkably sinister figure. He strikes us, however, as superficial — a terrible fault for an archfiend — and his grotesqueness strikes us as cheap. We attach also but the slenderest importance to the scene of the Witches' Sabbath, which has been reduced to a mere bald hubbub of capering, screeching, and banging, irradiated by the irrepressible blue fire, and without the smallest articulation of Goethe's text. The scenic effect is the ugliest we have ever contemplated, and its ugliness is not paid for by its having a meaning for our ears. It is a horror cheaply conceived, and executed with more zeal than discretion.

It seems almost ungracious to say of an actress usually so pleasing as Miss Terry that she falls below her occasion, but it is impossible for us to consider her *Margaret* as a finished creation. Besides having a strange amateurishness of form (for the work of an actress who has had Miss Terry's years of practice), it is, to our sense, wanting in fineness of conception, wanting in sweetness and quietness, wanting in taste. It is much too rough-and-ready. We prefer Miss Terry's pathos, however, to her comedy, and cannot but feel that the whole scene with the jewels in her room is a mistake. It is obstreperous, and not in the least in the poetic tone. If the passages in the garden fail of their effect, the responsibility for this is not, however, more than very partially with the *Margaret*. It is explained in the first place by the fact that the actor who represents *Faust* is, as we have hinted, not "in it" at all, and in the second by the fact that the conversation between *Mephistopheles* and *Margaret* is terribly overaccented — pushed quite out of the frame. *Martha's* flirtation, especially as Mrs. Stirling plays it, becomes the whole story, and *Faust* and *Margaret* are superseded. What can have beguiled Mr. Irving into the extraordinary error of intrusting the part of *Martha* first to one and then to another actress of (on this occasion at least) signally little temperance and taste? The fault has been aggravated by being repeated; the opportunity of retrieving it might have been seized when Mrs. Stirling laid down her task. But Mrs. Chippendale has even a heavier hand. We should be sorry to fail of respect to the former actress, who, to-day full of years and honors, has always shown an eminent acquaintance with her art and has been remarkable for a certain old-fashioned richness of humor. As such matters go, on the English stage, she is supposed to have the "tradition." It is to be hoped, however, for the tradition's sake, that she violates it to-day by her tendency to spread, to "drag," as the phrase is, to take too much elbow-room. This defect was sufficiently marked when a year or two ago she played the *Nurse* of *Juliet;* whom she put sadly out of focus. It is manifested in an even greater degree by her *Martha*, and it must be said that if she renders the part in the spirit of the tradition, the tradition will on this occasion have been strangely coarse. Yet Mrs. Stirling is distinction itself compared with the displeasing loudness to which her successor treats us; and of this latter lady's acting, it is enough to say that it compelled us to indulge in a melancholy "return" on an audience moved by such means to such mirth. The scene between *Mephistopheles* and *Martha* is the most successful of the play, judged by the visible appreciation of the public — a fact which should surely minister to deep reflection on the part of those who, as artists, work for the public. All the same, Mr. Irving would have been well advised, from the artistic point of view, in causing *Martha*, by contact and example, to be represented in a higher style of comedy. We shall not attempt to point out still other instances in which, as it seems to us, he would have been well advised; we have said enough to substantiate our contention that it is not for the interest of the actor's art that it should be too precipitately, or too superficially, assumed that the great elaboration of a play as a spectacle is a complete expression of it — a complete solution of the problem. * * *

THE TONIC SOL-FA SYSTEM.

OPINIONS OF A TEACHER.

HE musical world is surprised, and the professional portion of it not a little disturbed, by the appearance of a new method of writing and teaching music called the Tonic Sol-fa system. The first impulse of the musician is to condemn and reject the innovation. He issues a bull of excommunication against it, expecting it thereafter to disappear and take its place with the exploded theories and forgotten devices of the past. But presently he finds that his edict has failed to accomplish its purpose. The movement continues to live and shows signs of a boundless vitality. If he is disposed to be fair-minded and just, he then resolves to investigate the system in order to take an intelligent stand for or against it.

From that moment he finds himself the subject of a series of novel sensations, of which the prominent element is surprise. In the first place he is surprised to learn that the system has revolutionized popular music in Great Britain. If he visits that country, he sees its results on every side. He finds it in virtual possession of the Board (public) schools of the kingdom; he finds that all the church and Sunday-school hymnals have editions printed in the peculiar-looking tonic sol-fa notation; in many of the churches he hears sung by the congregations music of a high classical character such as only a few of the best-trained choirs in America attempt.

Being led by the visible results to a closer inspection of the cause, his sensations become even more positive than before. He sees that the educational influences of the system work with equal efficiency downward or upward. It furnishes such easy and natural steps for the elementary study of music as to bring it within reach of the children of the kindergarten, and at the same time supplies a key to the intricacies of higher art which enables the average singer, with but limited time for musical study, to master what the professional musician alone is able to acquire by the staff system. The observer finds vast gatherings of children singing Handel's Messiah and performing marvelous feats in sight-reading, hundreds of amateur societies rendering the most difficult works of the modern composers, unnumbered singers and players pursuing the study of harmony for the mere pleasure of it; he finds that hereafter music is no more to be limited to the specially musical than the enjoyment of literature to the few who are able to produce it.

Music has two distinct sides — the instrumental and the vocal. The instrumental side is exceedingly complex. The complications are represented by the keyboard of a piano or an organ. Twelve scales are to be played, a separate manipulation being required for each. The form of the scale or the order of its intervals is preserved by the use of sharps and flats — the black keys. The staff notation grew into use gradually as an embodiment of all the possible complications of instrumental music.

The vocal side of the art is, on the contrary, of the utmost simplicity. In fact it is, in its earlier stages, rather a language than an art. Little children will often use this language, *i.e.*, sing tunes correctly, before they can articulate. To the voice there is practically but one scale instead of twelve. It is, in effect, a musical alphabet of eight tones, produced in its different positions with no change of mental impression and no consciousness of sharps or flats. To illustrate: the singer is conscious of no difference between the key of B and the key of C, while the player uses five sharps in playing the former and none at all in playing the latter. The tonic sol-fa notation is a natural outgrowth of the vocal side of music. The following is a brief account of its origin and growth:

In the year 1844 a young nonconformist clergyman named John Curwen became pastor of a Congregational church at Plaistow, in the eastern suburbs of London. He had an unusual love for children, and great faith in music as a means of interesting and improving them. But he was, himself, musically deficient. His deficiency was so marked that a wager was made among his fellow-students at college that he could not be taught to sing the scale correctly within a given time, Mr. Curwen agreeing to receive a certain amount of drilling each day. The story goes that he accomplished the feat, but with nothing to spare. In after years he pursued the study very earnestly, and endeavored to impart to the children of his parish whatever he succeeded in gaining for himself. But the results were far from satisfactory. Hearing of a new method employed by a philanthropic lady at Norwich (Miss

Sarah Glover), he visited her school, saw, and was conquered. "Now," said he, "I have a tool to work with."

What he saw in Miss Glover's school was this. Discouraged, as so many have been, in the effort to teach the complicated signs of the staff, she had discarded it altogether, and was using in its place a notation made up of the initials of the musical syllables; the letter *d* standing for *do*, *r* for *re*, etc.

It was the farthest possible from Mr. Curwen's thoughts that through this new notation he was destined to reorganize the whole art of music, but such proved to be the case. His success in teaching the young people of his charge led a few others to make a trial of the novel device. They, in turn, carried the light to others, and thus the system gradually gained a foothold among the people. But the progress was very slow, and for a number of years the work was almost entirely non-professional. The movement was the offspring of philanthropy, and it was long dependent upon that worthy parent for its sustenance and growth. Every form of prejudice was instinctively arrayed against it,—religious, for it was a humble dissenter, and could lay no claim either to artistic or apostolic succession; social, for at first it was used chiefly in ragged schools and among the lower classes; musical, for it set at naught the traditions of the elders, and boldly proposed to show "a better way" to the professional scribes and pharisees who occupied the highest seats in the synagogues. It was indeed, as Mr. Curwen afterward described it, "a pariah in the musical world." Yet the bantling exhibited a marvelous vitality. Discouragement was its meat and drink, and misfortune was as oil to the flame.

Mr. Curwen was a wise master-builder. His own musical deficiency was made the chief corner-stone of the edifice. Distrusting his personal ability to carry on so great a work, he gathered around him a corps of earnest and able teachers, nearly all of whom were children of the system, and, with their advice and coöperation, he slowly and patiently shaped the method. After realizing the educational power of the new notation, it was his aim to develop Miss Glover's device into a complete system, leading by natural steps from the simplest expression of music as a language to its highest revelation as an art. Being a born educator, he saw that the instrumental notation of music, the staff, needed a vocal notation as an interpreter. He also saw that the familiar musical syllables invented by Guido d'Arezzo eight centuries ago furnish the groundwork of a perfect notation for the singer, and thus create a natural highway through the world of music.

His published works are voluminous, covering all musical facts and principles, from the first lesson as given to a little child up to the most abstruse law of acoustics as set forth by Helmholtz and other eminent scientists.

The details of Mr. Curwen's work do not fall within the purpose of this sketch. The following are the leading features of the subsequent history:

A partial failure of his health compelled him to give up his pastorate, and his time was thenceforth devoted exclusively to perfecting the tonic sol-fa system and to extending the movement, till it became, as the London "Times" expressed it, "the only national and popular system of teaching vocal music worthy of the name."

In 1851 he began the publication of the "Tonic Sol-fa Reporter," which has since continued as a monthly journal, and the official organ of the movement. The work spread quietly among the people, and was unknown to the general public till the year 1857, when a concert was given, with a chorus of three thousand children, in the Crystal Palace at Sydenham. An audience of thirty thousand was called together by the novelty, and one of the London papers said: "It was left for an almost unknown institution to draw a larger concourse of persons than has ever been attracted in this country to a musical performance."

This extraordinary success at once lifted the movement into national importance.

During the following year a concert was given in Exeter Hall, which, in a different way, exercised an equally effective influence in favor of the system. The programme was made up entirely of classical music, to show that the notation is as useful in high art as in elementary work. The first concert won the favor of the general public, the second, of cultivated musicians, and thus the whole ground was practically covered.

In 1867 a chorus of seventy tonic sol-fa singers went to Paris with their conductor, Mr. J. Proudman, to take part in a musical competition in connection with the International Exhibition. They won a triumphant success. Their singing excited the utmost enthusiasm. A special laurel-wreath was bestowed upon them by the Emperor, with a gold medal, a diploma, and the badge of the Orpheonists of France. Their return to London was equally triumphant. They were accorded a public reception by the most eminent musicians of the kingdom, who thus gave a recognition which some had been slow to concede to what they regarded as a musical heresy.

To gain possession of the Board schools was naturally a prominent desire of the pro-

moters of the movement. To keep the system out of the schools was an equally strong determination on the part of those who preferred the old ways. The struggle lasted for many years, now one side and now the other gaining the advantage. It was a hand-to-hand contest between medieval and modern methods, and, as such, could have but one conclusion. Tonic sol-fa now has practical possession of the schools of the kingdom.

In 1875, the Tonic Sol-fa College of London was incorporated, and it is now the center of influence and authority for the movement in all parts of the world. One of the most valuable features of the system is the series of certificates issued by the college. They are carefully graded, from the "junior" for school children up to the diploma of the "graduate and licentiate" of the college. This plan renders charlatanism among teachers impossible. No one can make a claim beyond his deserts, as is sometimes done in the musical profession, as in all others. Whoever represents himself as a tonic sol-fa teacher must prove his standing by the proper certificate, or his claim will receive no consideration.

It may be thought strange that this sketch does not include a description of the technical characteristics or peculiarities of the system by which so radical a change is being wrought in the musical world. But experience has proved that any verbal statement is so inadequate as to be only a disappointment to the reader. Nor is this to be wondered at. The system is based upon nature. Nature's ways are simple. The reader could not be made to understand from a mere schedule and description of the signs and symbols of the tonic sol-fa notation how it succeeds in opening an avenue through the world of music for all mankind. Yet it does so, and the object of this article is merely to call the attention of the public to the fact, in order that the vast benefits of the method may be extended. To understand the system and its application, the proper text-books must be studied.

The question is often asked, "Why this singular name, Tonic Sol-fa?" It seems meaningless to the unmusical. The word "Tonic," as technically employed in music, refers to the key-tone — the lowest or foundation-tone of the scale. "Sol-fa" represents all the musical syllables. The whole term, therefore, means that tones are studied in their relation to the central or key-tone, and that the syllables are used to aid by the power of association and by affording a natural or vocal system of notation. The movement arose in England as a reaction against the unnatural "fixed-do" method, and the name carried much weight at the outset by showing that the new system was based upon the true principle of key-relationship.

The public should realize that the value of the tonic sol-fa system is fully established. It long since passed beyond the experimental stage and took its place among the educational forces of the day. But as it is still comparatively new in this country, a few facts and statements are herewith given to show (1) that a reform in musical methods was needed, and (2) that the means for accomplishing the reform are completely supplied by the new notation.

First. The staff notation confuses the learner by the uncertainty of its signs. Nearly every character employed has several different meanings, and the same musical fact or truth has several different signs. This can best be shown by an illustration. A musical phrase is printed below in three different keys. It will be seen that not only is every note placed upon a different degree of the staff, thus requiring a distinct effort of the mind in reading, but nearly every chromatic sign is different in the three keys. Who but an expert would imagine that *the musical idea is precisely the same in each case?*

Second. In the tonic sol-fa notation each separate fact has a distinct sign, and each sign has but one unchangeable meaning in all the twelve keys. In the above example, as has already been stated, the different signs express (or conceal) the same musical thought. In the tonic sol-fa notation, the expression or representation would be precisely the same in each case, the pitch being indicated, according to the ordinary standard, by the words printed at the top "key of C," "key of D flat," "key of E."

Third. The difficulties of the staff are cumu-

lative. Every step of progress leads to new and increased complications.

Fourth. Per contra, the steps of the tonic sol-fa method are perfectly graded. Each point gained prepares for and leads to the next, in educational order. By this method the advanced stages of musical study are as easy and pleasant as the first elementary steps.

Fifth. The value of the new system as an interpreter of the old is proved by statistics showing that tonic sol-fa has produced more staff readers in Great Britain than all other methods combined.

Sixth. The new notation is carried by English missionaries to all parts of the globe, and they find that the natives can learn to read the language of music from it much sooner than they can learn to read their own spoken language.

Seventh. The teachers in the London Board schools are allowed to use whatever method they prefer, but are required to produce certain results. Of the four thousand teachers in that city all, without exception, adopt the tonic sol-fa system. This establishes its value as an elementary or school method.

Eighth. All the classical vocal music is printed in the tonic sol-fa notation — oratorios, masses, cantatas, glees; from Handel's Messiah to Gounod's Redemption, and from the quaintest madrigal of Ford or Wilbye to the latest part-song of Hatton or Pinsuti. In order to supply the popular demand, Messrs. Novello & Co. are reproducing the whole of their immense catalogue of vocal music in the tonic sol-fa notation. This proves its value on the side of higher art.

Ninth. The most eminent English musicians now heartily indorse the movement. When Dr. Stainer, organist of St. Paul's Cathedral, was appointed Inspector of the Training Colleges of the Kingdom two years ago, his first official act was to appoint as his assistant one of the most prominent tonic sol-fa teachers, Mr. W. G. McNaught.

Tenth. The above statement is equally true of the best American musicians, who invariably acknowledge the value of the system as soon as they understand it.

Eleventh. Thousands of amateurs throughout the kingdom are pursuing the study of harmony by postal lessons sent out from the college, showing the incentive to thoroughness which is given by the system.

Twelfth. The tonic sol-fa classes have led in very many cases to the formation of amateur bands, proving that the notation also has great value upon the instrumental side. This was not anticipated by the original promoters of the movement, who supposed the notation to be only suitable for the expression of vocal music.

As mathematics found its key in the nine Arabic figures, so music has found its key in the seven letters of the tonic sol-fa notation. The art is virtually emancipated. It is no longer a deep mystery, to be understood only by the favored few who are born with an exceptional musical faculty. It is brought, by its new method of representation, into conditions which are as easily comprehended by the ordinary mind as the rules of addition and subtraction. For those who possess a natural talent, the tonic sol-fa notation affords the best possible channel for cultivating it. Where the musical gift is deficient, it encourages and develops the latent capacity.

Theodore F. Seward.

OPINIONS OF A CRITIC.

THE question of the value of tonic sol-fa presents itself in two phases. A serious consideration requires that we look not only upon its immediate effect upon present musical effort, but also at its ultimate sociological importance.

As a system of primary education in one department of music, tonic sol-fa has so much to commend it that it scarcely seems worth while to spend time in its discussion. It is already a strong tree known by excellent fruits. To one, therefore, who is concerned simply with local results and existing conditions, there would seem to be only one practical question left open,— How does the education which it is competent to promote stand with relation to the dominant tendency in the cultivation of music?

Tonic sol-fa is admirably adapted to the study of harmony and of singing.

It is ill adapted to the study and practice of instrumental music.

In spite of the multitude of fine phrases that find their way into books and newspapers, the fact is that in this country music is as yet looked upon as a mere accomplishment. Its science is neglected and its popular practice is, as a rule, limited to that phase which yields the most generous (or sonorous) results with the least expenditure of emotional and intellectual force — that is to say, to pianoforte-playing. We may regret this state of affairs, but we are bound to recognize its existence. Now, so long as we confine our efforts to skimming over the surface of music, so long as we continue to vote harmony and the deeper things of the art unessential to popular musical education, and so long as we go on with our present one-sided cultivation of instrumental music to the neglect of vocal, so long we

shall have no need of tonic sol-fa. To the instrumentalist the system presents an utterly inadequate notation, one which places many more obstacles in his path than it removes from the path of the singer. The complexities of the staff notation do not provide embarrassments for the instrumentalist in the degree that they do for the singer, and it is possible that some of them may, in time, be removed. (Wagner's treatment of the parts of some of the transposing instruments in his later orchestral scores might be cited as an indication of a determination to consider simplicity even at the cost of grammatical accuracy.) For instrumental music the staff notation is so beautiful and efficient a system of symbols, however, that an improvement on it is scarcely conceivable. One thing is certain,—no system will supplant it that ignores the pictorial element which is so potent a factor in indicating pitch and time. On this I wish to lay special stress. Our music is growing more and more rich and complex in rhythms, and with every step in this progress toward a greater rhythmical heterogeneity the time signs of the staff notation must advance in our admiration. Try to imagine what a page of Wagner's "Meistersinger" would look like in tonic sol-fa notation. The hopelessness of an attempt to read it as one can read it in our ideographic staff system is apparent at once, and compels a recognition of the inadequacy of tonic sol-fa for all modern music except that written for voices.

But tonic sol-fa has cast away whatever ambition it may once have had to drive out the staff notation. Advocates of the system now confine themselves to urging its peculiar value in teaching vocal music and harmony, and say that it simplifies the study of the staff, a knowledge of which they admit to be necessary for all who wish to cultivate instrumental music.

In both respects their claims are amply justified; indeed, they have so convincingly demonstrated the correctness of their opinions by exhibitions of attained results, that the case has been taken out of court with judgment in their favor on all the pleadings except the demurrer of the instrumentalists. The adjudication is not only complete, but in the *obiter dicta* of the decision are contained the most valuable lessons taught by the controversy. On some of these lessons I should like to offer a few suggestions, keeping what I have called the "ultimate sociological importance" of the system in view.

There is no doubt in my mind that tonic sol-fa is the fittest means at our command for the promotion of popular choral culture; and a more general, more zealous, wiser cultivation of choral music is the greatest of the socio-educational needs of the United States.

The claim of the tonic sol-faists, that the true method of teaching vocal music is by the intervalic relation of tones, and not by absolute pitch, is unquestionably sound. A sense of absolute pitch is the possession of the few—a highly favored and exceptional few, even among professional musicians. There have been great composers who did not have it—Raff, for instance. To acquire it is all but impossible; to teach it to the masses in schools and choirs is utterly impossible. To bring to the pupil a knowledge of intervals independently is the aim of other methods of instruction; but tonic sol-fa teaches all intervals in their relation to a fundamental tone, the key-note; and in this fact lies its superiority. Tonality, which is impressed upon the mind by this means, distinguishes the complex modern art from the comparatively simple and half-developed art of the Middle Ages.

Tonic sol-fa is in accord with the scientific basis of music. While it teaches sight-reading—the first aim of every system of musical instruction—just as thoroughly (to say no more) as its chief rival, it teaches it more quickly, and by keeping before the learner an ever-accessible starting-point to which he may recur in moments of perplexity, it inspires him with confidence in himself and interest in the composition. There is nothing surprising in the fact (which I believe to be indubitably established) that learners by the tonic sol-fa method acquire a remarkably deep and enthusiastic interest in music. Each successive step in the study of a work lays bare something of its harmonic structure and affords a glimpse to that extent of the operations of the composer's mind. Every such perception creates a bond of interest. Choir-singers know what this means; they know that at no other time do they feel themselves so close to the heart of a composition as while they are helping to sing it. A German writer, Hermann Kretschmar, has appositely stated one of the benefits derived by the individual from the cultivation of choral music, in these words:

> "Whoever belongs to a singing society in which study is wisely conducted, at each performance accomplishes a work and receives a reward analogous to those of a painter who has copied a masterpiece. And he who has spent a generation in such a society can cherish his recollections like a museum."

Schumann emphasizes over and over again the advantages to be derived by the musical student from singing. "Sing diligently in choirs, especially the middle parts; this will make you musical," he says in one of his "Musical House and Life Rules," and in another he gives utterance to words which might have

been adopted as a motto by the tonic sol-fa party: "Even if you have but little voice, learn to sing from the page without the help of an instrument; it will sharpen your hearing."

To make the community "musical" in fact, not merely in affection — this should be the aim of musical instruction; and for several other reasons than those already given tonic sol-fa lends itself with superior advantage to the mission. A few more appropriate words from Schumann as to desirable aims: "It is not enough to know your piece with your fingers; be able to hum it over without the pianoforte. Quicken your fancy so as to be able to keep in mind not only the melody of a composition, but also the harmony belonging to it." "You must make yourself able to understand music from the printed page."

The advantages which accrue to the individual from the study of choral music are transmitted to the community. The musical taste of a city or town may be accurately estimated from the extent and character of its choral activity. There are said to be over three hundred cities and towns in Germany containing each a choir and an orchestra capable of performing classical music. There are not twenty in the United States.

On these premises a deduction of the value of a system of instruction which addresses itself with peculiar energy and potency to choir-singing can easily be made.

There are features in tonic sol-fa which seem to mark it as the agent called to free our musical cultivation from certain dangers which lurk in the dominant instrumental tendency. Good instruments are not a universal possession, and bad instruments work mischief to popular hearing and taste. Instrumental music, moreover, seems to be entering a degenerate stage from which vocal music has been rescued within the last half century,— that is, since the operatic scepter passed out of the hands of Italy. Brilliancy of technique is now the property of nearly every public performer, and instrumental music is being threatened by that decadence which all art history proves is the constant companion of "virtuosity."

This is one danger from the evil influence of which the encouragement of singing societies can save us. Against another the tonic sol-fa teachers, acting in the spirit of Schumann's wise injunction, have interposed a splendid bulwark. They prohibit the use of the pianoforte in teaching. Thereby they prevent learning from degenerating into imitation, which, in its ultimate effects, discourages excursiveness of thought and activity of the imagination. Better still, they stimulate the pupil to exercise the faculties which are most actively called into play in the correct interpretation of music. Beautiful tone-production is the most essential and most individual process in music-making. This process pianoforte-playing reduces to a minimum. So far as pitch is concerned (a thing of primary care in vocal music), the pianoforte-player is relieved of all responsibility by the mechanism of his instrument. The tones answer to the touch of his fingers; he does not need to exercise his intelligence or his ear in the matter. The tonic sol-fa pupil, on the contrary, is compelled to cultivate acuteness of hearing and to study with great painstaking the emission of each tone. In the hands of the pupil who plays it, or imitates it in the study of tones and intervals, a pianoforte which is out of tune is an evil of frightful magnitude which holds the pupil in its grasp and either stunts or deforms his faculties. Over the instrument of the tonic sol-faist there stands a monitor who can both detect faults and remedy them.

H. E. Krehbiel.

COMRADES.

ONE steed I have of common clay,
And one no less than regal;
By day I jog on old Saddlebags,
By night I fly upon Eagle:
To store, to market, to field, to mill,
One plods with patient patter,
Nor hears along the far-off heights
The hoofs of his comrade clatter.

To field, to market, to mill he goes,
Nor sees his comrade gleaming
Where he flies along the purple hills,
Nor the flame from his bridle streaming;
Sees not his track, nor the sparks of fire
So terribly flashing from it,
As they flashed from the track of Alborak
When he bravely carried Mahomet.

One steed, in a few short years, will rest
Under the grasses yonder;
The other will come there centuries hence
To linger and dream and ponder:
And yet both steeds are mine to-day,
The immortal and the mortal;
One beats alone the clods of earth,
One stamps at heaven's portal.

Henry Ames Blood.

MEMORANDA ON THE CIVIL WAR.

A Song in Camp.

THE article on the "Songs of the War," by Mr. Brander Matthews, in THE CENTURY MAGAZINE for August, brought back to my memory vividly an experience at Murfreesboro', just after the battle of Stone's River. There was a good deal of gloomy feeling there. The losses in the army had been terrible; and, besides, there were among the troops a large number of Kentucky and Tennessee regiments, to whom the Emancipation Proclamation was not palatable. A number of officers had resigned, or tendered resignations, on account of it. One day a whole batch of resignations came in, all written in the same handwriting and coming from one regiment, including nearly all the officers in it, assigning as a reason their unwillingness to serve longer in consequence of the change in the purpose and conduct of the war. The instigator of these letters was found, and dismissed with every mark of ignominy — his shoulder straps were cut off, and he was drummed out of camp. This heroic remedy caused the officers whom he had misled to withdraw their resignations; but the thing rankled. A few days afterward a glee club came down from Chicago, bringing with them the new song,

"We 'll rally round the flag, boys,"

and it ran through the camp like wildfire. The effect was little short of miraculous. It put as much spirit and cheer into the army as a victory. Day and night one could hear it by every camp fire and in every tent. I never shall forget how the men rolled out the line,

"And although he may be poor, he shall never be a slave."

I do not know whether Mr. Root knows what good work his song did for us there — but I hope so.

Henry Stone.

The Confederate Strength in the Atlanta Campaign.

THE paper by General Joseph E. Johnston on the Atlanta campaign, in the August number of THE CENTURY MAGAZINE, asserts that on the 30th of April, 1864, the strength of the Confederate army was "37,652 infantry, 2812 artillery with 112 guns and 2392 cavalry,"— in all 42,856. The return of the army on file in the War Department signed by General Johnston and attested by his adjutant-general, for April 30th, 1864, shows its "present for duty" almost 53,000:

Infantry	41,279
Cavalry	8,436
Artillery, 144 pieces	3,277
	52,992

The difference between these figures and those given by General Johnston from the same return is, that in the magazine he gives the footings of the column of "effective total." This, in all Confederate returns, includes only sergeants, corporals, and private soldiers for duty. That the cavalry had an effective total of but 2392 with 8436 officers and men for duty is accounted for by the fact that a large number of horses were grazing in the rear because of the scarcity of forage at Dalton. They were brought to the front and the men became effective when Sherman's army began to advance. General Johnston's statement that his artillery comprised but 112 pieces is a manifest error, for the return plainly says 35 companies, 144 pieces.

The battle of Resaca was fought on the 13th, 14th, and 15th of May. Prior to that time, the Confederate army was reënforced by General Mercer's brigade of four Georgia regiments, which had been on garrison duty on the Atlantic coast. A footnote to the return of April 30th records that one of these regiments, the 63d Georgia, joined the army "since the report was made out," and that its effective total was 814. All of these regiments had full ranks; 2800 is a low estimate of their line-of-battle strength. Cantey's division,* 2 brigades of infantry and 2 batteries, 5300 for duty, came from Mobile about the 7th of May and was stationed at Resaca. Loring's division, 3 infantry brigades and 2 batteries, from General S. D. Lee's command, with 5145 for duty and a detachment of 550 from French's division, reached Resaca May 10th, 11th, and 12th. Meantime a regiment of the Georgia State line, estimated as six hundred strong, had been added to Hood's corps.

General Johnston had at Resaca at least 67,000 men for battle and 168 pieces of artillery. General Sherman had at most 104,000:† the odds against General Johnston when "the armies were actually in contact" were as 100 to 64, instead of "10 to 4," as stated in his article.

On the night of May 16th the Confederate army evacuated Resaca. On the following day, at Adairsville, it was reënforced by General W. H. Jackson's cavalry command, 4477 for duty, which was increased to 5120 by June 10th. On the 19th of May at Cassville the division of General French joined the army with 4174 effectives, exclusive of the detachment which was at Resaca. Another Georgia State line regiment, estimated as 600, was added to Hood's corps, and Quarles's brigade, 2200 strong, came on the 26th of May at New Hope Church. A comparison of the return of April 30th with that of June 10th shows an increase to the fighting strength of the army of 3399 from the return of men "absent with leave" in the corps of Hood, Hardee, Wheeler, and in the artillery. The return of May 20th is missing, but that of June 10th shows an increase since May 20th of 649 "returned from desertion" and 799 "joined by enlistment."

* For Cantey's strength, see General D. H. Maury's return April 22d, 1864.
For Loring's strength, see General S. D. Lee's return May 10th, 1864.

For French's detachment, see General French's report of "effectives when joined."

† For Sherman's army at Resaca, add 5200 for cavalry joined between May 1st and 12th to his strength May 1st of 98,797.

General Johnston has to account between April 30th and June 10th for men available for battle *at least:*

Present for duty at Dalton	April 30th	52,992
Mercer's brigade	May 2d	2,800
Cantey's division	" 7th	5,300
Loring's "	May 10th, 11th, and 12th	5,145
French's detachment	May 12th	550
French's division	" 19th	4,174
Jackson's cavalry	" 17th	4,477
Jackson's cavalry increase before June 10th		643
Quarles's brigade	May 26th	2,200
Two regiments Georgia State line		1,200
Furloughed men returned		3,399
Recruits		799
Returned deserters		649
		84,328

All these figures are official except for Mercer's brigade and the two regiments of the Georgia State line.*

The return of General Johnston's army June 10th is the first on file in the War Department which includes all these reënforcements. It shows "present for duty":

	Officers.	*Men.*
Infantry	5049	47,554
Cavalry	1232	12,372
Artillery, 187 pieces	257	4,414
	6538	64,340
Or in round numbers		71,000

The difference of over 13,000 is accounted for by losses in battle, desertion, and increase in absent sick. The incomplete return of Medical Director Foard shows killed and wounded May 7th to 20th, inclusive, 3384. The return of June 10th shows 1551 killed and died since May 20th, indicating fully 6000 wounded. The same return shows 569 deserters. The 1542 prisoners captured from Hood and Hardee, shown by increase of absent without leave in their corps, account for the remainder without examining the returns of Polk's corps and the cavalry.

General Johnston's army reached its maximum strength on the New Hope Church line, where he must have had 75,000 for battle when the armies faced each other May 27th. General Sherman's army † there numbered, of all arms, for duty, 93,600 men, and several brigades of this force were employed in guarding trains and watching roads in all directions, for Sherman's army had no rear. Odds of less than 5 to 4 against him is "the great inequality of force" which General Johnston complains compelled him "to employ dismounted cavalry" in holding this line.

In a footnote to his article General Johnston says:

"I have two reports of the strength of the army besides that of April 30th, already given: 1. Of July 1st, 39,746 infantry, 3855 artillery, and 10,484 cavalry; total, 54,085. 2. Of July 10th, 36,901 infantry, 3755 artillery, and 10,270 cavalry; total, 50,926."

The return of July 1st shows "present for duty" all arms, officers and men, 64,578, instead of 54,085. (As in case of the return of April 30th, General Johnston gives only the "effective total.") The loss since June 10th is accounted for by 1114 dead, 711 deserters, 1042 increase in absent without leave (prisoners), and 3693 in increase of absent sick and wounded.

None of the returns of this army, either under Johnston or Hood, make any account of the Georgia militia, a division of which under General G. W. Smith joined the army about June 20th near Kenesaw, making its available force on that line nearly 70,000 men.

The return of July 10th gives the present for duty 60,032, instead of 50,926, the loss since July 1st being 1377 deserters, 526 dead, two regiments sent to Savannah, and prisoners and wounded. This with the Georgia militia (increased to about nine thousand when the army reached Atlanta) represents the force turned over to General Hood July 18th, viz.:

Infantry	42,571
Cavalry	13,318
Artillery, 187 pieces	4,143
Militia (probably)	5,000
	65,032

General Johnston asserts that the only affair worth mentioning, on his left at Resaca, was near the night of May 14th, when "40 or 50 skirmishers in front of our extreme left were driven from the slight elevation they occupied, but no attempt was made to retake it." In his official report, made in October, 1864, he says that at 9 o'clock at night of May 14th he "learned that Lieutenant-General Polk's troops had lost a position commanding our bridges." Comment upon the generalship that would leave a position commanding the line of retreat of an army in charge of 40 or 50 skirmishers within gun-shot of a powerful enemy is unnecessary, for it was not done. The position was held by a line of men. It was carried on the evening of May 14th by a gallant charge of two brigades of the Fifteenth Corps of the Union army. Reënforced by another brigade, they held it against the repeated and desperate efforts of Polk's men to retake it. The battle lasted far into the night. General John A. Logan, in his official report of it, says that when at 10 o'clock at night "the last body of the enemy retired broken and disheartened from the field, . . . it was evident to the meanest comprehension among the rebels that the men who double-quicked across to their hills that afternoon had come to stay." General Logan also says that by the capture of this position "the railroad bridge and the town were held entirely at our mercy."

The Fifteenth Corps lost 628 killed and wounded at Resaca. The troops in its front, Loring's and Cantey's divisions and Vaughan's brigade, according to their incomplete official reports lost 698. Much the greater part of this loss must have been on the evening of May 14th, for there was no other line-of-battle engagement on this part of the field.

General Johnston characterizes the battle of May 28th at Dallas as "a very small affair," in which the Confederates lost about 300 men and the Union troops "must have lost more than ten times as many." This was an assault made upon troops of the Fifteenth Corps by two brigades of Bate's Confederate division and Armstrong's brigade of Jackson's cavalry dismounted, supported by Smith's brigade of Bate's division and Ferguson's and Ross's brigades of Jackson's cavalry. Lewis's Kentucky brigade attacked the front of Osterhaus's division without success. Bullock's Florida brigade charged along the Marietta road and was driven back, with heavy loss, by the fire of the 53d Ohio regiment. Armstrong assailed the position held by Walcutt's brigade across the Villa Rica road and met a bloody re-

* For strength of Jackson's cavalry division, see General S. D. Lee's return May 10th, and the return of General Johnston's army June 10th, 1864.

For strength of General French's division, see his return of "effectives when joined."

For strength of Quarles's brigade, see Johnston's narrative, p. 575.

† For Sherman's strength on the New Hope line, see his return May 31st and deduct Blair's Seventeenth Corps, which did not join the army until June 8th.

pulse. General Bate officially reported the loss in his division as 450. General Walcutt in his official report says that "244 dead and wounded rebels were found in my front," and many were doubtless removed. The Confederate loss in this "very small affair" was, therefore, over 700. The loss of the Fifteenth Corps was 379, or about one-half the Confederate loss, instead of "more than ten times as many."

General Johnston assumes that General Sherman used his entire army in the assault on Kenesaw Mountain, when, in fact, he employed less than 15,000 men. The remainder of the army was not engaged, except in the continuous battle of the skirmish lines. The assaulting column of the Army of the Cumberland, directed against Hardee's corps, was composed of 5 brigades about 9000 strong. The formation was such that each brigade presented a front of but two companies. The leading regiments lost very heavily; those in the rear suffered few casualties. General Thomas reported the entire loss as 1580. The attack of the Army of the Tennessee was made upon the Confederate intrenchments held by French's division and a part of Walker's, by three brigades of the Fifteenth Corps, numbering 5500 men. Their formation was in two lines; their total loss 603, three-fourths of this falling on the regiments in the first line.

General Johnston expresses the belief that Northern soldiers could not be repulsed with casualties so small as reported at Kenesaw. In this he, unwittingly perhaps, compliments Sherman's army at the expense of his own. On the 22d of June, five days before the battle of Kenesaw, he tells us that the divisions of Stevenson and Hindman were repulsed, in an assault on the Union line, with a loss of one thousand men. These divisions, June 10th, numbered over 11,000 for duty. Their loss, therefore, was but 9 per cent., while that of the troops of the Army of the Cumberland engaged at Kenesaw was 17 per cent.; of the Army of the Tennessee, 11 per cent. In both cases the loss sustained was sufficient to demonstrate the futility of further effort. In neither case was it a fair test of the staying qualities of the troops who on many fields had shown their willingness to shed any amount of blood necessary when there was reasonable hope of success.

E. C. Dawes,
Late Major 53d Ohio Regiment.

CINCINNATI, September 8th, 1887.

A Rejoinder to General Robertson by Colonel Mosby.

IN THE CENTURY for August, General Beverly H. Robertson defends himself against the charge of having disobeyed orders in the Gettysburg campaign, and imputes to me the absurdity of trying to prove that Stuart knew nothing about it, and also with defending him against "an imaginary attack." With equal propriety it might be said that General Robertson has defended himself against "*an imaginary attack.*" I never intimated that Stuart was ignorant of his default. Stuart fought at Gettysburg and knew that Robertson did not. The latter affects to be unaware of the fact that two of General Lee's staff have published accounts of Gettysburg, in which they attribute the loss of the battle to the want of cavalry to make the preliminary reconnoissances; and that in the memoir of his chief by Stuart's adjutant, the blame of it is put upon himself (General Robertson). The accusation against which I defended Stuart was, that by going into Pennsylvania around Hooker's rear with a portion of the cavalry he had taken away the eyes of the army, so that General Lee, like a blind man, had stumbled into the fight. I think I have shown that the fault was not in Stuart's plan, but in the execution of the part assigned to a subordinate. If Booth plays "Othello" with a bad support, the performance as a whole will be a failure, no matter what may be the merit of the chief actor. The complaint against Robertson is, that having been placed with a large force of cavalry in observation, with orders to follow on the *right* of the army *next to the enemy*, he gave General Lee no information of their movements, but followed on the *left*, and never reached the battle-field. He says that he was ordered "to cross the Potomac where Lee crossed," and follow on the *right* of the army. No such instructions were given him, as they would have involved a physical impossibility, as Lee crossed with Longstreet on the *left* at Williamsport. So did General Robertson. His instructions were: "*After the enemy has moved beyond your reach*, leave sufficient pickets in the mountains, and withdraw to the west side of the Shenandoah, and place a strong and reliable picket to watch the enemy at Harper's Ferry, cross the Potomac and follow the army, keeping on its *right* and rear." In his letter to Stuart of June 23d, General Lee had directed that, if the cavalry passed through the Shenandoah Valley, it must cross on our *right* at Shepherdstown (where A. P. Hill crossed) and move towards Frederick City. Stuart's instructions to Robertson indicated the same general direction for him to go, and, if they had been obeyed, would have put the cavalry in its proper position, between our infantry and the enemy. The Northern army moved into Pennsylvania east of the Blue Ridge or South Mountain, while Robertson's command moved on a parallel line, about twenty miles to the *west* of it. This is the only example in war of the cavalry of an invading army marching in rear of the infantry. He says that, as he was ordered to avoid pikes, he was compelled to go by Martinsburg. But that could not have been the reason for selecting this route, as he actually traveled along pikes nearly all the way; whereas, if he had gone by Shepherdstown, he might have avoided them altogether. The *suggestion* to keep off turnpikes, to save his horses' shoes, did not require him to change the direction prescribed for him on the *right* of the army. He says he hurried on from Virginia to join the army, and by *forced* marches reached Chambersburg on the evening of July 2d, and Cashtown on the next morning — which was the last day of the battle. If he had kept on to Gettysburg, he might have reached there in time to witness the last scene of the great tragedy. He had marched from Berryville to Chambersburg in *three* days — which is exactly the time that it took Longstreet's infantry to march the same distance. But then Longstreet did not pretend to be in a hurry. If keeping behind the *left* wing is the same thing as being on the *right* flank of the army, then there can be no doubt that General Robertson obeyed orders. At Cashtown, he says that he heard that Pleasonton was moving to capture our trains, so he turned off and went to meet him. Pleasonton was then fighting Stuart at Gettysburg. General Robertson made no report of his operations in this campaign, but General Jones, who was

under him, says that at Cashtown an order came from General Lee requiring a cavalry force to be sent to Fairfield, and that in the *absence of General Robertson* he determined to move in that direction at once, and that near there he encountered and routed the 6th United States Regulars. There was only *one* regiment of Federal cavalry there, which thus neutralized two Confederate brigades with two batteries of artillery. If all of our cavalry had been at the front, Meade could not have spared even this one regiment to send after Lee's trains; it would have been all he could do to take care of his own. In the skirmish at Fairfield on July 3d was the first time Robertson's command had seen the enemy since it disappeared from his front at Middleburg, Va., early on the morning of June 26th. Keeping eight days out of sight of the enemy was not exactly the way to carry out Stuart's order *to watch and harass him*. It was his leadership *preceding* the battle that I criticised. In modern war the most important service of cavalry is rendered before a battle begins. General Robertson says that it was at Martinsburg, and not at Ashby's Gap in the Blue Ridge, "*as Colonel Mosby insinuates*," that he received orders from General Lee to join the army. In December, 1877, a letter of his was published in the Philadelphia "Times," in which he justified his delay in Virginia, on the ground that his instructions required him "*to await further orders*," and stated that on June 29th, *at Ashby's Gap*, he received orders from General Lee to join the army, and started forthwith. He fortified this statement by certificates of two members of his staff. The instructions which I recently found among the Confederate archives direct him to hold the mountain gaps "as long as the enemy remains in your [his] front in force." He staid there *three* days after they had gone into Pennsylvania, and now makes no explanation of the de lay, but raises an immaterial issue about the skirmish at Fairfield, which simply proves that on the day of battle he was in the rear with the wagon trains. General Robertson says that he gave satisfaction to General Lee. Now, that General Lee was dissatisfied with some one is shown by his report in which he complains that "the movement of the army *preceding* the battle of Gettysburg had been much embarrassed by the absence of the cavalry." I have elsewhere shown that this censure can only apply to the commander of the cavalry who was left with him to observe the enemy. As soon as the army returned to Virginia, General Robertson, at his own request, was relieved of command. No argument in favor of acquittal can be drawn from the leniency that was shown in this case. There was but little of the stern Agamemnon in the character of General Lee.

Jno. S. Mosby.

San Francisco, August 24th, 1887.

An Anecdote of the Petersburg Crater.

I was in Virginia in 1864, and the paragraph in General Grant's Vicksburg paper describing the mine explosion and the frightened negro who was lifted "'bout t'ree mile" brings to my mind the mining of the Confederate works before Petersburg in the summer of 1864. Among the prisoners captured was one whose face was greatly begrimed, and as he marched by he was saluted by a blue-coat with the remark, "Say, Johnny! guess you got blown up." "Well," replied Johnny with an oath, "I should just say so; but somehow I got the start of the other fellows, for when I was coming down I met the regiment going up, and they all called me a blasted straggler!"

Henry R. Howland.

Buffalo, September 7th, 1885.

Ransom's Division at Fredericksburg.

In the August, 1886, number of The Century General James Longstreet published what he "saw of the battle of Fredericksburg, Va., December 13th, 1862."

The omissions in that article were so glaring and did such injustice, that I wrote to him and requested him to correct what would produce false impressions. His answer was unsatisfactory, but promised that, "I [Longstreet] expect in the near future to make accounts of all battles and put them in shape, in a form not limited by words, but with full details, when there will be opportunity to elaborate upon all points of interest."

General Lee, in his report of the battle of Fredericksburg, December 13th, 1862, writes as follows:

. . . "Longstreet's corps constituted our left, with Anderson's division resting upon the river, and those of McLaws, Pickett, and Hood extending to the right in the order named. Ransom's division supported the batteries on Marye's and Willis's hills, at the foot of which Cobb's brigade of McLaws's division and the 24th North Carolina of Ransom's brigade were stationed, protected by a stone wall. *The immediate care of this point was committed to General Ransom.*"

The italics in this paper are all mine. The positions are stated by General Lee exactly as the troops were posted. Lee's report continues, farther on:

. . . "About 11 A. M., having massed his [the enemy's] troops under cover of the houses of Fredericksburg, he moved forward in strong columns, to seize Marye's and Willis's hills. General Ransom advanced Cooke's brigade to the top of the hill, and placed his own, with the exception of the 24th North Carolina, a short distance in rear." . . . "In the *third* assault" [his report continues] "the brave and lamented Brigadier-General Thomas R. R. Cobb fell at the head of his gallant troops, and almost at the same moment Brigadier-General Cooke was borne from the field severely wounded. Fearing that Cobb's brigade might exhaust its ammunition, General Longstreet had directed General Kershaw to take two regiments to its support. Arriving after the fall of Cobb, he assumed command, his troops taking position on the crest and at the foot of the hill, *to which point General Ransom also advanced three other regiments.*"

General Kershaw took command of Cobb's brigade, which I had had supplied with ammunition from my wagons, and I repeated the supply during the day.

General Longstreet in his official report says:

. . . . "*General Ransom on Marye's Hill was charged with the immediate care of the point attacked*, with orders to send forward additional reënforcements, if it should become necessary, and to use Featherston's brigade of Anderson's division, if he should require it." And continuing, "I directed Major-General Pickett to send me two of his brigades: *one, Kemper's, was sent to General Ransom* to be placed in some secure position to be ready in case it should be wanted." And again, "I would also mention, as particularly distinguished in the engagement of the 13th, Brigadier-Generals Ransom, Kershaw, and Cooke (severely wounded)."

General McLaws was not upon the part of the field in the vicinity of Marye's and Willis's hills during the

battle, but his aide, Captain King, was killed on the front slope of the hill near Marye's house.

My own permanent command was a small division of two brigades of infantry,—my own, containing the 24th, 25th, 35th, and 49th; and Cooke's, the 15th, 27th, 46th, and 48th regiments,—*all from North Carolina;* and attached to my brigade was Branch's battery, and to Cooke's brigade the battery of Cooper.

At the time the fog began to lift from the field, I was with Generals Lee and Longstreet, on what has since been known as Lee's Hill. Starting to join my command as the Federals began to emerge from the town, General Longstreet said to me, "Remember, general, I place that salient in your keeping. Do what is needed; and call on Anderson if you want help."

I brought up Cooke before the first assault to the crest of the hills, and before that assault ended, Cooke took the 27th and 46th and part of the 15th North Carolina into the sunken road in front. The 48th North Carolina fought on top of the hill all day.

At the third assault I brought up the 25th North Carolina just in time to deliver a few deadly volleys, and then it "took position shoulder to shoulder with Cobb's and Cooke's men in the road."

During this third attack General Cobb was mortally hit, and almost at the same instant, and within two paces of him, General Cooke was severely wounded and borne from the field, Colonel E. D. Hall, 46th North Carolina, assuming command of Cooke's brigade.

At this juncture I sent my adjutant-general, Captain Thomas Rowland, to the sunken road to learn the condition of affairs. "His report was most gratifying, representing the troops in fine spirits and an abundance of ammunition. I had ordered Cobb's brigade supplied from my wagons."

After this third attack I was bringing up the 35th and 49th North Carolina of my brigade, when General Kershaw, by a new road leading from the mill below, came up on horseback with his staff at the head of *one regiment*, which he took in just at Marye's house. He was followed by a second regiment, which halted behind a brick-walled graveyard upon Willis's Hill.

About sundown Brigadier-General Kemper was brought up, and relieved the 24th North Carolina with two of his regiments and held the others in closer supporting distance. On the 20th of December, 1862, he sent me a list of his casualties, with this note:

"HEADQUARTERS KEMPER'S BRIGADE,
December 20th, 1862.

"GENERAL: I inclose herewith the statement of the losses of my brigade on the 13th and 14th insts. while acting as part of your command. While a report of my losses has been called for by my permanent division commander, and rendered to him, it has occurred to me that a similar one rendered to yourself would be proper and acceptable. Permit me to add, general, that our brief service with you was deeply gratifying to myself and to my entire command. I have the honor to be, general, very respectfully, your obedient servant.

"J. L. KEMPER, BRIGADIER-GENERAL.
"BRIG.-GEN. RANSOM, COMMANDING DIVISION."

As stated in my letter to General Longstreet dated August 14th, 1886, when I brought to his attention his extraordinary omissions, it gave me unfeigned pleasure to mention properly in my official report the meritorious conduct of those who were a part of my permanent command and those others who that day fell under my direction by reason of my "*immediate care of the point attacked.*" My official report exhibits no self-seeking nor partial discriminations.

Upon a letter from me (of the 17th of December, 1862) to General R. H. Chilton, assistant adjutant-general Army of Northern Virginia, wherein I protest againt the ignoring of my command in some telegraphic dispatches to the War Department at Richmond relative to the battle of the 13th, General Longstreet indorses these words: "*General Ransom's division was engaged throughout the battle and was quite as distinguished as any troops upon the field*"; and the same day, the 19th of December, I received from both him and General Chilton notes expressing the regret felt by General Lee at the injustice of which I complained. Those original letters are now among the "Official Records" in Washington.

I may be pardoned for remembering with pride that among the Confederate troops engaged on the *whole* battle-field of Fredericksburg, Va., December 13th, 1862, none were more honorably distinguished than the sons of North Carolina, and those of them who with brother soldiers from other States held the lines at Marye's Hill against almost ten times their number of as brave and determined foes as ever did battle can well trust their fame to history when written from truthful official records.*

R. Ransom.

* When credit is not given for quotations, they are from my official report of the battle.—R. R.

THE BAGGAGE GUARD.

TOPICS OF THE TIME.

Municipal Patriotism.

IT is always much easier to die for one's country than to live for it. The headlong gallop; the desperate burst up the hill-side, guided by the colors that break out again and again through the smoke; the duel-spirit that yearns to lay the ship alongside an enemy, as if that were more than half the battle,—are all sustained and made easier by the sense of personal struggle, of great sacrifices publicly recognized, and of that magnetic influence which is in the eyes of comrades-in-arms. You shall find ten men ready to assume the burdens of war, with such incentives to sustain the war-spirit, where one is ready to espouse and take to himself the homelier virtues and duties of good citizenship,—to study the institutions of his own country, to test for himself the character and influence of candidates, the policies and methods of parties, the dangers which beset the State and the most hopeful remedies for them. Happy is the man who can take contentedly the duties of citizenship as they are carved out for him and presented to him by others; but more implicitly does he serve his country who looks on such duties as his personal service, never to be intrusted to another.

It is quite too much the fashion, just now, to talk as if good citizens, in this sense, were rarer than they really are; as if the mass of American citizens took party as the primary object of their devotion, and looked at the country only through the party. If this were true, it would be the most terrible indictment of democratic institutions by their results that ever was framed; and every one who is interested in the century's history of the great American experiment ought to take a pride in every indication that it is far from true — farther to-day than it ever was before. At no previous time have parties been so much like a bundle of nerves, answering to the slightest touch of circumstance. The smallest tendency to party tyranny is met no longer by willing submission, but by mutterings of discontent, or even by open revolt; and the apparent danger is rather of party disintegration than of party despotism. The man who grumbles about the "slow train," which makes but twenty miles an hour, is simply a personified proof that the day of the stage-coach has passed away; and the man who grumbles at the tyranny of party is merely a similar proof that the Essex Junto and the Albany Regency no longer provide ready-made political opinions for a contented people, or pull Adams down or Jackson up, but that party machines are, more than ever before, the servants of those who support them.

It is mainly, however, on the larger and more stately and imposing boards of the national theater that this tendency has thus far shown itself. The voter who has come to claim for his individual conscience the supreme power of private judgment in national politics is still far too apt to accept without hesitation the guidance of his party "machine" in State politics, while he looks upon city politics as practically beneath his notice. He is affronted by the action of his national party, in any of its attempts to control the action of its minorities, while he gazes tranquilly above and beyond the grossest abuses in his own city government. His Common Council spends months in a "dead-lock" over the appointment of three or four policemen, with "deals" and diplomatic negotiations enough for the management of an empire and hardly enough success for the management of a kitchen; the Fire Department, the Health Department, the Building Department, the Department of Public Works, the Police Department, and the Department of Education, which should be in active and harmonious coöperation, spend the time and effort which should be given to the city service in dealing one another vicious blows through the newspapers and elsewhere; taxation results merely in providing a livelihood for incompetent officials and in thrusting inefficient public service upon the citizens; and still the citizen refuses to learn the essential lesson that there is such a thing as municipal patriotism, and that municipal politics is its only practical mode of expression.

Why should the politics of the city be tied down to the politics of the nation or the State? Is there any identity of interest between the two, such as would be apt to secure efficient city administration by a selection of city officers based upon national party preferences? Every one knows the contrary, from practice as well as from theory: in a few of our cities, the lesson has already developed a strong and effective independent city vote; and yet, take the country through, the individual conscience seems to be almost as inert as ever in this matter. The man who, moved by conscience, takes up his own burden of battle against the abuses of his own city government, is pretty certain of the pity of those who know him personally and of the criticism of those who are strangers to him; he need not expect that which he deserves — the cordial sympathy of his fellow-citizens, their consideration for his inevitable errors, and their rejoicing in his successes. His fellow-citizens have not yet been educated up to that point. We still lack that essential factor in political development — municipal patriotism. Thousands of men have been found ready and willing to die for the United States or even for the individual State. Where are the men who would die for Brooklyn, or Chicago, or San Francisco? Where, indeed, are the men who would *live* for them?

It is an indication of progress, at least, that this last question has every year a larger answer: the growth is not so large as it should be, but it is a growth, not a degeneration. Every year sees an increased number of men who find their most interesting field of investigation in the various problems of city government; who study the American city, its methods of administration, its methods of voting, its abuses and their remedies, with all the intensity which once was peculiar to national politics. Men have even been found willing to abandon wide fields of national usefulness to enter the new battle-ground of municipal administration. Are

their efforts to be forever thwarted by the ill-advised experiments of State legislatures, governing bodies which are removed from the city by every sympathy and interest? Nothing can prevent such a result, unless the municipal patriotism of the citizens has a parallel development, as the essential sustaining power to the new development of municipal leadership. The American city must be left to work out its own salvation, released from the meddlesome interference of the American State legislature; and the only means of attaining such a result is the development of an alert and even irritable patriotism in the city itself. When the time comes in which the citizen shall feel the same sense of personal outrage in the State's interference with his city government that he is prompt to feel in the nation's interference with his State government, the problem of the American city will be very far on the road to solution.

Human history seems to run in circles: new conditions are introduced, run their round of development, and bring the race back to a new phase of the old beginning-point. The tangible current of history began in the cities of the Orient. When fully developed Oriental despotism swept into Europe, individual liberty found its bulwark in the Greek cities; and these, in their decadence, yielded to the new type of individual power represented by the Eternal City. When this power had become a despotism, the individual still cherished his city as his main defense against the tyranny of the Cæsar. In the downfall of the great Empire, it was the cities that stood out like islands in the stagnant waters of tyrannical stupidity which overspread the civilized world; and the cities, again, led in the rising struggle for individual freedom which has given modern history its character. We may not have all the incentives which led the Hollander to personify his city, to speak of it almost as of a mythological goddess, to count its buttresses and foundation-stones as even dearer than his hearth-stone, and to die on its walls or before its gates with all the patriotism which marked Marathon or Gettysburg. But, when one considers the importance of the American city, the increasing drift of American life into it, the magnitude of the interests, political as well as material, which hang upon its development, and the possible influence which the failure of the American city could exert upon the future history of the American people, he must believe that the field for municipal patriotism is even wider and more important in America than it ever was in Holland, and that nothing is more desirable for our political peace than the growth of an intelligent devotion of the citizen to his own city, and a personal dedication of himself to its healthy and honorable development.

The Seventieth Year of Our National Disgrace.

With the 15th of February next we shall enter upon the seventieth year of the United States Government's official license of literary piracy. It was on that day of the year 1819 that Congress formally excluded the foreign author from the protection then first accorded to the American. It may be that at that time this issuance of letters of marque and reprisal upon the literature of other nations was thought to be the best way to build up that of our own, but the protests from business interests which were made against the attempts under the leadership of Clay, Webster, and Everett to remedy the defect in 1837 and 1838, indicate that less patriotic considerations were at the bottom of this exclusion. However this may be, the failure to repeal the excluding clause has not only dwarfed the growth of American letters and given an abnormal impetus to the spread of foreign ideas among our people, but has exposed us for three-quarters of a century to the just reproaches of the civilized world; and to-day, when the intelligent opinion of the country demands the reform — as for years it has demanded it — the indifference of our legislators to the fundamental question of principle which is involved shows the moral callousness which gathers upon a long-existing wrong. Possibly we underrate the open-mindedness of Congress on this question, but the fact that it is thought absurd to expect on moral grounds the speedy redress of so manifest and grievous a wrong is an evidence of the dangerous disrespect with which the legislative office in this country is invested. The idea is certainly widely prevalent that a question of pure morality has little chance in Congress when there is any opportunity of protest from so-called vested interests. No doubt this conclusion does injustice to many upright legislators, but it is nevertheless a conclusion for which their supineness is largely and especially responsible.

But while Congress, by its inaction, is feeding this sentiment of distrust, it is much to be said of the tone of the literary classes in this country that their innumerable appeals in favor of this reform have been almost invariably on the line of the moral argument. They would be less entitled to the respect of their fellow-men, as in large measure conservators of the ideal, were they to take a less sincere position. Better a thousand times that a copyright law should be delayed another half century, than that this ground should be abandoned for that of mere political expediency. Justice is so necessary to the continuance of the race that it often occurs that there are many reasons for doing a just thing. But it may be questioned whether the moral tone both of him who demands justice and of him of whom it is demanded is not lowered by demanding it on any ground other than because it is right. Expediency has been defined as a lower kind of right, but even admitting this, it is confessedly a *lower kind*, and the acceptance of the lower motive is particularly perilous to a conscientious nature,— character being the attitude toward evil rather than the mere accomplishment of certain conventional acts called virtuous. For surely the habitual acceptance of a ground of expediency tends toward the abandonment or suppression of the higher point of view. And yet this higher point of view is the chief distinction in morals. Who would not be insulted to be asked not to lie because it may lose him consideration, or not to steal because he can make more money by being honest? Indeed, the comparative distances of men from the point of view of the criminal classes may be determined by their sensitiveness to the affront of assuring them that "Honesty is the best policy."

American authors, therefore, do themselves honor in holding out for a settlement of the question on the plane of justice rather than on that of commercial advantage, and in declining to take responsibilities in the matter of copyright legislation which do not appertain to them and which commit them to a line of policy in

which as authors they have little or no interest. Their position has been one of dignity and self-respect; they have contented themselves with urging upon Congress what they regard as the proper remedy — a pure and simple copyright law. They stand ready to give their frankest opinions as to the probable working of any other measure that may be introduced; individually many of them favor one or another of the proposed commercial conditions, but to expect them as a body to urge the particular schemes of other interests, which as a party to the compact they would be obliged hereafter to defend, is one more indignity added to those which they have endured for nearly three-quarters of a century. They are not "irreconcilables" in this matter, and will welcome the establishment of the principle of copyright, with any conditions which, after a full examination of the subject, Congress may impose. These conditions, however, should be proposed and defended by those who profess to believe them wise; and the responsibility of determining what, if any, conditions should be imposed should be made to rest where it belongs, — with the legislative power.

"Constitution Day." *

THE reflection that it would be wise to make a national holiday of the 17th of September is one which must have occurred to many who witnessed or read of the celebration at Philadelphia of the centenary of the Constitution. A venerable justice of the Supreme Court has pronounced this celebration the greatest public occasion of the kind in our history, and those who witnessed the pageantries of peace in which shone so conspicuously the public spirit of Philadelphia — a constant quantity, it must be said — can pay no higher compliment than to say, as they do, that the celebration was worthy of the event commemorated. Its significance was enhanced by the fact that it was the first public opportunity for the whole country to unite in a reverential recognition of the supreme body of our national law, which now includes — in a settlement not alone of force, but of reason and experience — the national decision upon those differences of interpretation which, like the dragon's teeth in the fable, sprang up into a harvest of armed men. It is not to be wondered at that so long as the Constitution meant one thing to one section and another to the other, there could be no real unity of appreciation of it: each section dwelt not so much on the grandeur of a common inheritance as on the wisdom of its own theory of government. Happily the danger in this condition of affairs is past, and we have learned from it that it is the part of statesmanship and patriotism not merely to admit but to cultivate kindly relations among all the sections of our diversified country. The serious uses in this direction of such an occasion as the Philadelphia celebration are not likely to be overrated. It has been wisely said that the quickest way to cure the quarrelsome tendencies of children is to provide them with some common ground of interest, even the simplest, such as marching together; and the rule is not without value for the children of a larger growth. Merely to group about a national idea intersectional courtesies and social relations — the want of which kept us sorry strangers before the War — is an incalculable influence in making our people homogeneous and sympathetic. We cannot but think that this influence would be broadened and perpetuated by a formal recognition of the day as a national holiday.

In another aspect the day could hardly fail to have great value. We are not likely, from the nature of the Declaration of Independence, to have any serious differences over its axiomatic pronouncements of political principles; but the fact that the Constitution is likely to change with the needs of a growing country is a reason for cultivating a popular knowledge of its past benefits and an intelligent regard for its conservative influence. Future changes in that instrument — and the day would lead to the consideration of its defects — are likely to be made against the wishes of large minorities and after burning discussion, and it is well that they should have the sanction of the broadest popular acceptation *per se* — such as the later amendments could not have had without a war. Moreover the debates over such questions as the regulation of commerce between the States and the proposed national aid to State education indicate that our future political history is likely to deal largely with questions involving the powers of the legislative branch. Our people, who have the faculty of not crossing bridges till a long time after they come to them, are not less likely than heretofore to rely on chance to take them over future constitutional chasms. But we need the preventive of a broader popular study of the functions of government,— an understanding of what it may and what it may not do. The use of such a holiday would be to aid in supplying from year to year that strength of intelligent sentiment which in national emergencies is the most practical support of all law.

It is easy to say that our national holidays have become occasions for mere rest and frolic. Even thus, since the national foible is not idleness, it would be better to retain them. But aside from the direct patriotic influence of their celebration, the mere existence of Washington's Birthday, Memorial Day, Independence Day, or "Thanksgiving" is the challenge of a great idea to the mind. The leaders of the "Labor Party" are shrewd enough to see the advantage to their cause of getting a recognition of it into the national calendar, and they are not likely to lose time in setting about it. The contrast in significance and value between "Constitution Day" and "Labor Day," as one imagines them, well exemplifies the uses to which a national holiday may be put. If the 17th of September needs any other recommendation to the favor of the American people, it may come from the fact that upon that day also was given to the nation one of the wisest and most notable of our State papers,— the "Farewell Address" of its great, unselfish First President.

* On the 8th of June, 1861, Mr. Charles Dudley Warner published in the Hartford "Evening Press" an editorial article favoring the establishment of two new national holidays, namely,— Flag Day, June 14th, and Constitution Day, September 17th. This project — the more appropriate by reason of the national crisis of that year — received considerable attention in the press. September 12th of the same year Mr. Warner published another editorial on Constitution Day, and that year the day was celebrated in several places, especially in Connecticut and Ohio. On the 12th of June, 1862, Mr. Loomis of Connecticut introduced in the House of Representatives a resolution recommending the establishment of the two holidays. On the 13th, after brief debate, this resolution was laid on the table by a vote of 67 to 33. In 1877, the centenary of the adoption of the flag was generally celebrated throughout the North.

OPEN LETTERS.

Cheap Books.

IT is one of the assumptions of those who oppose International Copyright, either ignorantly or willfully, that this reform will raise the price of books in the United States. We are all agreed that the American people must have cheap books, yet the ordinary answer to this plausible assertion is modeled on Mr. Lowell's memorable saying that "there is one thing better than a cheap book, and that is a book honestly come by." I think it is possible to make a broader answer than this by boldly denying the assumption. The passing of the bill proposed by the American Copyright League will not raise the price of any class of books in the United States, with one possible exception. To this exception I will return shortly; in the meanwhile I wish to repeat my assertion, that books will not be any dearer in America after we have passed the copyright bill than they are now. The absence of International Copyright makes books cheaper here only in so far as American publishers are willing to take foreign books without paying for them. A consideration of the present condition and annual statistics of the American book-trade will show that the legal right to pirate is not now utilized by most American publishers, and that those who are still privateers seek their booty chiefly, if not solely, among books of one exceptional class.

From the figures published annually in the "Publishers' Weekly," the following table has been prepared to show the different kinds of books published in the United States during the past five years. (The classification is not quite that of the "Weekly," but has been modified slightly by condensation.)

	1882	*1883*	*1884*	*1885*	*1886*
Education and language	221	197	227	225	275
Law	261	397	455	431	469
Science (medical, physical, mathematical, political, and social)	406	407	511	443	499
Theology, religion, mental and moral philosophy	347	390	399	460	395
History	118	119	115	137	182
Literary history and miscellany, biography and memoirs, description and travel, humor and satire	559	521	529	501	719
Poetry and the drama	182	184	222	171	220
Juveniles	278	331	358	388	458
Fiction	767	670	943	934	1080
Et cetera	333	265	329	330	379
Total	3472	3481	4088	4020	4676

Taking up these classes in turn, we shall see what will be the effect on each of the passage of the bill of the American Copyright League. On the first class, education and language, there would be no effect at all, as the text-books now used in American schools were written by Americans and are covered by copyright: it is hardly an exaggeration to say that the American school-boy never sees a book of foreign authorship in school-hours; — I know that I never did until after I had entered college, and then very infrequently. Fortunately for the future of our country, young Americans are brought up on American books. The foundation of American education is the native Webster's Spelling-book. In some respects the making of school-books is the most important branch of the publishing business, and the passage of the copyright bill would not influence it in any way; American school-books would be neither dearer nor cheaper.

In the second class, law, are included a tenth of the books published in the United States last year, and from the inexorable circumstances of the case most of these books are of American authorship and are already protected by copyright. All reports, and all treatises on practice and on constitutional law, etc., are of necessity national. Now and again an English treatise of marked merit may be edited for the use of American lawyers with references to American cases, but this is infrequent; and not often would the price of any work needed by the American lawyer be increased by the passage of the copyright bill.

Of books in the third and fourth classes — science and theology — very few indeed are ever pirated. Once in every three or four years there appears in England or France or Germany a book like Canon Farrar's "Life of Christ," the American price of which is lowered by rival reprints. A large majority of these books are written by American authors; and in general the minority by foreign authors are published here by an arrangement with the foreign author tantamount to copyright. Although purely ethical considerations ought to have more weight with readers of books of this class than with those of any other, yet it would be only infrequently that the price of any book of this class would be raised by giving to the literary laborer who made it the right to collect the hire of which he is worthy.

Taken together, the next three classes on the list — history; literary history and miscellany, biography and memoirs, description and travel, humor and satire; and poetry and the drama — include nearly all of what used to be called Belles Lettres (except fiction), and they supply nearly a quarter of the books published in America. In these and in the preceding classes most of the books are of American authorship, and most of those of foreign authorship are published at just the same price as though they were by native writers. It would probably surprise most readers who imagine that the absence of International Copyright gives us many inexpensive histories and biographies and books of travel and poems, if they were to consider carefully the catalogues of the paper-covered collections which furnish forth our cheap literature. Among the chief of these collections are the "Franklin Square Library" and "Harper's Handy Series." In 1886, there were issued fifty-four numbers of the "Franklin Square Library," one of which was by an American. Of the remaining fifty-three, forty-six were fiction, and only seven numbers could be classified as history, biography, travels, or the drama — only seven of these books in one year, and they were less than one-seventh of the books contained in this collection. In the same year there were sixty-two numbers in "Harper's Handy Series." Deducting four by American authors

we have fifty-eight books issued in cheap form owing to the absence of International Copyright. Of these fifty-eight books fifty-two were fiction, and only six belonged in other branches of Belles Lettres,—only six of these books in one year, and they were less than one-ninth of the series. In these two cheap collections then, there were published in 1886 one hundred and eleven books of foreign authorship, and of these all but thirteen were novels or stories. Not one of these thirteen books was a work of the first rank which a man might regret going without. It may as well be admitted frankly that these thirteen books would probably not have been published quite so cheaply had there been International Copyright; but it may be doubted whether if that were the case, the cause of literature and education in the United States would have been any the worse.

In the class of books for the young there are probably more works of foreign authorship sold than in any other class that we have hitherto considered, but in most cases they are not sold at lower prices than American books of the same character. Indeed, I question whether many English or French books for the young are sold at all in America. At bottom the American boy is more particular and harder to please than the American woman; he likes his fiction home-made and he has small stomach for imported stories about the younger son of a duke. He has a wholesomer taste for native work; no English juvenile magazine is sold in the United States, although several American juvenile magazines are sold in Great Britain. We export books for the young, and we import them only to a comparatively slight extent.

I come now to the one class of books the price of which would be increased by the granting of International Copyright. This is the large and important class of fiction. Of course American novels would be no dearer; and probably translations from the French, German, Italian, Spanish, and Russian would not vary greatly in price. But English novels would not be sold for ten, fifteen, twenty, or twenty-five cents each. We should not see five or ten rival reprints of a single story by the most popular English novelists. There would be but a single edition of the latest novels of the leading British story-tellers, and this would be offered at whatsoever price the authorized publisher might choose to ask, sometimes much, generally little. English fiction would no longer cost less than American fiction. The premium of cheapness which now serves to make the American public take imported novels instead of native wares would be removed; and with it would be removed the demoralizing influence on Americans of a constant diet of English fiction. That American men and women should read the best that the better English novelists have to offer us is most desirable; that our laws should encourage the reading of English stories, good and bad together, and the bad, of course, in enormous majority, is obviously improper and unwise. A well-nigh exclusive diet of English fiction full of the feudal ideas and superstitions and survivals of which we have been striving for a century to rid ourselves, is not wholesome for those who need to be strengthened and enlightened to do their duty as citizens of a free republic. The strongest argument against novel-reading just now is that the novel which an American is most likely to read is British. "Society is a strong solution of books," Dr. Holmes tells us; "it draws the virtue out of what is best worth reading, as hot water draws the strength of tea-leaves." And in like manner society draws the vice out of what is least worth reading. Unfortunately under the present state of the law, society in America is far less likely to get what is best worth reading than what is least worth reading.

The passage of the Authors' Copyright Bill would tend to correct this evil: it would make English novels dearer, probably; but it would have very little effect on the prices of other books.

Brander Matthews.

Occupations of the Blind.

(EDUCATION OF THE BLIND—CONCLUDED.)

ANY person of average endowments, if deprived of sight in the early part of life, before his habits of seeing have become too firmly fixed, will be able after a few years' experience to overcome all the actual difficulties directly occasioned by loss, and to do the same work that others do in his chosen vocation and do it equally well, though it may be at the expense of rather more time and strength and by somewhat different methods. He will not need or wish to ask for sympathy or special favors or partial judgment from his patrons, but will be glad to stand alone, fight his own battles and rely on his own resources; but he ought in justice to be allowed an equal chance with his seeing competitors, to be able to demand that no discrimination be made against him without a fair trial, that his work be valued wholly upon its merits, irrespective of his manner of performing it, or of the fact that the majority, failing to understand how he is able to do it, hasten to presuppose him unable by consequence.

In reality there are comparatively few occupations in which, so far as they are themselves concerned, the blind may not compete with a fair chance of success; though among those possible, some present far greater intrinsic difficulty than others, and the amount of public credence and support to be counted on in each depends largely upon the number of familiar precedents which can be cited in that particular branch.

It may be laid down as a general rule that those departments of activity which are purely intellectual, or in which the physical elements employed are within the reach of touch and hearing, are all feasible; while those will be the most advantageous in which special demand is made upon the faculties which the blind are forced to cultivate to an unusual degree, such as hearing and memory.

To begin with manual labor: Certain kinds of farming offer an excellent opening, like market-gardening, the raising of poultry and small fruits, dairy work, and like occupations which are carried on within circumscribed limits and all parts of which may be brought within arm's-length. Besides chair-seating and broom-making, upholstery and cabinet work might be undertaken with ease and profit. Great skill with tools is no uncommon thing with the blind, and the joining and polishing of furniture can be done as well by touch as by sight. The qualities and differences in woods and stuffs could easily be distinguished by their texture and weight, and their colors would be a simple matter of memory.

It is a popular fallacy, widespread and wholly baseless, that the blind can tell color by feeling. I regret to say that considerable humbug has been carried on in this respect at certain public institutions and in private, by persons who knew better and ought to have been ashamed of it, for the purpose of astounding and interesting the public. It is a very simple matter to keep beads or worsteds of different hues in different compartments, or to recognize each, when mixed, by size or quality or some slight peculiarity unnoticed by the casual observer, and thus to select with accuracy, as if by the color, and keep up the delusion.

Among the higher forms of skilled labor peculiarly adapted to the blind is that of tuning musical instruments, especially the piano,— an entirely creditable and quite remunerative occupation, in which their exceptionally fine sense of hearing is utilized to the full.

In the higher intellectual spheres the employment of teaching affords a wide and promising field, philosophical and metaphysical branches, as well as languages, furnishing probably the most favorable opportunities; the latter, in particular, giving fullest scope toa fine ear and exceptional memory. There is many a professor's chair in the country to which a gifted blind person might aspire, so far as his ability to fill it is concerned, though to secure the appointment might be another matter. The pulpit and the lecture-platform also offer opportunities and attractions, and have already been honorably represented by members of this class. But the realms in which sight may be most easily dispensed with, and which present the fewest barriers to the entrance and successful progress of those deprived of it, are music and literature. Given a fair amount of ability and natural aptitude, they offer an open, easily accessible plane of activity, with few disadvantages, save for some minor technical points, which may be overcome with scarcely a third more work than others would require. The intense inner life and strong personality, the habits of concentration and introspection, the accumulated imaginative and emotional power of minds in a measure cut off from natural outlets and forced in upon themselves, here find free vent and are brought into active requisition; while in music a superiority in the faculties of touch, hearing, and memory may be utilized to the full.

It may be asked why, then, have so few sightless persons attained preëminence in this branch, while so many who have attempted it have reached only mediocrity. Because, until very recently, few, if any, of their guardians and instructors have had sufficient faith in their capability to give them even a fair training and average opportunities. While their seeing competitors are spending years of time, and thousands of dollars upon their studies, at the art centers of Europe, they are kept at special schools, under the musical guidance, for the most part, of inexperience, indolence, and incompetency, any patient person who can be had cheap being considered good enough to fill the post of teacher at such institutions. I am glad to recall a few exceptions of teachers who are doing good work, and if their number can be increased till a really high standard becomes general, the results of the future in this regard will tell a different tale.

Though not, perhaps, within the limits of my theme, I would fain touch here upon one point, than which none is more erroneously regarded in connection with the blind. I refer to the probabilities for them of domestic relations and happiness.

The prevailing opinion of the world is, that a young person deprived of sight is necessarily doomed to a single and solitary existence; that for him the experiences of love and marriage are altogether out of the question, unless he be united with an unfortunate person suffering from his own or some equal infirmity, or, in very exceptional instances, chance upon a mate so imbued with the spirit of self-sacrifice as to espouse, from sheer pity, a person thus afflicted.

This seems at first a fair statement, and would, indeed, be a just conclusion, were it not deduced from unjust premises. That is, if the blind all were, or necessarily must be, the helpless, useless, whining objects of charity which they are generally — alas! often with reason — considered, there could be no two opinions as to the right of expecting any normal man or woman to be doomed to their society for life. But on the other hand, if a sightless person, by undue efforts, or unusual talents, or both, has succeeded in overcoming his misfortune, and in placing himself on a par with others, I see no reason why he may not deserve and expect a fair share of life's happiness in this as in other respects.

I have endeavored in these papers to treat the class under consideration with strict impartiality and candor — as children, as students, as active self-supporting citizens and heads of families — and to prove, for the encouragement of fellow-beings similarly burdened, the comfort of their friends, and the enlightenment of the public, what has long been my own opinion, justified by facts and experience, that loss of sight, though always deplorable, is not necessarily the hopeless and overwhelming misfortune which it is universally thought to be.

Edward B. Perry.

Re-Unions.

IT is desired to print in THE CENTURY a compact record of the various formal meetings which have taken place between the veterans of the Union and Confederate armies; and in order to make the list more complete, the Editor will receive with thanks information of the less widely known occasions of the kind, including place, date, and names of war-organizations participating,— and accompanied, so far as possible, by printed reports of the proceedings. Address "Reunion," THE CENTURY MAGAZINE, 33 East 17th street, New York City.

The Frontispiece Portrait of Lincoln.

THE photograph from which the frontispiece to this number was engraved was taken in Springfield, Illinois early in 1861, soon after Lincoln's election. A steel engraving of this picture was used on the original ten-dollar greenback and, later, on one of the issues of 5-20 bonds. This photograph belonged to the late F. W. Ballard, to whom it was given by Mr. Lincoln.

BRIC-À-BRAC.

Helen.

On certing subjects I jest know:
  There 's gals an' gals, I say,
An' the purtiest — don't care where you go —
  Lived yender, crost the way.

Them ankles, round as a rollin'-pin;
  That braid which hung way down;
All bright as if the day 'd struck in —
  A sky gal on the groun';

A leetle color on her cheek,
  Where the blood looks out o' door,
Like them fust changes on the maples
  From frost, the night afore —

No use in paintin' a snowdrift white,
  I need n't go no fu'ther;
God might, I s'pose — I s'pose he might —
  But he never made another.

We warn't no more nor a year apart,
  I 'd watched her from a chicken; —
I 'm there, right there, when you 're talkin' heart
  An' this 'ere women-pickin'.

We learnt together. At a book
  I hed n't no special sconce,
But in lickin's —'stead o' her, I took
  The ruler more than once.

I 'd danced long wi' her rether reg'lar,
  At most the scrapes in town;
Fact, I hev heerd 't was feared I 'd shake
  The darned old tavern down.

I 'd helped her folks at killin'-time,
  Or when hay was late in cuttin';
An' when their eatin' warn't quite prime,
  Swapt a bit of veal or mutton.

As I said, we started head an' head,
  But she kept gainin' groun';
At last, my dander up, I said,
  "I 'll in, be it swim or drown."

So, 'rangin' on 't some evenin's prev'ous,
  One mornin' I hitched the pair;
An', riggin' out my most mischievous,
  Druv her, spinnin', to the Fair.

To this 'ere time, to put it nice,
  There was nothin' wuth declarin',
'Cept I 'd kissed her onct or twice,
  At a huskin' or a parin'.

The grays, I swings! they made things whistle,
  A-gittin' to the Fair;
An', like a gold finch on a thistle,
  She sot beside me square.

As I was sayin', the grays warn't lazy,
  We got there bright an' early;
The dew still glistenin' on the daisy,
  The hills with mist all curly.

It ain't my style — doin' things by halves,
  I cut the entire figur';
We took all in, from the colts an' calves
  To the patent thig-a-magigger.

Ball butter, punkins two foot thro',
  Turnips, an' cheese, an' honey,
Pink-eyes, rag carpets, an' patch quilts too —
  We seen 'em; an' I slung some money.

I scattered the coppers; an' my pile,
  I remarked, I 'd willin' risk it
That a gal I knowed could beat 'em a mile
  On gingerbread and biscuit.

We heerd the speech an' lots o' the band,
  See the trot an' plowin' matches;
An' I never so much as techt her hand —
  Though there was some close scratches.

We made a day on 't: see all the stock,
  The fruit, the home manufactur's,
An' got away at eight o'clock,
  'Thout any compound fractur's.

The air was closter than I need,
  An' gin me a sort o' chokin';
So I druv at no partic'lar speed,
  An' tried to pluck up, jokin'.

The makeshift did n't take, somehow,
  An', rether wuss than better,
Sez I, "I 'll bring things hum, right now;
  If she mittings me — let her.

"Helen," sez I, a-takin' her hand,
  "Anent the fire-fly's spark,
That's jest my fix — you understand —
  A-burnin' in the dark."

She sot as straight, sir, straight an' still,
  As a rabbit in the wood —
On top the choke I took a chill;
  She certing understood.

"The goldenrods are comin' on,
  The sumachs growin' brighter;
The singin' birds hev quit, an' gone";—
  I squeezed a leetle tighter.

"It 's lonesome like (ez you be fair
  I know you 'll be forgivin'),
An' I 've a castle in the air
  Too big for *one* to live in.

"Since fust we played house-keep together —"
  Here come a flash o' lightnin'!
My back-bone felt like a big wet feather,
  But I kept my hand a-tightenin'.

"Ever since that day —" an' there I broke.
  So did a clap o' thunder:
It seemed as if the hevings spoke,
  An' I could see it stunned her.

She dropt them long, thick, sweepin' lashes,
  And her face grew white all over,
Like where a sprinklin' of wood ashes
  Brings up the new white clover.

I — guess we 'll let the subjeck drop.
  Do you hear that youngster yellin'?
When he begins, I allers stop,
  Give the floor to him an' — Helen.

John Vance Cheney.

The Goddess.

(DEDICATED TO T. B. ALDRICH.)

"A MAN should live in a garret aloof,
And have few friends and go poorly clad,
With an old hat stopping a chink in the roof
To keep the Goddess constant and glad."

So thought the poet and so thought I.
A garret I found me without delay,
And hung a picture of lurid gloom —
Dante and Virgil, by G. Doré.

But the saddest picture by far in the room
Was the one I made, with my bottle of ink
Spinning a verse with a thread of thought
While the wind blew fresh through the hat and chink.

I feared that the Goddess might take a cold,
So I placed a chair in the sunset's flame,
And patiently waited a year for her,
But somehow the Goddess never came.

Frozen and sleepy there I sat,
Wasting my paper by the quire,
And warming my inspiration up
In the far-off heat of the sunset fire.

With picture and ink, and roof and chink,
I might have staid till the end of time;
For the heathen lady betrayed my cause,
And never advanced me the ghost of a rhyme.

So I cut the fringe from my trousers-leg,
A silk hat placed on my ex-combed hair,—
"Farewell," I said to the mean, bare room,
"Farewell," to the clouds and zenith air.

Once more I stood in the busy throng,
My hand by my fellow-beings pressed;
For my friends came back in happy crowds
When they found I knew no more than the rest.

Ah, poet! I would you had known, when you wrote,
How very much sadder the case might be,
To live in a garret, alone and aloof,
With never a Goddess for company.

Karl.

At First Sight.

"HAST thou a heart, O deep-eyed girl,
To match that glance of thine?
Hast thou a soul as rich and sweet,
And may I call it mine?"

"I have no heart, O blue-eyed boy;
I am a maid forlorn,
For I dreamed of you and lost my heart
Long years ere I was born!"

"I have thy heart, O beauteous maid,
And hard within my breast
It leaps to meet its owner sweet,
That it may be at rest."

"And I have thine, O fair-eyed lad;
It flutters like a feather":
"Then since they may not be exchanged,
Let 's keep them close together!"

Charles H. Crandall.

"Thou Didst Not Say Me Nay."

I PRESSED thy hand at parting, thou didst not say me nay;
A smile so soft on dimpled cheek and roguish lip 'gan play,
I dared to kiss that tempting cheek,
I dared those honeyed lips to seek;
E'en now I scarce believe it true — thou didst not say me nay.

I asked might I return, Love — thou didst not say me nay;
And now I have nor rest by night, nor have I peace by day.
And still I fear to come again,
And half misdoubt my wondrous gain;
And half misdoubt that I have dreamed thou didst not say me nay.

Jennie W. Netter.

Meditations of a Jealous Rival.

YES, here I lounge and mope,
An abject misanthrope,
As she walks,
And looks up with winsome grace
In *his* red-mustachioed face
While he talks.

Of course she worships *him*,—
You see he 's "in the swim"
And I ain't.
When he speaks, to see her laugh
One would think this golden calf
Was a saint.

The fact is, he 's an heir
And owns his coach and pair,
And a house
Which he wheedled from "papa,"
Whilst I dwell in quarters à
La church mouse.

I 'm but a menial clerk —
I have to grind and work
Like a mill;
And I go with baggy knees
And my coat patched up; but he 's
Dressed to kill.

Whene'er I call, alack,
His hat usurps the rack,
Sure as fate;
And she jokes and romps with him,
But with me she 's very prim
And sedate.

You see the reason why
I moan around and sigh,—
I 've no show:
She is all eyes for the swell;
And I guess I might as well
Let her go.

. . . . . .

They 've turned the corner now,—
She sees me! got a bow!
And a smile!
Lovelier girl I never knew.
P'raps it would be better to
Wait awhile!

THE CATACOMBS OF ROME.

BAPTISM OF CHRIST. (FROM CRYPT OF LUCINA. ACCORDING TO ROSSI AND ROLLER.)

AMONG the many objects of interest which claim the attention of visitors to Rome are the Catacombs, or subterranean cemeteries of the early Christians, outside of the city walls. They attract alike the archæologist, the historian, and the theologian. It is now more than fourteen hundred years since the celebrated scholar and monk, St. Jerome, the translator of the Latin Bible, then a student at Rome, used to visit that vast necropolis with his friends on Sundays to quicken his devotion by the sight of the tombs of martyrs and confessors from the times of persecution. "There," he says, "in subterranean depths the visitor passes to and fro between the bodies of those that are buried on both sides of the galleries, and where all is so dark that the prophecy is fulfilled, 'The living go down into Hades.' Here and there a ray from above, not falling in through a window, but only pressing in through a crevice, softens the gloom. As you go onward, it fades away, and in the darkness of night which surrounds you that verse of Vergil comes to your mind:

"'Horror ubique animos, simul ipsa silentia terrent'
(Horror on every side, and terrible even the silence)."

The same impression is made in our days, only the darkness is deeper and the tombs are emptied of their treasures; yet the air is filled with the associations of the past when heathen Rome and Christian Rome were engaged in deadly conflict which ended in the triumph of the cross.

Not many years after the days of Jerome, who died at Bethlehem in 420, the Catacombs were virtually closed and disappeared from the memory of the Christian world. The barbarian invasions of Alaric, Genseric, Ricimer, Vitiges, Totila, and the Lombards turned the Eternal City again and again into a heap of ruins and destroyed many valuable treasures of classical and Christian art. The pious barbarism of relic-hunters robbed the graves of martyrs and saints, real and imaginary, of their bones and ornaments and transferred them to the Pantheon and churches and chapels for more convenient worship. Cartloads of relics were sold to credulous and superstitious foreigners.

In the year 1578 they were unexpectedly brought to light again, and created as great an interest in the Christian world as the discovery of long-lost Pompeii and Herculaneum in the eighteenth, and the discovery of Nineveh and Babylon, Mycenæ and Troy, in the nineteenth century. Some laborers in a vineyard on the Via Salaria, digging *pozzolana*, came upon an old subterranean cemetery ornamented with fresco paintings, sculptured sarcophagi, and Greek and Latin inscriptions. "On that day," says De' Rossi, "was born the name and the knowledge of *Roma Sotterranea*." A new chapter of ancient church history was opened,

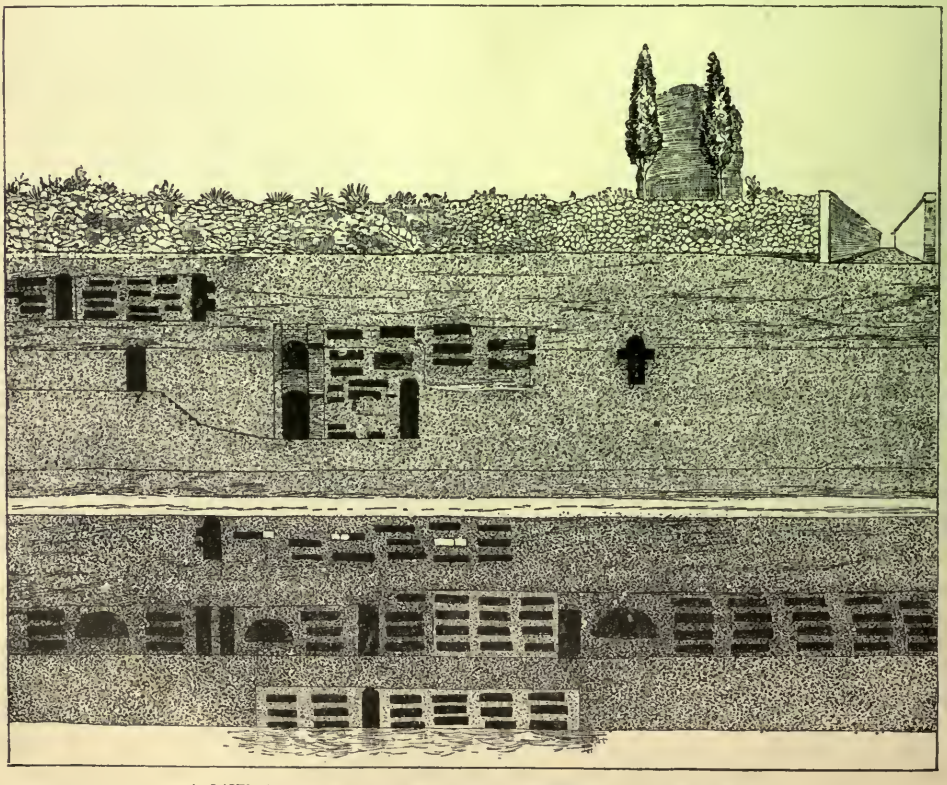
full of instruction about the domestic and social life, the manners and customs of the early Christians, and their religious views in the face of death and eternity. But it was only in our generation that the Catacombs were thoroughly explored and made the subject of systematic and scientific research, free from dogmatic and sectarian prejudices. The acknowledged pioneer in this department of antiquarian knowledge is the still living Cavalier John Baptist de' Rossi of Rome. His monumental Italian work, "Roma Sotterranea" (Rome, 1864–77, 3 vols.), richly illustrated, and his periodical, "Bulletino di Archeologia Christiana," are the chief sources from which Allard, Northcote and Brownlow, Marriott, Kraus, Lundy, Withrow, and others have drawn the material for their more popular works. Next to De' Rossi must be mentioned John Henry Parker, who in the twelfth part of his "Archæology of Rome" (Oxford and London, 1877) discusses the Catacombs, and Théophile Roller, a French Protestant pastor who devoted years of study to the same subject and embodied the results of his researches in two large and richly illustrated folio volumes, "Les Catacombes de Rome" (Paris, 1879-81).

For a long time false opinions were entertained which have been dispelled by modern research. The Catacombs were supposed to be forsaken sandpits and stone-quarries, excavated by the heathen and occasionally used as receptacles for the corpses of slaves and criminals. But it is now ascertained from the difference of soil, which is not at all adapted for building material, and the mode of construction, that they are of *Christian* origin and were intended from the beginning for burial-places. Another error, that they were places of refuge from heathen persecution, has likewise been abandoned. The immense labor required for their construction could not possibly have escaped the notice of the Roman police; and the heathen persecutor, by simply closing the access, could have easily smothered the Christians by thousands if they had taken refuge in those dark and narrow passages. In spite of the knowledge gained on the subject within the last twenty years, these errors are still repeated in popular books, and even in Dr. Killen's "Ancient Church," republished in New York, 1883.

The Catacombs, on the contrary, owe their origin to Roman *toleration*. The imperial government protected by law the burial



A SECTION OF THE CATACOMBS SHOWING SEVERAL STORIES OF TOMBS.

LOCULI, WITH TILES. (SUPPOSED TO BE OF THE SECOND CENTURY.)

clubs, composed mostly of poor people who by regular contributions secured decent interment for their relatives and friends. The Romans were not savages, but civilized men, and respect for the dead is an instinct of human nature — "*De mortuis nil nisi bonum.*"

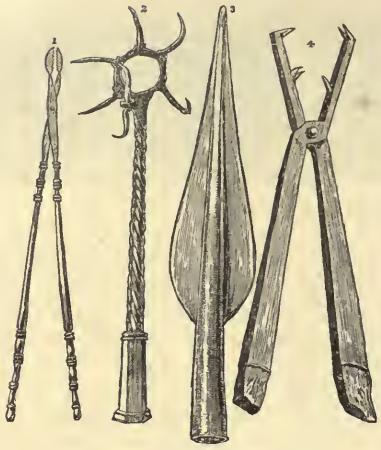
The Catacombs, then, were excavated by the early Christians for the express and sole purpose of burying their dead. The hope of the resurrection of the body made them averse to the custom of cremation then prevailing among the Greeks and the Romans. They adhered to the older Jewish custom of burying the dead in rock-hewn tombs and galleries. Hence the close resemblance of Jewish and Christian cemeteries in Rome. After Constantine, when the Christians could afford to buy and hold land and could bury their dead without fear of disturbance, they located their cemeteries above-ground around their churches and chapels.

DESCRIPTION OF THE CATACOMBS.

THE Roman Catacombs are long and narrow passages or cross-galleries, excavated in the bowels of the earth in the hills outside and around the city, for the burial of the dead. They are dark and gloomy, with only an occasional ray of light from above. The galleries have two or more stories, all filled with tombs, and form an intricate net-work or subterranean labyrinth. Small compartments *(loculi)* for the reception of the dead were cut out like shelves in the perpendicular walls, and rectangular chambers *(cubicula)* for families or distinguished martyrs. They were closed with a slab of marble or tile. The more wealthy were laid in sarcophagi. The ceiling is flat, sometimes slightly arched. Space was economized so as to leave room usually only for a single person, the average width of the passages being two and one-half to three feet. This economy may be traced to the poverty of the early Christians, and also to their strong sense of community in life and in death. The little oratories with altars and episcopal choirs cut in the tufa are probably of later construction, and could accommodate only a few persons at a time. They were suited for funeral services and private devotion, but not for public worship.

The cemetery of Domitilla (named in the fourth century Sts. Petronillæ, Nerei, et Achillei) is on the Via Ardeatina, and its origin is traced back to Flavia Domitilla, granddaughter or great-granddaughter of Vespasian. She was banished by Domitian (about A. D. 95) to the island of Pontia for professing Christ. Her chamberlains *(eunuchi cubicularii)*, Nereus and Achilleus, according to an uncertain tradition, were baptized by St. Peter, suffered martyrdom, and were buried in a farm belonging to their mistress. In another part of this cemetery De' Rossi discovered the broken columns of a subterranean chapel and a small chamber with a fresco on the

ENTRANCE TO THE CATACOMBS.



TOOLS FOUND IN THE CATACOMBS.

wall, which represents an elderly matron named "Veneranda," and a young lady, called in the inscription "Petronilla martyr," and pointing to the Holy Scriptures in a chest by her side as the proofs of her faith. The former apparently introduces the latter into Paradise. The name naturally suggests the legendary daughter of St. Peter. But Roman divines, reluctant to admit that the first pope had any children (though his marriage is beyond a doubt, from the record of the Gospels which mention his mother-in-law), understand Petronilla to be a spiritual daughter, as Mark was a spiritual son, of the apostle (1 Pet. v. 13), and make her the daughter of some Roman Petronius or Petro connected with the family of Domitilla.

Other ancient Catacombs are those of Prætextatus, Priscilla (St. Silvestri and St. Marcelli), Basilla (Sts. Hermetis, Basillæ, Proti, et Hyacinthi), Maximus, St. Hippolytus, St. Laurentius, St. Peter and Marcellinus, St. Agnes, and the Ostrianum, ad Nymphas St. Petri, or Fons St. Petri (where Peter is said to have baptized from a natural well). De' Rossi gives a list of forty-two greater or lesser cemeteries, including isolated tombs of martyrs, in and near Rome, which date from the first four centuries, and are mentioned in ancient records.

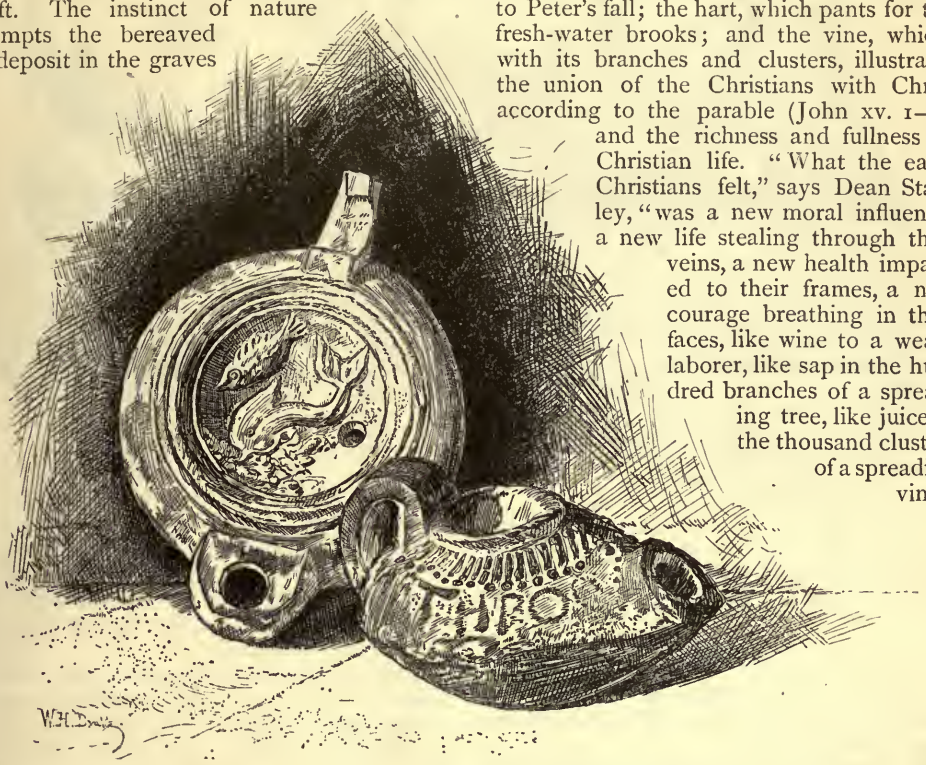
THE FURNITURE.

THE furniture of the Catacombs is instructive and interesting, but most of it has been removed to churches and museums, and must be studied outside. Articles of ornament, rings, seals, bracelets, necklaces, mirrors, tooth-picks, ear-picks, buckles, brooches, rare coins, innumerable lamps of clay (terra cotta) or of bronze (even of silver and amber), all sorts of tools, and, in the case of children, a variety of playthings were inclosed with the dead. Many of these articles are carved with the monogram of Christ or with other Christian symbols. (The lamps in Jewish cemeteries generally bear a picture of the golden candlestick.)

A great number of flasks and cups, with or without ornamentation, are also found, mostly outside of the graves, and fastened to the grave-lids. These were formerly supposed to have been receptacles for tears, or, from the red, dried sediment in them, for the blood of martyrs. But later archæologists consider them drinking-vessels used in the agapæ and oblations. A superstitious habit prevailed in the fourth century, although condemned by a council of Carthage (397), to give to the dead the eucharistic wine, or to put a cup with the consecrated wine into the grave.

GLASS FLASKS FOUND IN THE CATACOMBS. (FROM THE ORIGINALS IN POSSESSION OF GASTON L. FEUARDENT, ESQ.)

The instruments of torture which the fertile imagination of credulous people had discovered, and which were made to prove that almost every Christian buried in the Catacombs was a martyr, are simply implements of handicraft. The instinct of nature prompts the bereaved to deposit in the graves



LAMPS FOUND IN THE CATACOMBS. (FROM THE ORIGINALS IN POSSESSION OF GASTON L. FEUARDENT, ESQ.)

of their kindred and friends those things which were constantly used by them. The idea prevailed also, to a large extent, that the future life was a continuation of the occupations and amusements of the present, but free from sin and imperfection.

On opening the graves the skeleton frequently appears even now very well preserved, sometimes in dazzling whiteness, as covered with a glistening glory, but falls into dust at the touch.

SYMBOLS.

THE following symbols, borrowed from the Scriptures, were frequently represented in the Catacombs, and relate to the virtues and duties of the Christian life: the dove, with or without the olive branch, the type of simplicity and innocence; the ship, representing sometimes the Church as safely sailing through the flood of corruption, with reference to Noah's Ark, sometimes the individual soul on its voyage to the heavenly home under the conduct of the storm-controlling Saviour; the palm-branch, which the seer of the Apocalypse puts into the hands of the elect as the sign of victory; the anchor, the figure of hope; the lyre, denoting festal joy, sweet harmony; the cock, an admonition to watchfulness, with reference to Peter's fall; the hart, which pants for the fresh-water brooks; and the vine, which, with its branches and clusters, illustrates the union of the Christians with Christ according to the parable (John xv. 1–6), and the richness and fullness of Christian life. "What the early Christians felt," says Dean Stanley, "was a new moral influence, a new life stealing through their veins, a new health imparted to their frames, a new courage breathing in their faces, like wine to a weary laborer, like sap in the hundred branches of a spreading tree, like juice in the thousand clusters of a spreading vine."

THE FISH.

THE most favorite symbol in the Catacombs is the fish. This can only be properly understood from the Greek word for fish, which is ΙΧΘΥΣ *(ichthys)*. This is a pregnant anagram containing the initial letters of the words: Ι-ησοῦς Χ-ριστὸς Θ-εοῦ Υ-ἱὸς Σ-ωτήρ — *i.e.*, Jesus Christ, Son of God, Saviour. The fish, therefore, was an allegorical designation of Christ in his character (the Son of God) and his mission (the salvation of the world).

At the same time, the fish was also the symbol of the Christian saved by the great Fisher of Men from the sea of the world. It thus combined the ideas of the Redeemer and the redeemed. It reminded the Christian also of the water of baptism, with its regenerating effect upon the soul. Tertullian says: "We little fishes *(pisciculi)* are born by our fish *(secundum Ichthyn nostrum)*, Jesus Christ, in water, and can thrive only by continuing in water" (that is, if we are faithful to our baptismal vows).

In some pictures the mysterious fish is swim-

JONAH CAST INTO THE SEA. (POSSIBLY FROM THE CRYPT OF CALLISTUS.)

ming in the water with a plate of bread and a cup of wine on his back, with evident allusion to the Lord's Supper.

The oldest Ichthys monument, so far as known, was discovered in 1865, in the cemetery of Domitilla, a hitherto inaccessible part of the Roman Catacombs, and is traced by De' Rossi to the first century.

The symbol of the fish continued to be used till the middle of the fourth century. After this date it occurs only occasionally, as a reminiscence of olden times.

PICTURES.

THE most important remains of the Catacombs are the pictures, sculptures, and epitaphs.

The pictures are painted on the wall and ceiling, and represent Christian symbols, scenes of Bible history, and allegorical conceptions of the Saviour. A few are in pure classic style, and betray an early origin, when Greek art still flourished in Rome; but most of them belong to the period of decay. Prominence is given to pictures of the Good Shepherd and those biblical stories which exhibit the conquest of faith and the hope of the resurrection, as Jonah and the whale, Moses smiting the rock, Daniel in the lions' den, and the resurrection of Lazarus. The mixed character of some of the Christian frescoes may be explained partly from the employment of heathen artists by Christian patrons, partly from old reminiscences. The Etrurians and the Greeks were in the habit of painting their tombs, and Christian Greeks early saw the value of pictorial language as a means of instruction. In technical skill the Christian art is inferior to the heathen, but its subjects are higher and its meaning is deeper.

MOSES STRIKING THE ROCK. (FROM CATACOMBS OF ST. SATURNINUS. END OF THIRD CENTURY.)

The two most interesting pictures are those of the Good Shepherd and of Orpheus, which express those aspects of our Saviour which afforded most comfort to the early Christians. They combine the nobler reminiscences of heathenism with the new religion and make them subservient to Christian ideas.

The allegorical representation of Christ as the Good Shepherd is found not only in the Catacombs but also on household furniture, rings, cups, and lamps. Nearly one hundred and fifty such pictures have come down to us. The shepherd, an appropriate symbol of Christ, is usually represented as a handsome, beardless, gentle youth, in light costume, with a girdle and sandals, with the flute and pastoral staff, carrying a lamb on his shoulder, and standing between two or more sheep that look confidently up to him. Sometimes he feeds a large flock in green pastures. If this was the popular conception of Christ, it stood in contrast with the contemporaneous theological idea of the homely appearance of the Saviour, and anticipated the post-Constantinian conception.

The picture of Orpheus is found twice in the cemetery of Domitilla, and once in that of Callistus. One on the ceiling in Domitilla, apparently from the second century, is especially rich. It represents the mysterious singer,

AGAPÆ OR LOVE-FEAST. (FROM CRYPT OF CALLISTUS. THIRD CENTURY.)

RESTORATION OF SAME.

seated in the center on a piece of rock, playing on the lyre his enchanting melodies to wild and tame animals — the lion, the wolf, the serpent, the horse, the ram — at his feet and the birds in the trees. Around the central figure are several biblical scenes,— Moses smiting the rock, David aiming the sling at Goliath, Daniel among the lions, the raising of Lazarus. The heathen Orpheus — the reputed author of monotheistic hymns (the *Orphica*), the center of so many mysteries, the fabulous charmer of all creation — appears here either as a symbol and type of Christ himself, or, like the heathen Sibyl, as an antitype and unconscious prophet of Christ, announcing and foreshadowing him as the conqueror of all the forces of nature, as the harmonizer of all discords, and as the ruler over life and death.

THE SACRAMENTS.

Two sacraments are represented, the Lord's Supper and Baptism. The Lord's Supper was first celebrated in connection with the Agapæ or Love-Feast, in imitation of the Jewish Passover. A picture in the Catacombs exhibits the Saviour in the midst of the disciples reclining around the table, instituting the Holy Communion.

Of baptism there are several pictures. The catechumen stands in water or rises out of the water, while the baptizer stands on the shore, completing the act or helping the baptized. River baptism, or, as the "Teaching of the Apostles" has it, baptism "in living (running) water, was the favorite mode in the first three centuries, in imitation of Christ's baptism in the Jordan. In the age of Constantine special baptisteries were built."

THE GOOD SHEPHERD. (FROM CRYPT OF LUCINA.)

ORPHEUS.

THE PRAYING WOMAN.

A WOMAN in praying posture frequently appears on the walls of the Catacombs. Roman Catholic

archæologists see in that figure the earliest representation of the Virgin Mary praying for sinners; others interpret it as the mother church, or as both combined.

THE SCULPTURES.

THE works of sculpture are mostly found on sarcophagi. Many of them are collected in the Lateran Museum. Few of them date from the ante-Nicene age. They represent in relief the same subjects as the wall-pictures, so far as they could be worked in stone or marble, especially the resurrection of Lazarus, Daniel among the lions, Moses smiting the rock, and the sacrifice of Isaac.

Among the oldest Christian sarcophagi are those of St. Helena, the mother of Constantine (d. 328), and of Constantia, his daughter (d. 354), both of red porphyry, and preserved in the Vatican Museum. The sculpture on the former probably represents the triumphal entry of Constantine into Rome after his victory over Maxentius; the sculpture on the latter, the cultivation of the vine, probably has a symbolical meaning.

The richest and finest of all the Christian sarcophagi is that of Junius Bassus, Prefect of Rome A. D. 359, and five times consul, in the crypt of St. Peter's in the Vatican. It was found in the Vatican cemetery (1595). It is made of Parian marble in Corinthian style. The subjects represented in the upper part are the sacrifice of Abraham, the capture of St. Peter, Christ seated between Peter and Paul, the capture of Christ, and Pilate washing his

BAPTISM OF A BOY.
(CRYPT ATTRIBUTED TO POPE CALIXTUS.)

hands; in the lower part are the temptation of Adam and Eve, the suffering of Job, Christ's entrance into Jerusalem, Daniel among the lions, and the capture of St. Paul.

EPITAPHS.

"Homely phrases, but each letter
Full of hope, and yet of heart-break,
Full of all the tender pathos
Of the Here and the Hereafter."

To perpetuate, by means of sepulchral inscriptions, the memory of relatives and friends, and to record the sentiments of love and esteem, of grief and hope, in the face of death and eternity, is a custom common to all civilized ages and nations. These epitaphs are limited by space, and often provoke rather than satisfy curiosity, but contain, nevertheless, in poetry or prose, a vast amount of biographical and historical information. Many a graveyard is a broken record of the church to which it belongs.

The Catacombs abound in such monumental inscriptions, Greek and Latin, or strangely mixed (Latin words in Greek characters), often rudely written, badly spelt, mutilated, and almost illegible, with and without symbolical figures. The classical languages were then in process of decay, like classical eloquence and art, and the great majority of Christians were poor and illiterate people. One name only is given in the earlier epitaphs; sometimes the age, and the day of burial, but not the date of birth.

More than fifteen thousand epitaphs from the first six centuries in Rome alone have been collected, classified, and explained by De' Rossi, and their number is constantly increasing. Benedict XIV. founded, in 1750, a Christian museum, and devoted a hall in the Vatican to the collection of ancient sarcophagi. Gregory XVI. and Pius IX. patronized it. In this lapidarian gallery the costly pagan and the simple Christian inscriptions and sarcophagi confront each other on opposite walls, and present a striking contrast. Another important collection is in the Kircherian Museum, in the Roman College; another in the Christian Museum of the University of Berlin. The entire field of ancient epigraphy, heathen and Christian, in Italy and other countries, has been made accessible by the industry and learning of Gruter, Muratori, Marchi, De' Rossi, Le Blant, Böckh, Kirchhoff, Orelli, Mommsen, Henzen, Hübner, Waddington, and McCaul.

The most difficult part of this branch of archæology is the chronology (the oldest inscriptions being mostly undated). Their chief interest for the church historian is their religion, so far as it may be inferred from a few words.

The keynote of the Christian epitaphs, as

compared with the heathen, is struck by Paul in his words of comfort to the Thessalonians, that they should not sorrow like the heathen, who have no hope, but remember that, as Jesus rose from the dead, so God will raise them also that are fallen asleep in Jesus.

Hence, while the heathen epitaphs rarely express a belief in immortality, but often describe death as an eternal sleep, the grave as a final home, and are pervaded by a tone of sadness, the Christian epitaphs are hopeful and cheerful. The farewell on earth is followed by a welcome from heaven. Death is but a short sleep; the soul is with Christ and lives in God; the body waits for a joyful resurrection,—this is the sum and substance of the theology of Christian epitaphs. The symbol of Christ *(Ichthys)* is often placed at the beginning or end to show the ground of this hope. Again and again we find the brief but significant words: "In peace." "He [or "she"] sleeps in peace." "Live in God" [or "in Christ"]. "Live forever." "He rests well." "God quicken thy spirit." "Weep not, my child; death is not eternal." "Alexander is not dead, but lives above the stars, and his body rests in the tomb." "Here Gordian, the courier from Gaul, strangled for the faith, with his whole family, rests in peace. The maid servant, Theophila, erected this."

At the same time, stereotyped heathen epitaphs continued to be used (but of course not in a polytheistic sense), as, "Sacred to the funeral gods" [or "to the departed spirits"]. The laudatory epithets of heathen epitaphs are rare, but simple terms of natural affection very frequent, as, "My sweetest child"; "Innocent little lamb"; "My dearest husband"; "My dearest wife"; "My innocent dove"; "My well-deserving father" [or "mother"]; A. and B. "lived together" [for 15, 20, 30, 50, or even 60 years] "without any complaint or quarrel, without taking or giving offense." Such commemoration of conjugal happiness, and commendations of female virtues, as modesty, chastity, prudence, diligence, frequently occur also on pagan monuments, and prove that there were many exceptions to the corruption of Roman society as painted by Juvenal and the satirists.

Some epitaphs contain a request to the dead in heaven to pray for the living on earth. At a later period we find requests for intercession in behalf of the departed when once, chiefly through the influence of Pope Gregory I., Purgatory became an article of general belief in the Western church. But the overwhelming

ONE OF THE ORANTES, OR PRAYING FIGURES. (FROM ST. SATURNINUS. ABOUT END OF THIRD, OR BEGINNING OF FOURTH, CENTURY.)

testimony of the oldest Christian epitaphs is that the pious dead are already in the enjoyment of peace; and this accords with the Saviour's promise to the penitent thief, and with St. Paul's desire to depart and be with Christ, which is far better. Take but this example: "Prima, thou livest in the glory of God, and in the peace of our Lord Jesus Christ."

Philip Schaff.

CLAUDE AND MR. TARBOX.

IX.

NOT BLUE EYES, NOR YELLOW HAIR.

WHEN the St. Pierres found themselves really left with only each other's faces to look into and the unbounded world around them, it was the father who first spoke.

"Well, Claude, where you t'ink better go?"

There had been a long, silent struggle in both men's minds; and now Claude heard with joy this question asked in English. To ask it in their old Acadian tongue would have meant retreat; this meant advance. Yet he knew his father yearned for Bayou des Acadiens. Nay, not his father; only one large part of his father's nature,—the old, French, home-loving part.

What should Claude answer? Grande Pointe? Even for St. Pierre alone that was impossible. "Can a man enter a second time into his mother's womb?" No; the thatched cabin stood there—stands there now; but be he happy or unhappy, no power can ever make St. Pierre small enough again to go back into that shell. Let it stand, the lair of one of whom you may have heard, who has retreated straight backward from Grande Pointe and from advancing enlightenment and order — the village drunkard Chatoué.

Claude's trouble, then, was not that his father's happiness beckoned in one direction and his in another; but that his father's was linked on behind his. Could the father endure the atmosphere demanded by the son's widening power? Could the second nature of lifetime habits bear the change? Of his higher spirit there was no doubt. Neither father nor son had any conception of happiness separate from noble aggrandizement—nay, that is scant justice. Far more than they knew, or than St. Pierre, at least, would have acknowledged, they had caught the spirit of Bonaventure, to call it by no higher name, and saw that the best life for self is to live the best possible for others. "For all others,"

* Copyright, 1887, by George W. Cable. All rights reserved.

Bonaventure would have insisted; but "for Claude," St. Pierre would have amended. They could not return to Grande Pointe.

Where, then, should they go? Claude stood with his arms akimbo, looked into his father's face, tried to hide his perplexity under a smile, and then glanced at their little pile of effects. There lay their fire-arms, the same as ever; but the bundles in Madras handkerchiefs had given place to traveling-bags, and instead of pots and pans, here were books and instruments. What reply did these things make? New Orleans? The great city? Even Claude shrank from that thought.

No, it was the name of a quite different place they spoke; a name that Claude's lips dared not speak, because, for lo! these months and months his heart had spoken it,—spoken it at first in so soft a whisper that for a long time he had not known it was his heart he heard. When something within uttered and reuttered the place's name, he would silently explain to himself, "It is because I am from home. It is this unfixed camp-life, this life without my father, without Bonaventure, that does it. This is not love, of course; I know that; for, in the first place, I was in love once, when I was fourteen, and it was not at all like this; and, in the second place, it would be hopeless presumption in me, muddy-booted vagabond that I am; and, in the third place, a burnt child dreads fire. And so, it cannot be love. When papa and I are once more together, this unaccountable longing will cease."

But, instead of ceasing, it had grown. The name of the place was still the only word the heart would venture, but it meant always one pair of eyes, one young face, one form, one voice. Still it was not love — oh, no! Now and then the hospitality of some plantation-house near the camp was offered to the engineers, and sometimes, just to prove that this thing was not love, he would accept such an invitation, and even meet a pretty maiden or two, and ask them for music and song — for which he had well-nigh a passion — and talk enough to answer their questions and conjectures about a surveyor's life, etc.; but when he got back to camp, matters within his breast were rather worse than better.

He had then tried staying in camp, but without benefit; nothing cured, everything aggravated. Yet he knew so perfectly well that he was not in love, that, just to realize the knowledge, one evening when his father was a day's march ahead and he was having a pleasant chat with the "chief," no one else nigh, and they were dawdling away its closing hour with pipes, metaphysics, psychology, and like trifles,—which Claude, of course, knew all about,—Claude told him of this singular and amusing case of haunting fantasy in his own experience. His hearer had shown even more amusement than he, and had gone on smiling every now and then afterward, with a significance that at length drove Claude to bed disgusted with him and still more with himself. There had been one offsetting comfort — an unintentional implication had somehow slipped in between his words, that the haunting fantasy had blue eyes and yellow hair.

"All right," the angry youth had muttered, tossing on his iron couch, "let him think so!" And then he had tossed again and said below his breath, "It is not love; it is not. But I must never answer its call; if I do, love is what it will be. My father, my father! would that I could give my whole heart to thee as thou givest all to me!" God has written on every side of our nature — on the mind, on the soul, yes, and in our very flesh — the interdict forbidding love to have any one direction only, under penalty of being forever dwarfed. This Claude vaguely felt; but, lacking the clear thought, he could only cry, "Oh, is it, *is it* selfishness for one's heart just to be hungry and thirsty?"

And now here sat his father, on all their worldly goods, his rifle between his knees, waiting for his son's choice and ready to make it his own. And here stood the son, free of foot to follow that voice which was calling to-day louder than ever before, but feeling assured that to follow it meant love without hope for him, and for this dear father the pain of yielding up the larger share of his son's heart — as if love were subject to arithmetic! — yielding it to one who, thought Claude, cared less for both of them than for one tress of her black hair — one lash of her dark eyes. While he still pondered, the father spoke.

"Claude, I tell you!" His face lighted up with courage and ambition. "We better go — Mervillionville!"

Claude's heart leaped; but he kept his countenance. "Vermillionville? No, papa; you will not like Vermillionville."

"Yass! I will like him. 'T is good place! Bonaventure come from yondah. When I was leav' Gran' Point', Bonaventure, he cry, you know, like I tole you. He tell Sidonie he bringin' ed'cation at Gran' Point' to make Gran' Point' more better, but now ed'cation drive bes' men 'way from Gran' Point'. And den he say, 'St. Pierre, may be you go Mervillionville; dat make me glad,' he say; 'dat way,' he say, 'what I rob Peter I pay John.' Where we go if dawn't go Mervillionville? St. Martinville, Opelousas, New Iberia? Too many Creole yondah for me. Can't go to city; city too big to live in. Why you dawn't like Mervillionville? You

write me letter, when you was yondah, you like him fus' class!"

Claude let silence speak consent. He stooped and began to load himself with their joint property. He had had, in his life, several sorts of trouble of mind; only just now at twenty was he making the acquaintance of his conscience. Vermillionville was the call that had been sounding within him all these months, and Marguerite was the haunting fantasy.

X.

A STRONG TEAM.

I WOULD not wish to offend the self-regard of Vermillionville. But — what a place in which to seek enlargement of life! I know worth and greatness have sometimes, not to say ofttimes, emerged from much worse spots — from little lazy villages, noisy only on Sunday, with grimier court-houses, deeper dust and mud, their trade more entirely in the hands of rat-faced Isaacs and Jacobs, with more frequent huge and solitary swine slowly scavenging about in abysmal self-occupation, fewer vine-clad cottages, raggeder negroes, and more decay. Vermillionville is not the worst, at all. I have known lives to be large and grow large there.

Hither came the two St. Pierres. "No," Claude said; "we will not go to the Beausoleil house." Privately, he would make himself believe he had not returned to anything named Beausoleil, but only and simply to Vermillionville. On a corner opposite the public square there was another "hotel," and it was no great matter to them if it was mostly pine-boards, pale wall-paper, and transferable whitewash. But, not to be outdone by its rival around the corner, it had, besides, a piano of a quality you may guess, and a landlady's daughter who seven times a day played and sang, "I want to be somebody's darling," and had no want beyond. The travelers turned thence, found a third house full, conjectured the same of the only remaining one, and took their way, after all, towards Zoséphine's. It was quite right, now, to go there, thought Claude, since destiny led; and so he let it lead both his own steps and the thumping boots of this dear figure in Campeachy hat and soft, untrimmed beard, that followed ever at his side.

Then, after all! — looking into those quiet black eyes of Zoséphine's, — to hear that Marguerite was not there! Gone! Gone to the great city, the place "too big to live in." Gone there for knowledge, training, cultivation, larger life, and finer uses! Gone to study an art; an art! Risen beyond him — Claude — like a star! And he fool enough to come rambling back, blue-shirted and brown-handed, expecting to find her still a tavern maid! So, farewell, fantasy! 'T was better so; much better. Now life was simplified. Oh, yes; and St. Pierre made matters better still by saying to Zoséphine:

"I di' n' know you got one li'l' gal. Claude never tell me 'bout dat. I 'spec' dat why he dawn't want come yeh. He dawn't like gal; he run f'om 'em like dog from yalla-jacket. He dawn't like none of 'm. What he like, dass his daddy. He jus' married to his daddy." The father dropped his hand, smilingly, upon his son's shoulder with a weight that would have crushed it in had it been ordinary cast-iron.

Claude took the hand and held it, while Zoséphine smiled and secretly thanked God that her child was away. In her letters to Marguerite she made no haste to mention the young man's reappearance, and presently a small thing occurred that made it well that she had left it untold.

With Claude and his father some days passed unemployed. Yet both felt them to be heavy with significance. The weight and pressure of new and, to them, large conditions were putting their inmost quality to proof. Claude saw now what he could not see before — why his friend, the engineer, had cast him loose without a word of advice as to where he should go or what he should do. It was because by asking no advice he had really purposed to be his own master. Now, could he do it? Dare he try it?

The first step he took was taken, I suppose, instinctively rather than intelligently; certainly it was perilous; he retreated into himself. St. Pierre found work afield, for of this sort there was plenty; the husbandmen's year, and the herders', too, were just gathering good momentum. But Claude now stood looking on empty-handed where other men were busy with agricultural utensils or machine; or now kept his room, whittling out the toy miniature of some apparatus, which when made was not like the one he had seen. At last a great distress began to fill the father's mind. There had been a time when he could be idle and whittle; but that time had gone by. That was at Grande Pointe, and now for his son — for Claude — to become a lounger in tavern quarters — Claude had not announced himself to Vermillionville as a surveyor, or as anything — Claude to be a hater of honest labor — was this what Bonaventure called civilize-ation? Better, surely better, go back to the old pastoral life. How yearningly it was calling them to its fragrant bosom! And almost everything was answering the call. The town was tricking out its neglected decay with great trailing robes of roses. The spade and the hoe

were busy in front flower-beds and rear kitchen-gardens. Lanes were green, skies blue, roads good. In the *bas fonds* the oaks of many kinds and the tupelo-gums were hiding all their gray in shimmering green; from their leafy covert, and in the reedy marshes, all the feathered flocks not gone away north were broken into nesting pairs; in the fields crops were springing almost at the sowers' heels; on the prairie pastures, once so vast, now being narrowed so fast by the people's thrift, the flocks and herds ate eagerly of the bright new grass, and foals, calves, and lambs stood and staggered on their first legs, while in the door-yards housewives, hens, and mother geese warned away the puppies and children from downy broods under the shade of the china-trees. But Claude? Even his books lay unstudied and his instruments gathered dust, while he pottered over two or three little wooden things that a boy could not play with without breaking. At last St. Pierre could bear it no longer.

"Well, Claude, dass ten days han'-runnin' now, we ain't do nothin' but whittlin'."

Claude slowly pushed his model from him, looked, as one in a dream, into his father's face, and suddenly and for the first time saw what that father had suffered for a fortnight. But into his own face there came no distress; only, for a moment, a look of tender protestation, and then strong hope and confidence.

"Yass," he said, rising, "dass true. But we dawn't got whittle no mo'." He pointed to the model, then threw his strong arms akimbo and asked, "You know what is dat?"

"Naw," replied the father, "I dunno. I t'ink 't ain't no real mash-in * 'cause I dawn't never see nut'n' like dat at Belle Alliance *plant*-ation, neider at Belmont; and I know, me, if anybody got one mash-in, any place, for do anyt'in' mo' betteh or mo' quicker, Mister Walleece an' M'sieu Le Bourgeois dey boun' to 'ave 'em. Can't hitch nut'n' to dat t'ing you got dare. She too small for a rat. What she is, Claude?"

A yet stronger hope and courage lighted Claude's face. He laid one hand upon the table before him and the other upon the shoulder of his sitting companion.

"Papa, if you want to go wid me to de city, we make one big enough for two mule'. Dass a mash-in — a new mash-in — my mash-in — my invention!"

"Invench? What dat is — invench?"

Some one knocked on the door. Claude lifted the model, moved on tiptoe, and placed it softly under the bed. As he rose and turned again with reddened face, a card was slipped under the door. He took it and read, in a pencil scrawl, "State Superintendent of Public Education" — looked at his father with a broad grin, and opened the door.

* Machine.

Mr. Tarbox had come at the right moment. There was a good hour and a half of the afternoon still left, and he and Claude took a walk together. Beyond a stile and a frail bridge that spanned a gully at one end of the town a noble avenue of oaks leads toward Vermillion River. On one side of this avenue the town has since begun to spread, but at that time there were only wide fields on the right hand and on the left. At the farther end a turn almost at right angles to the left takes you through a great gate and across the railway, then along a ruined hedge of roses, and presently into the oak-grove of the old ex-governor's homestead. This was their walk.

By the time they reached the stile Claude had learned that his friend was at the head of his line, and yet had determined to abandon that line for another —

"Far up the height —
Excelsior!"

Also that his friend had liked him, had watched him, would need him, and was willing then and there to assure him a modest salary, the amount of which he specified, simply to do whatever he might call upon him to do in his (Claude's) "line."

They were walking slowly, and now and then more slowly still. As they entered the avenue of oaks, Claude declined the offer. Then they went very slowly indeed. Claude learned that Mr. Tarbox, by some chance not explained, had been in company with his friend the engineer; that the engineer had said, "Tarbox, you 're a born contractor," and that Claude and he would make a "strong team"; that Mr. Tarbox's favorite study was human nature; that he knew talent when he saw it; had studied Claude; had fully expected him to decline to be his employee, and liked him the better for so doing.

"That was just a kind of test vote; see?"

Then Mr. Tarbox offered Claude a partnership; not an equal one, but withal a fair interest.

"We've got to commence small and branch out gradually; see?" And Claude saw.

"Now, you wonder why I don't go in alone. Well, I 'll tell you; and when I tell you, I 'll astonish you. I lack education! Now, Claude, I 'm taking you into my confidence. You 've done nothing but go to school and study for about six years. I had a different kind of father from yours; I never got one solid year's schooling, all told, in my life. I 've picked up cords of information; but an ounce of education 's worth a ton of information. Don't you believe that? Eh? It 's so! I say it, and I 'm

the author of the 'A. of U. I.' I like to call it that, because it brings you and I so near together; see?" The speaker smiled, was still, and resumed:

"That 's why I need you. And I 'm just as sure you need me. I need not only the education you have now, but what you 're getting every day. When you see me you see a man who is always looking awa-a-ay ahead. I see what you 're going to be, and I 'm making this offer to the Claude St. Pierre of the future."

Mr. Tarbox waited for a reply. The avenue had been passed, the railway crossed, and the hedge skirted. They loitered slowly into the governor's grove, under whose canopy the beams of the late afternoon sun were striking and glancing. But all their light seemed hardly so much as that which danced in the blue eyes of Mr. Tarbox while Claude slowly said:

"I dunno if we can fix dat. I was glad to see you comin'. I reckon you jus' right kind of man I want. I jus' make a new invention. I t'ink 'f you find dass good, dat be cawntrac' enough for right smart while. And beside', I t'ink I invent some mo' b'fo' long."

But Mr. Tarbox was not rash. He only asked quiet and careful questions for some time. The long sunset was sending its last rays across the grove-dotted land, and the birds in every tree were filling the air with their sunset song-burst, when the two friends reëntered the avenue of oaks. They had agreed to join their fortunes. Now their talk drifted upon other subjects.

"I came back to Vermillionville purposely to see you," said Mr. Tarbox. "But I 'll tell you privately, you was n't the only cause of my coming."

Claude looked at him suddenly. Was this another haunted man? Were there two men haunted and only one fantasy? He felt ill at ease. Mr. Tarbox saw, but did not understand. He thought it best to speak plainly.

"I 'm courting her, Claude; and I think I 'm going to get her."

Claude stopped short, with jaws set and a bad look in his eye.

"Git who?"

But Mr. Tarbox was calm — even complacent. He pushed his silk hat from his forehead, and said:

> . . . . "'One made up
> Of loveliness alone;
> A woman, of her gentle sex
> The seeming paragon.'

I refer to the Rose of Vermillionville, the Pearl of the Parish, the loveliest love and fairest fair that ever wore the shining name of Beausoleil. She 's got to change it to Tarbox, Claude. Before yon sun has run its course again, I 'm going to ask her for the second time. I 've just begun asking, Claude; I 'm going to keep it up till she says yes."

"She 's not yondah!" snarled Claude, with the frown and growl of a mastiff. "She 's gone to de city."

Mr. Tarbox gazed a moment in blank amazement. Then he slowly lifted his hat from his head, expanded his eyes, drew a long slow groan, turned slowly half around, let the inhalation go in a keen, continuous whistle, and cried:

"Oh! taste! taste! who 's got the taste! What do you take me for? Who are you talking about? That little monkey! Why, man alive, it 's the mother I 'm after; ha, ha, ha!"

If Claude said anything in reply, I can not imagine what it was. Mr. Tarbox had a right to his opinion and taste, if taste it could be called, and Claude was helpless to resent it, even in words; but for hours afterward he execrated his offender's stupidity, little guessing that Mr. Tarbox, in a neighboring chamber, alone, and in his night-robe, was bending, smiting his thigh in silent merriment, and whispering to himself:

"He thinks I 'm an ass! He thinks I 'm an ass! He can't see that I was simply investigating him!"

XI.

HE ASKS HER AGAIN.

CLAUDE and his father left the next day — Saturday. Only the author of the "A. of U. I." knew whither they were gone. As they were going, he said very privately to Claude:

"I 'll be with you day after to-morrow. You can't be ready for me before then, and you and your father can take Sunday to look around and kind o' see the city. But don't go into the down-town part; you 'll not like it; nothing but narrow streets and old buildings with histories to 'em, and gardens hid away inside of 'em, and damp archways, and pagan-looking females, who can't talk English, peeping out over balconies that offer to drop down on you and then don't keep their word; everything old-timey, and Frenchy, and Spanishy; unprogressive — you would n't like it. Go up-town. That 's American. It 's new and fresh. There you 'll find beautiful mansions; mostly frame, it 's true, but made to look like stone, you know. There you 'll see wealth! There you 'll get the broad daylight — 'the merry, merry sunshine, that makes the heart so gay'; see? Yes, and Monday we 'll meet at Jones's, 17 Tchoupitoulas street; all right; I 'll be on hand. But to-day and to-morrow — 'Alabama' — 'here I rest.' I feel constrained" — he laid his hand upon his heart, closed one eye, and whispered — "to stay. I would fain spend

the Sabbath in sweet Vermillionville. You get my idea?"

The Sabbath afternoon beyond the town, where Mr. Tarbox strolled, was lovelier than can be told. Yet he was troubled. Zoséphine had not thus far given him a moment alone. I suppose when a hundred generations more have succeeded us on the earth, lovers will still be blind to the fact that women do not do things our way. How can they? That would be capitulation at once, and even we should find the whole business as stupid as shooting barn-yard fowls.

Zoséphine had walked out earlier than Tarbox. He had seen her go, but dared not follow. He read "Thou shalt not," as plain as print, on her back as she walked quietly away; that same little peremptory back that once in her father's caleche used to hold itself stiff when 'Thanase rode up behind. The occasional townsman that lifted his slouch hat in deep deference to her silent bow did not read unusual care on her fair brow; yet she, too, was troubled.

Marguerite! she was the trouble. Zoséphine knew her child could never come back to these old surroundings and be content. The mother was not willing she should. She looked at a photograph that her daughter had lately sent her. What a change from the child that had left her! It was like the change from a leaf to a flower. There was but one thing to do — follow her. So Zoséphine had resolved to sell the inn. She was gone now to talk with the old ex-governor about finding a purchaser. Her route was not by the avenue of oaks, but around by a northern and then an eastern circuit. She knew Mr. Tarbox must have seen her go; had a genuine fear that he would guess whither she was bound, and yet, deeper down in her heart than woman ever lets soliloquy go, was willing he should. For she had another trouble. We shall come to that presently.

Her suitor walked in the avenue of oaks.

"She 's gone," he said to himself, "to consult the governor about something, and she 'll come back this way." He loitered out across fields, but not too far off or out of sight, and by and by there she came, with just the slightest haste in her walk. She received him with kindly reserve, and they went more slowly, together.

She told where she had been, and that the governor approved a decision she had made.

"Yass; I goin' sell my hotel."

"He 's right!" exclaimed her companion, with joy; "and you 're right!"

"Well, 't ain't sold yet," she responded. She did not smile as she looked at him. He read trouble, some trouble apart from the subject, in her quiet, intense eyes.

"You know somboddie want buy dat?" she asked.

"I 'll find some one," he promptly replied. Then they talked a little about the proper price for it, and then were very still until Mr. Tarbox said:

"I walked out here hoping to meet you."

Madame Beausoleil looked slightly startled, and then bowed gravely.

"Yes; I want your advice. It 's only business, but it 's important, and it 's a point where a woman's instinct is better than a man's judgment."

There was some melancholy satire in her responding smile, but it passed away, and Mr. Tarbox went on:

"You never liked my line of business —"

Zoséphine interrupted, with kind resentment, "Ah!"

"No; I know you did n't. You 're one of the few women whose subscription I 've sought in vain. Till then, I loved my business. I 've never loved it since. I 've decided to sell out and quit. I 'm going into another business; one that you 'll admire. I don't say anything about the man going into it —

> "'Honor and shame from no condition rise;
> Act well your part, there all the honor lies'—

but I want your advice about the party I think of going in with. It 's Claude St. Pierre."

Zoséphine turned upon the speaker a look of steady penetration. He met it with a glance of perfect confiding. "She sees me," he said, at the same time, far within himself.

It was as natural to Mr. Tarbox to spin a web as it is for a spider. To manœuvre was the profoundest instinct of his unprofound nature. Zoséphine felt the slender threads weaving around her. But in her heart of hearts there was a certain pleasure in being snared. It could not, to her, seem wholly bad for Tarbox to play spider, provided he should play the harmless spider. Mr. Tarbox spoke again, and she listened amiably.

"Claude is talented. He has what I have n't; I have what he has n't; and together we could make each other's fortunes, if he 's only the square, high-style fellow I think he is. I 'm a student of human nature, and I think I 've made him out. I think he 'll do to tie to. But will he? You can tell me. You read people by instinct. I ask you just as a matter of business advice and in business confidence. What do you think? Will you trust me and tell me — as my one only trusted friend — freely and fully — as I would tell you?"

Madame Beausoleil felt the odds against her, but she looked into her companion's face

with bright, frank eyes and said: "Yass, I t'ink yass; I t'ink *'t is* so."

"Thanks!" said her friend, with unnecessary fervor and tenderness. "Then Claude will be my partner, unless — my dear friend, shall you be so kind — I might almost say confiding — to me, and me not tell you something I think you 'd ought to know? For I hope we are always to be friends; don't you?"

"Yass," she said, very sadly and sweetly.

"Thanks! And if Claude and I become partners, that will naturally bring him into our circle, as it were; see?"

The little madame looked up with a sudden austere exaltation of frame and intensity of face, but her companion rushed on with — "And I 'm going to tell you, let the risk to me be what it may, that it may result in great unhappiness to Claude; for he loves your daughter, who, I know, you must think too good for him!"

Madame Beausoleil blushed as though she herself were Marguerite and Tarbox were Claude.

"Ah! love Marguerite! Naw, naw! He dawn't love noboddie but hees papa! Hees papa tell me dat! Ah, naw! 't is *not* so!"

Mr. Tarbox stopped still; and when Zoséphine saw they were in the shadow of the trees, while all about them was brightened by the momentary southern twilight, she, too, stopped, and he spoke:

"What brought Claude back here when by right he should have gone straight to the city? You might have guessed it when you saw him." He paused to let her revolve the thought, and added in his own mind, "If you had disliked the idea, you 'd 'a' suspected him quick enough" — and was pleased. He spoke again. "But I did n't stop with guessing."

Zoséphine looked up to his face from the little foot that edgewise was writing nothings in the dust.

"No," continued her companion. "I walked with him two evenings ago in this avenue; and right where we stand now, without his ever knowing it — then or now — he as good as told me. Yes, Josephine, he dares to love your beautiful and accomplished daughter! The thought may offend you, but — was I not right to tell you?"

She nodded and began to move slowly on, he following.

"I 'm not betraying any one's confidence," persisted he; "but I can't help but have a care for you. Not that you need it, or anybody's. You can take care of yourself if any man or woman can. Every time your foot touches the ground it says so as plain as words. That 's what first caught my fancy. You have n't got to have somebody to take care of you. O Josephine! that 's just why I want to take care of you so bad! I can take care of myself, and I used to like to do it; I was just that selfish and small; but love 's widened me. I can take care of myself; but, oh! what satisfaction is there in it? Is there any? Now, I ask you! It may do for you, for you 're worth taking care of; but I want to take care of something I need n't be ashamed to love!" He softly stole her hand as they went. She let it stay, yet looked away from him, up through the darkling branches, and distressfully shook her head.

"Don't, Josephine! — don't do that! I want you to take care of me. You could do better, I know, if love was n't the count; but when it comes to loving you, I 'm the edition deloox! I know you 've an aspiring nature, but so have I; and I believe with you to love and you loving me, and counseling and guiding me, I could climb high. O Josephine! it is n't this poor Tarbox I 'm asking you to give yourself to; it 's the Tarbox that is to be; it 's the coming Tarbox! Why, it 's even a good business move! If it was n't, I would n't say a word! You know I can, and will, take the very best care of everything you 've got; and I know you 'll take the same of mine. It 's a good move, every way. Why, here 's everything just fixed for it! Listen to the mocking-bird! See him yonder, just at the right of the stile. See! O Josephine! don't you see he is n't

"'Still singing where the weeping-willow waves';

he 's on the myrtle; the myrtle, Josephine, and the crape-myrtle at that! — widowhood, unwidowed! — Now he 's on the fence — but he 'll not stay there, — and you must n't either!" The suitor smiled at his own ludicrousness, yet for all that looked beseechingly in earnest. He stood still again, continuing to hold her hand. She stole a furtive glance here and there for possible spectators. He smiled again.

"You don't see anybody; the world waives its claim." But there was such distress in her face that his smile passed away, and he made a new effort to accommodate his suit to her mood. "Josephine, there 's no eye on us except it 's overhead. Tell me this: if he that was yours until ten years ago was looking down now and could speak to us, don't you believe he 'd say yes?"

"Oh! I dunno. Not to-day! Not *dis* day!" The widow's eyes met his gaze of tender inquiry and then sank to the ground. She shook her head mournfully. "Naw, naw; not dis day. 'T is to-day 'Thanase was kill'!"

Mr. Tarbox relaxed his grasp and Zoséphine's hand escaped. She never had betrayed to him so much distress as filled her face now.

"De man what kill' him git away! You t'ink I git marrie' while dat man alive? Ho-o-o! You t'ink I let Marguerite see me do dat? Ah, naw!" She waved him away and turned to leave the spot, but he pressed after, and she paused once more. A new possibility lighted his eyes. He said eagerly:

"Describe the man to me. Describe him. How tall was he? How old would he be now? Did they try to catch him? Did you hear me talking yesterday about a man? Is there any picture of him? Have you got one? Yes, you have; it 's in your pocket now with your hand on it. Let me see it."

"Ah! I di' n' want you to see dat!"

"No, I don't suppose, as far as you know yourself, you did." He received it from her, and, with his eyes still on her, continued: "No, but you knew that if I got a ghost of a chance I 'd see you alone. You knew what I 'd ask you — yes, you did, Josephine, and you put this thing into your pocket to make it easier to say no."

"Hah! easier! Hah! easier! I need somethin' to *help* me do dat? Hah! 'T is *not* so!" But the weakness of the wordy denial was itself almost a confession.

They moved on. A few steps brought them into better light. Mr. Tarbox looked at the picture. Zoséphine saw a slight flash of recognition. He handed it back in silence, and they walked on, saying not a word until they reached the stile. But there, putting his foot upon it to bar the way, he said:

"Josephine, the devil never bid so high for me before in his life as he 's bidding for me now. And there 's only one thing in the way; he 's bid too late."

Her eyes flashed with injured resentment. "Ah, you! you dawn't know nut'n'—" But he interrupted:

"Stop, I don't mean more than just what I say. Six years ago — six and a half — I met a man of a kind I 'd never met, to know it, before. You know who I mean, don't you?"

"Bonaventure?"

"Yes. That meeting made a turning-point in my life. You 've told me that whatever is best in you you owe to him. Well, knowing him as I do, I can believe it; and if it 's true, then it 's the same with me; for first he, and then you, have made another man out of me."

"Ah, naw! Bonaventure, may *be;* but not me; ah, naw!"

"But I tell you, yes! you, Josephine! I 'm poor sort enough, yet; but I could have done things once that I can't do now. There was a time when if some miserable outlaw stood, or even seemed, maybe, to stand between me and my chances for happiness, I could have handed him over to human justice, so called, as easy as wink; but now? No, never any more! Josephine, I know that man whose picture I 've just looked at. I could see you avenged. I could lay my hands, and the hands of the law, on him inside of twenty-four hours. You say you can't marry till the law has laid its penalties on him, or at least while he lives and escapes them. Is that right?"

Zoséphine had set her face to oppose his words only with unyielding silence, but the answer escaped her:

"Yass, '*t is* so. 'T is ri-ight!"

"No, Josephine. I know you *feel* as if it were; but you don't *think* so. No, you don't; I know you better in this matter than you know yourself, and you don't think it 's right. You know justice belongs to the State, and that when you talk to yourself about what *you* owe to justice it means something else, that you 're too sweet and good to give the right name to and still want it. You don't want it; you don't want revenge, and here 's the proof; for, Josephine, you know, and I know, that if I — even without speaking — with no more than one look of the eye — should offer to buy your favor at that price, even ever so lawfully, you 'd thank me for one minute and then loathe me to the end of your days."

Zoséphine's face had lost its hardness. It was drawn with distress. With a gesture of repulsion and pain she exclaimed:

"I di' n' mean — I di' n' mean — Ah!"

"What? private revenge? No, of course you did n't! But what else would it be? O Josephine! don't I know you did n't mean it? Did n't I tell you so? But I want you to go farther. I want you to put away forever the *feeling*. I want to move and stand between you and it, and say — whatever it costs me to say it — God forbid! I do say it; I say it now. I can't say more; I can't say less; and somehow, — I don't know how — wherever you learned it — I 've learned it from you."

Zoséphine opened her lips to refuse; but they closed and tightened upon each other, her narrowed eyes sent short flashes out upon his, and her breath came and went long and deep without sound. But at his last words she saw — the strangest thing — to be where she saw it — a tear — *tears* — standing in his eyes; saw them a moment, and then could see them no more for her own. Her lips relaxed, her form drooped, she lifted her face to reply, but her mouth twitched; she could not speak.

"I 'm not so foolish as I look," he said, trying to smile away his emotion. "If the State chose to hunt him out and put him to trial and punishment, I don't say I 'd stand in the way; that 's the State's business; that 's for the public safety. But it 's too late — you and Bonaventure have made it too late — for me

to help any one, least of all the one I love, to be revenged." He saw his words were prevailing and followed them up. "Oh! you don't need it any more than you really want it, Josephine. You must n't ever look toward it again. I throw myself and my love across the path. Don't walk over us. Take my hand; give me yours; come another way; and if you 'll let such a poor excuse for a teacher and guide help you, I 'll help you all I can to learn to say, 'Forgive us our trespasses.' You can begin now, by forgiving me. I may have thrown away my last chance with you, but I can't help it; it 's my love that spoke. And if I have spoiled all, and if for the tears you 're shedding I 've got to pay with the greatest disappointment of my life, still I 've had the glory and the sanctification of loving you. If I must say, I can say,

"'T is better to have loved and lost,
Than never to have loved at all.'

Must I? Are you going to make me say that?"

Zoséphine, still in tears, silently and with drooping head pushed her way across the stile and left him standing on the other side. He sent one pleading word after her:

"Is n't it most too late to go the rest of the way alone?"

She turned, lifted her eyes to his for an instant, and nodded. In a twinkling he was at her side. She glanced at him again and said quite contentedly:

"Yass; *'t is* so," and they went the short remnant of the way together.

XII.

THE BEAUSOLEILS AND THE ST. PIERRES.

You think of going to New Orleans in the spring. Certainly the spring is the time to go. When you find yourself there go some day for luncheon — if they have n't moved it: there is talk of that — to the Christian Women's Exchange, already mentioned, in the Rue Bourbon,— French Quarter. You step immediately from the sidewalk into the former drawing-room of a house built early in the century as a fashionable residence. That at least is its aspect. Notice, for instance, in the back parlor, crowded now, like the front one, with eating-tables, a really interesting old wooden mantel-piece. Of course this is not the way persons used to go in old times. They entered in by the porte-cochère and carriageway upon which these drawing-rooms still open by several glass doors on your right. Step out there. You find a veranda crowded with neat white-clothed tables. Before some late alterations, there was a great trellis full of green sunshine and broken breezes entangled among vines of trumpet-creeper and the Scuppernong grape. Here you will be waited on, by small, blue-calico-robed damsels of Methodist unsophistication and Presbyterian propriety, to excellent refreshment; only, if you know your soul's true interest, eschew their fresh bread and insist on having yesterday's.

However, that is a matter of taste there, and no matter at all here. All I need to add is that there are good apartments overhead to be rented to women too good for this world, and that in the latter end of April, 1884, Zoséphine and Marguerite Beausoleil here made their home.

The tavern was sold. The old life was left far behind. They had done that dreadful thing that everybody deprecates and everybody likes to do — left the country and come to live in the city. And Zoséphine was well pleased. A man who had tried and failed to be a merchant in the city, and his wife, took the tavern; so Zoséphine had not reduced the rural population — had not sinned against "stastistics."

Besides, she had the good conscience of having fled from Mr. Tarbox — put U. and I. apart, as it were — and yet without being so hid but a suitor's proper persistency could find her. Just now he was far away prosecuting the commerical interests of Claude's one or two inventions; but he was having great success; he wrote once or twice — but got no reply — and hoped to be back within a month.

When Marguerite, after her mother's receipt of each of these letters, thought she saw a cloud on her brow, Zoséphine explained, with a revival of that old look of sweet self-command which the daughter so loved to see, that they contained matters of business not at all to be called troubles. But the little mother did not show the letters. She could not; Marguerite did not even know their writer had changed his business. As to Claude, his name was never mentioned. Each supposed the other was ignorant that he was in the city, and because he was never mentioned each one knew the other was thinking of him.

Ah, Claude! what are you thinking of? Has not your new partner in business told you they are here? No, not a word of it. "That 'll keep till I get back," Mr. Tarbox had said to himself; and such shrewdness was probably not so ungenerous after all. "If you want a thing done well, do it yourself," he said one evening to a man who could not make out what he was driving at; and later, Mr. Tarbox added to himself, "The man that flies the kite must hold the thread." So he kept his counsel.

But that does not explain. For we remember that Claude already knew that Marguerite was in the city, at least had her own mother's

word for it. Here, weeks had passed. New Orleans is not so large; its active center is very small. Even by accident, on the street, Canal street especially, he should have seen her time and again.

He did not; at any rate, not to know it. She really kept very busy indoors; and in other doors so did he. More than that, there was his father. When the two first came to the city St. Pierre endured the town for a week. But it was martyrdom doing it. Claude saw this. Mr. Tarbox was with him the latter part of the week. He saw it. He gave his suggestive mind to it for one night. The next day St. Pierre and he wandered off in street-cars and on foot, and by the time the sun went down again a new provision had been made. At about ninety minutes' jaunt from the city's center, up the river, and on its farther shore, near where the old "Company Canal" runs from a lock in the river bank, back through the swamps and into the Baratarian lakes, St. Pierre had bought with his lifetime savings a neat house and fair-sized orangery. No fields? None.

"You see, bom-bye Claude git doze new mash-in all right, he go to ingineerin' ag'in, and him and you [Tarbox] be takin' some cawntrac' for buil' levee or break up old steamboat, or raise somet'in' what been sunk, or somet'in' dat way. And den he certain' want someboddie to boss gang o' fellows. And den he say, 'Papa, I want you.' And den I say how I got fifty arpent'* rice in field. And den he say, 'How I goin' do wid out you?' And den dare be fifty arpent' rice gone." No, no fields.

Better here, with the vast wet forest at his back; the river at his feet; the canal, the key to all Barataria, Lafourche, and Terrebonne, full of Acadian fishermen, hunters, timber-cutters, moss-gatherers, and the like; the great city in sight from yonder neighbor's balustraded house-top; and Claude there to rally to his side or he to Claude's at a moment's warning. He would be an operator — think of that! — not of the telegraph; a commercial operator in the wild products of the swamp, the *prairies tremblantes*, the lakes, and in the small harvests of the *pointes* and bayou margins: moss, saw-logs, venison, wild-duck, fish, crabs, shrimp, melons, garlic, oranges, Perique tobacco. "Knowledge is power." He knew wood, water, and sky by heart; spoke two languages; could read and write, and understood the ways and tastes of two or three odd sorts of lowly human kind. Self-command is dominion; I do not say the bottle never went to his lips, but it never was lifted high. And now to the blessed maxim gotten from Bonaventure he added one given him by Tarbox: "In h-union ees strank!" Not mere union of hands alone, but of counsels! There were Claude and Tarbox and he! For instance: at Mr. Tarbox's suggestion Claude brought to his father from the city every evening, now the "Picayune" and now the "Times-Democrat." From European and national news he modestly turned aside. Whether he read the book-notices I do not know; I hope not. But when he had served supper — he was a capital camp-cook — and he and Claude had eaten, and their pipes were lighted, you should have seen him scanning the latest quotations and debating the fluctuations of the moss market, the shrimp market, and the garlic market!

Thus Claude was rarely in the city save in the busy hours of the day. Much oftener than otherwise he saw the crimson sunsets and the cool purple sunrises as he and St. Pierre pulled in the father's skiff diagonally to or fro across the Mississippi between their cottage and the sleepy outposts of city street-cars just under the levee at the edge of that green oak-dotted plain where a certain man, as gentle, shy, and unworldly as our engineer friend thought Claude to be, was raising the vast buildings of the next year's Universal Exposition.

But all this explains only why Claude did not, to his knowledge, see Marguerite by accident. Yet by intention! why not by intention? First, there was his fear of sinning against his father's love. That alone might have failed to hold him back; but, second, there was his helplessness. Love made Tarbox brave; it made Claude a coward. And, third, there was that helpless terror of society in general, of which we have heard his friend talk. I have seen a strong horse sink trembling to the earth at the beating of an empty drum. Claude looked with amazed despair at a man's ability to overtake a pretty acquaintance in Canal street and walk and talk with her. He often asked himself how he had ever been a moment at his ease those November evenings in the tavern's back-parlor at Vermillionville. It was because he had a task there; sociality was not the business of the hour.

Now I have something else to confess about Claude; something mortifying in the extreme. For you see the poverty of all these explanations. Their very multitude makes them weak. "Many fires cannot quench love." What was the real matter? I will tell.

Claude's love was a deep sentiment. He had never allowed it to assert itself as a passion. The most he would allow it to be was a yearning. It was scarcely personal. While he was with Marguerite in the inn, his diffidence alone was enough to hide from him the impression she was making on his heart. In all

* Forty-two acres.

their intercourse he had scarcely twice looked her full in the face. Afterward she had simply become in memory the exponent of an ideal. He found himself often, now, asking himself, Why are my eyes always looking for her? Should I, actually, know her, were I to see her on this sidewalk or in this street-car? And while still asking himself these silent questions, what does he do one day but fall — to all intents and purposes, at least — fall in love — pell-mell — up to the eyebrows — with another girl!

Do you remember Uncle Remus's story of Brer Rabbit with the bucket of honey inverted on him? It was the same way with Claude. "He wa' n't des only bedobble wid it, he wuz des kiver'd." It happened thus: An artist friend whose studio was in Carondelet street, just off Canal, had rented to him for a work-room a little loft above the studio. It had one window looking out over roofs and chimney-pots upon the western sky, and another down into the studio itself. It is right to say friend, although there was no acquaintanceship until it grew out of this arrangement. The artist, a single man, was much Claude's senior; but Claude's taste for design and love of work, and the artist's grave sincerity, simplicity, and cordiality of character — he was a Spaniard with a Spaniard's perfect courtesy — made a mutual regard, which only a common diffidence prevented from running into comradeship.

One Saturday afternoon Claude, thirsting for outdoor air, left his aerie for a short turn in Canal street. The matinée audiences were just out, and the wide balcony-shaded sidewalks were crowded with young faces and bright attires. Claude was crossing the "neutral ground" toward Bourbon street, when he saw coming out of it a young man who might be a Creole, and two young girls in light and what seemed to him extremely beautiful dresses, especially that of the farther one, who, as the three turned with buoyant step into Canal street to their left, showed for an instant the profile of her face, and then only her back. Claude's heart beat consciously, and he hurried to lessen the distance between them. He had seen no more than the profile, but for the moment in which he saw it it seemed to be none other than the face of Marguerite!

XIII.

THE CHASE.

Claude came on close behind. No; now he could see his mistake,—it was not she. But he could not regret it. This was Marguerite repeated, yet transcended. The stature was just perceptibly superior. The breadth and grace of these shoulders were better than Marguerite's. The hair, arranged differently, and far more effectively than he had ever seen it on Marguerite's head, seemed even more luxurious than hers. There was altogether a finer dignity in this one's carriage than in that of the little maid of the inn. And see, now,— now! — as she turns her head to glance into this shop window! It is, and it is n't, it is n't and it is, and — no, no, it is not Marguerite! It is like her, in profile; singularly like, yet far beyond her; the nose a little too fine, and a certain sad firmness about the mouth and eyes, as well as he could see in the profile,— but profiles are so deceptive,— that he had never seen in Marguerite.

"But how do I know? What do I know?" he asked himself, still following on. "The Marguerite I know is but a thing of my dreams, and this is not that Marguerite of my actual sight, to whom I never gave a word or smile or glance that calls for redemption. This is the Marguerite of my dreams."

Claude was still following, when without any cause that one could see the young man of the group looked back. He had an unpleasant face; it showed a small offensive energy that seemed to assert simply him and all his against you and all yours. His eyes were black, piercing, and hostile. They darted their glances straight into Claude's. Guilty Claude! dogging the steps of ladies on the street! He thrilled with shame, turned a corner into Exchange Alley, walked a little way down it, came back, saw the great crowd coming and going, vehicles of all sorts hurrying here and there; ranks of street-cars waiting their turns to start to all points of the compass; sellers of peanuts and walking-sticks, buyers of bouquets, acquaintances meeting or overtaking one another, nodding bonnets, lifted hats, faces, faces, faces; but the one face was gone.

Caught, Claude? And by a mere face? The charge is too unkind. Young folly, yes, or old folly, may read goodness rashly into all beauty, or not care to read it in any. But it need not be so. Upon the face of youth the soul within writes its confessions and promises; and when the warm pulses of young nature are sanctified by upward yearnings and a pure conscience, the soul that seeks its mate will seek that face which, behind and through all excellences of mere tint and feature, mirrors back the seeker's own faiths and hopes; and when that is found, that to such a one is beauty. Judge not; you never saw this face, fairer than Marguerite's, to say whether its beauty was mere face, or the transparent shrine of an equal nobility within.

Besides, Claude would have fired up and denied the first word of the charge with unpleasant flatness. To be caught means to be

in love; to be in love implies a wish and hope to marry, and these were just what Claude could not allow. May not a man, nevertheless, have an ideal of truth and beauty and look worshipfully upon its embodiment? Humph!

His eyes sought her in vain not only on that afternoon, but on many following. The sun was setting every day later and later through the black lace-work of pecan-trees and behind low dark curtains of orange groves, yet he began to be more and more tardy each succeeding day in meeting his father under the river-side oaks of the Exposition grounds. Then, on the seventh day, he saw her again.

Now he was more confident than ever that this vision and he, except in dreams, had never spoken to each other. Yet the likeness was wonderful. But so, too, was the unlikeness. True, this time she only flashed across his sight — out of a bank, into a carriage where a very "American"-looking lady sat waiting for her, and was gone. But the bank; the carriage; that lady; those earlier companions,— no, this could not be Marguerite. Marguerite would have been with her mother. Now, if one could see Madame Beausoleil's daughter with Madame Beausoleil at her side, to identify her and distinguish her from this flashing and vanishing apparition, it would clear away a trying perplexity. Why not be bold and call upon them where they were dwelling? But where? Their names were not in the directory. Now, inventive talent, do your best.

"WELL!" said St. Pierre after a long silence. Claude and he were out on the swollen Mississippi pulling with steady leisure for the home-side shore, their skiff pointed half to and half from the boiling current. The sun was gone; a purple dusk wrapped each low bank; a steamboat that had passed up-stream was now, at the turning of the bend, only a cluster of soft red lights; Venus began to make a faint silvery pathway across the waters. St. Pierre had the forward seat, at Claude's back. The father looked with fond perplexity at the strong young shoulders swinging silently with his own, forward and backward in slow, monotonous strokes, and said again:

"Well! Whass matter? Look like cat got yo' tongue. Makin' new mash-in?" Then in a low, dissatisfied tone — "I reckon somet'in' mighty curious." He repeated the last three words in the Acadian speech: "Tcheuque-chose bien tchurieux."

"Yes," replied the son; "mighty strange. I tell you when we come at home."

He told all,— recounted all his heart's longings, all his dreams, every least pang of self-reproach, the idealization of Marguerite, and the finding of that ideal incarnated in one who was and yet seemed not to be, or rather seemed to be and yet was not, Marguerite. Then he went on to reassure his father that this could never mean marriage, never mean the father's supplanting. A man could worship what he could never hope to possess. He would rather worship this than win such kind as he would dare woo.

He said all these things in a very quiet way, with now and then a silent pause, and now and then a calm, self-contained tone in resuming; yet his sentences were often disconnected, and often were half soliloquy. Such were the only betrayals of emotion on either side until Claude began to treat — in the words just given — his father's own heart interests; then the father's eyes stood brimming full. But St. Pierre did not speak. From the first he had listened in silence, and he offered no interruption until at length Claude came to that part about the object of his regard being so far, so utterly beyond, his reach. Then —

"Stop! Dass all foolishness! You want her? You kin have her!"

"Ah, papa! you dawn't awnstand! What I am?"

"Ah, bah! What anybody is? What she is? She invanted bigger mash-in dan you? a mo' better corn-stubbl' destroyer and plant-corner?" He meant corn-planter. "She invant a mo' handier doubl'-action pea-vine rake? What she done, mak' her so gran'? Naw, sir! She look fine in de face, yass; and dass all you know. Well, dass all right; dass de 'Cajun way — pick 'em out by face. You begin 'Cajun way, for why you dawn't finish 'Cajun way? All you got do, you git good saddle-hoss and ride. Bom-bye you see her, you ride behind her till you find where her daddy livin' at. Den you ride pas' yondah every day till fo', five days, and den you see de ole man come scrape friend' wid you. Den he hass you drop round, and fus' t'ing you know — *adjieu la calége!*"

Claude did not dispute the point, though he hardly thought this case could be worked that way. He returned in silent thought to the question, how to find Madame Beausoleil. He tried the mail; no response. He thought of advertising; but that would never do. Imagine: "If Madame Beausoleil, late of Vermillionville, will leave her address at this office, she will hear of something not in the least to her advantage." He could n't advertise.

It was midday following the eve of his confession to his father. For the last eleven or twelve days — ever since he had seen that blessed apparition turn with the two young friends into Canal street out of Bourbon — he had been

venturing daily, for luncheon, just down into Bourbon street, to the Christian Women's Exchange. Now, by all the laws of fortune he should in that time have seen in there, at least once or twice a day already, the face he was ever looking for. But he had not; nor did he to-day. He only saw, or thought he saw, the cashier — I should say the cashieress — glance crosswise at him with eyes that said:

"Fool; sneak; whelp; 'Cajun; our private detectives are watching you!"

Both rooms and the veranda were full of ladies and gentlemen, whose faces he dared not lift his eyes to look into. Yet even in that frame there suddenly came to him one of those happy thoughts that are supposed to be the inspirations of inventive genius. A pleasant little female voice near him said:

"And apartments upstairs that they rent to ladies only!" Instantly the thought came that Marguerite and her mother might be living there. One more lump of bread, a final gulp of coffee, a short search for the waiter's check, and he stands at the cashier's desk. She makes change without looking at him or ceasing to tell a small hunchbacked spinster standing by about somebody's wedding. But suddenly she starts.

"Oh! was n't that right? You gave me four bits, did n't you? And I gave you back two bits and a picayune, and — sir? Does Madame who? Oh, yes! I did n't understand you; I 'm a little deaf on this side; scarlet fever when I was a little girl. I 'm not the regular cashier; she 's gone to attend the wedding of a friend. Just wait a moment, please, while I make change for these ladies. Oh, dear, ma'am! is that the smallest you 've got? I don't believe I can change that, ma'am. Yes — no — stop! yes, I can! no, I can't! let 's see! yes, yes, yes, I can; I 've got it; yes, there! I did n't think I had it." She turned again to Claude with sisterly confidence. "Excuse me for keeping you waiting; have n't I met you at the Y. M. C. A. sociable? Well, you must excuse me, but I was sure I had. Of course I did n't if you was never there; but you know in a big city like this you 're always meeting somebody that 's ne-e-early somebody else that you know — oh! did n't you ask me? — oh, yes! Madame Beausoleil! Yes, she lives here, she and her daughter. But she 's not in. Oh, I'm sorry! Neither of them is here. She 's not in the city; has n't been for two weeks. They 're coming back; we 're expecting them every day. She heard of the death of a relative down in Terrebonne somewhere. I wish they *would* come back; we miss them here; I judge they 're relatives of yours, if I don't mistake the resemblance; you seem to take after the daughter; wait a minute."

Some one coming up to pay looked at Claude to see what the daughter was like, and the young man slipped away, outblushing the night sky when the marshes are afire.

The question was settled — settled the wrong way. He hurried on across Canal street. Marguerite had not been — so he had construed the inaccurate statement — in the city for two weeks. Resemblances need delude him no longer. He went on into Carondelet street, and was drawing near the door and stairway leading to his friend's studio and his own little workroom above it, when suddenly from that very stairway and door issued she whom, alas! he might now no longer mistake for Marguerite, yet who, none the less for lessening hope, held him captive.

(To be concluded.)

George W. Cable.

THE HARDEST LOT.

TO look upon the face of a dead friend
Is hard; but 't is not more than we can bear
If, haply, we can see peace written there,—
Peace after pain, and welcome so the end,
Whate'er the past, whatever death may send.
Yea, and that face a gracious smile may wear,
If love till death was perfect, sweet, and fair;
But there is woe from which may God defend:
To look upon our friendship lying dead,
While we live on, and eat, and drink, and sleep —
Mere bodies from which all the soul has fled —
And that dead thing year after year to keep
Locked in cold silence in its dreamless bed: —
There must be hell while there is such a deep.

John White Chadwick.

JOHN RUSKIN.

I.

I WAS sitting one afternoon with Longfellow, on the porch of the old house at Cambridge, when the conversation turned on intellectual development, and he referred to a curious phenomenon, of which he instanced several cases, and which he compared to the double stars, of two minds not personally related but forming a binary system, revolving simultaneously around each other and around some principle which they regarded in different lights. I do not remember his instances, but that which at once came to my mind was the very interesting one of Turner and Ruskin. The complementary relation of the great writer and the imaginative painter is one of the most — indeed the most — interesting that I know in intellectual history: the one a master in all that belongs to verbal expression but singularly deficient in the gifts of the artist, feeble in drawing, with a most inaccurate perception of color and no power of invention; the other the most stupendous of idealists, the most consummate master of color orchestration the world has ever seen, but so curiously devoid of the gifts of language that he could hardly learn to write grammatically or coherently, and when he spoke omitting so many words that often his utterances, like those of a child, required interpretation by one accustomed to his ways before a stranger could understand them. Ruskin is a man reared and molded in the straightest Puritanism, abhorring uncleanness of all kinds, generous to extravagance, moved by the noblest humanitarian impulses, morbidly averse to anything that partakes of sensuality, and responsive as a young girl to appeals to his tenderness and compassion. Turner was a miser; churlish; a satyr in his morals,—not merely a sensualist, but satisfied only by occasional indulgences in the most degrading debauchery; and even in his painting sometimes giving expression to images so filthy that when, after his death, the trustees came to overhaul his sketches, there were many which they were obliged to destroy in regard for common decency. It is hardly possible to conceive of a more complete antithesis than that in the natures of these two, who turn, and will turn so long as English art and English letters endure, around the same center of art and each around the other. In fact, to the great majority of our race Turner is seen through the eyes of Ruskin, and Ruskin is only known as the eulogist of Turner.

The conjunction leaves both misunderstood by the general mind. Ruskin looks at the works of the great landscape painter much as the latter looked at nature,—not for what is in the thing looked at, but for the sentiments it awakens. The world's art does not present anything to rival Turner's in its defiance of nature. He used nature when it pleased him to do so, but when it pleased him better he belied her with the most reckless audacity. He had absolutely no respect for truth. His color was the most splendid of impossibilities, and his topography like the geography of dreams; yet Ruskin has spent a great deal of his life in persuading himself and the world that his color was scientifically correct, and in hunting for the points of view from which he drew his compositions. His conviction that Turner was always doing his best, if in a mysterious way, to tell the truth about nature is invincible. Early in the period of my acquaintance with him we had a vivacious discussion on this matter in his own house; and to convince him that Turner was quite indifferent as to matters of natural phenomena, I called Ruskin's attention to the view out of the window, which was of the Surrey hills, a rolling country whose grassy heights were basking in a glorious summer sunlight and backed by a pure blue sky, requesting him then to have brought down from the room where it was hung a drawing by Turner in which a similar effect was treated. The hill in nature was, as it always will be if covered by vegetation and under the same circumstances, distinctly darker than the sky; Turner's was relieved in pale yellow green against a deep blue sky, stippled down to a delicious aërial profundity. Ruskin gave up the case in point, but still clung to the general rule. In fact, having begun his system of art teaching on the hypothesis that Turner's way of seeing nature was scientifically the most correct that art knew, he had never been able to abandon it and admit that Turner only sought, as was the case, chromatic relations which had no more to do with facts of color than the music of Mendelssohn's "Wedding March" has to do with the emotions of the occasion on which it is played. His assumption of Turner's veracity is the corner-stone of his system, and its rejection would be the demolition of that system.

His art criticism is radically and irretrievably wrong. No art can be gauged by its fidelity to nature unless we admit in that term the wider sense which makes nature of the human soul and all that is,— the sense of music, the perception of beauty, the grasp of imagination, "the light that never was, on sea or land," as well as that which serves the lens of the photographer; and Ruskin's own work, his teaching in his classes, and his application of his own standards to all great work, show that he understands the term "fidelity to nature" to mean the adherence to physical facts, the scientific aspects of nature. Greek art he never has really sympathized with, nor at heart accepted as supreme, though years after he took the position he never has avowedly abandoned, he found that in Greek coinage there were artistic qualities of the highest refinement; but Watts has told me that he expressed his surprise that the artist could keep before him so ugly a thing as the Oxford Venus, a cast of which was in his studio, and that he pronounced the horse an animal devoid of all beauty. In my opinion he cares nothing for the plastic qualities of art, or for the human figure, otherwise than as it embodies humanity and moral dignity. The diverse criticisms he makes on Titian, Michael Angelo, and Raphael, put side by side with his notes on Holman Hunt, on George Leslie and Miss Thompson in the Royal Academy, and Miss Alexander's drawings, show his appreciation of figure art to be absolutely without any criterion of style or motive in figure painting, if this were not already apparent from his contradictions at different periods of his life. These are puzzling to the casual reader. When he says, in the early part of "Modern Painters," that the work of Michael Angelo in general, the Madonna di San Sisto, and some other works are at the height of human excellence, and later demolishes poor Buonarotti like a bad plaster cast, and sets Raphael down as a mere posturer and dexterous academician, one is at a loss to reconcile his opinions with any standard. The fact I believe to be that his early art education, which was in great part due to J. D. Harding, a painter of high executive powers and keen appreciation of technical abilities in the Italian painters, was in the vein of orthodox standards; that while under the influence of his reverence for his teachers he accepted the judgment which they, in common with most artists, have passed on the old masters; but that when left to himself, with no kind of sympathy with ideal figure art, nor, I believe, with any form of figure art as such, but with a passion for landscape, a curious enthusiasm for what is minute and intense in execution, and an overweening estimate of his own standards and opinions, he gradually lost all this vicarious appreciation and retained of his admiration of old art only what was in accordance with his own feelings, *i. e.*, the intensity of moral and religious fervor, and, above all, anything that savored of mysticism, the ascetic and didactic — especially the art of the schools of religious passion. This was due to the profound devotional feeling which was the basis of his intellectual nature. He said to me once that he was a long time in doubt whether he should give himself to the church or to art. So far as the world is concerned I think he took the wrong road. In the church he might not have been, as his father hoped, a bishop, for his views have been too individual for church discipline, but I believe he would have produced a far greater and more beneficial effect on his age. As an art critic he has been like one writing on the sea-sands — his system and his doctrines of art are repudiated by every thoughtful artist I know. Art in certain forms touches him profoundly but only emotionally. Although he drew earnestly for years he never seemed to understand style in drawing, master as he is of style *(sui generis)* in language; his perception of color is so deficient that he appears to me unable to recognize the true optical color of any object; that is, its color in sunshine as distinguished from its color in shadow; and in painting from nature he is always best pleased with what is most like Turner. I painted or sketched with him during a summer in Switzerland, and therefore I do not speak from a moral consciousness. What he most admired in my work, and sought in his own, was excessive elaboration and photographic fidelity, and he did not easily apprehend the larger relations of the landscape. He used to wonder at my getting over the detail so fast; but he always got angry with the work when I reached a point where I found it necessary to bring the masses into relation according to my own ideas. At Chamonix I one day began a large study of the Mer de Glace from opposite the glacier, looking up it with the Aiguille de Dru in the center of the distance. The whole subject was rapidly laid in in general effect until it got down to the foreground, where I began finishing elaborately to his entire satisfaction, which continued for several days and until I pointed out to him a difficulty which it puzzled me to get over without violating the topographical fidelity of the study. There were several of the main lines of the distance which formed approximately radii from a point of no importance in the composition. He had not noticed it; but when I pointed it out he got into a state of vexation, and, declaring that nothing could be done with a subject which

had such an awkward accident in it, insisted on my giving up the study, saying he would not stay in Chamonix for me to finish it. As I was his guest I complied with his wish, and we left the valley the next day.

This capriciousness is a characteristic of the man. In spite of the womanly tenderness of his nature, which is, when favorably moved, of a kindliness which measures no sacrifice, he is capable, under impulse, of treating a friend of one day with the most contemptuous aversion on the next, for some whim no more important than that which drove us out of Chamonix.

There is in his character a curious form of individuality so accentuated and so imperious that it produces in him the sense of infallibility. He speaks of his opinions not as matters of opinion but as positive knowledge; yet in personal intercourse I found nothing of the dogmatism which is so notable a feature in his writing. He listened to all objections, and often acknowledged, during discussion, the inconsequence of his conclusions; and during the long and vigorous debates which occupied our evenings he not infrequently admitted error, but on the next day held the old ground as firmly as ever. His intellect, with all its power and intensity, is of the purely feminine type. The love of purity; the quick, kindly, and unreasoning impulse; the uncompromising self-sacrifice when the feeling is on him, and the illogical self-assertion in reaction when it has passed; the passionate admiration of power; the waywardness and often inexplicable fickleness,—all are there. But behind all these feminine traits there is the no less feminine quality of passionate love of justice, flecked, on occasions of personal implication, with acts of great injustice; there is a general inexhaustible tenderness, with occasional instances of absolute cruelty. Any present judgment of him as a whole is difficult if not impossible, because there are in him several different individuals, and the perspective in which we now see them makes of his position, as an art-teacher, the dominant element of his personality; whereas, in my persuasion, his art-teaching is in his own nature and work subordinate to his moral and humanitarian ideals. He always saw art through a religious medium, and this made him, from the beginning, strain his system of teaching and criticism to meet the demand of direct truth to nature, the roots of his enthusiasm and reverence being not in art but in nature and in her beneficial influence on humanity.

A little incident of our Alpine summer will illustrate this view of his character better than all my appreciations. During our stay at Geneva he had some mountain drawing to do at the Perte du Rhône, and asked me to drive down with him. Not far from the point of view which he had selected was a group of wretched dwellings miscalled cottages but which in America we call shanties,—not the picturesque wall-and-thatch structures which the word cottage calls up in England, but built of boards, shabby without being picturesque, and to my American notions only capable of association with poverty and discomfort. Ruskin asked me to draw them while he was drawing the mountains. The subject was anything but attractive or pictorial, and though it should have been enough for me that he wished me to draw it carefully, I only obeyed my own feeling and made a careless ten-minutes' pencil drawing,—all the thing was worth to me. When Ruskin drove up to take me in on the way back to Geneva and saw what I had done, he was, and I must say with good reason, offended at the indifferent way in which I had complied with his request, and after a few reproachful words threw himself back in the carriage in a sullen temper. I replied that the subject did not interest me, and that the principal feeling I had in looking at it was that it must be a wretched home for human beings and promised more fevers than anything else, and that, in short, I did not think it worth drawing. Nothing more was said by either of us until we had driven half-way back to Geneva, when he broke out with, "You are right, Stillman, about those cottages; your way of looking at them was nobler than mine, and now, for the first time in my life, I understand how anybody can live in America." It has always seemed to me that this was a true epitome of the man's nature,—first the æsthetic, outside view of the matter; then the humanitarian, overpowering it; the womanish pettishness, and the generous admission of his error when seen; and after this confession his greater cordiality to me—for he always valued more any one who brought him a new idea, though he often broke friendship with those who differed from him too strongly.

Besides this absorbing passion for the spiritual ideal, the mental constitution whose compass was set to the immovable pole of the most exalted morality, he had a curious facility for seeing things as he wished to. He saw through his feelings and prepossessions, and even looking at nature he only saw certain things, and those in general through his predisposition. So he always held Turner true although the thing he saw was false. In one drawing where Turner has given the full moon rising in cool night-mists at the left of the picture and the sun setting golden at the right, Ruskin explains it as intended to be two pictures. He praises Turner for mingled effects of sunlight and moonlight when he ought to know

that the full moon will cast no shadow until the sun has set nearly or quite an hour. Turner continually puts figures in full light in the foreground of a picture which has the sun setting in the view, the shadows on the figures being consequently on the side nearest the sun, yet Ruskin has never admitted the painter's indifference to the poets of nature.

II.

To the world at large Ruskin's reputation, even as an art critic, rests on the first volume of his "Modern Painters." Very few people have read the second volume, and fewer still the whole five, though the early editions have been sold and a reprint of one thousand since. Of this first volume, what most impressed the public was not the soundness of his views of art, of which it could not judge at all, or his knowledge of nature, of which it could judge but little, but his eloquence, his magnificent diction. Take for instance the following from the comparison of Turner with Poussin, which every reader of the book will remember as what is called a "word picture" of extraordinary power:

"But as I climbed the long slopes of the Alban mount, the storm swept finally to the north, and the noble outline of the domes of Albano, and the graceful darkness of its ilex grove rose against pure streaks of alternate blue and amber, the upper sky gradually flushing through the last fragments of rain-cloud in deep, palpitating azure, half ether and half dew. The noonday sun came slanting down the rocky slopes of La Riccia, and its masses of entangled and tall foliage, whose autumnal tints were mixed with the wet verdure of a thousand evergreens, were penetrated with it as with rain. I cannot call it color, it was conflagration. *Purple, and crimson, and scarlet, like the curtains of God's tabernacle, the rejoicing trees sank into the valley, in showers of light, every separate leaf quivering with buoyant and burning life, each, as it turned to reflect or to transmit the sunbeam, first a torch and then an emerald.* Far up into the recesses of the valley, the green vistas arched like the hollows of mighty waves of some crystalline sea, *with the arbutus flowers dashed along their flanks for foam, and silver flakes of orange spray tossed into the air around them, breaking over the gray walls of rock into a thousand separate stars, fading and kindling alternately as the weak wind lifted or let them fall.* Every glade of grass burned like the golden floor of heaven, opening in sudden gleams as the foliage broke and closed above it *as sheet lightning opens in a cloud at sunset; the motionless masses of dark rock — dark though flushed with scarlet lichen — casting their quiet shadows across its restless radiance*, the fountain underneath them filling its marble hollow with blue mist and fitful sound, and, over all, the multitudinous bars of amber and rose, the sacred clouds that have no darkness, and only exist to illumine, were seen in fathomless intervals, between the solemn and orbed repose of the stone pines passing to lose themselves in the last white, blinding lustre of the measureless line, where the Campagna melted into the blaze of the sea."

Magnificent this is as rhetoric, but if intended to show the shortcomings of Poussin or the attainments of Turner it is as exaggerated for one as it is unfair for the other; for the effects there described are no more in the power of color than in the feeling of either of those artists. It is not nature-painting at all; neither true to the sense nor to the details of nature. As mastery of the English language I shall not attempt to criticise it, but as statement of what is to be seen in nature or rendered in art it bears about the same relation to the most ideal and orchestral effects of Turner as those do to sober nature. I have put in italics certain expressions to which I ask the grave critical attention of the reader. I leave out the singular topographical inaccuracies which, in a work devoted to truth of nature, ought to claim some attention, but in such a work we may ask the sober meaning of such expressions as "Purple, and crimson, and scarlet, like the curtains of God's tabernacle"; "Every separate leaf quivering with buoyant and burning life, each, as it turned to reflect or to transmit the sunbeam, first a torch and then an emerald"; the rocks "dark though flushed with scarlet lichen — casting their quiet shadows [are shadows ever anything but quiet?] across its restless radiance" [why restless radiance except, like much else in the passage, for alliteration?]. The color epithets, to an artist, only express a crudity of pigment as unlike Turner as nature; the "arbutus flowers dashed along their flanks" . . . "silver flakes of orange spray [dreamed of from some other locality, for neither exists at Aricia] tossed into the air around them . . . into a thousand separate stars"; and "every separate leaf," show as great contempt for the possibilties of painting in the rendering of detail for the human eye as indifference to the aims of landscape painting, either by Poussin or Turner. The "Purple, and crimson, and scarlet, like the curtains of God's tabernacle," is apocalyptic, not naturalistic, and the entire passage, when we consider that it is part of an essay intended to advocate the close adherence to the facts of nature in landscape painting, can only be put aside as passing legitimate criticism or justifiable comparison. It is safe to say that of a thousand landscape painters and amateurs habituated to look at nature, taking the best and the most trivial, not one who had passed by Aricia would recognize as fact a single characteristic of the description by Ruskin. I know the place better than I do New York, and am confident in saying that neither in the ensemble nor in the detail is there anything there which Ruskin imagines he saw. Much is mere sound, alliteration which is in place in poetry but not in art criticism, and much only the expression of vague imaginings far less like nature than the great scenic compositions of John Martin.

Take another instance from the section on the sea ("Truth of Water," this being the description of a picture, the "Slave Ship"). Again I italicize the passages to which I wish to call attention as demanding analysis and criticism.

"It is a sunset on the Atlantic after prolonged storm; but the storm is partially lulled, and the torn and streaming rain-clouds *are moving in scarlet lines to lose themselves in the hollow of the night.* The whole surface of the sea included in the picture is divided into two ridges of enormous swell, not high nor local, but a broad heaving of the whole ocean like the lifting of its bosom by deep-drawn breath after the torture of the storm. Between these two ridges the fire of the sunset falls along the trough of the sea, dyeing it with an awful but glorious light, *the intense and lurid splendor of which burns like gold and bathes like blood. . . . Purple and blue the lurid shadows of the hollow breakers are cast on the mist of the night, which gathers cold and low, advancing like the shadow of death* upon the guilty ship as it labors amidst the lightning of the sea, its thin masts written upon the sky in lines of blood girded with *condemnation in that fearful hue which signs the sky with horror, and mixes its flaming flood with the sunlight, and, cast far along the desolate heave of the sepulchral waves, incarnadines the multitudinous sea.* I believe, if I were reduced to rest Turner's claim to immortality upon any single work, I should choose this. Its daring conception — ideal in the highest sense of the word — is fused on the purest truth and wrought out with the concentrated knowledge of a life . . . and the whole picture is dedicated to the most sublime of subjects and impressions,— (completing thus the perfect system of all truth which we have shown to be formed by Turner's works) — the power, majesty, and deathfulness of the open, deep illimitable sea."

"Burns like gold and bathes like blood" is, of course, again for alliteration; "Purple and blue the lurid shadows," etc., part for the sing of the sentence and part poetic imagination utterly unsuggested and unsuggestable by painting; "that fearful hue," etc., to "multitudinous sea," is simply fine writing which, when it conveys a false impression, or no impression legitimate to its professed purpose, is a literary vice, as it is in this case, where the purpose is the description of a picture.

Ruskin supposes this picture to be an attempt to portray the deep sea, but neither he nor Turner was ever out of soundings: how should one paint, or the other recognize, the fathomless as distinguished from the shallow seas? The fact is that the sea in the "Slave Ship" is a long ground-swell, resembling the watery mountains one may see on the open Atlantic no more than the water below a rapid. This form of swell and the "hollow breakers" are never found except when the sea is shoaling. In the deep Atlantic after a long gale, such as Ruskin supposes (I have seen it at its worst once only in 70,000 miles, more or less, of ocean travel by sail and steam), the great waves lift to heights such that Turner's "Slave Ship" would be hidden between two of them. They hang over you like impending doom, and just when you think that the ship must be buried in five seconds, the forefoot of the wave reaches you, and the ship suddenly begins to rise, and in another five seconds you are on the summit looking out over the heaving expanse, — black, save as it is foam-driven, fitfully rising and falling, apparently without law or order,— and after being poised an instant you feel the ship going from under you again, your breath almost leaves you with the rapidity of the descent, and you are buried once more in the deep trough of the sea for another brief space. Out of the flanks of these great waves jump and start, fitfully and unaccountably, lesser hillocks, to drop and disappear again; but when the crest of one comes towards you, you see no hollow breaker, for the crest simply pitches forward and slides down the slope — there is no combing.

Then, as to truth, Turner's whole picture is a flagrant falsehood. The most gorgeous colors of a sunset are painted in a sky where the sun has still half an hour or more to sink to the horizon; and this license the artist habitually took, although, as every artist knows, these colors never come till after sunset. The clouds are not the "torn and streaming rain-clouds" of an after-storm sky, but full-bellied, rolling wind-clouds, so far as they are structurally true to anything; subtly modeled and modulated, but as a whole as utterly impossible a sky as the sea is an utterly impossible sea. It is a marvelous picture: I do not yield to Ruskin in admiration of it as art, or admire it less for its daring license and contempt of nature's details; one can only say that it is magnificent, but it is not nature. Ruskin's feeling as to art may have been, *au fond*, correct; but it was so disturbed and perverted by his theories and the settled conviction that art was simply the uncompromising rendering of nature as she appears to the bodily vision, that he left out of all consideration the subjective transformation of natural truth which is the basis of art; or, if he reckoned it in, it was to persuade himself that it was due to a peculiarity of vision in the painter. It is impossible to reconcile all the inconsistencies into which this theory led him, such as the exaltation of painters who were mere naturalists, like Brett, or utterly unimaginative realists, like Holman Hunt, and the extraordinary judgment which he pronounced on Millais in his pamphlet on Pre-Raphaelitism,— which phase of art he desired to consider the consequence of his teaching, though, as I have heard Rossetti say, none of the Brotherhood had ever read ten pages of his writing before Ruskin had constituted himself their advocate. In some respects this little book may be considered the summing up of his art teachings, and the violence done to logic and art alike in his par-

allel between Millais and Turner is the clearest statement of his errors we possess. The function of the painter is here defined clearly and chiefly to be *topographer and historian.*

"Suppose that, after disciplining themselves so as to be able to draw with unerring precision each the particular kind of subject in which he most delighted, they had separated into two great armies of historians and naturalists; that the first had painted with absolute faithfulness every edifice, every city, every battle-field, every scene of the slightest historical interest, precisely and completely rendering their aspect at the time; and that their companions, according to their several powers, had painted with like fidelity the plants and animals, the natural scenery and the atmospherical phenomena of every country on the earth; suppose that a faithful and complete record were now in our museums of every building destroyed by war, or time, or innovation during these last 200 years; suppose that each recess of every mountain chain of Europe had been penetrated and its rocks drawn with such accuracy that the geologist's diagram was no longer necessary; — suppose that every tree of the forest had been drawn in its noblest aspect, every beast of the field in its savage life — that all these gatherings were already in our national galleries, and that the painters of the present day were laboring happily and earnestly to multiply them and put such knowledge more and more within reach of the common people,— would not that be a more honorable life for them than gaining precarious bread by 'bright effects'?"

One may reply, safely enough, that such a career is honorable in the sense that it is honest, but if the honor is that of which artists are most ambitious, it is equally safe to say that there is very little of it to be gained in that life. And this method of study has always been the basis of Ruskin's instruction — instruction for this and other reasons utterly wasted so far as the proper cultivation of art is concerned. I remember how, when Ruskin's drawing-book was published, an artist whose feeling for all the nobler qualities of art I have rarely known equaled, and a personal friend and admirer of Ruskin, said to me, "He should not have printed that; we know now just what he does not know." It is not so much that he ignores the greater gifts, but that he conceives that they can be trained or developed by this kind of antlike proceeding,— going over the earth as an insect, not even as a bird. But it is in the comparison of the two painters whom he chooses as types that we most clearly recognize the failure to distinguish between the two forms of so-called art.

"Suppose, for instance, two men, equally honest, equally industrious, equally impressed with a humble desire to render some part of what they saw in nature faithfully, and otherwise trained in convictions such as I have above endeavored to induce. But one of them is quiet in temperament, has a feeble memory, no invention, and excessively keen sight. The other is impatient in temperament, has a memory which nothing escapes, an invention which never rests, and is comparatively near-sighted. Set them both free in the same field in a mountain valley. One sees everything, small and large, with almost the same clearness; mountains and grasshoppers alike; the leaves on the branches, the veins in the pebbles, the bubbles in the stream; but he can remember nothing and invent nothing. Patiently he sets himself his mighty task; abandoning at once all thought of seizing transient effects, or giving general impressions of that which his eyes present to him in microscopical dissection, he chooses some small portion out of the infinite scene, and calculates with courage the number of weeks which must elapse before he can do justice to the intensity of his perceptions or the fullness of matter in his subject. Meanwhile the other has been watching the change of the clouds and the march of the light along the mountain-sides; he beholds the whole scene in broad, soft masses of true gradation, *and the very feebleness of his sight is in some sort an advantage to him in making him more sensible of the aërial mystery of distance and hiding from him the multitudes of circumstances which it would have been impossible for him to represent.* . . . I have supposed the feebleness of sight in this last and of invention in the first painter, that the contrast between them may be the more striking; but with very slight modification both the characters are real. Grant to the first considerable inventive power with exquisite sense of color, and give to the second, in addition to all his other faculties, the eye of an eagle, and the first is John Everett Millais, the second Joseph Mallord William Turner." "And thus Pre-Raphaelitism and Raphaelitism and Turnerism are all one and the same thing, so far as education can influence them; they are different in their choice, different in their faculties, but all the same in this, that Raphael himself, so far as he was great, and all who preceded or followed him who ever were great, became so by painting the truths around them as they appeared to each man's mind, not as he had been taught to see them except by the God who made both him and them."

And yet, between the first and the last sentences which I have quoted, the author has gone through a detailed account of the development of Turner's art, showing that it was a continuous evolution of conventional forms of treatment borrowed from earlier painters. He is obliged, to complete his antithesis, to suppose Turner feeble of sight, because he could in no other way consistent with his theory (and everything is always bent to his theories) account for his ignoring "the multitudes of circumstances which it would have been impossible for him to represent," whereas the simple fact was that Turner had, as he afterwards admits, an eagle's eye, and simply ignored whatever in nature did not suit his purpose. Turner was bred on conventions; he began in the style of the men about him, Girtin and his kind; he went through the schools of Loutherbourg, Poussin, Claude, Vandervelde, imitating everybody except the most naturalistic of the Dutchmen, but never from the beginning to the end of his career painting from nature, or in any other way than from memory, and always in a conventional manner very much influenced by the early landscape painters of the true subjective school, to which he belonged in character, faculties, and method; while Millais was a naturalist, who had no invention, no idealism, but was, and is, always working imitatively, and from direct vision, which Turner never did. Turner was

influenced, and happily, by Claude to the last day of his life, though not always obeying the influence to the same apparent degree.

Of Ruskin the writer, aside from the art critic, it is surely superfluous for me to say anything: for mastery of our language, the greater authorities long ago have given him his place; the multitude of petty critics and pinchbeck rhetoricians who pay him the tribute of tawdry imitation is the ever-present testimony to his power and masterhood. Probably no prose writer of this century has had so many choice extracts made from his writings, — passages of gorgeous description, passionate exhortation, pathetic appeal, or apostolic denunciation; and certainly no one has so molded the style of all the writers of a class as he, for there scarcely can be found a would-be art critic who does not struggle to fill his throat with Ruskin's thunders, so that a flood of Ruskin — and water — threatens all taste and all study of art. As an example of his diction take the description of "Schaffhausen":

"Stand for half an hour beside the Fall of Schaffhausen, on the north side where the rapids are long, and watch how the vault of water first bends, unbroken in *pure polished velocity*, over the arching rocks at the brow of the cataract, covering them with a dome of crystal twenty feet thick, so swift that its motion is unseen except when a foam globe from above darts over it like a falling star; and how the trees are lighted above it under all their leaves at the instant that it breaks into foam; and how all the hollows of that foam burn with green fire like so much shattering chrysoprase; and how ever and anon, startling you with its white flash, a jet of spray leaps hissing out of the fall like a rocket, bursting in the wind and driven away in dust, filling the air with light; and how, through the curdling wreaths of the restless crashing abyss below, the blue of the water, paled by the foam in its body, shows purer than the sky through white rain-cloud; while the *shuddering iris stoops in tremulous stillness over all, fading and flushing alternately through the choking spray and shattered sunshine*, hiding itself at last among the thick golden leaves, which toss to and fro in sympathy with the wild water; their dripping masses, lifted at intervals, like sheaves of loaded corn, by some stronger gush from the cataract, and bowed again upon the mossy rocks as its roar dies away; the dew gushing from their thick branches through drooping clusters of emerald herbage, and sparkling in white threads along the dark rocks of the shore, feeding the lichens which chase and chequer them with purple and silver."

In the expression of what may be seen in a waterfall, and the suggestion of what may be felt, but seen by no bodily eye, is there anything in our language that is comparable to this? But is it fair to ask art to realize it? Who shall paint "the shuddering iris fading and flushing alternately through the choking spray and shattered sunshine"? It is beyond the province of art to emulate this vein of feeling, as much as to paint Shelley's "flames mingling with sunset." But how many hapless phaetons has our Apollo of the pen thus sent tumbling down on us, entangled in their "predicates and six," or sixty! Description à la Ruskin has become a disease of the literature of the generation, and your novelist coolly stops you in the crisis of his story to describe a sunset in two or three pages which, when all is said, compare with Ruskin as a satyr with Hyperion.

III.

THUS Ruskin obstinately bent all his conclusions and observations to his doctrines — what he wanted to see he saw, nothing else. The summer before going to England I had painted a picture in what I believed the spirit of his teachings, being then one of the most enthusiastic of his disciples. I had conceived a death-struggle between a hunter and a buck, in which they had fallen together over a ledge of rock and lay in death at its foot. I had searched the forest around where I camped in the Adirondacks until I found the ledge which suited the conception, and painted it carefully with the red sunset light coming aslant through the forest and falling on the perpendicular cliff, at the foot of which was a dense, dank growth of ferns,— all painted on the spot and in the sunset light. At the foot, where they would fall, I put my guide, locked with a huge buck, and painted them as carefully as I knew how,— the man from life and the buck immediately after I had killed him. I took it with me to London, and one day Ruskin came into my studio, and, seeing the picture, exclaimed with a gesture of disgust, "Why do you have this stinking carrion in your picture? Put it out, it 's filthy, it stinks!" etc. I was too much under his influence to weigh his judgment against mine, and painted it out accordingly. Dante Rossetti, who had seen and liked the picture as it was, coming in again a few days after, exclaimed, "What have you done to your picture?" I explained, and with strong irritation in his manner he replied, "You 've spoiled your picture," and walked straight out of the room. I *had* spoiled it, for everything in it had been chosen and painted with reference to this deadly duel, with which Ruskin had no sympathy. Death oppressed him, whence his annoyance with the picture; but that he was olfactorily impressed as he was only could be explained by the fact that, as always, he felt what he imagined or wished to see. He wanted to see truth in Turner's drawings, and he made his truth accordingly. I can but regard his influence on modern landscape painting as pernicious from beginning to end, and coinciding as it did with the advent of a great naturalistic and, therefore, anti-artistic, tendency in all branches of study, it was even more disastrous than it would have been in ordinary circumstances.

His architectural work, "Stones of Venice," etc., I am not so competent to judge, but I believe that while on the one hand he did great good by bringing out the virtues of Gothic architecture and awakening the interest of the world in the art that was passing away, on the other hand he did harm by repressing the influence of the better form of Renaissance, which is often of the noblest and truest art, and is far more adapted to our modern ways of work and uses than is the Gothic. He uses here the same bitter polemics and biased judgment as in the "Modern Painters." In the lovely little Renaissance church of the Miracoli at Venice, where are the most exquisite decorations in the style of which I know, Ruskin finds among the arabesques *a child's head* tied by its locks among the tendrils of the vegetation, and inveighs bitterly against the brutality of such a conception as putting a bodiless head in the decoration. But he never stops to think that it is a cherub among other cherubim, and that, as it is in the character of the cherub to have no body, the tying of one of them by the hair to the vine is only a bit of playful invention in which there is no brutality whatever, but the most seraphic of practical jokes by the other cherubim on the bodiless and helpless state of the charming little creature, a creation which in Gothic days might have been believed in as an actuality, but which the Renaissance only looked at as a fiction of mythology with the Tritons and Sirens, and therefore with no reverence. But with Greek art, all that in any way sympathized with its dominant character meets his anathema. It seems to me that even in architecture his influence is not catholic, but is tinged by his devotional tendencies, although he introduces an element of common sense into the criticism of architecture unknown before him.

But Ruskin's true position is higher than that of art critic in any possible development. It is as a moralist and a reformer and in his passionate love of humanity (not inconsistent with much bitterness, and even unmerited, at times, to individual men) that we must recognize him. His place is in the pulpit, speaking largely and in the unsectarian sense. Truth is multiform, but of one essence, and, such as he sees it, he is always faithful to it. I have taken large exception to his ideas and teachings in respect to art because I feel that they are misleading. His mistakes in art are in some measure due to his fundamental mistake of measuring it by its moral powers and influence, and the roots of the error are so deeply involved in his character and mental development that it can never be uprooted. It is difficult for me (perhaps for any of his contemporaries) to judge him as a whole because, besides being his contemporary and a sufferer by what I now perceive to be the fatal error of his system, I was for so many years his close personal friend, and because, while I do not agree with his tenets and am obliged by my own sense of right to combat many of his teachings, I still retain the personal affection for him of those years which are dear to memory, and reverence the man as I know him; and because I most desire that he should be judged rightly,—as a man who for moral greatness has few equals in his day, and who deserves an honor and distinction which he has not received, and in a selfish and sordid world will not receive, but which I believe time will give him,—that of being one who gave his whole life and substance to the furtherance of what he believed to be the true happiness and elevation of his fellow-men. Even were he the sound art critic so many people take him to be, his real nature rises above that office as much as humanity rises above art. When we wish to compare him with men of his kind, it must be with Plato or Savonarola rather than with Hazlitt or Hamerton. Art cannot be clearly estimated in any connection with morality, and Ruskin could never, any more than Plato or Savonarola, escape the condition of being in every fiber of his nature a moralist and not an artist, and as he advanced in life the ethical side of his nature more and more asserted its mastery, though less and less in theological terms.

If I have assumed the right to pass judgment on his art teachings, it is because I have devoted most of my life to the study of art and more years than Ruskin had when he finished his most important books; but when I come to the moral problem, so vast, so profound and momentous in comparison with any questions of culture, I have not the presumption to judge a man whose moral nature I know to be so exceptional, and winged to flights that I can only honor from below. Here we enter into a world where only the Judge of all life can pronounce and where my opinion must be respectful, for the unquestionable loftiness and unselfishness of his nature and the consecration of his life to the advancement of truth as he has seen it, give him, to me, an authority I dare not debate with, and which I insist on all the more because I know the world does not accord it to him. No one has yet dared answer Pilate, and I have no disposition to judge whether Ruskin's social reforms and political theories are in accordance with eternal truth or not — whether they are practical or not is, perhaps, a question of epoch simply.

As an indication of Ruskin's position,—more free, possibly, because more personal than

those given in his early works,— I quote part of one of his first letters to me (about 1851). I had been involved in mystical speculation, partly growing out of the second volume of "Modern Painters," and had written to him for counsel.

"I did not indeed understand the length to which your views were carried when I saw you here, or I should have asked you much more about them than I did, and your present letter leaves me still thus far in the dark that I do not know whether you only have a strong conviction that there is such a message to be received from all things or whether in any sort you think you have understood and can interpret it, for how otherwise should your persuasion of the fact be so strong? I never thought of such a thing being possible before, and now that you have suggested it to me I can only imagine that by rightly understanding as much of the nature of everything as ordinary watchfulness will enable any man to perceive, we might, if we looked for it, find in everything some special moral lesson or type of particular truth, and that then one might find a language in the whole world before unfelt like that which is forever given to the Ravens or to the lilies of the field by Christ's speaking of them. This I think you might very easily accomplish so far as to give the first idea and example; then it seems to me that every thoughtful man who succeeded you would be able to add some types or words to the new language, but all this quite independently of any Mystery in the Thing or Inspiration in the Person, any more than there is Mystery in the cleaning of a Room covered with dust — of which you remember Bunyan makes so beautiful a spiritual application, so that one can never more see the thing done without being interested. If there be mystery in things requiring Revelation, I cannot tell on what terms it might be vouchsafed us, nor in any way help you to greater certainty of conviction, but my advice to you would be on no account to agitate nor grieve yourself nor look for inspiration — for assuredly many of our noblest English minds have been entirely overthrown by doing so — but to go on doing what you are quite sure is right — that is, striving for constant purity of thought, purpose and word: — not on any account overworking yourself — especially in headwork: but accustoming yourself to look for the spiritual meaning of things just as easily to be seen as their natural meaning: and fortifying yourself against the hardening effect of your society, by good literature. You should read much — and generally old books: but above all avoid *German* books — and all Germanists except Carlyle, whom read as much as you can or like: Read George Herbert and Spenser and Wordsworth and Homer, all constantly: Young's Night Thoughts, Crabbe — and of course Shakespeare, Bacon and Jeremy Taylor and Bunyan: do not smile if I mention also Robinson Crusoe and the Arabian Nights, for standard places on your shelves: I say read Homer: I do not know if you can read Greek, but I think it would be healthy work for you to teach it to yourself if you cannot, and then I would add to my list Plato — but I cannot conceive a good translation of Plato. I had nearly forgotten one of the chief of all — Dante. But in doing this, do not strive to keep yourself in an elevated state of spirituality. No man who earnestly believed in God and the next world was ever petrified or materialized in heart, whatever society he kept. Do whatever you can, however simple or commonplace, in your art; do not force your spirituality on your American friends. Try to do what they admire as well as they would have it, unless it costs you too much — but do not despise it because commonplace. Do not strive to do what you feel to be above your strength. God requires that of no man: Do what you feel happy in doing: mingle some physical science with your imaginative studies: and be sure that God will take care to lead you into the fulfillment of whatever Tasks he has ready for you, and will show you what they are in his own time.

"Thank you for your sketch of American art. I do hope that your countrymen will look upon it, in time, as all other great nations have looked upon it at their greatest times, as an object for their united aim and strongest efforts. I apprehend that their deficiency in landscape has a deep root — the want of historical associations. Every year of your national existence will give more power to your landscape painting — then — do you not want architecture? Our children's taste is fed with Ruins of Abbeys. I believe the first thing you have to do is to build a few Arabic palaces by way of novelty — one brick of jacinth and one of jasper. . . .

"Write to me whenever you are at leisure and think I can be of use to you — with sympathy or in any way, and believe me always interested in your welfare and very faithfully yours,

"J. RUSKIN."

I could not quote from his published works so condensed a summary of the creed of the man: it maintains the supremacy of the moral element which has obtained in his life-work taken as a whole.

That comparatively few people have read the "Fors Clavigera" I know, for having occasion to complete my set not long since, I found that several of the numbers supplied me by the publisher were from the first thousand, published years ago; and yet this is the work which more than any other gives us a clear insight into the character and mental tendencies of Ruskin. He is here at his ease, not bound by any prepossessions and theories; wayward, outspoken, indifferent to praise or blame; speaking with full possession of himself and frank appreciation of his audience, addressing himself "to the workmen and laborers of Great Britain," not so much in the hope that they would come to fill his school, but because he knew that only by the poor and the despised by the great world was there any hope of the reconstruction of society, as he dreamed it, being effected or accepted. The drift of all Ruskin's preaching (and I use the word in its noble sense) is a protest against materialism in ourselves, impurity in our studies and desires, and selfishness in our conduct towards our fellow-men.

He considers himself the pupil of Carlyle — for me he floats in a purer air than Carlyle ever breathed. As a feminine nature he was captivated by the robust masculine force of his great countryman, and there was in the imperial theory of Carlyle much that chimed with Ruskin's own ideas of human government. The Chelsean regretfully looking back to the day of absolutism and brutal domination of the appointed king was in a certain sense a sympathetic reply to Ruskin's longings for a firm and orderly government when he felt the quicksands of the transitional order of the day yield-

ing under his feet, but in reality the two regarded Rule from points as far removed from each other as those of Luther and Voltaire. Carlyle's ideal was one of a Royal Necessity, an incarnate law indifferent to the crushed in its marchings and rulings,— burly, brutal, contemptuous of the luckless individual or the overtaken straggler; his Rule exists not for the sake of humanity, but for that of Order, as if Order and Rule were called out for their own sake; he puffs into perdition the trivial details of individual men, closing accounts by ignoring the fractions. Ruskin loses sight of no detail, but calls in to the benefit of *his* Order and Rule every child and likeness of a child in larger form, full of a tenderness which is utterly human yet inexhaustible. Carlyle's Ruler is like a Viking's god, his conception utterly pagan; Ruskin's is Christlike; Carlyle's word is like the mace of Charlemagne, Ruskin's like the sword of the Angel Gabriel; if Ruskin is notably egotistical, Carlyle is utterly selfish; if Ruskin dogmatizes like an Evangelist, Carlyle poses as a Prophet; and the difference, when we come to sum up all the qualities, moral, intellectual, and literary, seems to me to be in favor of Ruskin. Their ideals are similarly antithetical,— Ruskin's lying in a hopeful future, an unattainable Utopia, perhaps, but still a blessed dream; Carlyle's in a return to a brutal and barren past, made forever impossible by the successful assertion of human individuality, and for whose irrevocability we thank God with all our hearts and in all hope of human progress. The public estimate has not overrated Ruskin, just as he had not overrated Turner, because the aggregate impression of power received was adequate to the cause; but in the one case as in the other the mistake has been relative, and consisted in misestimating the genius and attributing the highest value to the wrong item in the aggregate. I may be mistaken in my estimate of Ruskin, but I believe that the future will exalt him above it rather than depress him below it.

W. J. Stillman.

THE HAWK.

I WOULD I were as eagles are,
That I might fly o'er hill and plain,
A trackless course; defenseless, bare
To the cold dash of mountain rain,
But armed against a world of pain.
Or that I were as morning dove
That shoots into her forest green;
Or that I had the wings of love,
The spirit speed, and heart serene,
Forgetting all to be once more as I have been.

For now I live where none rejoice;
I move amid a world of woe.
How from its husky throat the voice
Of the great city sounds below,
Hoarse, indistinct;—these hills of snow
Are shamed with foulness; the clear sky
Is lowered from its haughty height,
And hangs like dingy drapery,
And shifts but changes not; and white,
Pallid, and thin the sun sends down unlovely light.

But yesterday a Hawk I saw!
Full-poised he hung in the clear blue,
And servant to no stricter law
Than will or wish, he seemed to view
The city's circuits;—yet he knew
A freer heaven, and hills. My mind
Grew troubled for his fate. I stood,
And pausing pitied him, designed
For freedom and the fastness rude:
Had hunger urged, or cold or tempest him subdued?

Oh, weary lot! would thou wert dead!
When sudden he did his wings unbind,
And down the sky like light he fled
Borne on the bosom of the wind,
And left nor track nor trace behind!
And he was free!— and free were I
Love should not stop, hate should not stay,
Nor strength deter, nor orb descry,
Nor fraud impede, nor doubt delay
Thy upward flight, O Soul! through darkness to the day!

Langdon Elwyn Mitchell.

THE OLD MAN AND JIM.

OLD man never had much to say —
'Ceptin' to Jim,—
And Jim was the wildest boy he had —
And the Old man jes' wrapped up in him!
Never heerd him speak but once
Er twice in my life,— and first time was
When the army broke out, and Jim he went,
The Old man backin' him, fer three months.—
And all 'at I heerd the Old man say
Was, jes' as we turned to start away,—
"Well; good-bye, Jim:
Take keer of yourse'f!"

'Peared-like, he was more satisfied
Jes' *lookin'* at Jim
And likin' him all to hisse'f-like, see? —
'Cause he was jes' wrapped up in him!
And over and over I mind the day
The Old man come and stood round in the way
While we was drillin', a-watchin' Jim —
And down at the deepot a-heerin' him say,—
"Well; good-bye, Jim:
Take keer of yourse'f!"

Never was nothin' about the farm
Disting'ished Jim;—
Neighbors all ust to wonder why
The Old man 'peared wrapped up in him:
But when Cap. Biggler, he writ back
'At Jim was the bravest boy we had
In the whole dern rigiment, white er black,
And his fightin' good as his farmin' bad —
'At he had led, with a bullet clean
Bored through his thigh, and carried the flag
Through the bloodiest battle you ever seen,—
The Old man wound up a letter to him
'At Cap. read to us, 'at said,— "Tell Jim
Good-bye;
And take keer of hisse'f."

Jim come back jes' long enough
To take the whim
'At he 'd like to go back in the calvery,—
And the Old man jes' wrapped up in him!—
Jim 'lowed 'at he 'd had sich luck afore,
Guessed he 'd tackle her three years more.
And the Old man give him a colt he 'd raised
And follered him over to Camp Ben Wade,
And laid around fer a week er so,
Watchin' Jim on dress-parade —
Tel finally he rid away,
And last he heerd was the Old man say,—
"Well; good-bye, Jim:
Take keer of yourse'f!"

Tuk the papers, the Old man did,
A-watchin' fer Jim —
Fully believin' he 'd make his mark
Some way — jes' wrapped up in him! —
And many a time the word 'u'd come
'At stirred him up like the tap of a drum —
At Petersburg, fer instance, where
Jim rid right into their cannons there,
And tuk 'em, and p'inted 'em t' other way,
And socked it home to the boys in gray,
As they skooted fer timber, and on and on —
Jim a lieutenant and one arm gone,
And the Old man's words in his mind all day,—
"Well; good-bye, Jim:
Take keer of yourse'f!"

Think of a private, now, perhaps,
We 'll say like Jim,
'At 's clumb clean up to the shoulder-straps —
And the Old man jes' wrapped up in him!
Think of him — with the war plum' through,
And the glorious old Red-White-and-Blue
A-laughin' the news down over Jim
And the Old man, bendin' over him —
The surgeon turnin' away with tears
'At had n't leaked fer years and years —
As the hand of the dyin' boy clung to
His father's, the old voice in his ears,—
"Well; good-bye, Jim:
Take keer of yourse'f!"

THE GRAYSONS: A STORY OF ILLINOIS.*

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "The Circuit Rider," "Roxy," etc.

VIII.

BARBARA'S PRIVATE AFFAIRS.

FROM childhood Barbara's ambition had centered in Tom: it was her plan that the clever brother should give standing to the family by his success in life. If Tom could only be persuaded to be steady, he might come to be a great man. A great man, in her thinking, was a member of the State legislature, or a circuit judge, for example: to her provincial imagination the heights above these were hazy and almost inaccessible. The scheme of a professional career for Tom had been her own, in conception and management; for though her brother was nearly two years her senior, she, being prudent and forecasting, had always played the part of an elder. Tom's undeniable "brightness" was a great source of pride to her. In spite of his heedless collisions with the masters, he was always at the head of his classes; and it seemed to Barbara the most natural thing in the world that she, being a girl, should subordinate herself to the success of a brother so promising. She had left school to devote herself to the house and the cares of the farm, in order that Tom might be educated — in the moderate sense of the word then prevalent. The brother was far from being ungrateful: if he accepted his sister's sacrifices without protest, he repaid her with a demonstrative affection and admiration not often seen in brothers; and there were times when he almost reverenced in her that prudence and practical wisdom in which he found himself deficient.

It was only during this summer that Barbara had been seized with independent aspirations for herself; and perhaps even these were not without some relation to Tom. If Tom should come to be somebody in the county, she would sit in a reflected light as his sister. It became her, therefore, not to neglect entirely her own education. To go to Moscow to a winter school was out of the question. Every nerve was strained to extricate the farm from debt and to give a little help, now and then, to Tom. It chanced, however, that a student from an incipient Western college, intent on getting money to pay his winter's board bills, had that summer opened a "pay school" in the Timber Creek district school-house, which was only two miles from the Grayson farm.

Those who could attend school in the summer were, for the most part, small fry too young to be of much service in the field, and such girls, larger and smaller, as could be spared from home. But the appetite for "schooling" in the new country was always greater than the supply; and when it was reported that a school was "to be took up" in the Timber Creek school-house, by a young man who had not only "ciphered plumb through the Rule of Three," but had even begun to penetrate the far-away mysteries of Latin and algebra, it came to pass that several young men and young women, living beyond the district limits, subscribed to the school, that they might attend it, even if only irregularly; — not that any of the pupils dreamed of attacking the Latin, but a teacher who had attained this Ultima Thule of human learning was supposed to know well all that lay on the hither side of it. The terms of a "pay school," in that day, were low enough, — a dollar and twenty-five cents was the teacher's charge for each pupil for thirteen weeks; but the new schoolmaster had walked from home to avoid traveling expenses, the log school-house cost him no rent, and he had stipulated that he should "board 'round" in the families of his patrons, so that the money he received from twenty pupils was clear profit, and at the price of living in those primitive times would pay his board at college for six months.

Barbara, for one, had resolved to treat herself to a dollar and a quarter's worth of additional learning. The Timber Creek school-house was on the road leading to the village of Moscow: she could therefore catch a ride, now and then, on the wagon of some farmer bound to the village, by mounting on top of a load of wood, hay, or potatoes; and often she got a lift in the evening in a neighbor's empty wagon rattling homeward from town, or for a part of the way by sitting in the tail of some ox-cart plying between forest and prairie; but more frequently she had to walk

both in going and coming, besides working early and late at her household duties.

Hiram Mason was the name of the new teacher whom the pupils found behind the master's desk on the first day of school. He was the son of a minister who had come out from New England with the laudable intention of lending a hand in evangelizing this great strapping West, whose vigorous and rather boisterous youth was ever a source of bewilderment, and even a cause of grief, to the minds of well-regulated Down-easters. The evangelists sent out aimed at the impossible, even at the undesirable, in seeking to reproduce a New England in communities born under a different star. Perhaps it was this peninsular trait of mind that prevented the self-denying missionaries from making any considerable impression on the country south of the belt peopled by the current of migration from New England. The civilization of the broad, wedge-shaped region on the north side of the Ohio River, which was settled by Southern and Middle State people, and which is the great land of the Indian corn, has been evolved out of the healthier elements of its own native constitution. But it was indebted to New England, in the time of its need, for many teachers of arithmetic and grammar, as well as for the less-admirable but never-to-be-forgotten clock-peddlers and tin-peddlers from Connecticut, who also taught the rustics of southern Ohio, Indiana, and Illinois things they had never dreamed of before, and took high pay for the instruction. Young Mason, though he had mostly grown up in the new country, and would have scorned the name of Yankee, had got from his father that almost superstitious faith in the efficacy of knowledge which, in the North-eastern States, has been handed down from generation to generation, and which has produced much learning and not a little pedantry. Mason was of middle stature, good breadth of shoulder, prominent, broad forehead, and brows that overhung his eyes, but were rather high above them. He had a well-set chin and a solid jaw; his mouth was too large to be handsome and was firmly closed; his gait was strong, straightforward, resolute, and unhurried. There were little touches of eccentricity in him: he had a way of looking at an interlocutor askance, and his habitual expression was one of mingled shyness and self-contained amusement. The religious enthusiasm of his father had been transmuted in him to a general earnestness of character, which was veiled under a keen perception of the droll side of life, derived from a mother of Southern extraction. His early-and-late diligence in study was the wonder of the country, but the tastes and aspirations that impelled him to so much toil rarely found utterance in any confessions, even to his nearest friends. Reserved as he was, the people could never complain that he held himself above them. A new-country youth, the son of a minister on slender pay, Hiram understood how to extend a helping hand, when occasion required, in any work that might be going on. At school, when the young master saw the boys playing at the boisterous and promiscuous "soak-about," he would sometimes catch the contagion of the wild fun, and, thrusting his "Livy" into the desk, rush out of the door to mix in the confusion, throwing the yarn ball at one and another with a vigor and an accuracy of aim that doubled the respect of his pupils for him. But when once he had extricated himself from the *mêlée*, and had rapped on the door-frame with his ruler, crying, "Books, books!" the boy who a minute before had enjoyed the luxury of giving the master what was known in school-boy lingo as a "sockdolager," delivered full in the back, or even on the side of the head, did not find any encouragement to presume on that experience in school hours.

The new master's punishments usually had a touch of his drollery in them; he contrived to make the culprit ridiculous, and so to keep the humor of the school on his side. A girl who could not otherwise be cured of munching in school had to stand in front of the master's desk with an apple in her teeth; a boy who was wont to get his sport by pinching his neighbors, and sticking them with pins, was forced to make no end of amusement for the school in his turn, by standing on the hearth with a cleft stick pinching his nose out of shape. It was soon concluded that there was no fun in "fooling" with a master who was sure to turn the joke on the offender.

The older pupils who occupied the "writing bench," in front of a continuous shelf-like desk fixed along the wall, spent much of their time in smuggling from one to another fervid little love-notes, which, for disguise, were folded like the "thumb-papers" that served to protect their books from the wear and tear of their over-vigorous thumbs, and from soiling. By passing books from one to another, with such innocent-looking square papers in them, a refreshing correspondence was kept up. This exchange of smuggled billets-doux was particularly active when Rachel Albaugh was present. As for the love-letters thus dispatched, they were fearfully monotonous and not worth the pains of capture by a schoolmaster. Some were straightforward and shameless declarations of admiration and affection in prose scrawls, but a very common sort was com-

posed entirely of one or another of those well-worn doggerel couplets that have perhaps done duty since the art of writing became known to the Anglo-Saxons.

"If you love me as I love you,
No knife can cut our love in two,"

was a favorite with the swains of the country school-house; but

"The rose is red, the violet 's blue,
Sugar 's sweet, and so are you,"

had a molasses-like consistency in its alliterative lines that gave it the preference over all other love poems extant.

Amongst these unblushing scribblers of love doggerel and patient cutters and folders of many sorts of thumb-papers, whose fits of studying, like chills and fever, came on only "by spells," Barbara sat without being one of them. The last chance for education was not to be thrown away; and Mason soon singled out this rather under-sized, sharp-eyed girl, not only as the most industrious and clever of the pupils in the Timber Creek school, but as a person of quite another sort from the rest of them. When he was explaining anything to a group of half-listless scholars, her dark eyes, drawn to beads, almost startled him with their concentrated interest. She could not be taught in any kind of classification with the rest; her rate of progress was too rapid. So, finding that Barbara studied all through the recess time, he undertook to give her extra instruction while the others were on the playground. The most agreeable minutes of his day were those in which he unfolded to her the prosaic principles of Vulgar Fractions, of Tare and Tret, and of the Rule of Three. This last was the great and final goal, and it was attained by few of those who attended an intermittent country school in that time. To reach it was to become competent to teach school. Barbara, with the help of the master, who directed her to save time by omitting some of the rubbish of Pike's Arithmetic, was soon in sight of this promised land of the Rule of Three, and it became a question of reviewing the book once more, when she should be through with it, so as to take rank among those who would certainly "do every sum in the book."

"Why not take up algebra?" said the teacher to her, during a long noon recess as they sat side by side at his desk poring over a slate full of figures.

"Do you think I could learn it?" she asked.

"You could learn anything," he said; and the assurance gave Barbara more pleasure than any commendation she had ever received. But she did not know what to reply. To go beyond the arithmetic would be, according to the standard of the country, to have a liberal education, and she was ambitious enough to like that. But where would she get the money to buy a text-book? She did n't wish to confess her scruple of economy. It was not that she was ashamed of her poverty, for poverty might be said to be the prevailing fashion in the Timber Creek country; but it would be bringing to Mason's attention her private affairs, and from that she shrank with an instinct of delicacy for which she could not have given any reason. Yet there sat Mason, leaning back and waiting for her to reply to his question. After a few moments she mustered courage to ask timidly:

"Would the book cost much?"

"I would n't buy any book just now," said the master, seeing the drift of her thoughts. He went to one corner of the school-room, and, standing on the bench, pushed aside one of the boards laid loosely over the joists above. It was here, in the dark loft, that he kept the few articles not necessary to his daily existence in boarding 'round. Reaching his hand up above the boards, he found a copy of a school text-book on algebra, and brought it down with him, rapping it against his hand and blowing the dust off it.

"Use that for a while," he said.

"Oh, thank you!" said Barbara, taking hold of the book with a curious sense of reverence, which was greatly increased as she turned the leaves and regarded the symbols, whose nature and use were quite inconceivable to her. Here was a knowledge beyond any that she had ever dreamed of looking into; beyond that of any schoolmaster she had ever known, except Mason. "It looks hard," she said, regarding him.

"Take it home and try it," he replied, as he took up his ruler to call the scholars to books.

A closer companionship now grew up between the master and the pupil. Both of them anticipated with pleasure the coming of recess time, when the new study could be discussed together. Henceforth the boys looked in vain for Mason to take a turn with them in playing soak-about.

To a man of high aims nothing is more delightful than to have a devoted disciple. Even the self-contained Mason could not be quite unmoved in contemplating this young girl, all of whose tastes and ambitions flowed in the same channel with his own, listening to him as to an oracle. If he had not been so firmly fixed in his resolve that he would not allow any woman to engage his affections before he had completed his college course, he might have come to fall in love with her. But all such thoughts he resolutely put aside. Of

course, teaching her was a delight; but who could help feeling delight in teaching such a learner? Moreover, he was particularly fond of algebra. But he could hardly lay all of his enjoyment to his liking for algebra, or his pleasure in teaching a quick-witted pupil. He could not make himself believe that it was his enjoyment of algebraic generalizations that made his hand tremble whenever he returned a slate or book to Barbara Grayson.

Barbara, for her part, was too intent on her work to think much about anything else. She had more than once caught sight of the furtive, inquiring glance of her teacher on her face before he could turn his eyes away; she was pleased to note that his voice had a tone in addressing her that it had not when he spoke to the others; and she took pleasure in perceiving that she was beyond question the favorite pupil. But Barbara was averse to building any castles in the air which she had small chance of being able to materialize.

One evening, as she was going briskly toward home, she was overtaken by Mason, who walked with her up hill and down dale the whole long rough new-country road through the woods, carrying her books, and chatting about trivial things as he had never done before. He contrived, half in pleasantry but quite in earnest, to praise her diligence, and even her mind. She had hardly ever thought of herself as having a mind. That Tom had such a gift she knew, and she understood how important it was to cultivate his abilities. But she was only Tom's sister. It seemed to her a fine thing, however, this having a mind of her own, and she thought a good deal about it afterward.

When Hiram Mason reached the place where Barbara was accustomed to leave the main road, in order to reach her home by a shorter path through a meadow, he got over the fence first and gave her his hand, though he wondered afterward that he had had the courage to do it. Barbara had climbed fences, and trees too, for that matter, from her infancy, and she was in the habit of getting over this fence twice a day, without ever dreaming that she needed help. But a change had come over her in this two-miles' walk from school. For the first time, she felt a certain loneliness in her life, and a pleasure in being protected. She let Mason take her hand and help her to the top of the fence, though she could have climbed up much more nimbly if she had had both hands free to hold by. Hiram found it so pleasant helping her up, by holding her hand, that he took both her hands when she was ready to jump down on the meadow side of the fence, and then, by an involuntary impulse, he retained her right hand in his left a bare moment longer than was necessary. A little ashamed, not so much of the feeling he had shown as of that he had concealed, he finished his adieux abruptly, and, placing his hands on the top rail, vaulted clean over the fence again into the road. Then he thought of something else that he wanted to say about Barbara's new study of algebra,— something of no consequence at all, except in so far as it served to make Barbara turn and look at him once more. The odd twinkling smile so habitual with him died out of his face, and he looked into hers with an eagerness that made her blush, but did not make her turn away. Then blaming himself for what seemed to him imprudence, he left her at last and started back, only stopping on the next high ground to watch her figure as she hurried along through the meadow grass, and across the brook, and then up the slope toward the house.

There were several other evenings not very different from this one. The master would wait until all the pupils had gone, and then overtake Barbara. He solaced his conscience by carrying a book in his pocket, so as to study on the way back; but he found a strange wandering of the mind in his endeavors to read a dead language after a walk with Barbara. He still held to his resolution, or to what was left of his resolution, not to entangle himself with an early engagement. What visions he indulged in, of projects to be carried out in a very short time after his graduation, belong to the secrets of his own imagination; all his follies shall not be laid bare here. But to keep from committing himself too far, he drew the line at the boundary of Mrs. Grayson's farm,— the meadow fence. He gave himself a little grace, and drew the line on the inside of the fence. He was firmly resolved never to go quite home with his pupil, and never to call at her house. So long as he stopped at the fence, or within ten, or say twenty, or perhaps thirty, feet of it, he felt reasonably safe. But he could not, in common civility, turn back until he had helped her to surmount this eight-rail fence; and indeed it was the great treat to which he always looked forward. There was a sort of permissible intimacy in such an attention. He guarded himself, however, against going beyond the limits of civility — of kindly politeness — of polite friendship; that was the precise phrase he hit on at last. But good resolutions often come to naught because of its being so very difficult to reckon beforehand with the involuntary and the uncontrollable. The goodman of the house never knows at what moment the thief will surprise him. One evening Mason had taken especial pains to talk on only the most innocent and indifferent subjects, such as algebra. On this theme he was the schoolmaster, and he felt particularly secure against any expression

of feeling, for *x*, *y*, and *z* are unknown quantities that have no emotion in them. Though Barbara was yet in the rudiments of the study, he was trying to make her understand the general principles involved in the discussion of the famous problem of the lights. To make this clear he sat down once or twice on logs lying by the roadside, and wrote some characters on her slate showing the relation of *a* to *b* in any given case, while Barbara sat by and looked over his demonstrations. But in spite of these delays, they got to the fence before he had finished, and the rest was postponed for another time. It did n't matter so much about the lights after all, whether they were near together or far apart; it does not matter to lights, but there are flames much affected by proximity. As Mason helped Barbara down from the fence, his passion, by some sudden assault, got the better of his prudence, and looking intently into the eyes shaded by the sun-bonnet, he came out with:

"It's all the world to a fellow like me to have such a scholar as you are, Barbara."

The words were mild enough; but his eager manner and his air of confidence, as he stood in front of her sun-bonnet and spoke, with his face flushed, and in a low and unsteady voice, made his speech a half confession. Startled at this sudden downfall of his resolution, he got back over the fence and went straight away, without giving her a chance to say anything; without so much as uttering a civil good-bye. The precipitation of his retreat only served to lend the greater significance to his unpremeditated speech.

Mrs. Grayson complained that "there was no sense in a girl's studyin' algebra, an' tryin' to know more 'n many a good schoolmaster ever knowed when I was a girl. Ever since Barbary 's been at that new-fangled study, it 's seemed like as if she 'd somehow 'r nuther clean lost her mind. She 'll say supper 's ready when they ain't knife nur fork on the table; an' she 's everlastin'ly losin' her knittin'-needles an' puttin' her thimble where she can't find it, or mislayin' her sun-bonnet. Ef her head was loose, she 'd be shore to leave that around somewheres, liker 'n not."

If Hiram Mason's half-involuntary love-making had not brought Barbara unmeasured pleasure she would not have been the normal young woman that she was. He filled all her ideals, and went beyond the highest standard she had set up before she knew him. She was not the kind of a girl that one meets nowadays; at least, that one meets nowadays in novels. She did not have a lot of perfectly needless and inconceivably fine-spun conscientious scruples to prevent the course of her fortune from running smoothly. She did find in herself a drawing back from the future which Mason's partiality had brought within the range of her vision. But her scruple was only one of pride; she exaggerated the superiority of an educated family, such as she conceived his to be, and she reflected that the Graysons were simple country people. She felt in herself that she could never endure the mortification she would feel, as Hiram's wife, if the Masons should look down on her good but unlettered mother, and say or feel that Hiram had "married below him." If, now, Tom should come to something, the equation would be made good.

But the very day after Mason had spoken so warmly of the comfort he found in such a pupil was that disagreeable Saturday on which Tom had come home plucked in gambling, to ask for money enough to pay the debt he had incurred in redeeming his clothes. Was it any wonder that Barbara spoke to him with severity when she found her cherished vision becoming an intangible illusion? Tom would make no career at all at this rate; and to yield to Hiram Mason's wooing would now be to bring to him, not only the drawback of a family of humble breeding and slender education, but the disgrace of a rash, unsteady, and unsuccessful brother, whose adventures with gamblers would seem particularly disreputable to a minister's family. There was no good in thinking about it any more. Her pride could never bear to be "looked down on" by the family of her husband. It would be better to give it up at once — unless — she clung to this possibility — unless Tom should turn out right after all. The necessity for surrendering so much imminent happiness did not surprise her. She had always had to forego, and no prospect of happiness could seem quite possible of realization to an imagination accustomed to contemplate a future of self-denial. None the less, the disappointment was most acute, for she must even give up the school, and try, by spinning yarn, by knitting stockings, and by weaving jeans and linsey, to make up the money taken out of their little fund by Tom's recklessness.

On the next Monday, and the days following, she staid at home without sending any word to the schoolmaster. She held to a lurking hope that Tom's affairs might mend, and she be able, by some good luck, to resume her attendance on the school for a part of the remainder of the quarter. But when on Wednesday Tom's haggard face appeared at the door, and she read in it that all her schemes for him had miscarried, she knew that she must give up dreaming dreams which seemed too good to be innocent. There was nothing for her but to give herself to doing what could be

done for Tom. It was lucky that the poor fellow did not suspect what it cost her to put a smooth face on his disasters.

IX.

BY THE LOOM.

On Monday, Mason saw with regret that Barbara was not at school. On Tuesday he felt solicitous, and would have made inquiry if it had not been for an impulse of secretiveness. By Wednesday he began to fear that his words spoken to her at the meadow fence had something to do with her absence. He questioned the past. He could not remember that she had ever repelled his attentions, or that she had seemed displeased when he had spoken his fervent and unpremeditated words. Conscious that his bearing toward Barbara had attracted the observation of the school, he did not summon courage to ask about her until Thursday. Then when the voluble Mely Davis came to him before the beginning of the afternoon session, to ask him how she should proceed to divide 130 by 9, he inquired if Barbara was ill.

"No, I don't 'low she 's sick," responded Mely. "I sh' d 'a' thought she 'd tole you, 'f anybody, what 't wuz kep' 'er"; and Mely laughed a malicious little snicker, which revealed her belief that the master was in confidential relations with his algebra scholar. "She thinks the worl' 'n' all of the school an' the master." Mely gasped a little as she ventured this thrust, and quickly added, "An' of algebray — she 's *that* fond of algebray; but I sh' d thought she 'd tole *you* what kep 'er, ur 'a' sen' choo word. But I 'low it 's got sumpin' to do weth the trouble in the family."

Mely made what the old schoolmasters called a "full stop" at this point, as though she considered it certain that Mason would know all about Barbara's affairs.

"Trouble? What trouble?" asked the master.

"W'y, I 'low'd you 'd 'a' knowed," said the teasing creature, shaking her rusty ringlets with a fluttering, half-suppressed amusement at the anxiety she had awakened in Mason's mind. "Hain' choo hyeard about her brother?"

"No; which brother? The one that 's in Moscow?"

"W'y, lawsy, don' choo know 't she hain't got nary nuther one? The res' 's all dead an' buried long ago. Her brother Tom lost 'is sitooation along of gamblin' an' the like. They say he lost the boots offviz feet an' the coat offviz back." Here Mely had to give vent to her feelings in a hearty giggle; Tom's losses seemed to her a joke of the best, and all the better that the master took it so seriously. "I 'low it 's cut Barb'ry up more 'n a little. She sot sech store by Tom. An' he *is* smart, the *smartest* feller you 'd find fer books an' the like. But what 's the use a-bein' so smart an' then bein' sech a simple into the bargain? *I* say."

Mason did not like to ask further questions about Barbara's family affairs. He could hardly bear to hear Mely canvass them in this unsympathetic way. But there was one more inquiry that he made about Tom.

"Does he drink?"

"Mighty leetle. I 'xpect he takes a drop ur two now an' then, jest fer company's sake when he 's cavortin' 'roun' weth the boys. But I 'low he hain't got no rale hankerin' fer the critter, an' he 's that fond of Barb'ry 'n' 'is mother, an' they 're so sot on 'im, that he wouldn' noways like to git reg'lar drunk like. But he 's always a-gittin' into a bad crowd, an' tryin' some deviltry 'r nuther; out uv one scrape an' into t' other, kinduh keerless like; head up an' never ketchin' sight 'v a stump tell he 's fell over it, kerthump, head over heels. His uncle 's been a-schoolin' 'im, an' lately he 's gone 'n' put 'im weth Squire Blackman to learn to be a lawyer; but now he 's gone 'n' sent him home fer a bad bargain. Ut 's no go 't the law, an' he won't never stan' a farm, yeh know. Too high-sperrited."

Possessed of a share of Mely Davis's stock of information about Barbara's troubles, Hiram Mason saw that his resolution against calling on his pupil at her own house would have to go the way of most of his other resolutions on this subject. He set himself to find arguments against keeping this one, but he was perfectly aware, all the time, that his going to the Graysons' would not depend on reasons at all. He reflected, however, that Barbara's trouble was a new and unforeseen condition. Besides, his regulative resolutions had been so far strained already that they were not worth the keeping. It is often thus in our dealings with ourselves; we argue from defection to indulgence.

Mely Davis felt sure of having the master's company after school as far as she had to go on the road leading to the Graysons'. But he went another way to Pearson's, where he was boarding out the proportion due for three pupils. Mrs. Pearson had intermitted the usual diet of corn-dodgers, and had baked a skilletful of hot biscuits, in honor of the master; she was a little piqued that he should absorb them, as he did, in a perfectly heartless way. As soon as the early supper was over he left the house, without saying anything of his destination. He took a "short cut"

across a small prairie, then through the woods, and across Butt's corn-field, until he came out on the road near the place at which he had several times helped Barbara over the fence. By her path through the meadow he reached the house just as the summer twilight was making the vault of the sky seem deeper and mellowing all the tones in the landscape. In that walk Mason's mind had completely changed front. Why should he try to maintain a fast-and-loose relation with Barbara? She was in need of his present sympathy and help. Impulses in his nature, the strength of which he had never suspected, were beating against the feeble barriers he had raised. Of what use was this battle, which might keep him miserable awhile longer, but which could end in but one way? As he walked through the narrow meadow path, in the middle of which the heavy overhanging heads of timothy grass, now ready for the scythe, touched one another, he cast away the last tatters of his old resolves. The dams were down; the current might go whither it listed. He would have it out with Barbara this evening, and end the conflict. It is by some such only half-rational process that the most important questions of life are usually decided — sometimes luckily; in other cases, to the blighting of the whole life. Is it not rather a poor fist of a world after all, this in which we live, where the most critical and irrevocable decisions must be made while the inexperienced youth is tossed with gusts of passion and blinded by traditional prejudices or captivated by specious theories? The selection of wives and vocations, the two capital elements in human happiness and success, is generally guided by nothing higher than the caprice of those whose judgments are in the gristle. Often the whole course of life of the strong, clear-seeing man yet to come is changed forever by a boy's whim. The old allegorists painted the young man as playing chess with the devil; but chess is a game of skill. What the young man plays is often a child's game of pitch and toss, cross or pile, heads or tails, for stakes of fearful magnitude. Luckily for Hiram, as you and I know from our present acquaintance with Barbara, nothing more disastrous than disappointment was likely to happen to him from his inability to keep his mortifying resolves. The abandonment of them had simplified his feelings and brought him present relief. When he knocked on the jamb of the open front door of the Grayson farm-house, and was invited to come in by the mother, there was a wholeness in his feelings and purposes to which he had been a stranger for weeks.

"Barb'ry," said Mrs. Grayson as she entered the kitchen, after giving Hiram a chair, "here 's the master come to see you. I 'low he thought you mought be sick ur sumpin'."

Barbara sat perched on the loom-bench, with her back to the web she had been weaving. Just now she was peeling, quartering, and coring summer apples to dry for winter stores. She untied her apron and went from the kitchen into the sitting-room, where Mason was looking about, as was his habit, in a quizzical, half-amused way. He had noted the wide stone fireplace, the blackness of whose interior was hidden by the bushy asparagus tops which filled it, and the wooden clock on the unpainted mantel-piece, which had a print of the death-bed of George Washington impaneled in its door. A stairway winding up in one corner gave picturesqueness to the room; diagonally across from this was a high post bed; there were some shuck-bottom chairs, and a splint-bottom rocking-chair, and a bureau with a looking-glass on top. The floor was covered with a new rag-carpet, and the comfortable home-like sentiment excited in Hiram's mind by the general aspect of the room was enhanced by a hearth cricket, which, in one of the crevices of the uneven flag-stones, was already uttering little chirps by way of tuning up for an evening performance.

The sight of Mason dissipated for the moment the clouds that darkened Barbara's thoughts; she saw blue sky for the first time since Tom's first return. It was a pleased and untroubled face that met his gaze when she extended her hand to him.

"Howdy, Mr. Mason!"

Mason fixed his eyes on her in his odd fashion, half turning his head aside, and regarding her diagonally.

"Well, Barbara, you 're the lost sheep," was his greeting. "I was afraid you would n't come back to the flock if I did n't come into the wilderness and look you up."

"There 's been such a lot of things to do this week," she answered hurriedly, "I did n't know how to get time to go to school."

This was truthful, but it was far from being frank, and it was not on these terms that Mason wished to meet her. His first thought was to put her more at ease.

"Can't we sit out on the porch?" he said; "I 'm warm with walking." And he lifted two of the chairs and carried them to the covered porch. There would soon be no light outside but what came from the night sky, and what a dim candle in the sitting-room, when it should be lighted, might manage to spare through the open door. Hiram had a notion that in this obscurity he could coax Barbara out of the diplomatic mood into the plain indicative. But before they had sat down he had changed his plan.

"Hold on," he said, more to himself than to her; and added, "What were you doing when I came?"

"Only peeling some apples to dry."

"Let me help you; we 'll have an apple-peeling all to ourselves."

"No," said Barbara, hesitatingly; but Mason went through the sitting-room and, opening the kitchen door, thrust his head through and said:

"May n't I sit out there and help Barbara peel apples, Mrs. Grayson?"

"You may do what you like, Mr. Mason," said the old lady, pleased with his familiarity; "but peelin' apples ain't jest the kind of work to set a schoolmaster at."

"Schoolmasters a'n't all of them so good for nothing as you think. Come on, Barbara; a little apple-peeling will make it seem like home to me; and this living 'round in other people's houses has made me homesick."

Barbara came out and took her old place on the loom-bench, beside the great three-peck basket of yellow apples. Her seat raised her considerably higher than Mason, who occupied a low chair. In front of Barbara was another chair, on which sat a pan to hold the quarters of apples when prepared for drying; on one of the rungs of this Barbara supported her feet. The candle which Mrs. Grayson lighted shed a dim yellow light from one end of the high smoke-blackened mantel-shelf, which extended across the chimney above the cavernous kitchen fireplace. The joists of the loft were of heavy logs, and these, and the boards which overlaid them, and all the wood-work about this kitchen, were softened and sombered by the smoke that had escaped from the great, rude chimney; for the kitchen was the original log-cabin built when Tom's father, fresh from Maryland, had first settled on the new farm; the rest of the house had grown from this kernel.

The mother, who had not dreamed of any relation between Barbara and Hiram Mason more friendly than that of master and pupil, was a little surprised at the apparently advanced stage of their acquaintance; but she liked it, because it showed that the schoolmaster was not "stuck up," and that he understood that "our Barb'ry" was no common girl. Tom looked in at the open outside door of the kitchen after a while, and was pleased. "Barb deserved a nice beau if ever anybody did," he reflected, and it might keep her from feeling so bad over his own failures. Not wishing to intrude, and wearied to exhaustion with his first day of farm-work since his return, he went around to the front door and through the sitting-room upstairs to bed. When the mother had finished "putting things to rights" she went into the sitting-room, and the apple-peelers were left with only the loom, the reel, and the winding-blades for witnesses.

They talked of school, of their studies, and of many other things until the great basket of apples began to grow empty while the basket of parings and corings was full. The pan of apple-quarters, having overflowed, had been replaced by a pail, which was also nearly full, when, after a playful scuffle of hands in the basket, Hiram secured the last apple and peeled it. Then laying down his knife, he asked:

"You 'll be back at school next week?"

Barbara had been dreading this inquiry. She wished Mason had not asked it. She had heartily enjoyed his society while they talked of things indifferent, but the question brought her suddenly and painfully back into the region of her disappointment and perplexities.

"I 'm afraid I can't come any more. Things have n't gone right with us." The wide spaces between her words indicated to her companion the effort it cost to allude to her affairs.

Mason was more than ever puzzled. By what means could he establish such a ground of confidence between them as would enable him to enter into her difficulties and give her, at the least, the help of his sympathy and counsel? There seemed no way so good as that by direct approach.

"Barbara," he said, drawing his chair nearer to the loom-bench and leaning forward toward her, "won't you please tell me about your affairs, if — if you can do it? I don't want to intrude, but why can't you let me be your best friend and — help you if I can?"

This speech had a different effect from what Mason had intended. Barbara's pride resented an offer of help from him. Of all things, she did not wish to be pitied by the man she was beginning to love. He would always think of her as lower than himself, and she had too much pride to relish anything like the rôle of King Cophetua's beggar maid.

"I can't do it, Mr. Mason; there 's nothing anybody can do." She spoke with her eyes downcast. Having ventured so much and gained nothing, Mason leaned back in his chair and turned his head about to what a photographer would call a "three-quarters position," and looked at Barbara from under his brows without saying anything more. He was like a pilot waiting for the fog to lift. This silent regard made Barbara uneasy. She could not help feeling a certain appreciation of his desire to help her, however disagreeable it might be to her feelings. Perhaps she was wrong to repel his confidence so abruptly.

"I suppose you know about poor Tom?" she said, making so much concession to his

kindness, but half swallowing the rapidly spoken words.

"Yes," said Hiram; "I heard he had got into a scrape such as many a bright boy gets into. A village like Moscow is a hard place for a boy raised in the country. But he 'll pull out of that."

It lifted a weight from Barbara's mind that Mason did not take a too serious view of Tom. She wished, however, that he would not look at her so long in that askance fashion.

"Did the trouble cost you much money?" he ventured to inquire after a while.

"Well, no, not much for some folks, but a good deal for us; we're rather poor, you know." There is a pride that conceals poverty; there is a greater pride that makes haste to declare it, feeling that only hidden poverty is shameful. "You know father was a smart man in some ways," Barbara continued, "but he had n't any knack. He lost most of his money before he came to Illinois; and then when he got here he made the mistake, that so many made, of settling in the timber, though very little of the prairie had been taken up yet. If he had n't been afraid of the winters on the prairie, we might have been pretty well off; but it 's been a hard struggle opening a farm in the woods. Then we have had nothing but misfortune. My father died of a congestive chill, and then my three brothers and my sister died, and Tom and I are all that 's left to mother. And there are doctor's bills to pay yet, and a little debt on the farm."

"Yes, yes," said Hiram, wounded in thinking of the pain he was giving Barbara in forcing her to speak thus frankly of the family troubles. "I know what it is. Poverty and I are old acquaintances; regular old cronies. She 's going to stand by my side till I graduate, anyhow; but as I have known her ever since I was born, I can afford to laugh in her face. There 's nothing like being used to a thing."

Barbara made no reply to this. Mason sat and looked at her awhile in silence. There was no good in trying to help her on his present footing. He leaned forward, resting his elbow on the loom-bench by her side.

"Look here, Barbara," he said, with abrupt decision, "let 's, you and me, go in partnership with our poverty some day, and see what 'll come of it. I suppose, so far as money is concerned, the equations would be about equal without the trouble of figuring it out."

Barbara looked toward the pan of cut apples in front of her with her eyes out of focus, and made no reply. After a while Hiram spoke again.

"Did I — make you mad, Barbara?" He used the word "mad" in the sense attached to it in that interior country, meaning angry.

"No, not mad," said Barbara. "Not that — but — I don't know what to say. I don't believe what you propose can ever be."

Mason waited for her to explain herself, but she did not seem to be able to get her own consent. At length he got up and went to the mantel-piece and took down Barbara's slate.

"Let 's talk about algebra awhile," he said.

Barbara was fond enough of algebra, but it seemed droll that Mason, with an unsettled proposition of marriage on hand, should revert to his favorite study. She could not see what he was writing, but when he passed the slate to her, she read:

a = another lover.
b = objections to H. Mason.
c = interfering circumstances.
$x = a + b + c$.

"Now," said Mason, when she looked up, "I 'd like you to help me to get the exact value of x in this little equation. It 's a kind of fortune-telling by algebra. We must proceed by elimination; you may strike out such of the letters on the right side of the last equation as do not count for anything.

But instead of proceeding as the master suggested, Barbara, whose reserve was partly dissipated by her amusement, took the pencil that he offered her, and after a moment's reflection wrote below:

$a = 0$
$b = 0$
$x = c$

"I never saw an equation more to my taste," said Hiram. "If it 's only circumstances, then circumstances and I are going to fight it out. You think there are things that will keep us from making an equation between Barbara and Hiram?"

"There would n't be any equation," she said, looking out of half-closed eyelids, as she always did when speaking with feeling. "Your family is an educated one, and your father and mother would n't approve of us. Mother never had any chance to learn, and her talk is very old-fashioned, but she 's just as good as good can be, all the same. Tom 's unsteady; I hope he 'll get over that yet; but your father and mother and your sisters would n't like it."

"Yes, they would, if they knew you," said Mason, with enthusiasm; "and, besides, I don't see that I 'm bound to get their consent."

"But that would n't change matters," persisted Barbara, despondingly. "If they did n't like it, it would n't be nice."

"Don't you bother about my happiness, Barbara. If I have you, do you think anything else will trouble me?" He got up and snuffed the candle with his fingers like the brave man that he was.

BARBARA AND HIRAM BY THE LOOM.

"I 'm not bothering about you at all," said Barbara. "I 'm not so good as you think I am. I let you take care of yourself in this matter; you 're strong, and such things won't worry you." She was picking at her dress as she spoke. "Ever since you said what you did when you helped me over the fence last,"— Barbara took a long breath as she thought of that scene; she had often retraced all its details in her memory,— "I 've known that you felt so toward me that you would face anything. But *I*— I could n't bear it if your folks should look down on me and I be — your wife." It was hard to say the last words; they sounded strangely, and when they were uttered, the sound of them put her into a trepidation not altogether disagreeable.

"Look down on *you?*" said Hiram, with a vehemence Barbara had never known him to manifest before. "Do you think my folks are such idiots? They don't meet a person like you often enough to get the habit of looking down on such."

"But you don't know women folks," said Barbara.

"I know my family better than you do, and

you 've got mighty curious notions about them and about yourself. You 've always lived here in the woods, and you don't know what you 're worth."

He lifted the empty apple-basket out of the way and sat down by her.

"Now, Barbara, you say you know how I feel toward you. You are the girl of all girls in the world for me. And now you won't spurn me, will you?" he said entreatingly.

Barbara's lips quivered and she seemed about to lose control of herself. However, after a little period of silence and struggle, she suppressed her feelings sufficiently to speak:

"I could n't *spurn* you," she said. Then, after another pause: "Maybe you don't care any more for me than I do for you. But I 'm in such trouble — that I can't tell what to say. Won't you wait and give me a little time? Things may be better after a while."

"How long shall I stay away? A week?" Mason's voice had a note of protest in it.

"Don't be hurt," she said, lifting her eyes timidly to his. "But I 'm in such a hard place. Let me have two weeks or so to think about it, and see how things are going to turn." It was not that Barbara saw any chance for a change of circumstances, but that she could not resolve to decide the question either way, and wished to escape from her present perplexity by postponement.

"Just as you say," said Mason, regretfully; "but I tell you, Barbara, it 's two weeks of dead lost time."

Then he got up and held out his hand to her.

"Good-bye, Barbara."

"Good-bye, Mr. Mason."

"Oh, call me Hiram! It 's more friendly, and you call all the other young men by their first names."

"But you 're the master."

"I 'm not the master of you, that 's clear. Besides, you 've left school." He was holding her hand in gentle protest all this time.

"Well, good-bye — Hiram!" said Barbara, with a visible effort which ended in a little laugh.

Mason let go of her hand and turned abruptly and walked out of the door, and then swiftly down the meadow path. Barbara stood and looked after him as long as she could see his form; then she slowly shut and latched the kitchen door and came and covered with ashes the remaining embers of the fire, and took the candle from the mantel-piece and went through the now vacant sitting-room to her chamber above.

(To be continued.)

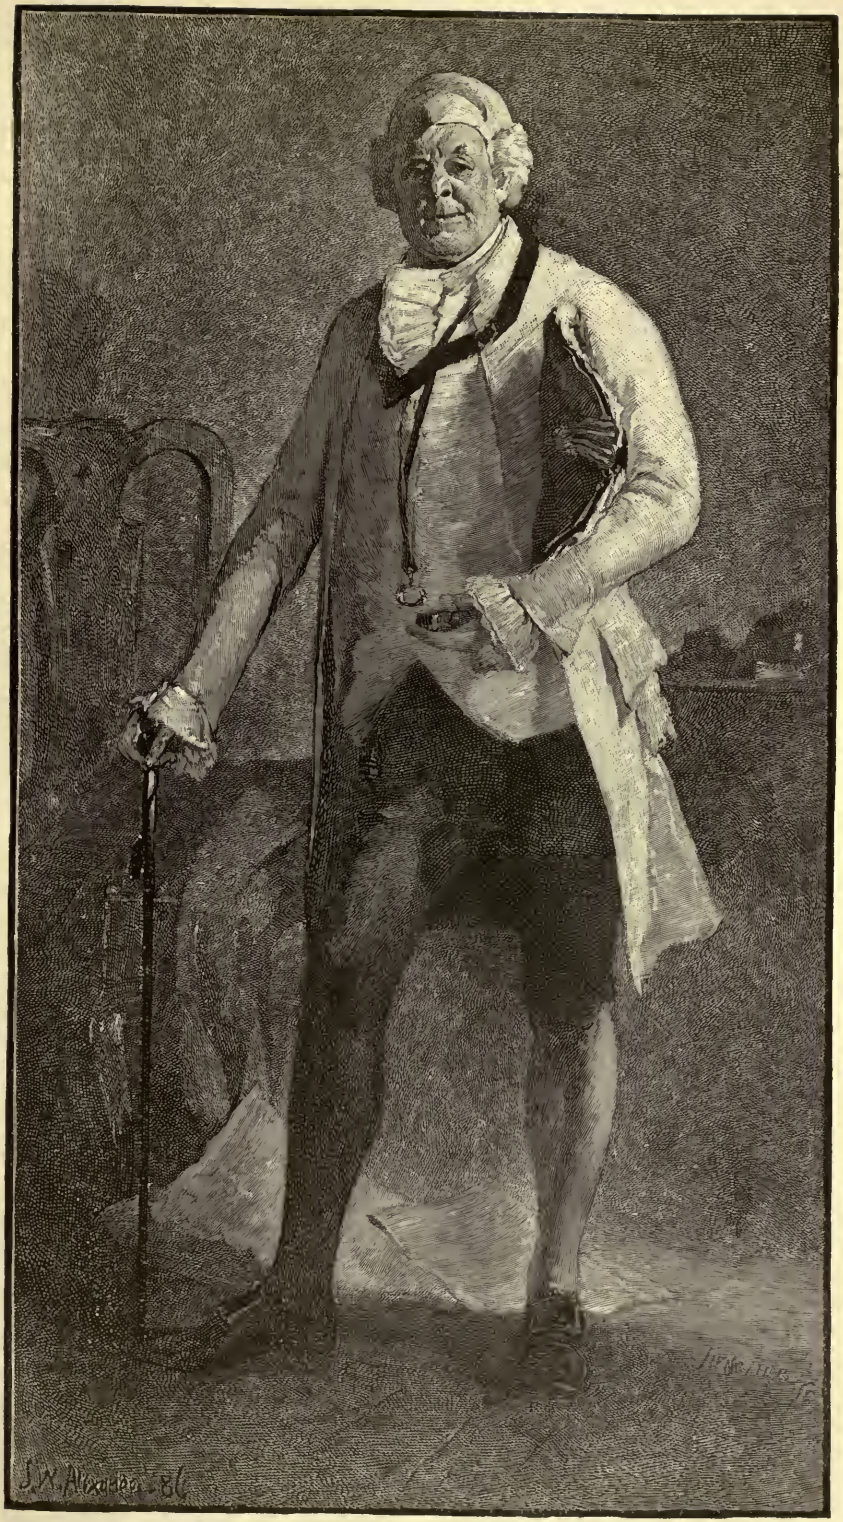
Edward Eggleston.

JOHN GILBERT.

WITH ILLUSTRATIONS BY J. W. ALEXANDER.

OF all the men who have achieved fame upon the American stage during the last half century, a period which includes almost all that is important in the theatrical history of the country, no one probably ever gained a higher place in public esteem than that now occupied by the finished artist and fine old actor John Gilbert.

There have been players of greater genius and wider renown, whose names are known the world over, and whose brilliant careers mark the limits of dramatic eras, but none of them, it is safe to say, ever secured a firmer hold upon the popular heart, in the twofold capacity of actor and man, than the veteran who is the subject of this sketch. The position of Mr. Gilbert upon the stage of to-day is extraordinary in more ways than one. Although he can scarcely be said to be the most prominent figure in the American theatrical world, yet he is certainly the one man whose retirement from it would leave a void which nobody



JOHN GILBERT AS "SIR PETER TEAZLE."

JOHN GILBERT AS "SIR PETER TEAZLE."

now in sight could hope to fill. With him will vanish, for a time at least, if not forever, old comedy characters that have been beloved by play-goers for generations and have been regarded almost in the light of actual personages instead of mere creatures of the imagination. The remark that such or such a character will disappear with this or that actor is common enough, and is apt to be unfounded, but in the case of Mr. Gilbert it is, unhappily, only too true. It is by no means necessarily an irreparable loss to the stage when an eccentric conception, made vital by the peculiar powers of some particular actor, dies with its originator. *Paul Pry*, *Lord Dundreary*, *Solon Shingle*, and a host of others, admirable as they are in their respective classes, may all go to the limbo of forgotten plays and the condition of the theater will not be affected permanently; but it is altogether a more serious matter when the survival of a classic type seems to be dependent upon a single life. When Mr. Gilbert abandons the foot-lights — may the day be far distant! — he will take with him nearly all the famous old men of old English comedy, to say nothing of the comedy which is rapidly growing middle-aged. Who but he can give us *Sir Anthony* or *Sir Peter*, *Old Dornton* or *Mr. Hardcastle*, *Lord Duberly* or *Sir Francis Gripe?* It is surely a great good fortune for us all that has preserved his health and vigor for three-quarters of a century, and which leaves him in the full possession of physical and mental powers in his seventy-eighth year.

Many of the younger admirers of Mr. Gilbert doubtless think that he has never or rarely played in anything but comedy, whereas the truth is that his earliest efforts were in tragedy. The perfection of his present method, which appears to the careless observer so simple and natural a thing, is the result of long years of arduous labor and a strangely varied experience. He was born on the 27th of February, 1810, in Boston, next door to the house

in which Charlotte Cushman first saw the light. From his earliest youth, it is said, he was attracted to a theatrical life, and as a boy in the Boston High School was noted among his fellows for his skill and force in declamation. His aspirations were high, and his first recitations were selected from "The Iron Chest" and "Venice Preserved." This was before he was fourteen years old, at which age he was put behind the counter in his uncle's dry-goods store and doomed to ply the yard-stick and scissors. He was too young for open rebellion, but he had the courage, resolution, and industry which are more potent than genius itself. Always steadfast to the purpose of his life, he never for an instant ceased the study of elocution, and at last, when he was eighteen years old, he managed to obtain permission from the directors of the old Tremont Theater to make a public appearance there as *Jaffier*. This important step was taken without the knowledge either of his mother or his uncle, neither of whom had much reverence for the stage. He was announced simply as a young gentleman of Boston, and had the privilege of one rehearsal only. His performance proved so successful that he was allowed to try again, and this time he essayed the part of *Sir Edward Mortimer*, to the manifest approval of his audience. His triumph enabled him to overcome the opposition of his relatives, and he was allowed to leave the shop and enter definitely upon the career of an actor. His third part was *Shylock*, and there his ambition met with a severe shock. Boylike, he thought that the favorable reception accorded to him as a novice meant permanent fame for him, and he was greatly taken aback when he found that he had to begin again, like everybody else, at the bottom of the ladder. After playing two and three line parts for a time, he was glad to get an opportunity to go to New Orleans under the management of James H. Caldwell, although his salary was of the smallest. He made his first appearance there as *Sir Frederick Vernon* in "Rob Roy," and is reported to have failed completely on account of a bad attack of stage fright, pardonable enough in a lad of his inexperience. Immediately afterward he

JOHN GILBERT AS "JESSE RURAL."

JOHN GILBERT AS "SIR ANTHONY ABSOLUTE."

redeemed himself by the admirable manner in which he acted an old man, a very strong part, in a piece called "The May Queen"; and it was on this occasion that the natural bent of his talent was first displayed. Thereafter he appeared constantly in the characters of old men and made rapid advances in professional reputation. For five years he traveled in the South and South-west, undergoing discomforts and making shifts of which even the modern barn-stormer has but the faintest conception, but constantly adding to his experience and self-confidence, until he finally made his way back again to Boston and procured an engagement at the Tremont Theater. Here he played for another five years in a great variety of characters, many of which were old men — in tragedy, old and new comedy, melodrama, romantic-drama, and farce. He was associated in those days with a host of dead-and-gone celebrities,— Booth, Forrest, Hamblin, J. W. Wallack, Tyrone Power, Charlotte Cushman, Cooper, Ellen Tree (Mrs. Charles Kean), Mr. and Mrs. Keely, etc.,—and doubtless learned something from each of them. The modern actor would call work of this kind drudgery, but to the true student of dramatic art it is more precious than all the rules of all the professors. At the end of his five years' term in Boston, Mr. Gilbert's position in his profession was assured, and he came to New York, where he at once procured an engagement in the Old Bowery Theater, then at the height of its fame. He played *Sir Edward Mortimer* and a number of other important characters with much success, and then returned for a brief season to Boston, acting in the Tremont and the National theaters. Being desirous of studying the methods of comedians trained amidst the old traditions, he made a trip to England, and was engaged by Mr. Walton, the manager of the Princess's Theater, and made his first appearance there in the character of *Sir Richard Bramble* in "The Poor Gentleman." His success was so emphatic that he was reëngaged for the whole of the ensuing season, and played the old men's parts in a number of standard English comedies, and also supported Macready and Charlotte Cushman. Whenever he had a chance he went to the Haymarket Theater, the home of legitimate comedy, where Mathews, Buckstone, Compton, Mrs. Nesbitt, and other famous actors could be seen, and he also paid a visit to Paris to study the best methods of the French school.

On his return to New York he joined the company of the Park Theater, then under the direction of Hamblin, and remained there until the house was burned in 1848. Then he went to Philadelphia, where he acted for five years, and next to Boston, to the New Boston Theater, managed by Thomas Barry, where he remained until 1857. During the ensuing five years he was once more in Philadelphia, but in 1862 he returned to New York for good, joining the company of Mr. Wallack, of which he was one of the chief ornaments to the very last. It is not possible within the limits of this sketch to attempt even the briefest summary of the work which he has accomplished in the last twenty-five years, but a hasty reference to some of his most important impersonations will give a good idea of its variety and scope. The fame of his *Sir Anthony Absolute* entitles it to be placed at the head of the list. It is difficult to believe that the choleric old Englishman ever had a better representative. To-day there is no actor who could presume to challenge comparison with him in it. Mr. William Warren, of Boston, has retired

upon his laurels. Mr. Chippendale, Mr. Phelps, and the original Warren are dead. All were celebrated in the character, but Mr. Gilbert is probably better than any of them. His figure, his face, and his voice fit the part exactly; the naturalness of his choleric outbursts is extraordinary; the dryness of his humor is perfect; and his whole carriage is an absolute reproduction of the old-time manner. The performance is — in one word — perfection. His *Sir Peter* is a companion-piece of almost equal merit, but is distinctly inferior. It is a little deficient in polish. The ideal *Sir Peter* ought to have an air a little more courtly than that which Mr. Gilbert imparts to him; but perhaps even this objection is open to the charge of hypercriticism. At all events, there is no other *Sir Peter* upon the English-speaking stage to compare with it, although the younger Farren in London and Mr. Charles Fisher here are both clever in the character. Their admitted excellence only emphasizes Mr. Gilbert's easy superiority. By way of contrast with the explosive *Sir Anthony*, take *Old Dornton* in the "Road to Ruin." No more perfect picture of probity, benevolence, and tenderness could be imagined. There is almost as much pathos in the old man's honest outbursts of indignation as in his moments of forgiveness and reconciliation. What a study of sturdy indignation and parental tenderness he furnished as *Job Thornberry* in "John Bull," and what a wealth of humor he infused into *Lord Duberly!* His *Lord Ogleby* is another instance of his wide versatility, as is his *Sir Francis Gripe* in "The Busy-body," which a year or two ago gave so much pleasure to lovers of genuine old comedy. Even more striking is the contrast between his *Master Walter* in "The Hunchback" and his *Mr. Hardcastle* in "She Stoops to Conquer," two characters with scarcely a point in common, yet played with almost equal truth and finish. The *Hardcastle* is the finer, of course, being a veritable masterpiece full of the rarest and homeliest humor; but what other actor capable of playing the one could play the other at all? *Dogberry*, *Adam*, *Sir George Thunder*, *Old Wilding*, *Sir William Fondlove*, *Justice Greedy*, *Paul Lafont*, in "Love's Sacrifice," and others innumerable,— what a splendid gallery of portraits they all make, and how long it is likely to be before any one man will be able to paint them again!

But even in these later days it is not only in old comedy that Mr. Gilbert has excelled; his *Sir Harcourt Courtly* is as finished a modern portrait as any of the old ones just enumerated. The external polish of this superannuated fop is a triumph of the most delicate and artistic acting, in which the broadest effects are secured by the most minute elaboration. Who would suppose that this exquisite was identical with the ruffianly *McKenna* in "Rosedale," the fussy old *Brisemouch* in "A Scrap of Paper," or the jealous old husband in "The Guv'nor"? The personal characteristics of Mr. Gilbert — his stature, voice, and face — are so marked that, until the list of his impersonations is examined, he often fails to receive credit for the uncommon versatility which he exhibits.

JOHN GILBERT AS "HARDCASTLE."

The personages named do not constitute one-tenth, perhaps, of those which he has enacted in New York, but they are sufficient for the present purpose, which is simply to show the strong foundation upon which his reputation rests. He is in every sense an honor to his profession. The stage was never more urgently in need of such men as he, who furnish irrefutable demonstration that labor and experience are the only sure means by which artistic perfection can be attained. Genius in acting, as in everything else, will always

assert itself; but it cannot be developed to its full extent without complete knowledge of the mechanical processes needed to create the desired impression, and mechanical — or, if the word be displeasing, executive — excellence can be reached by practice, and by practice only. The only real school of acting is the stage, and in this, as in every other school, the student must begin at the bottom and work his way up. Mr. Gilbert is a past-master of his art, who uses, with unerring precision, all the resources acquired in half a century of intelligent observation and laborious application. His skill is so complete that everything he does has the effect of intuition; but neither he nor any other expert in acting equal to him can impart the faculty which he possesses. He can tell how he does it, but that will not enable anybody else to do it off-hand in the same way. There was a glimmer of this truth in the mind of Mr. Squeers when he sent his students in practical philosophy to clean his windows. It will be a blessed day for the theater when the agile dolls who masquerade nowadays as comedians begin to comprehend that mimicry is not acting, and that, if it were, they would be inferior in this respect to many of the anthropoid apes.

THE DUSANTES.*

A SEQUEL TO "THE CASTING AWAY OF MRS. LECKS AND MRS. ALESHINE."

BY FRANK R. STOCKTON,

Author of "Rudder Grange," "The Lady, or the Tiger?" etc.

II.

AFTER a second night spent in the stage-coach on that lonely and desolate mountain road where we were now snow-bound, I arose early in the morning and went into the forest to collect some fuel; and while thus engaged I made the discovery that the snow was covered with a hard crust which would bear my weight. After the storm had ceased the day before, the sun had shone brightly and the temperature had moderated very much, so that the surface of the snow had slightly thawed. During the night it became cold again, and this surface froze into a hard coating of ice. When I found I could walk where I pleased, my spirits rose, and I immediately set out to view the situation. The aspect of the road gave me no encouragement. The snow-fall had been a heavy one, but had it not been for the high wind which accompanied it, it would have thrown but moderate difficulties in the way of our rescuers. Reaching a point which commanded a considerable view along the side of the mountain, I could see that in many places the road was completely lost to sight on account of the great snow-drifts piled up on it. I then walked to the point where the two roads met, and crossing over, I climbed a slight rise in the ground which had cut off my view in this direction, and found myself in a position from which I could look directly down the side of the mountain below the road.

Here the mountain-side, which I had supposed to be very steep and rugged, descended in a long and gradual slope to the plains below, and for the greater part of the distance was covered by a smooth shining surface of frozen snow, unbroken by rock or tree. This snowy slope apparently extended for a mile or more, and then I could see that it gradually blended itself into the greenish-brown turf of the lower country. Down there in the valley there still were leaves upon the trees, and there were patches of verdure over the land. The storm which had piled its snows up here had given them rain down there and had freshened everything. It was like looking down into another climate, and on another land. I saw a little smoke coming up behind a patch of trees. It must be that there was a house there! Could it be possible that we were within a mile or two of a human habitation? Yet, what comfort was there in that thought? The people in that house could not get to us nor we to them, nor could they have heard of our situation, for the point where our road reached the lower country was miles farther on.

As I stood thus and gazed, it seemed to me that I could make a run and slide down the mountain-side into green fields, into safety, into life. I remembered those savage warriors who, looking from the summits of the Alps upon the fertile plains of Italy, seated themselves upon their shields and slid down to conquest and rich spoils.

An idea came into my mind, and I gave it glad welcome. There was no time to be lost. The sun was not yet high, but it was mounting in a clear sky, and should its rays become warm enough to melt the crust on which I stood, our last chance of escape would be gone. To plow our way to any place, through deep, soft snow, would be impossible. I hurried back to our coach, and found three very grave women standing around the fire. They were looking at a small quantity of food at the bottom of a large basket.

"That 's every crumb there is left," said Mrs. Aleshine to me, "and when we pass in some to them unfortunates on the other side of the drift,— which, of course, we 're bound to do,— we 'll have what I call a skimpy meal. And that 's not the worst of it. Until somebody gets up to us, it will be our last meal."

I took my poor Ruth by the hand, for she was looking very pale and troubled, and I said: "My dear friends, nobody can get up to this place for a long, long time; and before help could possibly reach us we should all be

dead. But do not be frightened. It is not necessary to wait for any one to come to us. The snow is now covered with a crust which will bear our weight. I have thought of a way in which we can slide down the mountain-side, which, from a spot where I have been standing this morning, is no steeper than some coasting hills, though very much longer. In a few minutes we can pass from this region of snow, where death from cold and starvation must soon overtake us, to a green valley where there is no snow, and where we shall be within walking distance of a house in which people are living."

Ruth grasped my arm. "Will it be safe?" she exclaimed.

"I think so," I answered. "I see no reason why we should meet with any accident. At any rate, it is much safer than remaining here for another hour; for if the crust melts, our last chance is gone."

"Mr. Craig," said Mrs. Lecks, "me and Mrs. Aleshine is no hands at coastin' down-hill, havin' given up that sort of thing since we was little girls with short frocks and it did n't make no matter any way. But you know more about these things than we do; and if you say we can get out of this dreadful place by slidin' down-hill, we 're ready to follow, if you 'll just go ahead. We followed you through the ocean with nothin' between our feet and the bottom but miles o' water and nobody knows what sorts of dreadful fish, and when you say it 's the right way to save our lives, we 're ready to follow you again. And as for you, Mrs. Ruth, don't you be frightened. I don't know what we 're goin' to slide on, but, whatever it is, even if it 's our own selves, me and Mrs. Aleshine will take you between us, and if anything is run against, we 'll get the bumps, and not you."

I was delighted to see how readily my proposition was accepted, and we made a hasty breakfast, first sending in some of our food to the other party. The gentleman reported through the hole of communication that they were all fairly well, but a good deal stiffened by cold and want of exercise. He inquired, in a very anxious voice, if I had discovered any signs of approaching relief. To this I replied that I had devised a plan by which we could get ourselves out of our present dangerous situation, and that in a very short time I would come around to the door of his shed — for I could now walk on the crusted snow — and tell him about it. He replied that these words cheered his heart, and that he would do everything possible to coöperate with me.

I now went to work vigorously. I took the cushions from the coach, four of them altogether, and carried them to the brink of the slope down which I purposed to make our descent. I also conveyed thither a long coil of rawhide rope which I had previously discovered in the boot of the coach. I then hurried along the other road, which, as has been said before, lay at a somewhat lower level than the one we were on, and when I reached the shed I found the door had been opened, and the gentleman, with his tin pan, had scooped away a good deal of the snow about it, so as to admit of a moderately easy passage in and out. He met me outside, and grasped my hand.

"Sir, if you have a plan to propose," he said, "state it quickly. We are in a position of great danger. Those two ladies inside the shed cannot much longer endure this exposure, and I presume that the ladies in your party — although their voices, which I occasionally hear, do not seem to indicate it — must be in a like condition."

I replied that, so far, my companions had borne up very well, and without further waste of words proceeded to unfold my plan of escape.

When he had heard it the gentleman put on a very serious expression. "It seems hazardous," he said, "but it may be the only way out of our danger. Will you show me the point from which you took your observations?"

"Yes," said I, "but we must be in haste. The sun is getting up in the sky, and this crust may soon begin to melt. It is not yet really winter, you know."

We stepped quickly to the spot where I had carried the cushions. The gentleman stood and silently gazed, first at the blocked-up roadway, then at the long, smooth slope of the mountain-side directly beneath us, and then at the verdure of the plain below, which had grown greener under the increasing brightness of day. "Sir," said he, turning to me, "there is nothing to be done but to adopt your plan, or to remain here and die. We will accompany you in the descent, and I place myself under your orders."

"The first thing," said I, "is to bring here your carriage cushions, and help me to arrange them."

When he had brought the three cushions from the shed, the gentleman and I proceeded to place them with the others on the snow, so that the whole formed a sort of wide and nearly square mattress. Then, with the rawhide rope, we bound them together in a rough but secure net-work of cordage. In this part of the work I found my companion very apt and skillful.

When this rude mattress was completed I requested the gentleman to bring his ladies to the place while I went for mine.

"What are we to pack up to take with us?" said Mrs. Aleshine, when I reached our coach.

"We take nothing at all," said I, "but the money in our pockets and our rugs and wraps. Everything else must be left in the coach, to be brought down to us when the roads shall be cleared out."

With our rugs and shawls on our arms we left the coach, and as we were crossing the other road we saw the gentleman and his companions approaching. These ladies were very much wrapped up, but one of them seemed to step along lightly and without difficulty, while the other moved slowly and was at times assisted by the gentleman.

A breeze had sprung up which filled the air with fine frozen particles blown from the uncrusted beds of snow along the edge of the forest, and I counseled Ruth to cover up her mouth and breathe as little of this snow powder as possible.

"If I 'm to go coastin' at all," said Mrs. Aleshine, "I 'd as lief do it with strangers as friends; and a little liefer, for that matter, if there 's any bones to be broken. But I must say that I 'd like to make the acquaintance of them ladies afore I git on to the sled, which" — at that moment catching sight of the mattress — "you don't mean to say that that 's it?"

"Barb'ry Aleshine," said Mrs. Lecks from underneath her great woolen comforter, "if you want to get your lungs friz, you 'd better go on talkin'. Manners is manners, but they can wait till we get to the bottom of the hill."

Notwithstanding this admonition, I noticed that as soon as the two parties met, both Mrs. Lecks and Mrs. Aleshine advanced and shook hands with the ladies who had been their neighbors under such peculiar circumstances, and that Mrs. Lecks herself expressed a muffled hope that they might all get down safely.

I now pushed the mattress which was to serve as our sled as close as was prudent to the edge of the descent, and requested the party to seat themselves upon it. Without hesitation Mrs. Lecks and Mrs. Aleshine sat down, taking Ruth between them, as they had promised to do. My young wife was very nervous, but the cool demeanor of her companions, and my evident belief in the practicability of the plan, gave her courage, and she quietly took her seat. The younger of the two strange ladies stepped lightly on the cushions, and before seating herself stood up for a good look at the far-extending bed of snow over which we were to take our way. The prospect did not appear to deter her, and she sat down promptly and with an air that seemed to say that she anticipated a certain enjoyment from the adventure. The elder lady, however, exhibited very different emotions. She shrank back from the cushions towards which the gentleman was conducting her, and turned her face away from the declivity. Her companion assured her that it was absolutely necessary that we should descend from the mountain in this way, for there was no other; and asserting his belief that our slide would be a perfectly safe one, he gently drew her to the mattress and induced her to sit down.

I now, for the first time, noticed that the gentleman carried under one arm, and covered by his long cloak, a large package of some sort, and I immediately said to him: "It will be very imprudent for us to attempt to carry any of our property except what we can put in our pockets or wrap around us. Everything else should be left here, either in your carriage or our coach, and I have no fear that anything will be lost. But even if our luggage were in danger of being molested if left here, we cannot afford to consider it under circumstances such as these."

"My dear sir," said the gentleman, speaking very gravely, "I appreciate the hazards of our position as keenly as yourself. Our valises, and all the light luggage which we had with us in our carriage, I have left there, and shall not give them another thought. But with the parcel I hold under this arm I cannot part, and if I go down the mountain-side on these cushions, it must go with me. If you refuse in such a case to allow me to be one of your party, I must remain behind, and endeavor to find a board or something on which I can make the descent of the mountain."

He spoke courteously but with an air of decision which showed me that it would be of no use to argue with him. Besides, there was no time for parleying; and if this gentleman chose to take his chances with but one arm at liberty, it was no longer my affair. I therefore desired him to sit down, and I arranged the company so that they sat back to back, their feet drawn up to the edge of the mattress. I then took the place which had been reserved for me as steersman, and having tied several shawls together, end to end, I passed them around the whole of us under our arms, thus binding us all firmly together. I felt that one of our greatest dangers would be that one or more of the party might slip from the mattress during the descent.

When all was ready I asked the gentleman, who, with the elder lady, sat near me, at the back of the mattress, to assist in giving us a start by pushing outward with his heels while I thrust the handle of my wooden shovel into the crust and thus pushed the mattress forward. The starting was a little difficult, but in a min-

ute or two we had pushed the mattress partly over the brink, and then, after a few more efforts, we began to slide downward.

The motion, at first slow, suddenly became quite rapid, and I heard behind me a cry or exclamation, from whom I knew not, but I felt quite sure it did not come from any of our party. I hoped to be able to make some use of my shovel in the guidance of our unwieldy raft or mattress-sled, but I soon found this impossible, and down we went over the smooth, hard-frozen slope, with nothing to direct our course but the varying undulations of the mountain-side. Every moment we seemed to go faster and faster, and soon we began to revolve, so that sometimes I was in front and sometimes behind. Once, when passing over a very smooth sheet of snow, we fairly spun around, so that in every direction feet were flying out from a common center and heels grating on the frozen crust. But there were no more cries or exclamations. Each one of us grasped the cordage which held the cushions together, and the rapidity of the motion forced us almost to hold our breath.

Down the smooth, white slope we sped as a bird skims through the air. It seemed to me as if we passed over miles and miles of snow. Sometimes my face was turned down the mountain where the snow surface seemed to stretch out illimitably, and then it was turned upward towards the apparently illimitable slopes over which we had passed.

Presently, my position now being in front of the little group that glanced along its glittering way, I saw at some distance below me a long rise or terrace which ran along the mountain-side for a considerable distance, and which cut off our view of everything below us. As we approached this hillock the descent became much more gradual and our progress slower, and at last I began to fear that our acquired velocity would not be sufficient to carry us up the side of this elevation, and so enable us to continue our descent. I therefore called to everybody in the rear to kick out vigorously, and with my shovel I endeavored to assist our progress. As we approached the summit of the elevation, we moved slower and slower. I became very anxious, for, should we slide backward, we might find it difficult or impossible to get ourselves and the mattress up this little hill. But the gentleman and myself worked valiantly, and as for Mrs. Lecks and Mrs. Aleshine, they kicked their heels through the frozen crust with such energy that we moved sidewise almost as much as upward. But in a moment the anxious suspense was over, and we rested on the ridge of the long hillock with the mountain-side stretching down to the plain, which lay not very far below us.

I should have been glad to remain here a few minutes to regain breath, and to give some consideration to the rest of our descent, but some of those behind continued to push — the mattress slid over the edge of the terrace, and down again we went. Our progress now was not so rapid, but it was very much more unpleasant. The snow was thinner; there was little or no crust upon it, and we very soon reached a wide extent of exposed turf over which we slid, but not without a good deal of bumping against stones and protuberances. Then there was another sheet of snow, which quickened our downward impetus; and, after that, the snow was seen only in occasional patches, and our progress continued over a long slope of short, partly dried grass, which was very slippery, and over which we passed with considerable quickness.

I wished now to bring our uncouth sled to a stop, and to endeavor to make the rest of the descent on foot. But although I stuck out my heels and tried to thrust the handle of my shovel into the ground, it was of no use. On we went, and the inequalities of the surface gave an irregularity of motion which was uncomfortable and alarming. We turned to this side and that, we bounced and bumped, and the rawhide ropes, which must have been greatly frayed and cut by the snow crust, now gave way in several places, and I knew that the mattress would soon separate into its original cushions, if indeed they still could be called cushions. Fearing increased danger should we now continue bound together in a bunch, I jerked apart the shawl knot under my arms, and the next moment, it seemed to me, there was a general dissolution of our connection with each other. Fortunately, we were now near the bottom of the slope, for while some of us stuck fast to the cushions, others rolled over, or slid, independent of any protection; while I, being thrown forward on my feet, actually ran down-hill! I had just succeeded in stopping myself, when down upon me came the rest of the company, all prostrate in some position or other.

And now from an unwieldy mass of shawls came a cry:

"O Albert Dusante! Where are you? Lucille! Lucille!"

Instantly sprang to one foot good Mrs. Aleshine, her other foot being entangled in a mass of shawls which dragged behind her. Her bonnet was split open and mashed down over her eyes. In her left hand she waved a piece of yellow flannel, which in her last mad descent she had torn from some part of the person of Mrs. Lecks, and in the other a bunch of stout dead weeds, which she had seized and pulled up by the roots as she had

passed them. Her dress was ripped open down her rotund back, and the earth from the weed roots had bespattered her face. From the midst of this dilapidation her round eyes sparkled with excitement. Hopping on one foot, the shawls and a part of a cushion dragging behind her, she shouted:

"The Dusantes! They are the Dusantes!"

Then pitching forward on her knees before the two strange ladies, who had now tumbled into each other's arms, she cried:

"Oh, which is Emily, and which is Lucille?"

I had rushed towards Ruth, who had clung to a cushion, and was now sitting upon it, when Mrs. Lecks, who was close beside her, arose to her feet and stood upright. One foot was thrust through her own bonnet, and her clothes gave evidence of the frenzy and power of Mrs. Aleshine's grasp, but her mien was dignified and her aspect stately.

"Barb'ry Aleshine!" she exclaimed, "if them Dusantes has dropped down from heaven at your very feet, can't you give 'em a minute to feel their ribs and see if their legs and arms is broken?"

The younger lady now turned her head towards Mrs. Aleshine. "I am Lucille," she said.

In a moment the good woman's arms were around her neck. "I always liked you the best of the two," she whispered into the ear of the astonished young lady.

Having found that Ruth was unhurt, I ran to the assistance of the others. The gentleman had just arisen from a cushion, upon which, lying flat on his back, he had slid over the grass, still holding under one arm the package from which he had refused to part. I helped him to raise the elder lady to her feet. She had been a good deal shaken, and much frightened, but although a little bruised, she had received no important injury.

I went to fill a leather pocket-cup from a brook near by, and when I returned I found the gentleman standing, confronted by Mrs. Lecks, Mrs. Aleshine, and Ruth, while his own companions were regarding the group with eager interest.

"Yes," he was saying, "my name is Dusante, but why do you ask at this moment? Why do you show such excited concern on the subject?"

"Why?" exclaimed Mrs. Lecks. "I will tell you why, sir. My name is Mrs. Lecks, and this is Mrs. Aleshine, and if you are the Mr. Dusante with the house on the desert island, this is the Mrs. Craig who was married in that very house, and the gentleman here with the water is Mr. Craig, who wrote you the letter which I hope you got. And if that is n't reason enough for our wanting to know if you are Mr. Dusante, I 'd like to be told what more there could be!"

"It 's them! Of course it 's them!" cried Mrs. Aleshine. "I had a feelin' while we were scootin' down hill that they was near and dear to us, though exactly why and how, I did n't know. And she 's told me she 's Lucille, and of course the other must be Emily, though what relations —"

"Am I to understand," interrupted the gentleman, looking with earnest animation from one to the other of us, "that these are the good people who inhabited my house on the island?"

"The very ones!" cried Mrs. Aleshine. "And what relation are you to Emily? and Lucille to her?"

The gentleman stepped backward and laid down the package which he had held under his arm, and advancing towards me with outstretched hands, and with tears starting to his eyes, he exclaimed:

"And this man then, to whom I owe so much, is Mr. Craig!"

"Owe me!" I said. "It is to you that we owe our very lives, and our escape from death in mid-ocean."

"Do not speak of it," he said, shaking his head with a sorrowful expression on his face. "You owe me nothing. I would to Heaven it were not so! But we will not talk of that, now. And this is Mrs. Craig," he continued, taking Ruth by the hand,—"the fair lady whose nuptials were celebrated in my house. And Mrs. Lecks, and Mrs. Aleshine." As he spoke he shook hands with each. "How I have longed to meet you! I have thought of you every day since I returned to my island, and discovered that you had been — I wish I could say — my guests. And where is the reverend gentleman? And the three mariners? I hope that nothing has befallen them!"

"Alas! — for three of them at least," ejaculated Mrs. Aleshine; "they have left us, but they are all right. And now, sir, if you could tell us what relation you are to Emily, and what Lucille —"

"Barb'ry!" cried Mrs. Lecks, making a dash towards her friend, "can't you give the man a minute to breathe? Don't you see he 's so dumbflustered that he hardly knows who he is himself! If them two women was to sink down dead with hunger and hard slidin' right afore your very eyes while you was askin' what relation they was to each other and to him, it would no more 'n serve you right! We 'd better be seein' if anythin' 's the matter with 'em, and what we can do for 'em."

At this moment the younger of Mr. Dusante's ladies quickly stepped forward. "O Mrs. Craig, Mrs. Lecks, and Mrs. Aleshine!"

she exclaimed, "I 'm just dying to know all about you!"

"And which, contrariwise," cried Mrs. Aleshine, "is the same with us, exactly."

"And of all places in the world," continued the young lady, "that we should meet here!"

No one could have been more desirous than I was to know all about these Dusantes and to discuss the strange manner of our meeting, but I saw that Ruth was looking very pale and faint, and that the elder Dusante lady had sat down again upon the ground as though obliged to do so by sheer exhaustion, and I therefore hailed with a double delight the interruption of further explanations by the appearance of two men on horseback who came galloping toward us.

They belonged to the house which I had noticed from the road above, and one of them had seen our swift descent down the mountain-side. At first he had thought the black object he saw sliding over the snow slopes was a rock or mass of underbrush, but his keen eye soon told him that it was a group of human beings, and summoning a companion, he had set out for the foot of the mountain as soon as horses could be caught and saddled.

The men were much surprised when they heard the details of our adventure, but as it was quite plain that some members of our party needed immediate nourishment and attention, the questions and explanations were made very short. The men dismounted from their horses and the elder Dusante lady was placed upon one of them, one man leading the animal and the other supporting the lady. Ruth mounted the other horse, and I walked by her to assist her in keeping her seat, but she held fast to the high pommel of the saddle and got on very well. Mr. Dusante took his younger companion on one arm, and his package under the other, while Mrs. Lecks, having relieved her foot from the encircling bonnet, and Mrs. Aleshine, now free from the entangling shawls, followed in the rear. The men offered to come back with the horses for them if they would wait; but the two women declared that they were quite able to walk and intended to do no waiting, and they trudged vigorously after us. The sun was now high, and the air down here was quite different from that of the mountain-side; being pleasant and almost warm. The men said that the snows above would probably soon melt, as it was much too early in the season for snow to lie long on these lower sides of the mountain.

Our way lay over an almost level plain for about a mile. A portion of it was somewhat rough, so that when we reached the low house to which we were bound, we were all very glad indeed to get there. The house belonged to the two men who owned a small ranch here. One of them was married, and his wife immediately set herself to work to attend to our needs. Her home was small, its rooms few, and her larder very plain in quality; but everything she had was placed at our disposal. Her own bed was given to the elder Dusante lady, who took immediate possession of it; and after a quickly prepared but plentiful meal of fried pork, corn-bread, and coffee, the rest of us stretched ourselves out to rest wherever we could find a place. Before lying down, however, I had, at Ruth's earnest solicitation, engaged one of the men to ride to the railroad station to inquire about Mr. Enderton, and to inform him of our safety. By taking a route which ran parallel with the mountain chain, but at some distance from it, the station, the man said, could be reached without encountering snow.

None of us had had proper rest during the past two nights and we slept soundly until dark, when we were aroused to partake of supper. All of us, except the elder Dusante lady, who preferred to remain in bed, gathered around the table. After supper a large fire, principally of brush-wood, was built upon the hearth; and with the bright blaze, two candles, and a lamp, the low room appeared quite light and cheery. We drew up about the fire — for the night was cool — on whatever chairs, stools, or boxes we could find, and no sooner had we all seated ourselves than Mrs. Aleshine exclaimed:

"Now, Mr. Dusante, it ain't in the power of mortal man, nor woman neither,— an' if put the other way it might be stronger,— to wait any longer before knowin' what relation Lucille is to Emily, and you to them, an' all about that house of yours on the island. If I 'd blown up into bits this day through holdin' in my wantin' to know, I should n't have wondered! An' if it had n't been for hard sleep, I don't believe I could have held in nohow!"

"That 's my mind exactly," said Mrs. Lecks; "and though I know there 's a time for all things, and don't believe in crowdin' questions on played-out people, I do think, Mr. Dusante, that if I could have caught up with you when we was comin' over here, I 'd have asked you to speak out on these p'ints. But you 're a long-legged walker, which Mrs. Aleshine is not, and it would n't have done to leave her behind."

"Which she would n't 'a' been," said Mrs. Aleshine, "long legs or short."

Ruth and I added our entreaties that Mr. Dusante should tell his story, and the good ranchman and his wife said that if there was anything to be done in the story-telling line

they were in for it, strong; and quitting their work of clearing away supper things, they brought an old hair trunk from another room and sat down just behind Mrs. Lecks.

The younger Dusante lady, who, having been divested of her wraps, her veil, and the woolen shawl that had been tied over her head, now proved to be a very pretty girl with black eyes, here declared that it had been her intention at the very first opportunity to get us to tell our story, but as we had asked first, she supposed we ought to be satisfied first.

"I do not wish, my good friends," said Mr. Dusante, "to delay for a moment longer than necessary your very pardonable curiosity concerning me and my family; and I must say at the same time that, although your letter, sir, gave me a very clear account of your visit to my island, there are many things which naturally could not be contained within the limits of a letter, and about which I am most anxious to make inquiries. But these I will reserve until my own narration is finished.

"My name is Albert Dusante. It may interest you to know that my father was a Frenchman and my mother an American lady from New England. I was born in France, but have lived very little in that country, and for a great part of my life have been a merchant in Honolulu. For the past few years, however, I have been enabled to free myself in a great degree from the trammels of business, and to devote myself to the pursuits of a man of leisure. I have never married, and this young lady is my sister."

"Then what relation," began Mrs. Aleshine, "is she to — ?"

At this moment the hand of Mrs. Lecks, falling heavily into the lap of the speaker, stopped this question, and Mr. Dusante proceeded:

"Our parents died when Lucille was an infant, and we have no near blood relations."

At this, the faces of both Mrs. Aleshine and Mrs. Lecks assumed expressions as if they had each just received a letter superscribed in an unknown hand, and were wondering who it could possibly be from.

"The lady who is now resting in the adjoining room," continued Mr. Dusante, "is a dear friend who has been adopted by me as a mother."

"Upon my word!" burst from Mrs. Lecks and Mrs. Aleshine, in as much unison of time and tone as if the words had been a response in a church service, while Miss Lucille leaned back against the wall near which she sat, and laughed gleefully. Mr. Dusante, however, continued his statements with the same quiet gravity with which he had begun.

"This lady was a dear friend of my mother, although younger than she. I adopted her as a mother to my little orphan sister, and consequently placed her in the same maternal relation to myself, doing this with much earnest satisfaction, for I hoped to be able to return, as a son, something of the tender care and affection which she would bestow on Lucille as a daughter."

"And this is Emily?" cried Mrs. Aleshine.

"She adopted our name," answered the speaker, "and she is Mrs. Emily Dusante."

"And she is your adopted *mother?*" said Mrs. Aleshine.

"Adopted mother!" ejaculated Mrs. Lecks.

"Yes," answered Mr. Dusante.

"And that is the only relation she is to you two?" said Mrs. Lecks.

"And you to her?" added Mrs. Aleshine.

"Most assuredly," answered Mr. Dusante.

Here Mrs. Lecks leaned back in her chair, folded her hands in her lap, and ejaculated: "Well, well!" and then allowed her face to assume a rigid intention of having nothing more to say at the present moment.

"One thing is certain," remarked Mrs. Aleshine, in a tone which indicated that she did not care who heard her, "I always liked Lucille the best!"

At this Ruth and I exchanged smiles with Miss Lucille, and Mr. Dusante proceeded:

"I do not wish to occupy too much of your time with our personal affairs, and will therefore state that the island on which you found refuge and where I wish, most heartily, I had been present to act as host, was bought by me as a retreat from the annoyances of business and the exactions of society. I built there a good house —"

"Which it truly was," said Mrs. Aleshine, "with fixtures in it for water and letting it off which I never saw in a house so far out of town."

"I furnished it suitably," said Mr. Dusante. "We had books and music, and for several years we passed vacations there which were both enjoyable and profitable. But of late my sister has found the place lonely, and we have traveled a good deal, making intermittent and often short visits to the island.

"As I never cared to leave any one on that lonely spot during our absences from it, I arranged a gateway of bars across the only opening in the reef, with the intention of preventing marauding visits from fishing-boats or other small craft which might be passing that way. As the island was out of the ordinary track of vessels, I did not imagine that my bars would ever prove an obstacle to unfortunate castaways who might seek a refuge there."

"Which they did n't," remarked Mrs. Aleshine, "for under we bobbed."

"I never exactly understood," said Mr. Dusante, "and I hope to have it explained to me in due time, how you passed my bars without removing them, and I have had a sore weight upon my conscience since I discovered that shipwrecked persons, fleeing to my house from the perils of the sea, should have found those inhospitable bars in their way —"

"Which is a weight you might as well cast off and be done with it," said Mrs. Lecks, her deep-set notions on the rights of property obliging her to speak; "for if a man has n't a right to lock up his house when he goes away and leaves it, I don't know what rights anybody has about anything. Me, or Mrs. Aleshine, or anybody else here who has a house, might just as well go off travelin' or to town visitin' and leave our front door unlocked and the yard gate swingin' on its hinges, because we was afraid that some tramp or other body with no house or home might come along and not be able to get in and make himself comfortable. Your business, sir, when you left that house and all your belongin's on that island was to leave everything tight and safe, and the business of people sailin' in ships was to go on their proper way and not be runnin' into each other. And if these last mentioned did n't see fit to do that and so got into trouble, they should have gone to some island where there were people to attend to 'em, just as the tramps should go to the poor-house. And this is what we would have done — not meanin' the poor-house — if we had n't been so over long-headed as to get into a leaky boat, which, I wish it understood, is sayin' nothin' against Mr. Craig."

"That 's true," said Mrs. Aleshine, "for nobody has got a right to complain that a fellow-bein' locks his own door after him. But it does seem to me, sir, that in such scattered neighborhoods as your island is in, it might be a good thing to leave something to eat and drink — perhaps in a bottle or in a tin pail — at the outside of your bars for them as might come along shipwrecked and not be able to get inside on account of bein' obliged to come in a boat, an' not as we did; an' so when they found they 'd have to go on, they might have somethin' to keep up their strength till they got to another house."

"Now, Barb'ry Aleshine," said Mrs. Lecks, "when you start off on a journey to Japan or any other place an' leave mince-pies and buttered toast a-stickin' on the p'ints of your palin's for tramps that might come along and need 'em, you can do that kind of talkin'. But as that time has n't come, let 's hear the rest of Mr. Dusante's story."

"When I first visited my island this year," continued the narrator, "we made but a short stay, as we were all desirous of taking a somewhat extended sea voyage in my steam yacht. We visited several places of interest, and when we returned, just six weeks ago to-day —"

"Just one week, lackin' a day," exclaimed Mrs. Lecks, "after we left that spot!"

"If I 'd 'a' knowed," said Mrs. Aleshine, rising to her feet, "that you 'd be back so soon, I 'd 'a' made them sailor men live on fish, I 'd 'a' eat garden truck myself, and I 'd be bound I 'd 'a' made the flour hold out for six days more for the rest of 'em, if I 'd 'a' had to work my fingers to the skin and bone to do it!" Then she sat down solemnly.

"When we returned," continued Mr. Dusante, "I was pleased to find my bars intact; and when these were unlocked, and the boat from our yacht went through with ourselves and our servants, it was very agreeable to notice the good order which seemed to prevail everywhere. As we passed from the wharf to the house, not even fallen boughs or weeds were seen to indicate that we had been away from the place for more than two months. When we entered the house, my mother and sister immediately ascended to their chambers, and when the windows had been opened I heard them from above calling to each other and remarking upon the freshness and cleanliness of the rooms. I went to my library, and when I had thrown open the window I was struck with the somewhat peculiar air of order which seemed to obtain in the room. The books stood upon their shelves with a remarkable regularity, and the chairs and other furniture were arranged with a precision which impressed me as unusual. In a moment, sir, I saw your letter upon the table, addressed to me. Greatly astonished, I opened and read it.

"When I had finished it, my amazement was great indeed; but obeying an instant impulse, I stepped into the dining-room, which a servant had opened, and took the ginger-jar from the mantel-piece. When I lifted from it the little brown-paper parcel, and beneath it saw the money which had been mentioned in the letter, you may imagine the condition of my mind. I did not take out the money, nor count it; but covering it again with the paper parcel, which I believe contained fish-hooks, and with the jar in my hands, I returned to the library, where I sat down to ponder upon these most astounding revelations. While so doing, my mother and my sister hastily entered the room. Lucille declared in an excited manner that she believed that the brownies or some other fairies had been there while we were away and had kept the house in order. The whole place was actually cleaner, she said, than when

we left it. She had taken down a thin dress from her closet, and it positively looked as if it had just come from the hand of a laundress, with the ruffles ironed smoother and more evenly than they had ever been since it was first stitched together. 'Albert,' said my mother, her face a little pale, 'there has been somebody in this house!' Then she went on to say that the windows, which were left unwashed because we went away in somewhat of a hurry, were as bright and clean as if the maids had just been rubbing them; the floors and furniture were cleaner and freer from dust than they had ever been before; and the whole house looked as if we had just left it yesterday. 'In fact,' she said, 'it is unnaturally clean!'"

During this part of Mr. Dusante's story, Mrs. Lecks and Mrs. Aleshine sat very quiet, with an air of sedate humility upon their faces; but I could see by the proud light in their eyes that they felt their superiority to ordinary women, although they were properly resolved not to show such feeling.

"At that moment," continued Mr. Dusante, "a servant came hurrying into the room, and informed us that the flour was all gone, and that there was scarcely anything in the pantries to eat. At this my mother and my sister, who knew that an abundance of provisions had been left in the house, looked at each other aghast. But before they could express their consternation in words, I addressed them. 'My dear mother,' said I, 'and Lucille, there truly has been some one in this house. By this letter I am informed that for several weeks eight persons have lived here under this roof; a marriage has been solemnized, and the happy couple have gone forth from our doors. These persons have eaten our food, they have made use of our property, and this has been their temporary home. But they are good people, honest and true-hearted, for they have left the house in better order than they found it, and more than the price of all they have consumed is in that ginger-jar.' And, thereupon, I read them your letter, sir.

"I cannot undertake to describe the wonder and absorbing interest with which this letter filled our minds. All needful stores were brought ashore from the yacht, which lay outside the reef, and we began our usual life on the island; but none of the occupations or recreations in which we formerly employed our time now possessed any attractions for us. Our minds were filled with thoughts of the persons who had been so strangely living in our house; and our conversation was mainly made up of surmises as to what sort of people they were, whether or not we should ever see them again, and similar suppositions."

"Yes, indeed!" exclaimed Miss Lucille, "I thought of you by day and by night, and pictured you all in various ways, but never as you really are. Sometimes I used to think that the boat in which you went away had been sunk in a storm in which you were all drowned, and that perhaps your ghosts would come back and live in our house, and sleep in our beds, and clean our windows, and wash and iron our clothes, and do all sorts of things in the night."

"Goodnessful, gracious me!" cried Mrs. Aleshine, "don't talk that way! The idea of bein' a cold ghost, goin' about in the dark, is worse than slidin' down a snow mountain, even if you had to do it on the bare of your back."

"Barb'ry!" said Mrs. Lecks, severely.

"The idea is jus' as chillin'," replied her undaunted friend.

"Two things connected with this matter," continued Mr. Dusante, "weighed heavily on my mind. One of these I have already mentioned — the cruel inhospitality of the barred entrance."

I had refrained from adding to the interruptions to Mr. Dusante's narrative, but I now felt impelled to assure the gentleman, on behalf of myself and wife, that we shared the opinions of Mrs. Lecks and Mrs. Aleshine, and felt that he could in no way be blamed for thus protecting his private property.

"You are very good," said Mr. Dusante, "but I will say here that there are now no bars to that entrance. I have left some people on the island, who will take care of my property and succor any unfortunate castaways who may arrive there. The other matter to which I alluded was, however, the heavier load which oppressed me. This was the money in the ginger-jar. I could not endure to reflect that I had been paid actual money for the hospitality I would have been so glad to offer to you poor shipwrecked people. Every sentiment of my being rebelled against such a thing. I was grieved. I was ashamed. At last I determined I would bear no longer the ignominy of this brand of inhospitality, and that, with the ginger-jar in my hand, I would search over the world, if necessary, for the persons who in my absence had paid board to me, and return to them the jar with its contents uncounted and untouched. Your letter informed me of the island to which you were bound, and if I did not find you there I could discover to what port you had taken your departure. There I could make further inquiries, and so follow you. When I proposed this plan to my family they agreed to it instantly, for their interest in the matter was almost as great as mine; and in a day or two we started on our quest.

"I easily traced you to San Francisco, and found the hotel at which you had stopped. Here I obtained fresh news of you, and learned that you had started East, and that the destination of the party was believed to be Philadelphia. I had hoped that I should meet with you before you left California; but supposing that by that time you had reached your destination, or were, at least, far on your way, I yielded to the solicitations of my sister and made some excursions in California, intending then to follow you to Philadelphia and there to advertise for Mr. Craig, if he could not otherwise be found. However, by the rarest and most fortunate of chances, we have met thus early, and for this I can never be too devoutly thankful."

"Nor we," said I earnestly; "for our greatly desired acquaintance with you and your family could not have begun too soon."

"Now," said Mr. Dusante, "I will perform the duty for which my journey was undertaken, and I assure you it is a great pleasure to me to be able, so soon, to carry out this cherished purpose."

He then took up from the floor by his side the package which he had so safely guarded during his swift and perilous descent of the mountain-side, and which he had since kept close by him. Placing this upon his knee, he removed the light shawl in which it had been rolled, and then several pieces of wrapping-paper, revealing to our eyes the familiar fat little ginger-jar which had stood on the mantel-piece of the dining-room in the house on the island, and in which we had deposited our board-money.

"It would be simply impossible for me," said Mr. Dusante, "to consent to retain in my possession money paid for the aid which I involuntarily rendered to shipwrecked people. Had I been present on the island that aid would have been most heartily and freely given, and the fact of my absence makes no difference whatever in regard to my feelings on the subject of your paying for the food and shelter you found at my house. Having understood from Mr. Craig's letter that it was Mrs. Lecks who superintended the collection and depositing of the money, I now return to you, madam, this jar with its contents."

"And which," said Mrs. Lecks, sitting up very rigidly, with her hands clasped behind her, "I don't take. If it had been a day and a night, or even two nights and over a Sunday, it would n't have mattered; but when me and Mrs. Aleshine — and the rest of the party can speak for themselves — stays for weeks and weeks, without leave or license, in a man's house, we pay our board — of course, deductin' services. Good-night."

With that she arose, and walked very erect into the adjoining room.

"It was all very well, Mr. Dusante," said Mrs. Aleshine, "for you to try to carry out what you thought was right, but we have our ideas as to what our duty is, and you have your ideas as to what your duty is, an' consciences is even."

And she followed her friend.

Mr. Dusante looked surprised and troubled, and he turned towards me. "My dear sir," said I, "those two good women are very sensitive in regard to right and justice, and I think it will be well not to press this subject upon them. As for my wife and I, neither of us would consent to touch money which was placed in that jar by Mrs. Lecks with the expectation that no one but you or one of your family would take it out."

"Very well, sir," said Mr. Dusante, replacing the wrapping-paper around the jar; "I will drop the subject for the present. But you will allow me to say, sir, that I also am very sensitive in regard to right and justice."

Early the next morning the man who had been sent to the railroad station came back bringing news that a four-horse wagon would shortly be sent for us, and also bearing a letter from Mr. Enderton to Ruth. In this that gentleman informed his daughter that he was quite well, but that he had suffered anxiety on account of her probable hardships in the abandoned stage-coach. He had hoped, however, that the snow which had precluded his return with assistance had fallen lightly in the elevated position in which she had been left; and he had trusted also that Mr. Craig had bethought himself to build a fire somewhere near the coach, where his daughter might be warmed; and that the provisions, of which he knew an ample quantity had been packed for the trip, had been properly heated for her and given to her at suitable intervals. This anxiety, he said, had added very much to his own mental disquietude occasioned by the violent vituperations and unjust demands of the driver of the stage-coach, who had seen fit to attack him with all manner of abuse, and might even have resorted to personal violence had it not been for the interference of bystanders and the locking of his room-door. He was now, however, much relieved by the departure of this driver, and by the news that his daughter had reached a place of safety, which, of course, he had supposed she would do, her detention having occurred on an ordinary route of travel.

While waiting for the arrival of the wagon, the adventures of Mrs. Lecks, Mrs. Aleshine, and myself, as well as those of Ruth and her father, from the time the one party left Amer-

ica and the other China, were related at length to the Dusantes, who showed a deep interest in every detail and asked many questions.

Mrs. Dusante, whose nervous equilibrium had been fully restored by her night's rest, and who, although feeling a little stiff and bruised, now declared herself quite well, proved to be a very pleasant lady of fifty-five or thereabouts. She was of a quiet disposition, but her speech and manner showed that in former years, at least, she had been a woman of society, and I soon found out that she was much interested in the study of character. This interest was principally shown in the direction of Mrs. Lecks and Mrs. Aleshine, whom she evidently looked upon as most remarkable women. If any of her sentiments were those of admiration, however, they were not returned in kind: Mrs. Lecks and Mrs Aleshine had but a small opinion of her.

"There 's mother-in-laws, and step-mothers, and real mothers, and grandmothers, and sometimes great-grandmothers livin'," said Mrs. Lecks to me apart; "but though Mr. Dusante may be a well-meanin' man — and I don't doubt he is — and wishin', I have n't the least reason to disbelieve, to do his whole duty by his fellow-men, still, I must say, bein' brought up as I was, he has n't any right to make a new kind of mother. To be sure, a man can adopt children, but that is n't goin' backward like this is, which is agen nat'ral law, and gospel."

"I expect," said Mrs. Aleshine, who was with us, "that them French has got fashions that we don't know about, and thankful we ought to be that we don't! I never had no patience with French heels an' French arsenic-green beans, an' now if there 's to be adoptin' of mothers in this country, the next thing will be gullotynes."

"I don't see," said I, "why you look upon the Dusantes as French people. They are just as much American as French."

"Well," said Mrs. Lecks, "it 's not for me and Mrs. Aleshine to set ourselves up to judge other people. In our part of the country we don't adopt mothers, but if they do it in France, or the Sandwich Islands, or down East, I don't know that we ought to have anythin' to say."

"He might as well have adopted a father at the same time," said Mrs. Aleshine, "although, to be sure, he would 'a' had to been particular to take one that was acquainted with Mrs. Dusante, and not had 'em strangers to each other, though parents to him."

"If I was you, Barb'ry Aleshine," said Mrs. Lecks, "I'd adopt some sort of rag to the top of my head to serve for a bonnet, for here comes the wagon, and I suppose now we 'll be off."

We took leave of the kind-hearted ranch people, who looked upon us as a godsend into their lonely life, and disposed ourselves as comfortably as we could in the large wagon. Our journey of seven or eight miles to the railroad station was slow, and over ways that were rough. Mrs. Dusante was a delicate woman and not used to hardship, whereas Mrs. Lecks and Mrs. Aleshine were exceedingly vigorous and tough. The consequence of this difference was that the kindly hearts of the latter prompted them to do everything they could to prevent Mrs. Dusante feeling the bumps and jolts, and to give her such advantages of wraps and position as would help her to bear better the fatigues of the journey.

In doing this these good women gradually forgot the adopted mother and came to think only of the very pleasant lady who needed their attentions, and who took such a lively and agreeable interest in their family histories, their homes, their manner of living, and everything that pertained to them; and before we reached the end of our trip, these three were talking together like old friends. Ruth and Miss Lucille had also struck up a warm acquaintance, while I found Mr. Dusante a very entertaining man,— of sedate and careful speech, ingenious ideas, and of a very courteous disposition.

When we arrived at the railroad station we were met by Mr. Enderton, who showed a moderate degree of pleasure at seeing us and an immoderate amount of annoyance, exhibited principally to me, in being obliged to give up to the women of our party the large room he had occupied in the only lodging-house in the little settlement.

When I informed him that the strangers with us were the Dusantes, on whose island we had been staying, he at first listened vaguely. He had always looked upon the Dusante family as a sort of fable used by Mrs. Lecks to countenance her exactions of money from the unfortunate sojourners on the island. But when I told him what Mr. Dusante had done, and related how he had brought the board-money with him, and had offered to pay it back to us, an eager interest was aroused in him.

"I do not wonder," he exclaimed, "that the conscience-stricken man wishes to give the money back, but that any one should refuse what actually belongs to him or to her is beyond my comprehension! One thing is certain — I shall receive my portion. Fifteen dollars a week for my daughter and myself that woman charged me, and I will have it back."

"My dear sir," I said, "your board was reduced to the same sum as that paid by the rest of us,— four dollars a week each."

"I call to mind no reduction," said Mr.

Enderton. "I remember distinctly the exorbitant sum charged me for board on a desert island. It made a deep impression upon me."

"I do not care to talk any further on this subject," I said. "You must settle it with Mrs. Lecks."

Mr. Enderton gave a great sniff, and walked away with dignity. I could not but laugh as I imagined his condition two minutes after he had stated his opinions on this subject to Mrs. Lecks.

When Mr. Dusante had started from San Francisco on his search for us he had sent his heavy baggage ahead of him to Ogden City, where he purposed to make his first stop. He supposed that we might possibly here diverge from our homeward route in order to visit the Mormon metropolis; and, if we had done so, he did not wish to pass us. It was therefore now agreed that we should all go to Ogden City, and there await the arrival of our effects left in the snowed-up vehicles on the mountain-side. We made arrangements with the station-master that these should be forwarded to us as soon as the stage-coach and the carriage could be brought down. All the baggage of my party was on the coach, and it consisted only of a few valises bought in San Francisco, and a package containing two life-preservers, which Mrs. Lecks and Mrs. Aleshine said they would take home with them, if they took nothing else.

On the morning after our arrival at Ogden City, Mr. Dusante took me aside. "Sir," he said, "I wish to confide to you my intentions regarding the jar containing the money left by your party in my house, and I trust you will do nothing to thwart them. When your baggage arrives, you, with your party, will doubtless continue your eastern way, and we shall return to San Francisco. But the jar, with its contents, shall be left behind to be delivered to Mrs. Lecks. If you will take charge of the jar and hand it to her, sir, I shall be obliged greatly."

I promised Mr. Dusante that I would not interfere with his intentions, but asserted that I could, on no account, take charge of the jar. The possession of that piece of pottery, with its contents, was now a matter of dispute between him and Mrs. Lecks, and must be settled by them.

"Very well, then, sir," he said. "I shall arrange to depart before you and your company, and I shall leave the jar, suitably packed, in the care of the clerk of this hotel, with directions to hand it to Mrs. Lecks after I am gone. Thus there will be nothing for her to do but to receive it."

Some one now came into the smoking-room, where we were sitting, and no more was said on this subject. Mr. Dusante's statement of his intention very much amused me, for Mrs. Lecks had previously taken me into her confidence in regard to her intentions in this matter. "Mr. Dusante," she had said, "has n't dropped a word more about the money in that ginger-jar, but I know just as well as he does what he is goin' to do about it. When the time comes to go, he 's goin' to slip off quietly, leavin' that jar behind him, thinkin' then I 'll be obliged to take it, there bein' nobody to give it back to. But he 'll find me just as sharp as he is. I 've got the street and number of his business place in Honolulu from his sister,— askin' about it in an off-hand way, as if it did n't mean anythin',— an if that jar is left for me, I 'll pack it in a box, money and all, and I 'll express it to Mr. Dusante; and when he gets to Honolulu he 'll find it there, and then he 'll know that two can play at that sort of game."

Knowing Mr. Dusante, and knowing Mrs. Lecks, I pictured to myself a box containing a ginger-jar, and covered with numerous half-obliterated addresses, traveling backward and forward between the Sandwich Islands and Pennsylvania during the lifetime of the contestants, and, probably, if testamentary desire should be regarded, during a great part of the lifetime of their heirs. That the wear and tear of the box might make it necessary to inclose it in a keg, and that, eventually, the keg might have to be placed in a barrel, and that, after a time, in a hogshead, seemed to me as likely as any other contingencies which might befall this peregrinating ginger-jar.

We spent three days in Ogden City, and then, the weather having moderated very much, and the snow on the mountains having melted sufficiently to allow the vehicles to be brought down, our effects were forwarded to us, and my party and that of Mr. Dusante prepared to proceed on our different ways. An eastward-bound train left that evening an hour after we received our baggage, but we did not care to depart upon such short notice, and so determined to remain until the next day.

In the evening Mr. Dusante came to me to say that he was very glad to find that the westward train would leave Ogden City early in the morning, so that he and his family would start on their journey some hours before we left. "This suits my plans exactly," he said. "I have left the ginger-jar, securely wrapped, and addressed to Mrs. Lecks, with the clerk of the hotel, who will deliver it to-morrow immediately after my departure. All our preparations are made, and we purpose this evening to bid farewell to you and our other kind friends, from whom, I assure you, we are most deeply grieved to part."

I had just replied that we also regretted extremely the necessity for this separation, when a boy brought me a letter. I opened it, and found it was from Mr. Enderton. It read as follows:

My Dear Sir: I have determined not to wait here until to-morrow, but to proceed eastward by this evening's train. I desire to spend a day in Chicago, and as you and the others will probably not wish to stop there, I shall, by this means, attain my object without detaining you. My sudden resolution will not give me time to see you all before I start, but I have taken a hurried leave of my daughter, and this letter will explain my departure to the rest.

I will also mention that I have thought it proper, as the natural head of our party, both by age and position, to settle the amicable dispute in regard to the reception and disposition of the money paid, under an excusable misapprehension, for our board and lodging upon a desert island. I discovered that the receptacle of this money had been left in the custody of the clerk, addressed to Mrs. Lecks, who has not only already refused to receive it, and would probably do so again, but who is, in my opinion, in no wise entitled to hold, possess, or dispose of it. I, therefore, without making any disturbance whatever, have taken charge of the package, and shall convey it with me to Chicago. When you arrive there, I will apportion the contents among us according to our several claims. This I regard as a very sensible and prudent solution of the little difficulty which has confronted us in regard to the disposition of this money. Yours hurriedly,

David J. Enderton.

P. S. I shall stop at Brandiger's Hotel, where I shall await you.

(To be concluded in the next number.)

Frank R. Stockton.

RUSSIAN PROVINCIAL PRISONS.*

THERE are in Russia outside of the city of St. Petersburg no prisons intended primarily for political offenders and devoted exclusively to that class of criminals. Persons arrested upon political charges in the provinces await trial in prisons which were originally built for the detention of common vagrants, thieves, forgers, burglars, and murderers, and which are always filled to overflowing with felons of that class. Although the politicals are separated by cell partitions from the common criminals, they necessarily share with the latter all the evils and miseries that result from the overcrowding, bad management, and bad sanitary condition of the prison buildings. How terrible and sometimes intolerable such evils and miseries are, only those who have had an opportunity to inspect Russian prisons can imagine, and only those who have been shut up in them can fully understand. Attempts — and apparently earnest and sincere attempts — have been made again and again by the Ministry of the Interior and the Central Prison Administration to improve the condition of the penal institutions of the empire, but with very little success.

As long ago as 1867 Baron Velio, Chief of the Department of Executive Police, made a report to the Minister of the Interior based on an inspection of forty-nine provincial prisons, in which he said that in every one of the institutions visited he found violations of law of a more or less flagrant character. He reported, for example, that little attention was paid to the classification and separation of prisoners — insolvent debtors being shut up with hardened criminals of the worst type; prisoners were not properly supplied with clothing, and many of them were barefooted and in rags; men and women sick with contagious diseases were allowed to remain for days without care in crowded "kameras";† the hospitals were in a "very unsatisfactory condition," and the medical authorities failed properly to discharge their duties; prisoners were illegally detained beyond the periods of confinement to which they had been sentenced, and the prison wardens, with rare exceptions, were negligent, incompetent, and unfit for their places.‡

In 1869 — two years later — Actual State Councilor Kossagofski made another inspection of provincial prisons, which resulted in "the discovery of many disorders, abuses, and violations of law," which are set forth with specifications in a circular letter to provincial governors. The Minister of the Interior "observes," he says, "with regret that most of the prison disorders found by State Councilor Kossagofski to exist in 1869 were the same which had been reported upon by Baron Velio in 1867." In other words, there had been no improvement.§

In 1872 the Minister of the Interior again earnestly called the attention of provincial governors to the disorders and violations of law which continued to prevail in the prisons subject to their control, and referred "with regret" to the fact that although seven previous circulars had been issued on the same subject, there had been little if any change for the better.‖

* [These articles are prefatory to Mr. Kennan's illustrated papers on "Siberia and the Exile System." —The Editor.]

† A "kamera" is a large room or cell in which from twenty to a hundred and sixty prisoners are shut up.

‡ Circular letter of the Minister of the Interior to provincial governors, No. 151, July 8th, 1867.

§ Circular letter No. 220, August 18th, 1869.

‖ Circular letter No. 84, August 27th, 1872.

The evils complained of were evidently too deeply-rooted and had existed too long to be eradicated by Ministerial circulars, however mandatory their tone.

In 1879 the Ministry of the Interior sent still another letter to provincial governors, based on a report from Senator Grote calling attention once more to the glaring defects of the prison system, and urging the adoption of measures to remedy them and to secure a more rigid enforcement of the laws.*

Most of the circular letters above cited related to disorders which were the direct result of bad management and incompetent supervision;† but coincident with them there was issued another series, devoted more particularly to the overcrowding and bad sanitary condition of the prison buildings. From the letters comprised in this latter series it appears that "most of the prisons of the empire" were overcrowded, many of them containing twice or three times the number of prisoners for which they were intended.‡ In a report made by the Chief of the Central Prison Administration to the Minister of the Interior in 1883, it was stated that in the province of Sedlets there were 484 persons in a prison intended for 207; in the province of Suvalki there were 433 in a prison built for 165; and in the province of Petrokof there were 652 in a prison designed for 125.

In the annual report of the Central Prison Administration for 1882 it was admitted that there was not a prison in the empire which afforded its occupants one cubic fathom of air space per capita;§ that in more than half the prisons the per capita air space was little more than a third of a cubic fathom, and that in some cases the overcrowding went to such an extent as to reduce the per capita air space to one-fifth of a cubic fathom. In other words, there were prisons where five human beings lived together and tried to breathe, in a volume of air which might have been contained in a packing-box seven feet square and seven feet high.‖

Much of this overcrowding is due to the slowness of judicial procedure in Russia, and still more, perhaps, is attributable to the provision of law which makes it a criminal offense to be without a passport or to allow one's passport to lapse. In some parts of the empire twenty-five and even thirty per cent. of the so-called "criminals" in the jails are mere vagrants and "bezpassportni"—persons not provided with the papers necessary to prove their identity.¶

792,933 persons were received into the prisons of the empire in 1884 and 698,418 were discharged therefrom, leaving 94,515 in prison on the first of January, 1885. Of this last number 26,307 were awaiting trial.**

It further appears from the series of circular letters above referred to, that in many prisons women were not adequately separated from the men, and male overseers were allowed to search the persons of female prisoners;†† officials took bribes from the criminals in their custody and furnished them secretly with intoxicating liquor;‡‡ the sanitary condition of the prison buildings was almost everywhere bad, the wells being poisoned by leakage from neglected and improperly constructed privies, and the air in the overcrowded cells being polluted and rendered unfit for respiration by miasmatic exhalations from the same sources;§§ the prison hospitals were in an "extremely unsatisfactory condition," and many of them were so small and so ill provided with medicines as to be of little use to the sick;‖‖ and the hospital officers sometimes neglected their duties to such an extent as to render themselves liable to criminal prosecution. In one case, cited by the Minister of the Interior as an illustration, a prison surgeon in a provincial town, wishing to get rid of a troublesome patient who had been left there sick by a passing criminal party, ordered the man to be sent forward to his destination, notwithstanding the fact that he was in a dying condition. The unfortunate prisoner lived only long enough to reach the first etape, fifteen or twenty miles away.¶¶

The condition of the provincial prisons, as it appears from these circulars, is, to adopt the words of the Minister of the Interior, "an extremely unsatisfactory" one; but the picture thus outlined still falls far short of a full and true representation of the real state of affairs. Prison inspectors like Baron Velio and State Councilor Kossagofski necessarily see the penal institutions of the empire at their best. The provincial governors and the prison officials

are always forewarned of their coming and have ample time to put the prisons into a temporary and deceptive state of comparative order; the inspection is generally a formal and perfunctory one, taking note only of irregularities and abuses which, to use a Russian expression, "throw themselves into the eyes"; and, finally, the stereotyped phrases, "violation of law," "extremely unsatisfactory condition," and so forth, in which the results of the inspection are set forth by the Minister of the Interior, convey to the mind of the reader no definite idea of the state of facts to which such euphemistic expressions refer.

A RUSSIAN PRISON AND ITS LIFE.

WITHOUT, however, going behind official sources of information, it is possible to obtain a much clearer view of Russian prison life than that afforded by ministerial circulars. Now and then a fearless and honest prison official, shocked by the disorder, wretchedness, and misery which he is forced to witness but is powerless to remedy, and convinced of the futility of formal report and remonstrance, prints in some Russian periodical as much of the results of his prison experience as the censor will allow him to print. In 1885 Mr. I. Reve, an official connected with a provincial prison in one of the northern provinces of European Russia, published in the "Juridical Messenger," the organ of the Moscow Bar Association, two long and carefully prepared papers entitled "A Russian Prison and its Life," in which there is drawn a much darker picture of prison disorder and demoralization than that outlined in the ministerial circulars above cited. The author does not hesitate to assert that the laws which are supposed to regulate Russian prisons bear hardly a semblance of relation to the real facts of prison life. "Nine-tenths of such laws," he says, "are not enforced at all, and the remaining tenth is enforced in a way very different from that which the statutes themselves contemplate." He recites at length the regulations for the government of prisons contained in the fourteenth volume of the Russian collection of laws, and shows that in the prison to which his observations relate hardly a pretense was made of observing any one of them. And this, he maintains, is not a state of affairs which exists in a single prison only, but a state of affairs which, with slight and inconsiderable variations, prevails everywhere. In 1880 the prison described by Mr. Reve was, he says, "a little tsardom, where the highest law was the will of the warden, and where the superior officials of the province either did not dare or did not care to show their faces." The procureur, who was required by law to visit the prison every Friday, came thither once or twice a year. The prison surgeon paid no attention whatever to the sanitary condition of the buildings, nor to the food, clothing, or habits of the prisoners, but contented himself with visiting the hospital for a few moments once a week. The priest, whose duty it was to go to the prison "not less than twice a week," for the purpose of instructing ignorant prisoners and ministering to the spiritual welfare of the whole prison population, did not appear there at all. The prison workshop was in chaotic disorder, and the prisoners, instead of working in it, spent a large part of their time in smoking, gambling, quarreling, or fighting. Hardly a pretense was made of feeding them decently or regularly; but as most of them were allowed to wander about the town and seek work during the day-time they earned money enough to feed themselves, and shared the remainder of their wages with the warden who allowed them the privilege. The trade in intoxicating liquor was an organized system, and the warden himself set the example of drunkenness. Disciplinary punishment was inflicted at his caprice, and he executed his own sentences by beating the prisoners in the face with his fists. The prison committee, which should have supervised and controlled the whole domestic economy of the prison, was absolutely dead and inert. "It was not," Mr. Reve says, "a living institution, but a mere bureaucratic fiction."

It seems almost incredible that such a state of things as this should have been allowed to exist in any prison in European Russia, but the statements of fact are made by an official over his own signature, and the articles were printed in the most influential legal journal of the empire, presumably with the consent of the Moscow censorial committee. It must not be inferred, however, that no attempt was made by the higher authorities of the province to remedy the evils above set forth. Such attempts were made, but as they had their origin in official caprice rather than in a serious determination to enforce the existing laws, their results were far from satisfactory. Every official who stands at the head of a provincial government has his own peculiar character and his own peculiar views, and such character and views are reflected in the administration of prison affairs within the limits of his province. As the result of successive changes of provincial governors, the prison above described had, between 1880 and 1885, three different wardens and was subjected to five abrupt and radical changes of administrative policy. "What can be expected," Mr. Reve asks, "under such circumstances, except complete disorder and disorganization? A prison

so managed is like the proverbial child with seven nurses which always grows up crooked."*

Mr. Reve does not state what efforts he made, if any, to improve the condition of the prison which he describes; but in 1882 another official, Associate Procureur N. Timofeief, published through the same medium a long and instructive account of his attempts to remedy the horrible state of things which he found to exist in another provincial prison which it was a part of his official duty to visit and inspect.

The prison, he says, was an old, badly constructed, badly ventilated building with dark entries and corridors, and was so saturated with offensive odors, disease germs, and miasmatic exhalations from neglected privies that its atmosphere was to an unaccustomed person almost insufferable. During the time that Mr. Timofeief had official relations with this prison it rarely contained less than twice the number of occupants for which it was intended, and often held three times that number. Two-thirds of the prisoners, unable to find room on the "nares," or sleeping-benches, slept under them on the bare, filthy floor without bedding, blankets, or pillows. As the result of this overcrowding and of the bad sanitary condition of the building, from ten to twenty per cent. of the prisoners were constantly in the hospital, and there were two epidemics of typhus fever in one summer. The bath-house attached to the prison was in such a ruined and tumble-down condition that the warden would not allow the prisoners to use it, and in such washing as they could give their bodies in the overcrowded cells, they were compelled to use clay in the place of soap. Clothing was furnished to the prison upon the basis of the number of prisoners which it was intended to hold; but as the real number was always twice and sometimes three times the estimated number, one-half to two-thirds of the prisoners were dressed in filthy rags swarming with vermin, and had neither shoes nor a change of underclothing. At three different times in the course of one winter they were ordered to work out-of-doors barefooted, in a temperature of minus twenty degrees Réaumur. The mayor of the town was official purveyor for the prison, and as he was also a dealer in provisions, he found it convenient and profitable to feed the prisoners with spoiled products for which there was no market. The members of the prison committee rarely assembled oftener than once in six months, and ignored entirely the duties imposed upon them by law. The provincial prison bureau held one or two sessions a year, but committed the supervision of prison affairs to an indifferent and incompetent clerk. The priest, whose legal duty it was to look after the moral training of the prisoners and to conduct religious services every Sunday for their benefit, made but one visit to the prison in the course of twelve months, and went there then only at the urgent solicitation of the ispravnik, "for the sake of form and decency." The prison turnkeys, who received salaries of from $3.50 to $4.50 a month, acted as purchasing agents for prisoners who had money, and supplied them with intoxicating liquor. One of the overseers — a renegade Jew — hired a degraded courtesan by the month, brought her every night to the prison, and received the wages of her prostitution.

* "A Russian Prison and its Life," by I. Reve. "Juridical Messenger," No. 5, May, 1885, pp. 120-142; and Nos. 6 and 7, June and July, 1885, pp. 389-490.

ATTEMPTS AT REFORM.

If Mr. Timofeief had been a weak man, a selfish man, or a timid man, he would have dealt with this cesspool of misery and vice as many weak, selfish, and timid men had dealt with it before — that is, he would have visited it as rarely as possible, would have characterized it in his annual report as "very unsatisfactory," and would have quieted his conscience with the reflection that his responsibility for the existing state of affairs was much less than that of the warden, the prison surgeon, the priest, the prison committee, the mayor, the provincial prison bureau, the ispravnik, the procureur, the governor, and the governor's council. Fortunately, however, Mr. Timofeief was not a man of that character. As soon as it became his official duty to visit the prison he did visit it, and, shocked by its terrible sanitary condition, he made a report thereupon to the prison administration. No attention, however, was paid to his representations. He made another report, with the same result. Finally, during one of the epidemics of typhus fever in the prison, he succeeded in enlisting the sympathies of the district surgeon, and with the aid of the latter prevailed upon the prison authorities to put ventilators in some of the cell windows, and induced the district assembly to authorize the district apothecary to furnish him with thirty-six pounds of copperas for use as a disinfectant. This was a very moderate measure of success, but it was probably more than had been done for that prison in the previous decade.

Mr. Timofeief then turned his attention to the ruined bath-house, and after an official correspondence which lasted more than a year, after three successive sets of plans and estimates for a new bath-house had been drawn up and sent back and forth to and from St. Petersburg, and after the provincial architect had made four journeys of three hundred versts each to inspect the old bath-house,— spending in mileage more than half enough

to put up a new building,—the persistent associate procureur succeeded in getting an appropriation for a small quantity of lumber, and permission to employ the idle prisoners in the work of repair. The bath-house was then put in usable condition in two weeks.

The next reform in order was that relating to clothing. Soon after Mr. Timofeief's appointment, a number of prisoners, pale and emaciated from sleeplessness and partial asphyxia, came to him "almost in desperation," showed him their foul and ragged clothing, which was alive with vermin, and which they had worn night and day without change for months, and said to him in the graphic metaphorical language of the Russian peasant that "all their strength had been eaten up by beasts." The quantity of parasites on their bodies was, Mr. Timofeief says, "something astounding." He sent complaint after complaint to his immediate superior, the procureur of the circuit court, setting forth the intolerable sufferings of the prisoners and asking that they be supplied with the clothing to which they were legally entitled. The procureur replied that the letters of complaint had been "appropriately referred for suitable action, in accordance with law," and that ended it. Mr. Timofeief then went personally to the higher authorities of the province and urged them to make at least an effort to remedy what seemed to him the shameful and insufferable condition of things in one of their own prisons. The high officials said to him, "My dear sir, the evils of which you complain are not exceptional; they are common to all of our prisons, and they can not be remedied by temporary and exceptional measures." Determined that his superiors should fully understand, even if they would not remedy, the sufferings of the "beast"-tormented prisoners, Mr. Timofeief caused one of the latter to be stripped naked, made a package of his ragged, filthy clothing, loaded as it was with "a mass of parasites" and indescribably offensive to every sense, sewed it up in stout linen cloth, and sent it under seal, without a word of explanation, to the procureur of the circuit court. This heroic measure brought the desired clothing; but it brought also a reprimand from the procureur, who regarded such action on the part of a subordinate as impertinent and "out of place." In concluding his recital, Mr. Timofeief says that an associate procureur who attempts conscientiously to perform the duties laid upon him by the prison reform law of 1864 simply "makes for himself personal enemies, and earns the reputation of being a troublesome man."*

I have summarized Mr. Timofeief's paper, not for the purpose of calling attention to one particular drop of suffering in an ocean of human misery, but for the purpose of illustrating some of the defects of a hopelessly bad system. The evils against which Mr. Timofeief bravely but vainly struggled are, as the provincial officials frankly said to him, common to all Russian prisons, and can not be remedied by local, temporary, and exceptional measures. It would, of course, be hasty and unfair to say that all provincial prisons in Russia are so bad as the one above described; but that there are scores, if not hundreds, which resemble this one to a greater or less extent can, I think, be shown beyond the possibility of doubt. The statistics furnished by the Government itself are fully adequate to prove that Mr. Timofeief's prison was not an exceptional nor an unusual phenomenon.

According to the report of the Central Prison Administration for 1884 there were in the empire 144 prisons in which the sick-rate for the year exceeded twenty per cent. of the whole number of prisoners therein confined; in 52 prisons it was more than thirty per cent.; in 25 prisons it exceeded forty per cent.; in 8 prisons it was more than fifty per cent.; and in the prison of Kutais it reached seventy-two per cent.† That in computing these sick-rates the officials did not take into account trifling ailments is shown by the fact that in 55 places of confinement the average period of sickness per capita was more than forty days, and in some prisons the patients were sick on an average seventeen weeks.‡ Scurvy—a preventable disease—was reported from 223 prisons, and in 19 of them it constituted more than ten per cent. of the whole aggregate of sickness.§ There were in the course of the year 391 scorbutic cases in the prisons of St. Petersburg alone, not taking into account the two fortresses of Petropavlovsk and Schlüsselburg.‖ In explanation of this extraordinary prevalence of scurvy in the penal institutions of the capital itself, the prison physicians maintained first that the scorbutic patients had the disease in an incipient form when they were admitted to the prisons, and second that scurvy is infectious!¶ Typhus fever—another preventable disease, due chiefly to filth and overcrowding—was reported from 336 prisons, but in only 45 of them did the number of cases exceed 20. In

‖ Ibid., Appendix, pp. 69–117, 124.

¶ Ibid., pp. 234–236.

Odessa, however, there were 58 cases; in Kharkoff, 73; in Saratoff, 121; in St. Petersburg, 158; in Warsaw, 261; in Perm, 484; and in Moscow, 1206. The malady was epidemic in 17 prisons, and in one of them constituted ninety-four per cent. of the total aggregate of disease.* The whole number of sick patients treated in prison hospitals during the year was 89,523, not including 700 insane, and the whole number of "hospital days" was 2,055,524. Every prison in the empire had therefore on an average 101 cases of serious sickness and 2325 "hospital days" in the course of the year.† In the face of official statistics like these it seems to me impossible to maintain or to believe that the condition of the prison described by Associate Procureur Timofeief was either exceptional or unusual.

SUFFERINGS OF POLITICAL PRISONERS.

THE feeling of apprehension, humiliation, and misery which educated and sensitive human beings must endure in such prisons as these while awaiting trial is still further intensified by imperfect separation from common criminals of the worst class. The solitary-confinement cells which political offenders occupy were originally intended for felons whose depraved character or boisterous behavior made it necessary to isolate them from the rest of the prison population. Such cells are still partly used for that purpose, and the result is that innocent young women arrested upon suspicion of political "untrustworthiness" are sometimes imprisoned side by side with the most degraded and foul-mouthed criminals of their sex, and are compelled to hear things which to a refined and pure-minded young girl are inexpressibly shocking and terrible. I met in Siberia many young women who told me that they had had this experience, and there were doubtless many more who were too shy and timid to suggest to a man and a stranger some phases of their prison life.

The solitary-confinement cells are also used for the purpose of isolating common felons sick with small-pox or other contagious diseases. In many, if not in most, Russian prison hospitals all the patients occupy what is practically one large room or a series of intercommunicating rooms, where there are no facilities for the separate treatment of infectious disorders. Small-pox patients are therefore put into solitary-confinement cells side by side with politicals and on the same corridor, and the same attendants serve both.

In the hospitals and lazarets politicals suffering from nervous affections, or sick with brain-fever brought on by intense anxiety and solitude, are often put into the same ward with insane criminals who are undergoing what is known as "ispitanie" or "probation." The effect produced by the incessant babbling or raving of a lunatic upon the disordered nerves of a sick political prisoner, who perhaps feels conscious that his own mind is already breaking, and who is compelled to see and hear continually in another that which he most dreads for himself, can be imagined. The results of such experience were described to me as particularly disastrous and terrible in the cases of young and nervous women who had been reduced to a chronic hysterical condition by solitary confinement.

In addition to all of the sufferings and privations which political offenders must inevitably endure in such prisons as those described by Mr. Reve and Associate Procureur Timofeief, they are not infrequently subjected to cruel and illegal personal treatment at the hands of brutal or hot-tempered wardens.

In the year 1879 there were confined in the provincial prison of Kiev two political offenders named Izbitski and Beverly — the latter a young man of English descent on his father's side, but of Russian birth. In the summer of that year these two young men, seeing no prospect of an early trial, made an attempt to escape by digging a tunnel under the prison wall. For many weeks they labored hard with tin cups, pieces of board, and such rude implements as they could fashion for themselves out of the materials at their command, and by working at night, depositing the earth from the tunnel in vacant spaces under their cells, and carefully replacing the floors every morning, they succeeded in wholly concealing their operations from the eyes of the prison officials. At last the tunnel was completed. Its outer end was only a few feet below the surface of the ground, at a sufficient distance from the prison wall to render flight from it reasonably safe, and the young men were only waiting for a dark night to carry their plan of escape into execution. At this critical moment the prison officials, visiting the cell of one of the young men during the latter's temporary absence, discovered and explored the tunnel. In view of the fact that within a short time there had been several daring and successful escapes from the Kiev prison, the warden determined to make such an example of these young men as would deter others from following in their footsteps. Instead, therefore, of removing them to other cells and thus frustrating their plan of escape, the warden allowed them to suppose that no discovery had been made, and then prepared an ambush for them at the end of the tunnel.

* Report of the Central Prison Administration for 1884, pp. 222-225.

† Ibid., p. 213.

When, on the first dark night, the fugitives came up through the ground outside the prison wall they were fired upon by a squad of soldiers, who had been stationed there by the warden with instructions to shoot the prisoners as soon as they should make their appearance. Beverly was killed outright, and Izbitski, who was dangerously wounded, was carried back into the prison. Beverly's blood-stained body was allowed to lie on the ground where it had fallen in plain sight of the prison windows until late the following day, as a sort of ghastly object-lesson for the instruction of the other prisoners. The exile who gave me these facts, and who was Beverly's dearest friend, left the Kiev prison for Siberia on the morning after the tragedy, and was compelled to march past the dead body of the man whom he loved, as he told me, "better than a brother." There can, I think, be no question that the deliberate and coolly planned assassination of Mr. Beverly under such circumstances was as truly a treacherous and shameful murder as it would have been had the warden shot him while asleep in his cell.

Such occurrences as this are, of course, not common even in the worst of Russian prisons, but that even this is not an isolated case appears from a ministerial circular sent to provincial governors on the 9th of February, 1870, in which a precisely similar occurrence is narrated and in which the prison officials are mildly rebuked for "permitting and even organizing crime." The minister declares that "such methods are not consistent with the conditions of prison life, nor with the objects of prison discipline, nor with the dignity of prison officials, and that they interfere with the moral reformation of the prisoners!"

The bearing of this whole series of facts upon the life of political offenders who have the misfortune to be arrested in the provinces hardly needs to be pointed out. Mr. Timofeief, in the article from which I have quoted, says very justly that when the executive power "deprives an individual of his liberty, paralyzes his volition, and subjects him to the restraints of a rigid system of prison discipline, it is bound to guarantee to him all the rights which are still his by virtue of law. The most important of such rights — the right to an endurable human existence, the right to live without danger of losing health and strength — is not guaranteed in most of our prisons, particularly in those remote, abandoned, almost forgotten places of confinement where the face of a high official is never seen and where the prisoners do not live, but merely languish in filth, and corruption, and hunger, and cold."*

If the right to "an endurable human existence" ought to be guaranteed to a burglar or a murderer,— to a common felon of low intelligence and coarse fiber, who has been duly tried and found guilty of crime,— how much more should that right be guaranteed to an educated, sensitive young man or woman who has never been tried nor confronted by a witness, and against whom there is no other charge than "an intent to change the existing form of government . . . . at a more or less remote time in the future."

* "Prison Methods," before cited, p. 305.

METHODS OF INTERCOMMUNICATION.

THE hardships, humiliations, and petty miseries innumerable of life in a Russian provincial prison are alleviated to some extent by the possibility of secret communication between prisoners who occupy adjacent cells. Although such intercommunication is strictly forbidden by law, and renders the prisoners who attempt it liable to "disciplinary punishment," it prevails to a greater or less extent in all the prisons of the empire, with the single exception, perhaps, of the castle of Schlüsselburg. Every possible measure of prevention has been tried again and again by the prison authorities, but the ingenuity, patience, and persistence of the political prisoners have triumphed over all difficulties, and have virtually set official prohibition at defiance. Even in the gloomy and closely guarded casemates of the Petropavlovski fortress, it has been found impossible wholly to deprive the prisoners of this much-prized source of encouragement, support, and consolation.

The methods of intercommunication commonly resorted to by political prisoners in solitary confinement are based upon what is known as the "knock alphabet"— an ingenious combination of letters and figures so arranged that the letters have numerical values and the figures alphabetical equivalents. This inarticulate language of knocks has recently become familiar to a large number of people in Russia, including probably four-fifths of the whole "untrustworthy" class; but in the early days of the revolutionary movement, before "neblagonadezhnost" or "the-condition-from which-nothing-good-is-to-be-hoped" became a crime, the ability to transmit intelligence through a solid brick wall was a rare accomplishment, and was confined chiefly to wily recidivists of a vulgar type, who, to use their own expression, had "been through fire, water, and a copper tube," and had received the degree of "Artium Magister" from half the penal institutions in the empire.

THE "KNOCK ALPHABET."

THE talented Russian novelist X——, who has been twice exiled to Siberia and half a dozen times imprisoned, told me last summer

that when he was arrested for the first time he had never even heard of the "knock alphabet"; and that when, during the second day of his imprisonment, he noticed a faint tapping on the other side of the wall, he regarded it merely as an indication that the adjoining cell was occupied, and gave it no particular attention. As the knocking continued, however, and as the faint taps seemed to be definitely segregated into groups by brief intervals of silence, he became convinced that his unknown neighbor was endeavoring to communicate with him. Upon what principle or plan the knocks were grouped he did not know, but he conjectured that the number of taps between two "rests" might correspond with the serial number of a letter in the alphabet,—one knock standing for "a," two for "b," three for "c," and so on up to twenty-six for "z." Upon putting this conjecture to the test he was delighted to find that the knocks resolved themselves into the letters "D-o-y-o-u-u-n-d-e-r-s-t-a-n-d?" He replied with forty-nine knocks, so grouped and spaced as to make "Y-e-s"; but long before he had finished this short word he became mournfully conscious that, at the rate of forty-nine knocks for every three letters, he and his unknown correspondent would not be able to exchange more than half a dozen ideas a week. The invisible prisoner on the other side of the wall did not seem, however, to be at all discouraged, and began at once another long series of knocks, which extended to two hundred and ninety-six, and which, when translated, made the words "Teach you better way—listen!" Mr. X—— then heard one loud tap near the corner of the cell, followed by a sound of scratching, which proceeded from that point towards the door at about the height of a man's head, as if the unknown were drawing a long horizontal line with some hard substance on the other side of the wall. After a brief interval of silence there came two staccato taps and the noise made by the scratching of a second line parallel with the first one, but a little lower down. When seven of these invisible lines had been drawn under one another about a foot apart, with a group of knocks at the beginning of each one to denote its number, the unseen artist went back to one knock, and proceeded to draw six perpendicular lines crossing the first series at right angles, so as to make a huge audible checker-board. As soon as Mr. X—— heard this invisible diagram, the purpose for which it was intended flashed upon his mind, and before the unknown instructor had finished knocking out the words, "Put alphabet in squares," the quick-witted pupil had scratched upon the floor of his cell a reduced copy of the audible tracing, and was numbering its lines and columns. His diagram when finished looked something like this:

	1	2	3	4	5
1	a	b	c	d	e
2	f	g	h	i	j
3	k	l	m	n	o
4	p	q	r	s	t
5	u	v	w	x	y
6	z	·			

After giving Mr. X—— time to construct the figure, the unknown prisoner began another series of knocks so grouped and spaced as to indicate the lines and columns in which the required letters were to be found. Five knocks followed by three knocks meant that the equivalent letter would be found at the intersection of the fifth line and third column; two knocks followed by one knock indicated letter "f," at the intersection of line two and column one; and five knocks followed by four knocks meant letter "x," at the intersection of line five, column four. The first question asked by the unknown was 53 23 35 11 43 15 55 35 51: "Who are you?" The prisoners then exchanged brief biographies, and Mr. X—— discovered that he had learned his a b c's and taken his first lesson in prison telegraphy from a common criminal,—a burglar, if I remember rightly,—who was awaiting exile to Siberia.

THE "CHECKER-BOARD CIPHER."

THE object of the "checker-board cipher" is, first, to facilitate the transmission of letters and words, and, second, so to disguise them as to make them unrecognizable to persons who have not the key. The cipher in the form above shown is an extremely simple one; but it reduces from 351 to 157 the number of knocks necessary to represent the English alphabet, and it is susceptible of variation and complication to an almost unlimited extent. The letters of the alphabet, for example, may be arranged in the square in twenty-four different symmetrical ways, and every such alphabetical scheme can be combined with two variations in the order of the figures and four in their arrangement, making 192 different ciphers. This, however, is only the beginning of the varied and complex system of secret intercommunication which the political prisoners have

built up on the corner-stone of the lettered square. By combining an understood key-word with the alphabetical checker-board, they have made a number-cipher which has thus far defied the ingenuity of the "cipher bureau" of the "gendarmerie" and which seems to me to be absolutely inscrutable.

Suppose that the message to be put into cipher is "Nicholas arrested," and that the understood key-word is "prison." The letters of the key-word are first written under the letters of the message as many times as may be necessary to fill out the space. The numerical equivalents of the two series of letters are then found in the lettered and numbered square and are added together to make a new series:

N	i	c	h	o	l	a	s	a	r	r	e	s	t	e	d
P	r	i	s	o	n	p	r	i	s	o	n	p	r	i	s
34	24	13	23	35	32	11	44	11	43	43	15	44	45	15	14
41	43	24	44	35	34	41	43	24	44	35	34	41	43	24	44
75	67	37	67	70	66	52	87	35	87	78	49	85	88	39	58

The last series constitutes the cipher, and its peculiar merit is that the same number never stands twice for the same letter. "A" in "Nicholas" is represented by "52"; "a" in "arrested" is represented by "35"; "e," the first time it occurs, is "49"; and the next time, "39"; the number "67," in the cipher message, stands in one place for "i" and in another for "h"; while "87" stands once for "s" and once for "r." In deciphering the cryptograph the numerical equivalents of the letters of the key-word are, of course, to be subtracted from the cipher-numbers, and then the letters which correspond with the figures of the remainder are to be sought in the alphabetical square.

It is apparent at a glance that a cryptograph of this kind, which can be indefinitely varied, and in which the same number never stands twice for the same letter, cannot be deciphered by any of the ordinary methods.

VARIOUS APPLICATIONS OF THIS CIPHER.

ANOTHER merit of the "checker-board cipher" is the wide range of its applicability. It can be used not only as a knock alphabet, but as an oral language, as a signal-code based on vision, and as a method of secret intercommunication by means of almost imperceptible dots or indentations in paper, sand, dust, or the leaf of a tree. Any substance which can be dotted, indented, or pierced may serve as a medium for the conveyance of the cipher numbers. The use of the alphabetical square in the form of an oral language is not common, but it is frequently resorted to in prisons where the number of politicals is so large that they can safely defy control. In such cases they do not restrict themselves to secret intercommunication by means of knocks, but shout the cipher-numbers to one another openly from their cell windows. It is not possible to punish a hundred or more people for this offense by putting them all into dark cells,— the capacity of an already overcrowded prison will not admit of such a method of dealing with the evil,— and if the authorities resort to physical violence the prisoners meet it with an organized "hunger-strike." This desperate form of protest creates an excited state of public feeling in the town where the prison is situated; it exasperates the friends of the sufferers to such a degree as to endanger the lives of the prison officials; it is an occurrence which the warden must report to the Minister of the Interior, and it is almost certain to be followed by an investigation of the prison management, which may bring to light the illegal practices from which the warden, overseers, and turnkeys derive pecuniary profit. These inevitable consequences of a hunger-strike are greatly dreaded by the prison authorities, and it often happens that a warden, in order to avoid what is known in the prison world as a "skandal," winks at relatively trivial infractions of prison discipline. In this way a *modus vivendi* is established, by virtue of which the warden permits oral communication between the political prisoners, and the latter tacitly agree not to create a disturbance prejudicial to the interests of the warden. Such a state of things existed in the Kiev prison in 1883, and at almost any hour of the day or night a pedestrian passing the prison wall might have heard the voices of the politicals calling out in a steady monotone from their cell windows, "Twelve, fifteen, fifty-four, twenty-four, thirty-two, fifteen, fourteen." Nearly all of the political exiles whom I met in Siberia were skilled in the use of the checker-board cipher, and could transmit intelligence either by knocks or by calling the equivalent numbers at the rate of from ten to fifteen words a minute.

The use of this cipher as a signal code by prisoners who are so situated that they can see one another is more common, the numbers being made by visible motions of the hand instead of by audible knocks. At night the prisoner, if allowed to have a candle, makes the numbers by moving a book or a towel back and forth in front of the light so as to alternately hide it and reveal it. In this way conversations are sometimes carried on between politicals at their cell windows and friends in houses standing outside the prison wall and at a considerable distance.

One of the most ingenious and successful adaptations of the checker-board cipher to the peculiar conditions and necessities of prison

life is the method by which the politicals convey secret intelligence to their relatives and friends in open letters forwarded through official hands. When a political offender has been subjected to final examination and the papers in his case are ready for submission to the Department of Justice, he is generally allowed to exchange letters with his relatives. All such letters, however, must be sent to the procureur or the local chief of gendarmes for examination, and they are not only carefully scrutinized, but are often subjected to heat and to the action of chemical re-agents, in order to ascertain whether or not they contain invisible writing in sympathetic ink. In spite, however, of such measures of precaution, the political prisoners manage, with the aid of the checker-board cipher, to transmit contraband information through the hands and under the very eyes of the most subtle and experienced officials. As an illustration of the way in which this is accomplished, take the following extract from the letter of a prisoner:

I have received your welcome letter of the nineteenth instant and am very glad to learn from it that you are all well at home and that you received safely the letter which I wrote you on the Twenty-third of last month. I wish I could hear from you oftener.

There is apparently nothing unusual or suspicious either in the language or in the chirography of this letter,—it would probably be approved and passed by nine officials out of ten,—and yet it contains the words, "Tell Alexe to fly—arrest threatened." A close and careful examination of the writing will show that the letters are segregated into groups by minute and almost imperceptible spaces. The first words are spaced as follows: "Ihav-erece-i-vedyo-urw-el-com-el." The number of letters in each group is regarded as a figure and every two figures constitute a number, whose alphabetical equivalent is to be found in the cipher square. The numbers in the above groups are 45 15 32 32, which the checker-board resolves into the letters, "T-e-l-l." The embarrassment which would be caused by the word-spaces is obviated by a rule that such spaces shall be disregarded unless the final stroke of the terminal letter is upward, as in the word "of" in the first line of the foregoing illustration. That sign indicates that the word-space which follows it is also a cipher-space and is to be taken into account in determining the limits of the cipher-groups. This method of conveying information is now known to the "cipher bureau" of the gendarmerie, but for a long time it was practiced successfully, and it is still resorted to occasionally in remote provincial prisons.

Nothing has done more than this sort of intercommunication to prevent suicide and insanity among political prisoners in solitary confinement. Complete isolation is perhaps the most terrible punishment that can be inflicted upon an educated human being, and when to such isolation are added perfect stillness, limitation of vision by four bare walls, and deprivation of all means of employment for the intellectual powers, life soon becomes unendurable and the prisoner either commits suicide, goes insane, or sinks into an apathetic stupor which terminates in dementia. The possibility of intercommunication—of sharing one's thoughts and emotions with another—lends some interest even to the dreariest existence, and the contrivance of schemes to baffle official vigilance and secure such intercommunication affords the mental faculties exercise enough to keep them from decay. Scores of political offenders have gone insane in Russian prisons, but the number of lives thus wrecked is much smaller than it would have been if the imprisoned revolutionists had not contrived, by ingenious methods of intercommunication, to support, encourage, and comfort one another in hours of despair.

George Kennan.

POST-MERIDIAN.

I. AFTERNOON.

WHEN in thy glass thou studiest thy face,
Not long, nor yet not seldom, half repelled
And half attracted; when thou hast beheld
Of Time's slow ravages the crumbling trace
(Deciphered now with many an interspace
The characters erewhile that Beauty spelled),
And in thy throat a choking fear hath swelled
Of Love, grown cold, eluding thy embrace:
Could'st thou but read my gaze of tenderness —
Affection fused with pity — precious tears
Would bring relief to thy unjust distress;
Thy visage, even as it to me appears,
Would seem to thee transfigured; thou would'st bless
Me, who am also, Dearest, scarred with years!

II. EVENING.

Age can not wither her whom not gray hairs
Nor furrowed cheeks have made the thrall of Time;
For Spring lies hidden under Winter's rime,
And violets know the victory is theirs.
Even so the corn of Egypt, unawares,
Proud Nilus shelters with engulfing slime;
So Etna's hardening crust a more sublime
Volley of pent-up fires at last prepares.
O face yet fair, if paler, and serene
With sense of duty done without complaint!
O venerable crown! — a living green,
Strength to the weak, and courage to the faint —
Thy bleaching locks, thy wrinkles, have but been
Fresh beads upon the rosary of a saint!

Wendell P. Garrison.

INLET AND SHORE.

HERE is a world of changing glow,
Where moods roll swiftly far and wide!
Waves sadder than a funeral's pride,
Or bluer than the harebell's blow!

The sunlight makes the black hulls cast
A firefly radiance down the deep;
The inlet gleams, the long clouds sweep;
The sails flit up, the sails drop past.

The far sea-line is hushed and still;
The nearer sea has life and voice;
Each soul may take his fondest choice,—
The silence, or the restless thrill.

O little children of the deep,
The single sails, the bright, full sails,
Gold in the sun, dark when it fails,
Now you are smiling, then you weep!

O blue of heaven, and bluer sea,
And green of wave, and gold of sky,
And white of sand that stretches by
Toward East and West away from me;

O shell-strewn shore that, silent, hears
The legend of the mighty main,
And tells to none that lore again,—
We catch one utterance, only,—"Years!"

Rose Hawthorne Lathrop.

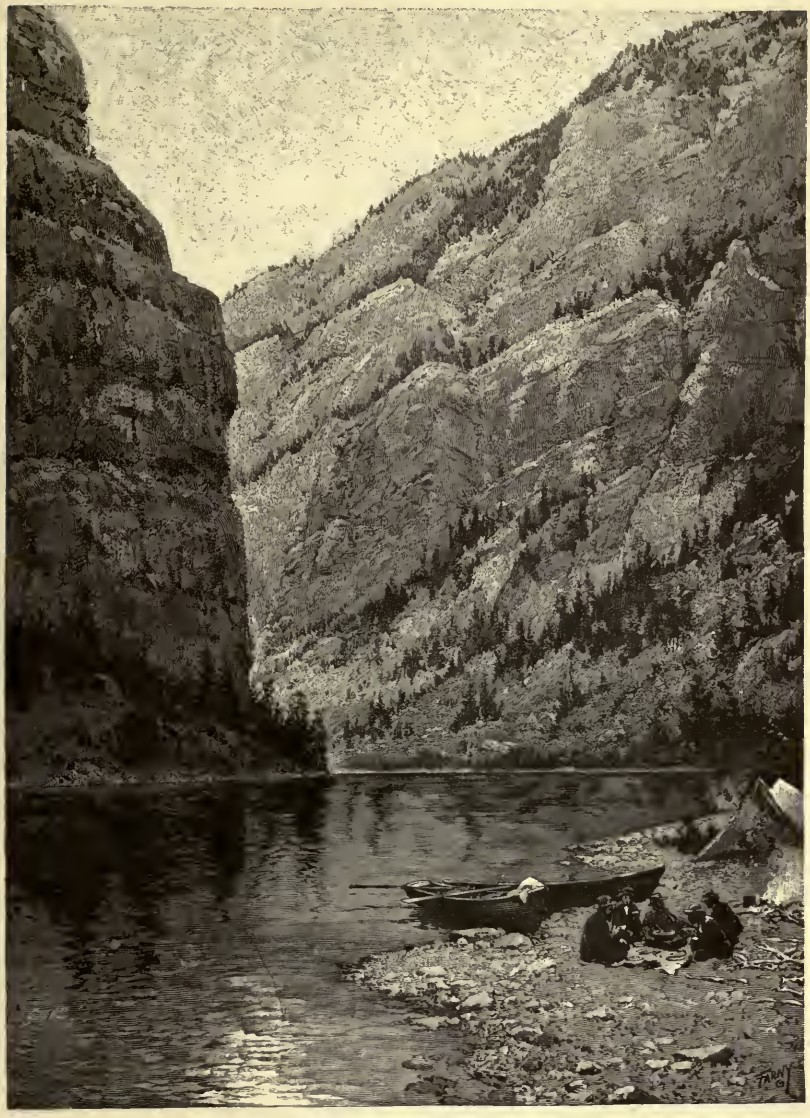
THE UPPER MISSOURI AND THE GREAT FALLS.

IT was a CENTURY expedition in its plan, and its object was to descend the Missouri River in a skiff from some point near Helena, Montana, to the Great Falls, to make a portage around the falls and follow the river down to Fort Benton, and thence, by some sort of land transportation, to cross the country to the Yellowstone through the cattle and sheep ranges. When it came to start from Helena, however, a number of citizens joined it for the purpose of making the trip to the falls, so that there were two skiff-loads instead of one. The pilot, whose old title of colonel had lately been changed to commodore by the Helena newspapers, by reason of his having seven times braved the perils of the rapids and the passage through the Gate of the Mountains, was a man of resources. He had provided but one boat, and, in the free Western fashion, he laid hands upon a small craft that the governor of the Territory had constructed with the view of making a voyage, put it on wheels, and started it for the river in the wake of the larger skiff. The governor was to have gone with the expedition, but was hindered by some public duties. If he could not go his boat could, the commodore reasoned; and go it did, never to return, for there is no such thing as getting up the river with any sort of craft.

Now, Helena, where the boats were built, is some twelve miles from the Missouri, and the departure of the expedition was not so impressive an affair as its members might have wished. The appearance of the two skiffs on wheels, loaded with provisions and camp equipage, with the company following, some on foot and some in a "jerky," was by no means heroic. Nevertheless, the people of the town, accustomed to seeing all sorts of queer "outfits," witnessed our departure without any vociferous demonstrations of hilarity, restrained, perhaps, by the blue pennant which the commodore had set up on the prow of his flagship.

The day was the 16th of September, and though the high mountains of the main divide of the Rockies were white with new snow, the oats were not yet harvested on the ranches in the Valley of the Prickly Pear, through which we passed, so late is the maturing of grain in the high latitudes and on the high altitudes of Montana. At Stubbs's Ferry we put the boats into the water. Stubbs seemed to keep a ferry chiefly for getting his hay across to his barns from his fields on the farther side of the river. There was a road that ran up into the foot-hills of the Belt Range, but no one could tell where it went to or why anybody should travel it. Stubbs's Ferry is about a hundred miles below the junction of the three rivers which form the Missouri — the Jefferson, Madison, and Gallatin. For much of that distance a railroad follows the course of the stream and the banks are sparsely inhabited by ranchmen, but below the ferry the river rushes through a series of profound cañons, and until it gets out of the Belt Range and into the great plains of eastern Montana, the country it traverses is singularly savage and desolate.

In the division of the party between our two boats, the artist and the writer took the smaller one, which had been pirated from the governor, and recruited for its crew a wandering Californian and a Helena journalist. The artist took the steering-oar, reassuring his companions as to his ability to run rapids successfully with the information that in his younger days he had navigated lumber-rafts on the Alleghany River; the writer sat in the bow, to give warning of breakers ahead and shove the boat off when she grounded on shoals; the Californian proved almost a Hanlan at the oars, and the Helena journalist was detailed to work the pumps, which consisted of an old tin can and a cup. The remainder of the party, numbering eight, embarked in the long-boat, and as they had with them the cook, the "grub-stake," and the tents, their craft was an object of much interest, about meal-times and at nightfall, to the occupants of the smaller skiff. At other times each of the boats kept its own course, and the skill of the commodore was only required to manage his own craft. By the camp-fire, however, when the day's run was over, the tents were pitched, and the supper was eaten, he came out strong with tales of Indian fights, of Vigilante hangings, and of all manner of wild frontier adventures. He had been through the civil war and numerous Indian campaigns, and carried two bullets in his body. At one time he had held a prominent Federal office in Montana. In later years he has taken a great fancy to the wild rapids and gorges of the Upper Missouri and delights to conduct parties of adventurous travelers through them. The business cannot be profitable, but there is lots of fun in it for the old gentleman; and his bronzed face, sil-



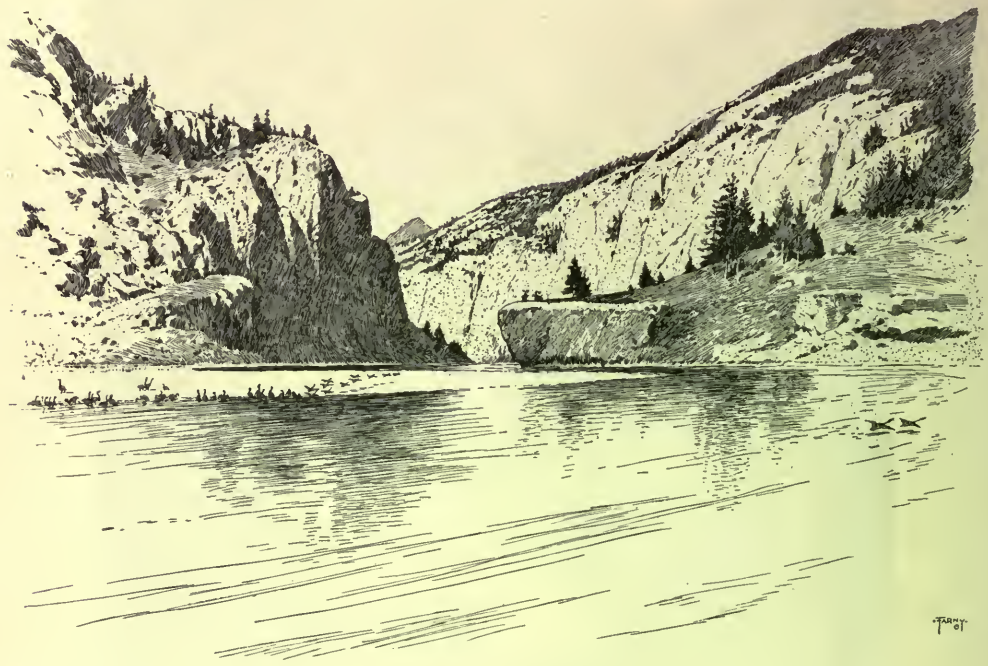
THE CAMP IN WHITE ROCK CAÑON.

very hair and whiskers, and scarlet handkerchief light up the dark cañons of the river two or three times every season.

In floating down the stream there was a quiet exhilaration which grew upon the travelers as they became accustomed to the moods and ways of the strong green river, and were convinced that it meant no harm when it whirled them around a rocky promontory or swept them swiftly through a seething rapid; convinced, too, that with stout arms and oars they were the masters in any case, and could keep off from half-hidden rocks and away from dangerous shores. The water was clear and cold, and as good to drink as any spring water. Occasionally there was a little stretch of grassy bottom along one or the other bank, fringed with a thicket of wild-rose bushes, the branches all beaded with coral-red berries; but most of the way huge cliffs of reddish rock or steep mountains, thinly clad with pines, rose abruptly from the water's edge. The strata in the cliffs were bent and twisted in curious ways. Occasionally broad green bands ran through the gray or red rocks, indicating the presence of copper. A solitary ranch was passed the first day of the voyage, and for many miles there was a vestige of former human occupancy in the shape of a long-abandoned flume, that once furnished water for placer-mining. It had cost

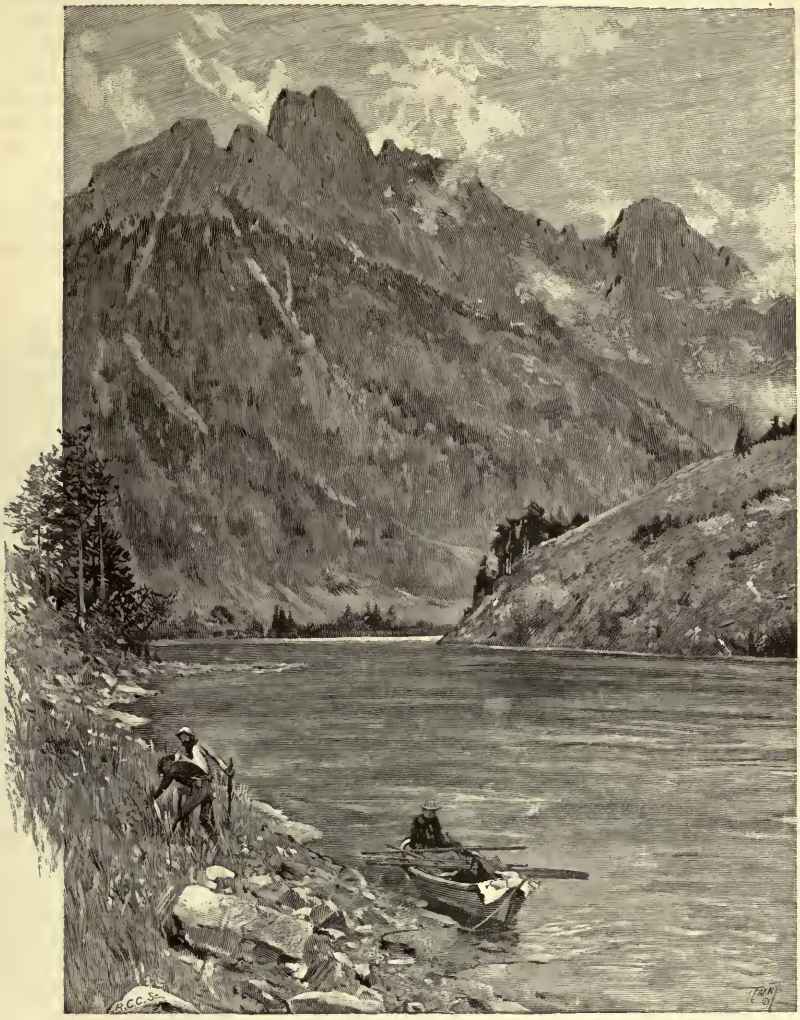
a hundred thousand dollars, the commodore said, and had never paid back the money. Montana, and all the mining Territories, abound in such monuments of misplaced enterprise. The old adage about mining for the precious metals, that more money is put into the ground than is taken out, would probably not hold good for universal application, but it fits most mining districts. The solitude and silence on the river grew oppressive as twilight began to fall. There was no sound save the rippling and gurgling of the water. The boat slipped along as quietly as the funeral barge in Tennyson's "Lancelot and Elaine." Weird profiles and masks looked down from the rocky walls. The talk and laughter, and the shouting for echoes, that had made the voyage a merry one so long as the sun shone, had ceased, and there came upon the wanderers a sense of loneliness and mystery, as though they had set out to penetrate an unknown wilderness. It was a relief to all to tie up to the bank at dark, to light a camp-fire, pitch the tents, and unload the boats; and the efforts of the party to eat supper on the ground, in darkness made visible by the flickering fire, were amusing enough to restore good humor all around.

Nick, the cook, was a droll frontier character. For twelve years he had cooked for exploring parties, engineers, and railway builders all the way from Minnesota to Oregon. When enlisted for THE CENTURY expedition he was newly out of jail, a fact that did not in the least put him out of countenance. He regarded himself as a victim of Chinese cheap labor. When in Missoula, cooking in a hotel, he could not get on well with the Chinese assistant in the kitchen, and therefore knocked him down. The landlord took the Chinaman's part, which so enraged Nick against the Mongolian element in general, that he rushed into the street and proceeded to run amuck against all the Celestials he met. Before the police could secure him, he had prostrated three or four by vigorous kicks and fisticuffs. He was an amiable fellow in the main, however. His coffee was good, but his views on the Chinese question were a little too aggressive.



THE GATE OF THE MOUNTAINS.

The second day's run took the boats through the Gate of the Mountains, a narrow cleft in the Belt Range, through which the river runs at moderate velocity after the preliminary rush of a rapid. The precipices are of grayish rock, about fifteen hundred feet high, and the riven mountains are covered with pines. The sheer cliffs and the warped strata show that the passage has not been worn by the action of the water, but was opened by some great convulsion which tore the solid mountains apart. Very grand and impressive is this deep cañon, but with the bright blue sky above and the sunlight on the pea-green river below, it did not



BEAR'S TOOTH MOUNTAIN.

seem gloomy, like the two smaller cañons we had passed the day before. All through Montana people talk of the Gate of the Mountains, but very few have visited it, from the fact that it is inaccessible by road or bridle-path and can be seen only from a boat. The name was bestowed by Lewis and Clarke, the explorers, who passed through it in canoes on the 19th of June, 1805, on their way to the Pacific coast. They also gave it the alternative designation of the Great White Rock Cañon. Two sons of the Chevalier Vendrye, the French explorer, passed through it as early as 1742, and were probably the first white men to gaze upon its frowning precipices.

Tying up the boats that day for the noon lunch of ham and bread, we found upon a grassy plateau some relics of former occupancy that seemed to indicate that the spot had been the scene of a tragedy. There were two "foundations," a few rods apart. A "foundation" in Montana means four logs laid across each other so as to form a square, and is a legal notification of intent to build a cabin and take up a claim. The two "foundations" so near together were evidences of a dispute about the title to the little strip of meadow land, on which the occupants perhaps expected to find gold. Within one of the log quadrangles we found bloody clothing, sodden and mildewed, a rusty ax, a camp-kettle and a coffee-pot, some blankets, and many other articles. The imaginative members of our party speedily constructed from these materials a story of murder — the victim thrown into

the river, and the guilty man fleeing horror-stricken from the scene of his crime.

Below the mountain gateway a boiling rapid carried us swiftly past one of the great landmarks of northern Montana — the Bear's Tooth Mountain. It rises in a series of cliffs some two thousand feet above the river channel, and on its forest-covered summit stands a huge irregular, turret-like rock with broken crest. This rock, possibly three hundred feet high, gives the mountain its name. It is plainly seen from Helena, which must be at least forty miles away as the crow flies.

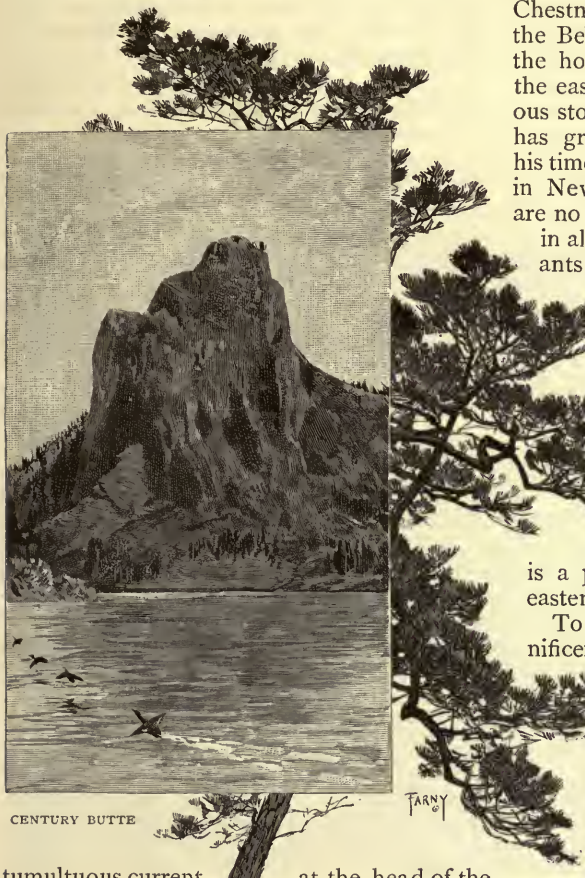
Below the Bear's Tooth the character of the shores of the river changes. The great chasms of distorted strata cease, and though there are numerous cliffs and pinnacles, they are of soft brown rock, much worn by the action of wind and rain. Profiles and faces become so numerous that only the most striking are remarked. I remember the Egyptian mummies suspended high above the water; a strongly marked, majestic, and serene face with beard washed by the waves, which I called the River God; and two gigantic statues known as the Old Man and the Old Woman. Of ruined castles, broken towers and battlements, huge archways, and other familiar effects of fantastic rock-work, there were too many specimens to name or notice at length. The mountains gradually broke away into steep hills, between which were grassy valleys running down to the river's brink. This region of singular rock effects extends for about forty miles below the Gate of the Mountains and ends abruptly. Beyond, stretch out the great plains. A huge wall, beginning at the river and running up an acclivity for three or four hundred yards, marks the boundary between the two regions, and is the last outwork of the Rocky Mountain system in this direction.

In the afternoon of the third day of the voyage the crew of the small boat, having gotten some miles in advance of the commissariat in the big skiff, determined to forage on the country for supplies. A pair of horses grazing on the bank indicated that there must be a ranch near at hand. In Montana every human habitation outside of the towns is a ranch. There are hay ranches, grain ranches, milk ranches, horse ranches, cattle ranches, and chicken ranches. The word has traveled all the way from northern Mexico to the British possessions, amplifying its application as it advanced. The ranch which we found, after scrambling through the thicket of rose-bushes and willows that formed a stout natural hedge all along the shore, defied classification under any of the above terms. It displayed a little of everything that could be done in the way of Montana agriculture. On a broad bench, surrounded by mountains, were small fields of hay and grain, and a big irrigated vegetable garden, where potatoes, corn, beets, turnips, tomatoes, and watermelons were growing. A log cabin with one door and one window, and a log barn flanked by hay and straw stacks, stood far back from the river. A man clad in a brown canvas suit and a wide-brimmed felt hat, which is the universal costume of all who do outdoor work in Montana, was digging potatoes. He leaned on his hoe and very closely scanned the four men approaching him, as if to satisfy himself whether their intentions were hostile or peaceable. When told that we were well-disposed travelers floating down the river, at that moment bent only on getting something to eat, he became quite friendly. "You 're welcome to the best I 've got," he said. "Pick an armful of roasting-ears, and I 'll rustle up a fire." He limped on to the house while we hunted for tender ears on the dry stalks. He proved to be the only occupant of the place, and his cabin of one room was kitchen, dairy, granary, and bedroom combined. Its only decorations were a huge rude painting of a four-horned goat, and a singular robe of some strange fur. He explained the possession of these treasures by saying that some years ago he went to South Africa to dig for gold. The robe he bought from a native chief, and the picture represented a goat he had brought back and exhibited in "the States," with small financial success. He came to Montana from Ohio as a young man in the early days of the gold migration, and after his African adventures he had returned to these wild mountains, concluding that this country suited him as well as any he had seen. "Lonesome? Well, not particularly." He had always "bached it" (lived as a bachelor). Next winter his nephew was coming to live with him. A raft went down the river once a month. Once a year he went to Helena for his supplies. There was no wagon road to his place, and bacon was the only thing he could pack out to sell. He fed his milk and vegetables to his hogs.

The prospect for a square meal did not look favorable at first view of the cabin, but we underrated our host's resources. He roasted potatoes under the embers in his little box-stove and corn above them, and upon it he fried bacon and made coffee; with plenty of milk and cream, with tomatoes for salad and watermelons for dessert, we made a capital dinner. There was room at the rough board table for only two, so the others took their plates and cups to the wood-pile outdoors. Our host refused to take money, invited us to come again, and following us to our boat, as a last

act of hospitality he gathered for us some choke-cherries in a thicket near the river.

That afternoon we ran the Half Breed Island rapids, the only formidable obstacle to steamboat navigation on the Missouri above the falls. The gunwales of the boats were raised by nailing on boards, canvas was stretched over the bows, and thus protected against shipping water, we pushed into the tumultuous current at the head of the island — a little nervous at first, but quite jubilant when we found how lightly our craft danced over the waves and how easy it was, with steady rowing, to give her steerage-way and thus avert the only danger, that of drifting broadside to the current and being rolled over like a log. The first plunge of the rapids is about half a mile in length; then comes a little stretch of quiet water, and then a second descent, of a quarter of a mile. To sweep along with the swift rush of the seething waves, past the fast-receding shores, was wonderfully exhilarating.



CENTURY BUTTE

By dint of some hard rowing, with the aid of a rather sluggish current, we that night reached the only place between our point of embarkation and the Great Falls that is accorded a name and the round dot on the map which indicates a town. The name was Ulidia, and the town consisted of a store and post-office, a hotel, a saloon, and two dwellings. The hotel had but three rooms, and its single bedroom was occupied by the landlady. Guests were lodged in a lean-to attached to the store on the opposite side of the road. South of Ulidia the Chestnut Valley stretches out at the foot of the Belt Mountains in brown undulations to the horizon, the Little Belts bounding it on the east. It is sparsely inhabited by prosperous stock-raisers, mostly from Missouri. One has grown so rich that he spends most of his time in Paris; another passes his winters in New York. I need hardly say that there are no chestnut-trees in the valley, or indeed in all Montana. If there were, the inhabitants would have found another name for them. A current ferry crosses the river at Ulidia, and a road leads north-west to Fort Shaw and the stage road from Helena to Fort Benton, which keeps far back from the river to avoid the cañons and broken mountain ranges. The country is open and grassy, consisting of rolling plains diversified by buttes and rock-crested ridges, and is a part of the great grazing ranges of eastern Montana.

To float down a rapid river through magnificent and varied scenery is a pleasant mode of travel, but when the river grows lazy, as does the Missouri after it gets out into the plains, and its banks are mud walls topped by screens of cottonwoods and willows, and you must pull hard at the oars under a hot sun to make any satisfactory progress, the business assumes quite a different aspect. After five or six hours of this sort of navigation, leaving Ulidia on the fourth day of the journey, we tied the boat up to the bank for the main body of the expedition to pick up, and engaged a ranchman to take us across country in his wagon to Sun River. This ranchman lived in a log house of two rooms, and had a homestead of 160 acres, on which he cut hay to feed the horses of the cavalry at Fort Shaw. He got six dollars a ton for the hay, and had cut about two hundred tons. His girlish wife — she was only eighteen — put the baby in a hammock made from an old piece of bagging, and cooked for us an excellent dinner of prairie chickens shot that morning from the kitchen window. In the living-room of the cabin the log walls and the rafters which supported the

dirt roof were hidden by cotton sheeting, and there was a sewing-machine, a rocking-chair, a canary bird, a white counterpane on the bed, and a few pictures. The husband had saved enough from his wages as a teamster to buy a team and wagon and build a cabin. In a few years he will be an independent ranchman with money in the bank, and will undoubtedly take his family back to Illinois to visit the old folks and show them how young people can prosper in Montana. He represents the new element in the population of Montana, and the hermit who entertained us the day before was a type of the old element.

GREAT FALLS OF THE MISSOURI.

The agricultural valleys and the great grazing ranges of this enormous Territory are fast being occupied by active young men who refuse to lead the lonesome bachelor life of the old times, and who wisely lay the sure foundations of success by marrying, and creating for themselves homes, however humble they may be at the start.

We drove across rolling plains covered with dry bunch-grass. An enormous square-topped butte on the northern horizon gave character to the landscape. The surface of the country dipped suddenly into a narrow valley through which ran Sun River, the Medicine River of Lewis and Clarke's map—a clear, shallow stream, with an occasional clump of cottonwoods on its banks. At the place where we forded it the bottom was paved from side to side with large square rocks as smooth as flagstones. Far to the northward could be seen the snowy peaks of the main chain of the Rockies, where the river has its sources. Southward, towards the Missouri, was a white speck on the horizon, which was the goal of our day's journey. It was after dark before the little speck had grown to a house and we had found shelter for the night at the ranch of the Montana Cattle Company. The fall round-up for the Sun River district was in progress at the time, but the cattle were sixty or seventy miles distant on the Teton River. The beeves were to be driven northward to the Canadian Pacific Railway for shipment to the Eastern markets. All the cattle transportation for the country north of the Missouri and that immediately south of the river is now done by the new Canadian road. The drive is not so long as that to the Northern Pacific in the Yellowstone Valley, and the grazing on the way is said to be better.

From comfortable quarters in the dwelling of the cattle ranch we drove down the Sun River Valley to a ferry that led to the site of a prospective town just above the upper fall of the Missouri, called Great Falls City.

Placid as a Minnesota lake in summer-time, the Missouri glides along between banks shaded by cottonwoods. Its waters are ruffled only by flocks of wild ducks and geese. There are no indications that it is about to plunge over a series of cataracts and rapids and make an aggregate fall of five hundred feet in a distance of about twelve miles. So hemmed in by steep banks are the cataracts, that their roar is muffled and is scarcely heard until one is close upon them. The first leap, succeeding a long rapid, is twenty-six feet in perpendicular descent. This is called the Black Eagle Fall, and was so named by Lewis and Clarke from the circumstance of an eagle having her nest on an island below the fall. Viewed from the high bank above, this cataract is not very impressive. It has too much the look of a great mill-dam. The eye soon wanders from the fall to the stately landscape, spread out to the north and west — to the billowy brown plains, the black masses of the Belt Mountains, and the white pinnacles of the Rockies, far up towards the Canadian line. The appearance of the Black Eagle Fall suggests its future use. Some day it will drive saws, spindles, and mill-stones. About four miles below is a nameless fall, of fourteen feet — nameless, no doubt, because hardly noticeable from its proximity to the beautiful Rainbow Fall, a sheer descent of forty-seven feet. The water is nearly equally distributed over the whole breadth of this superb fall, and its curve of white and light green, tinted with rainbow hues, is wonderfully symmetrical. Only in one place is it broken a little by an indentation in the ledge which gives to the plunging flood a deeper hue of green. Otherwise the fall might be criticised as "faultily faultless." The best view is from the bottom of the gorge. On the south bank of the river there is a break-neck path that leads down to the foot of the cataract. Here the spray clouds and rainbows, and the lovely aqua-marine tints of the water, show to best advantage.

Below the Rainbow Fall is the Crooked or Horse Shoe Fall, which has a perpendicular descent of nineteen feet. This fall, the Rainbow, and the smaller fall above can be seen at once from a projecting bluff. Not far off is an enormous spring, shaped like an open fan with an outer radius of three hundred feet, which discharges into the river, over a series of wide, low terraces, an enormous quantity of pure, cold water. This tremendous outpouring seems to be rather the mouth of a hidden river than a simple spring. Various names were suggested by the visiting party, for it had hitherto borne no other name than the "big spring." Finally all agreed to christen it the Giant's Fountain.

Eight miles below the Rainbow are the Great Falls. Perhaps a third of the river's volume plunges down a precipice eighty-seven feet high, the rest descending over broken shelves of rock, in a multitude of cascades. After Niagara this fall must rank as the greatest cataract on the American continent. We could only see the entire breadth of the fall from a single point on the extreme verge of a crag jutting over the cañon. There was no way of getting down into the gorge to the water's edge, which is about four hundred feet below the general level of the country. The deep crease in which the river runs is entirely lost to view a quarter of a mile away. Its lips seem to close up, and appear like the many modulations in the grassy plain, so that a traveler riding across country might come almost to the sheer verge of the cañon before he would suspect that he was approaching one of the great rivers of the world.

We returned to the new town to spend the night, and late in the morning we were joined by the party in the boats. We had gained a day's time by striking across the country to Sun River and following its valley to the Missouri.

We portaged the boats around the falls the next day, getting them out of the water and upon wagons by dint of much tugging and lifting, with the assistance of the entire population. By the time we had traveled twelve miles of rolling country and had gotten the wagons down the precipitous banks of a *coulé* leading to the river and launched the boats it was 2 o'clock, and we were still twenty-four miles from Benton.

The stream was shut in between Bad Land bluffs — miniature mountains of blue clay and brown mud with streaks of lignite coal and strata of soft sandstone, all worn and seamed by the weather and showing many fantastic shapes. The aspect of these queer formations was dreary and sinister. "If this is God's country," remarked the Californian, "it must be because he is still at work on it."

Night fell long before we reached the town. There was no moon, and it was impossible to see the shores, the shallows, or the rapids. Nothing was visible but a little gleam on the water a few yards around the boat, and the black bulk of the tall cliffs. Then came the welcome sight of lights ahead. Soon we were safely ashore and sitting down to supper in a comfortable hotel, very tired and very happy.

The town of Fort Benton has played a part in the commerce of the far North-west out of all proportion to its size. In its best days it had a scant thousand of settled inhabitants, but twice that number of transient sojourners

RUINS OF FORT BENTON.

were often domiciled in its log and adobe buildings. Probably it has now a stable population of fifteen hundred at least, but the wild throng of buffalo-hunters, wolfers, teamsters, French-Canadian half-breeds, boatmen, and miners that once filled the streets has departed, leaving a peace and serenity behind that is not at all enjoyed by the citizens. Formerly the trade of Benton extended far up into the British territory, reached westward and south-westward for five hundred miles, and to the southward embraced all the country as far as the Yellowstone. Goods were brought up the Missouri by steamboat from St. Louis, 2500 miles distant, until the railroad reached Bismarck, in Dakota, when that place became the point of departure for the fleet of flat-bottomed, light-draught boats. The season of navigation was short, lasting only from May to midsummer, though sometimes two or three boats went up after the autumn rise in the river. A few years ago the boats had to run the gauntlet of hostile Indians, and every wood-yard was a stockade. Old captains tell of the days when they had to stop and wait for enormous herds of buffalo to swim the stream. The boats brought the year's supplies for the mining-camps in the Rocky Mountains, for the Indian agencies and the military posts, for the cattle ranches, and for the Canadian mounted police. Long trains of wagons, drawn by mules or bullocks, transported the goods over vast desolate plains and through lonesome mountain gorges. The arrival of the first boat in the spring was a great event in the little frontier hamlet which had been cut off from the world for eight months. The necessity of laying in a year's stock at once caused the trade of Benton to fall into the hands of a few strong firms controlling large capital, having branch stores, and owning the freighting teams that distributed the goods over all the immense tributary territory. Each of these firms had a motley army of retainers and dependents—teamsters, trappers, hunters, and Indians. Their big stores survive the trade that once filled them with customers.

The channels of commerce in the Northwest have changed of late, and Fort Benton is left stranded between two railroads. On the south and west the Northern Pacific has

PIEGAN CAMP ON TETON RIVER.

cut off the business of nearly all the mining country and much of the cattle country, and on the north the Canadian Pacific has taken away the traffic of all the Dominion posts, agencies, and police, and of the fur-trapping Indians and half-breeds over the line. There is nothing left for the town to live upon but the trade of the cattle and sheep ranches in the country close at hand. Most of the boats that used to come up the river have been withdrawn, and those that arrived last season with light freights could get no return cargoes, there being no more buffalo skins to carry. It would not be appropriate to say that in Benton all the week seems like Sunday, for in prosperous times Sunday was the busiest and noisiest day. There used to be a saying in the Yellowstone country that "West of Bismarck there is no Sunday, and west of Miles City there is no God." Benton was probably never so good as now. In time the town will rebound from its present depression, and with the development of the resources of the neighboring farming and grazing country will again be prosperous, but in a different way. The dramatic features of its old life as a remote outpost of civilization are gone forever.*

The town is built on a bank by the riverside surrounded by grassy hills. Climb the hills, or cross the river by the current ferry and scramble to the top of the lone mud cliffs, and you see that the stream runs some hundreds of feet below the general level of the country, which is a rolling plateau. The town is a queer conglomeration of handsome new brick structures and old cotton-wood log huts, with a few neat frame houses painted in the fashionable olives and browns. One is astonished at the size of the hotel, of the mercantile establishments, of the court-house, and of the buildings of the two newspapers.

Near the town, we visited the camp of a dozen lodges of Piegan Indians, who had come to stay all winter for the sake of such subsistence as they could get from the garbage-barrels of the citizens. A race of valorous hunters and warriors has fallen so low as to be forced to beg at back doors for kitchen refuse. In one of the *tepees* in the Piegan camp there was an affecting scene. A young squaw lay on a pile of robes and blankets, hopelessly ill and given up to die. In the lines of her face and the expression of her great black eyes there were traces of beauty and refinement not often seen in Indian women. Crouched on the ground by her side sat her father, an old blind man with long white hair and a strong, firm face clouded with an expression of stolid grief.

The Piegans and the Blackfeet, who inhabit the great reservation north and east of Fort Benton, have suffered grievously of late for want of food, and hundreds have died from scrofula and other diseases induced by insufficient nourishment. In fact, the Government has kept them in a state of semi-starvation. It is a long way from the Upper Missouri to the halls of Congress, where the money is voted for Indian supplies, and it is not easy to place on the proper shoulders the blame for the barbarity of issuing for a week's rations barely enough food for two days. The appropriations for these Indians have hitherto been based on estimates for their winter support only. In the season of roaming and hunting it was supposed they could pick up their own living, as they used to do with ease before the white buffalo-hunters exterminated the game which was their main dependence. Now, the buffaloes which used to roam these plains in great herds are gone.. Occasionally a solitary animal is found, or perhaps a little "bunch" of half a dozen, lurking in a ravine among the Bad Lands, but an Indian might starve to death before he had the luck to find one. Knowing how desperate are the chances of killing game, the Indians crowd around the agencies and try to subsist on the scanty rations issued by the Government. A few, up at Fort Belknap, raise little patches of grain; but of the five or six thousand on the reservation north of the Missouri, probably there are not five hundred who can be called self-supporting. One of the Jesuit fathers from Flathead Mission visited the Blackfeet lately and prevailed upon them to let him take fifty of their children to be reared and educated at the Mission. Indians are strongly attached to their children in a passionate, unreasoning way, and as they are but children of larger growth themselves, living only in the present and incapable of much thought for the future, it is very hard to persuade them to part with the little ones. In this case the only consideration that moved them was the fear that the children would die for want of food, as many had already done. Father Palladimi told me that the speeches of the Indian chiefs at the council, where they told of the sufferings of the tribe and bared their emaciated arms and breasts to show to what a condition they had been brought by hunger, were thrilling bursts of savage oratory, even affecting listeners who could not, as he did, understand the spoken words. There seems to be but one humane and sensible course for the Government to take with these Indians. Their enormous reservation, now useless to them for the purposes of the chase, should be abolished,

* Benton is on the line of the new railroad, and expects a new season of prosperity.

and smaller ones containing good agricultural and grazing lands established, and they should be fed until they could be put in a way of raising crops and cattle. This course has lately been recommended by a commission sent out to examine into their condition.

The old adobe fort erected in 1846 by the American Fur Company, which served as a nucleus to the town of Fort Benton and gave it its name, is still in existence, though much dilapidated. The four towers at the corners of the quadrangle are in a good state of preservation, but portions of the connecting walls have fallen. The rooms where the trappers and traders used to count their profits and make merry are now a rookery of poor homeless people, and the court looks like the backyard of a block of New York tenement houses.

In one of the towers an embrasure is shown from which a cannon was once turned with terrible effect upon a party of peaceable Indians gathered outside the walls of the fort for traffic. The story is that a hunting party of Blackfeet drove off some cattle belonging to the fort, and killed a negro who followed them to recover the animals. The burgess (the title borne by the commander of the fur-trading station) was a man of violent and revengeful disposition. When the Blackfeet failed to give up the murderer, he determined to punish them Indian fashion, and waited until all apprehension of reprisals had been allayed in their minds and they had brought in their furs to barter for goods. Then he loaded his cannon to the muzzle with slugs and musket-balls, and, his men all refusing to put a match to it, fired it himself into a group of the unsuspecting savages.

The original trading fort on the Upper Missouri stood at the mouth of the Maria's River, twenty miles below Benton, and was built in 1828. This was abandoned in 1849, and old Fort Benton was erected eight miles above the present town and occupied for fourteen years. In 1843 the traders went down to the mouth of the Judith and built Fort Shagran. In 1846 they began work on the existing adobe fort and transferred to it the name of Benton. The American Fur Company sold the fort in 1865 to the North-west Fur Company, and in 1877 the Government leased it for a military post and occupied it four years. The town grew up slowly under the protection of the walls of the fort. These are the outlines of the history of a place whose trade extended over an area as great as that of all New England and the Middle States when it was itself only a collection of mud-roofed log huts and warehouses.

Eugene V. Smalley.

A SONG OF CHEER.

THE winds are up, with wakening day
And tumult in the tree.
Across the cool and open sky
White clouds are streaming free.
The new light breaks o'er flood and field,
Clear, like an echoing horn;
While in loud flight the crows are blown
Athwart the sapphire morn.

What tho' the maple's scarlet flame
Declares the summer done;
Tho' finch and starling voyage south
To win a softer sun;
What tho' the withered leaf whirls by
To strew the purpling stream,—
Stretched are the world's glad veins with strength;
Despair is grown a dream!

The acres of the golden-rod
Are glorious on the hills;
Tho' storm and loss approach, the year's
High heart upleaps and thrills.
Dearest, the cheer, the brave delight,
Are given to shame regret,
That, when the long frost falls, our hearts
Be glad, and not forget!

Charles G. D. Roberts.

ABRAHAM LINCOLN: A HISTORY.*

THE FORMATION OF THE CABINET.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

LINCOLN'S CABINET.

THERE is distinguished authority † for the statement that the work of framing the new Cabinet was mainly performed on the evening of the presidential election. After the polls were closed on the 6th of November (so Mr. Lincoln related a year or two later), the superintendent of the telegraph at Springfield invited him to come and remain in his office and read the dispatches as they should come in. He accepted the offer; and, reporting himself in due time at the telegraph office, from which all other visitors were excluded at 9 o'clock, awaited the result of the eventful day. Soon the telegrams came thick and fast — first from the neighboring precincts and counties; then from the great Western cities, Chicago, St. Louis, Cincinnati; and finally from the capitals of the doubtful States, Indiana, Ohio, Pennsylvania, and the Empire State of New York. Here in this little room, in the company of two or three silent operators moving about their mysteriously clicking instruments, and recording with imperturbable gravity the swift-throbbing messages from near and far, Mr. Lincoln read the reports as they came in, first in vague and fragmentary dribblets, and later in the rising and swelling stream of cheering news. There was never a nicer or closer calculator of political probabilities than himself. He was emphatically at home among election figures. All his political life he had scanned tables of returns with as much care and accuracy as he analyzed and scrutinized maxims of government or platforms of parties. Now, as formerly, he was familiar with all the turning-points in contested counties and "close" districts, and knew by heart the value of each and every local loss or gain and its relation to the grand result. In past years, at the close of many a hot campaign he had searched out the comforts of victory from a discouraging and adverse-looking column of figures, or correctly read the fatal omen of defeat in some fragmentary announcement from a precinct or county. Silently, as they were transcribed, the operators handed him the messages, which he laid on his knee while he adjusted his spectacles, and then read and re-read several times with deliberation. He had not long to wait for indications. From a scattering beginning, made up of encouraging local fragments, the hopeful news rose to almost uninterrupted tidings of victory. Soon a shower of congratulatory telegrams fell from the wires, and while his partisans and friends from all parts of the country were thus shaking hands with him "by lightning" over the result, he could hear the shouts and speeches of his Springfield followers, gathered in the great hall of the State-house across the street, and fairly making that building shake with their rejoicings.

Of course his first emotions were those of a kindling pleasure and pride at the sweeping completeness of his success. But this was only a momentary glow. He was indeed President-elect; but with that consciousness there fell upon him the appalling shadow of his mighty task and responsibility. It seemed as if he suddenly bore the whole world upon his shoulders, and could not shake it off; and sitting there in the yet early watches of the night, he read the still-coming telegrams in a sort of absent-minded mechanical routine, while his "inner man" took up the crushing burden of his country's troubles, and traced out the laborious path of coming duties. "When I finally bade my friends good-night and left that room," said Lincoln, "I had substantially completed the framework of my Cabinet as it now exists."

If the grouping and combining of the new President's intended councilors occurred at this time, it is no less true that some of them were selected at a much earlier date. In the mean time no one was informed of his intentions in this regard. For a full month after the election he gave no intimation whatever of his purpose. Cabinet-making is at all times difficult, as Mr. Lincoln felt and acknowledged, even though he had already progressed thus far in his task. Up to the early days of December he followed the current of newspaper criticism, daily read his budget of private letters, gave numerous interviews to visiting pol-

† Hon. Gideon Welles, conversation. J. G. N., personal memoranda. MS.

iticians of prominence and influence from other States, and, on the occasion of a short visit to Chicago, met and conferred with Mr. Hamlin, the Vice-President-elect, — all constituting, most probably, little else than a continued study of the Cabinet question. Never arbitrary nor dictatorial in the decision of any matter, he took unusual care on this point to receive patiently and consider seriously all the advice, recommendations, and objections which his friends from different States had to offer.

His personal experience during his service as a member of Congress had given him an insight into the sharp and bitter contentions which grow out of office-seeking and the distribution of patronage. It was therefore doubtless with the view to fortify himself in his selections, that he now determined to make definite offers of some at least of the Cabinet appointments. The question of taking part of his constitutional advisers from among his political opponents, and from the hostile or complaining Southern States, had been thoroughly debated in his own mind. The conclusion arrived at is plainly evinced by the following, written with his own hand, and inserted as a short leading editorial in the Springfield "Journal" on the morning of December 12th (or 13th), 1860:

"We hear such frequent allusions to a supposed purpose on the part of Mr. Lincoln to call into his Cabinet two or three Southern gentlemen from the parties opposed to him politically, that we are prompted to ask a few questions.

"*First.* Is it known that any such gentleman of character would accept a place in the Cabinet?

"*Second.* If yea, on what terms does he surrender to Mr. Lincoln, or Mr. Lincoln to him, on the political differences between them, or do they enter upon the administration in open opposition to each other?"

The high authorship of these paragraphs was not announced, but the *reductio ad absurdum* was so complete that the newspapers were not amiss in guessing whence they emanated.

The selection of enemies being out of the question, Mr. Lincoln, in execution of long-matured plans, proceeded to choose his friends, and those of the best and ablest. On the morning of December 8th, 1860, he penned the following letters:

SPRINGFIELD, ILL., December 8th, 1860.

MY DEAR SIR: With your permission I shall at the proper time nominate you to the Senate for confirmation as Secretary of State for the United States. Please let me hear from you at your own earliest convenience.

Your friend and obedient servant,

A. LINCOLN.

HON. WILLIAM H. SEWARD,
Washington, D. C.*

(Private and confidential.)

SPRINGFIELD, ILL., December 8th, 1860.

MY DEAR SIR: In addition to the accompanying and more formal note, inviting you to take charge of the State Department, I deem it proper to address you this. Rumors have got into the newspapers to the effect that the Department named above would be tendered you as a compliment, and with the expectation that you would decline it. I beg you to be assured that I have said nothing to justify these rumors. On the contrary, it has been my purpose, from the day of the nomination at Chicago, to assign you, by your leave, this place in the Administration. I have delayed so long to communicate that purpose, in deference to what appeared to me a proper caution in the case. Nothing has been developed to change my view in the premises; and I now offer you the place in the hope that you will accept it, and with the belief that your position in the public eye, your integrity, ability, learning, and great experience all combine to render it an appointment preëminently fit to be made.

One word more. In regard to the patronage sought with so much eagerness and jealousy, I have prescribed for myself the maxim, "Justice to all"; and I earnestly beseech your coöperation in keeping the maxim good.

Your friend and obedient servant,

A. LINCOLN.

HON. WILLIAM H. SEWARD,
Washington, D. C.*

This letter, so full of frankness and delicate courtesy, together with the brief note preceding it, was sent to two intimate friends of the President-elect at Washington, with the request, if their judgment concurred in the step, to hand them to Mr. Seward. They were at once delivered, and the recipient wrote the following equally courteous and characteristic answer:

WASHINGTON, December 13th, 1860.

MY DEAR SIR: I have had the honor of receiving as well your note which tenders to me a nomination to the Senate for the office of Secretary of State, as also your private and confidential letter on the same subject.

It would be a violation of my own feelings, as well as a great injustice to you, if I were to leave occasion for any doubt on your part that I appreciate as highly as I ought the distinction which, as the Chief Magistrate of the Republic, you propose to confer upon me, and that I am fully, perfectly, and entirely satisfied with the sincerity and kindness of your sentiments and wishes in regard to my acceptance of it.

You will readily believe that, coming to the consideration of so grave a subject all at once, I need a little time to consider whether I possess the qualifications and temper of a minister, and whether it is in such a capacity that my friends would wish that I should act if I am to continue at all in the public service. These questions are, moreover, to be considered in view of a very anomalous condition of public affairs. I wish, indeed, that a conference with you upon them were possible. But I do not see how it could prudently be held under existing circumstances. Without publishing the fact of your invitation, I will, with your leave, reflect upon it a few days, and then give you my definite answer, which, if I know myself, will be made under the influence exclusively of the most earnest desire for the success of your administration, and through it for the safety, honor, and welfare of the Union.

Whatever may be my conclusion, you may rest assured of my hearty concurrence in your views in regard to the distribution of the public offices as you have communicated them.

Believe me, my dear sir, most respectfully and most faithfully your friend and humble servant,

WILLIAM H. SEWARD.

THE HON. ABRAHAM LINCOLN,
President-elect of the United States.*

* Unpublished MS.

Before the end of the month, Mr. Lincoln received a short and simple note from Mr. Seward signifying his acceptance. Meanwhile he had sent (December 13th) a verbal message to Hon. Edward Bates, at St. Louis, Mo., that he would come down there the next day to see and consult him about some points connected with the formation of his Cabinet. "I thought I saw an unfitness in his coming to me, and that I ought to go to him,"* writes Mr. Bates with his old-school politeness. Accordingly, the following Saturday (December 15th) found him at Mr. Lincoln's office in Springfield.

They had had a personal acquaintance of some eight years; and after cordial greetings the President-elect proceeded without further prelude to tell him that since the day of the Chicago nomination it had been his purpose to tender him one of the places in his Cabinet. Some of his friends had asked the State Department for him. He could not now offer him this, which was usually considered the first place in the Cabinet, for the reason that he should offer that place to Mr. Seward, in view of his ability, his integrity, his commanding influence, and his fitness for the place. He did this as a matter of duty to the party and to Mr. Seward's many and strong friends, while at the same time it accorded perfectly with his own personal inclinations, notwithstanding some opposition on the part of sincere and warm friends. He would, therefore, offer Mr. Bates what he supposed would be more congenial, and for which he was certainly in every way qualified,— the Attorney-Generalship.†

Within a few days it was announced by authority that Mr. Bates had been tendered and had accepted a place in the new Cabinet. His adhesion was looked upon as a sure indication of a moderate and constitutional policy by the incoming Administration.

The choice of Mr. Seward as the head of the Cabinet, as well as his probable acceptance, was also soon whispered about among leading Republicans in Congress, rumored in the public press, and in due time confirmed by a semi-official statement in the Albany "Evening Journal," the organ of Mr. Seward's friend Thurlow Weed. This action of Mr. Lincoln also gave the party at large general gratification, since up to the Chicago convention Mr. Seward had been its chief favorite. Whatever of antagonism existed between pronounced and conservative Republicans was thus happily neutralized, and the respective partisans of Mr. Seward and Mr. Bates each felt themselves bound to the new Administration through the presence of an acknowledged and trusted leader in Mr. Lincoln's councils.

To these two selections a third had in the mean time been virtually added. As the individual held a less prominent position in the nation, and as the choice was merely provisional, it provoked no immediate attention or contest. On December 11th, three days after writing his letter to Mr. Seward, two gentlemen called upon the President-elect to present the claims of Hon. Caleb B. Smith of Indiana, one of the "pivotal States" in the November election, to a seat in the Cabinet. After a very short talk, showing that the question had already gone through the crucible of his judgment, Mr. Lincoln replied, that, being determined to act with caution and not embarrass himself with promises, he could only say that he saw no insuperable objections to Indiana's having a place, or to Smith being the man.† To this decision Mr. Lincoln held firm, though, later on, very considerable pressure came upon him in behalf of another citizen of Indiana, already then distinguished and destined to attain still greater eminence. A letter which Mr. Lincoln wrote him, explaining why he adhered to his original choice, will be of interest in this connection as illustrating one of his rules of conduct which contributed so much to his popular strength; namely, neither to forget a friendship nor remember a grudge.

EXECUTIVE MANSION, March 8th, 1861.
HON. SCHUYLER COLFAX.

MY DEAR SIR: Your letter of the 6th has just been handed me by Mr. Baker of Minnesota. When I said to you the other day that I wished to write you a letter, I had reference, of course, to my not having offered you a Cabinet appointment. I meant to say, and now do say, you were most honorably and amply recommended; and a tender of the appointment was not withheld, in any part, because of anything happening in 1858. Indeed, I should have decided as I did easier than I did, had that matter never existed. I had partly made up my mind in favor of Mr. Smith — not conclusively, of course — before your name was mentioned in that connection. When you were brought forward I said, "Colfax is a young man, is already in position, is running a brilliant career, and is sure of a bright future in any event — with Smith it is now or never." I considered either abundantly competent, and decided on the ground I have stated. I now have to beg that you will not do me the injustice to suppose for a moment that I remember anything against you in malice.

Yours very truly,
A. LINCOLN. ‡

The next step in Cabinet-making was much more complex as a political and personal adjustment, and proved for the present too difficult of execution. Mr. Lincoln had frequently and without reserve expressed his decided preference for Governor Salmon P. Chase of

* Bates, diary. Unpublished MS.
† J. G. N., personal memoranda. MS.
‡ Unpublished MS. Also partly printed in Hollister, "Life of Colfax."

Ohio as his Secretary of the Treasury,— not only on account of his acknowledged executive talent, but above all because his spotless integrity of character would at once impart tone to and confidence in the national credit, greatly impaired by recent maladministration and now liable to be lost in the convulsions of civil war. There seemed, too, an eminent fitness in this selection. He was looked upon as the most prominent and able representative of the second great constituent element of the Republican party,— the former Democrats of the Northern States whose anti-slavery convictions had joined them to the new party of freedom.

But against this personal preference of the President-elect, to this particular office there rose up the local claim of the State of Pennsylvania and of Senator Simon Cameron as her most prominent citizen. The manufacturing industry of the State created a local sentiment in behalf of a protective tariff stronger than all other party issues. Protection had not, indeed, been a prominent question in the late election, yet the Republican platform proclaimed that the "industrial interests" should be encouraged; the bulk of the new party were former tariff men; Mr. Lincoln himself had been an avowed protectionist in other political campaigns, and was known not to have changed his convictions on this point. Stronger than all was the implied understanding in favor of protection,— unwritten, indeed, but none the less relied upon by politicians and parties. Now that the election was won, Pennsylvania claimed control of the Treasury Department as that branch of the Government which could wield the greatest influence, both upon legislation and administration, for the promotion of her industrial prosperity. Governor Chase had a wider national reputation than Senator Cameron, but each was an unrivaled leader in his own State, each had received the almost unanimous complimentary vote of his own State in the Chicago convention.

In view of these conflicting motives and interests, the President invited Mr. Cameron to visit him at Springfield, and interviews took place between them on the 30th and 31st of December. Their conversations were undoubtedly intended to be frank and explicit, and yet it would appear that a temporary misunderstanding grew out of them, the precise nature of which has never become public history. When Mr. Cameron returned to his home, he bore with him the following note:

SPRINGFIELD, ILL., December 31st, 1860.

HON. SIMON CAMERON.

MY DEAR SIR: I think fit to notify you now, that by your permission I shall at the proper time nominate you to the U. S. Senate for confirmation as Secretary of the Treasury, or as Secretary of War — which of the two I have not yet definitely decided. Please answer at your earliest convenience.

Your obedient servant,

A. LINCOLN.*

The purpose of the President-elect, evidently formed with deliberation, was suddenly changed, but, as the sequel proved, for a time only. If he ever explained his full reason for so doing, it was to witnesses who are long since dead. One of the secondary causes he has himself left on record. It happened that just at this juncture he received, both by letter and through personal visits from Pennsylvania politicians, the indications of a bitter hostility to Cameron from an influential and very active minority in that State, headed by the newly elected governor and the chairman of the State central committee, who protested in harsh and severe terms against Cameron's appointment. The situation required prompt action, and keeping his own counsel, Mr. Lincoln wrote:

(Private.)

SPRINGFIELD, ILL., Jan. 3d, 1861.

HON. SIMON CAMERON.

MY DEAR SIR: Since seeing you, things have developed which make it impossible for me to take you into the Cabinet. You will say this comes of an interview with McClure; and this is partly, but not wholly, true. The more potent matter is wholly outside of Pennsylvania; and yet I am not at liberty to specify it. Enough that it appears to me to be sufficient. And now I suggest that you write me declining the appointment, in which case I do not object to its being known that it was tendered you. Better do this at once, before things so change that you cannot honorably decline, and I be compelled to openly recall the tender. No person living knows or has an intimation that I write this letter.

Yours truly,

A. LINCOLN.

P. S. Telegraph me instantly on receipt of this, saying, "All right."— A. L.*

It will be seen from this that Mr. Lincoln did not offer any explanation of his course; also that he had so well kept his secret, both of the tender and the recall, that, since his judgment so dictated, he could reverse his own action and the world be none the wiser. Still further does it appear from this letter that he had either enjoined or expected an equal discretion on the part of Mr. Cameron. But the latter, in haste to control the party politics of Pennsylvania, and dictate who from that State should succeed him in the Senate, had shown Mr. Lincoln's first note. Mr. Cameron was, therefore, not only unable to telegraph "All right," but was in a measure compelled also to show the recall to a few special friends; and thus the incident, though the correspondence and the actual details were carefully kept out of the newspapers, was more or less understood in the confidential circles of politics.

* Unpublished MS.

As might have been expected, Mr. Cameron's nearest personal friend came at once to Springfield; and the conferences on the subject may be sufficiently inferred from a letter and its inclosure which he carried back to Mr. Cameron:

(Private and confidential.)

SPRINGFIELD, ILL., Jan. 13th, 1861.

HON. SIMON CAMERON.

MY DEAR SIR: At the suggestion of Mr. Sanderson and with hearty good-will besides, I herewith send you a letter dated Jan. 3d — the same in date as the last you received from me. I thought best to give it that date, as it is in some sort to take the place of that letter. I learn, both by a letter of Mr. Swett and from Mr. Sanderson, that your feelings were wounded by the terms of my letter really of the 3d. I wrote that letter under great anxiety, and perhaps I was not so guarded in its terms as I should have been; but I beg you to be assured I intended no offense. My great object was to have you act quickly, if possible before the matter should be complicated with the Penn. senatorial election. Destroy the offensive letter or return it to me.

I say to you now I have not doubted that you would perform the duties of a Department ably and faithfully. Nor have I for a moment intended to ostracize your friends. If I should make a Cabinet appointment for Penn. before I reach Washington, I will not do so without consulting you, and giving all the weight to your views and wishes which I consistently can. This I have always intended.

Yours truly,

A. LINCOLN.

[Inclosure.]

SPRINGFIELD, ILL., Jan. 3d, 1861.

HON. SIMON CAMERON.

MY DEAR SIR: When you were here, about the last of December, I handed you a letter saying I should at the proper time nominate you to the Senate for a place in the Cabinet. It is due to you and to truth for me to say you were here by my invitation, and not upon any suggestion of your own. You have not as yet signified to me whether you would accept the appointment, and with much pain I now say to you that you will relieve me from great embarrassment by allowing me to recall the offer. This springs from an unexpected complication, and not from any change of my view as to the ability or faithfulness with which you would discharge the duties of the place.

I now think I will not definitely fix upon any appointment for Pennsylvania until I reach Washington.

Your obedient servant,

A. LINCOLN.*

Before further describing this Cameron dilemma, we must look at another complication which was added to it. On the day on which Mr. Lincoln had given Mr. Cameron his written tender of a place (December 31st), he had also telegraphed to Governor Chase, "In these troublous times I would like a conference with you. Please visit me here at once."† By a curious coincidence, Mr. Chase arrived in Springfield on the very day (January 3d) on which Mr. Lincoln wrote the recall of the tender to Mr. Cameron. As in other instances, the President-elect waived all ceremony and promptly called on Mr. Chase at his hotel. "I have done with you," said he, "what I would not perhaps have ventured to do with any other man in the country,— sent for you to ask you whether you will accept the appointment of Secretary of the Treasury, without, however, being exactly prepared to offer it to you."‡ He was also informed of the selection of Mr. Seward and Mr. Bates, which he heartily approved. Nothing was, of course, said of the tender to Cameron or its recall; but the opposition of the anti-Cameron minority in Pennsylvania and their urging the selection of Mr. Dayton of New Jersey instead, the apparent acquiescence of all in the choice of Mr. Chase, and the threatening affairs of the nation as well as the strife among Republican factions, were fully talked over during his visit, which lasted two days. Mr. Chase stated that he "was not prepared to say that he would accept that place if offered."† Neither did he positively decline. He valued the trust and its opportunities, but he was reluctant to leave the Senate. It was resolved to ask the advice of friends, and abide the course of events. "A good deal of conversation," writes Mr. Chase, "followed in reference to other possible members of the Cabinet, but everything was left open when we parted."

All these important visits to Springfield were heralded in the newspapers, and the rumors connected therewith proportionately magnified. Particularly did the statement of Mr. Cameron's selection, and its quick contradiction, put both his friends and opponents on the alert. Pennsylvania politics were for the moment at a white heat, and letters showered into Springfield. Politicians are but human, and Mr. Cameron was sorely wounded in pride and weakened in prestige. He felt hurt at the form as well as the substance of the recall, which, being intended to remain secret, was more explicit than conventional. While he did not conceal his chagrin, on the whole he kept his temper, taking the ground that he neither originally solicited the place, nor would he now decline it. His enemies, seeing him at bay, redoubled their efforts to defeat him. They charged him with unfitness, with habitual intrigue, with the odium of corrupt practices. Mr. Lincoln, however, soon noticed that these allegations were vaguely based upon newspaper report and public rumor, and that, when requested to do so, no one was willing to make specific charges and furnish tangible proof.

While the opponents of Mr. Cameron hastened to transmit to Springfield protests against his appointment, his friends were yet more

*Unpublished MS.

† Warden, "Life of Salmon P. Chase."

‡ Schuckers, "Life of S. P. Chase."

active in forwarding recommendations in his behalf. All through the month of January this epistolary contest seemed the principal occupation of the Pennsylvania Republicans, and to some extent it communicated itself to other localities. Sharp as were the assaults, the defense was yet more earnest, and testimonials came from all ranks and classes,— citizens, clergymen, editors, politicians, and officials of all grades, and in numbers fully as three to one,— indorsing his private and personal worth, his public services, his official uprightness. Astute Washington politicians were nonplused, and frankly confessed that his vindication from aspersion was complete and overwhelming and that they could not account for it,— attributing it, as usual, to his personal intrigue. Reasons aside, it was evident that Pennsylvania demanded Cameron, and in the same connection protested against Chase, in the Treasury Department, insisting that the latter, through his Democratic teachings and party affiliations, was necessarily wedded to the doctrines of free trade, and hence inimical to the manufacturing prosperity of that State, which was anxiously looking forward to protective legislation. Mr. Cameron was highly gratified at this manifestation from his own State, as he had a right to be, and was thereby able to declare himself entirely satisfied with the situation as thus left, and to express his continued good-will towards the President-elect.*

Pending this incident, still another phase of the Cabinet question had more fully developed itself at Washington. The proposition to appoint at least one distinctly Southern man continued from time to time to be urged upon Mr. Lincoln, notably by some of the most prominent and, it may be added, most radical Republican senators and representatives in Congress. To the policy of such a step the President-elect cordially assented; but the real question was, as he had already so sharply defined it, Would any Southern man of character and influence accept such a place? Since Mr. Seward's selection, he too joined in the current suggestion. "I feel it my duty," he wrote, December 25th, "to submit for your consideration the names of Colonel Frémont for Secretary of War, Randall Hunt of Louisiana, and John A. Gilmer or Kenneth Raynor of North Carolina, for other places. Should you think that any of these gentlemen would be likely to be desirable in the Administration, I should find no difficulty, I think, in ascertaining whether they would accept, without making the matter public."† In another note, of December 28th, he added the name of Hon. Robert E. Scott of Virginia to his list of Southern candidates. Thereupon Mr. Lincoln sent him authority to make the inquiry, while he himself wrote directly to John A. Gilmer asking him to come to Springfield. Mr. Seward's letters had also urged, in this connection, that in view of the threatened revolution Mr. Lincoln should come to Washington somewhat earlier than usual, and should at once select his Secretaries of War and Navy, that they might begin to devise measures of safety. To all these suggestions Mr. Lincoln sent the following reply:

(Private.)

SPRINGFIELD, ILL., Jan. 3d, 1861.

HON. W. H. SEWARD.

MY DEAR SIR: Yours without signature was received last night. I have been considering your suggestions as to my reaching Washington somewhat earlier than usual. It seems to me the inauguration is not the most dangerous point for us. Our adversaries have us now clearly at disadvantage. On the second Wednesday of February, when the votes should be officially counted, if the two houses refuse to meet at all, or meet without a quorum of each, where shall we be? I do not think that this counting is constitutionally essential to the election; but how are we to proceed in absence of it?

In view of this, I think it best for me not to attempt appearing in Washington till the result of that ceremony is known. It certainly would be of some advantage if you could know who are to be at the heads of the War and Navy Departments; but, until I can ascertain definitely whether I can get any suitable men from the South, and who, and how many, I cannot well decide. As yet, I have no word from Mr. Gilmer, in answer to my request for an interview with him. I look for something on the subject, through you, before long.

Yours very truly,

A. LINCOLN.‡

The result of Mr. Seward's inquiries soon came, and revealed precisely the hesitation and difficulty which the President-elect had foretold. "Mr. G. of N. C. says he will consider of the proposition, and that he trusts that before giving an answer he will be able to name a person better calculated than himself for the purpose indicated. I do not think he will find such a person. He will not reply further, until required to do so by you, directly or indirectly. I will communicate with him if you wish. I think he would not decline. I have tried to get an interview on my own responsibility with Mr. Scott, but he has not yet come, though he has promised to do so. . . I still think Randall Hunt of Louisiana would be well chosen."§ And again: "Mr. Gilmer has written home confidentially, and will give me an answer in a few days. He is inquiring

SALMON P. CHASE, SECRETARY OF THE TREASURY. (FROM A PHOTOGRAPH BY BENDANN.)

about Randall Hunt. What do you know of Meredith P. Gentry of Tennessee?"* To this Mr. Lincoln answered:

(Private.)

SPRINGFIELD, ILL., Jan. 12th, 1861.

HON. W. H. SEWARD.

MY DEAR SIR: Yours of the 8th received. I still hope Mr. Gilmer will, on a fair understanding with us, consent to take a place in the Cabinet. The preference for him over Mr. Hunt or Mr. Gentry is that, up to date, he has a living position in the South, while they have not. He is only better than Winter Davis in that he is farther South. I fear if we could get, we could not safely take, more than one such man — that is, not more than one who opposed us in the election, the danger being to lose the confidence of our own friends.

Your selection for the State Department having become public, I am happy to find scarcely any objection to it. I shall have trouble with every other Northern Cabinet appointment, so much so that I shall have to defer them as long as possible, to avoid being teased to insanity to make changes.

Your obedient servant, A. LINCOLN.†

This quest after a loyal member from the South soon terminated. Under date of January 15th Mr. Seward sent an additional report on the subject. "I think," wrote he, "Mr. Scott has been terrified into dropping the subject about which I wrote to you. He has not come to see me; so we will let him pass, if you please. I still think well and have hopes of Gilmer."‡ But Mr. Lincoln was by that time thoroughly satisfied that this last hope would also prove idle; for he himself had a second letter from Mr. Gilmer (dated January 29th) in which that gentleman declined his invitation to come to Springfield, and in which, having missed receiving Mr. Lincoln's former reply, he still pathetically insisted that the President-elect should save the country by writing a letter to satisfy the South.

In this attitude matters remained until towards the end of February, when Mr. Lin-

* Seward to Lincoln, Jan. 8th, 1861. Unpublished MS.

† Unpublished MS.

‡ Seward to Lincoln, Jan. 15, 1861. Unpublished MS.

coln arrived in Washington; namely, Mr. Seward of New York and Mr. Bates of Missouri had positively accepted definite places in the Cabinet. Mr. Chase of Ohio and Mr. Smith of Indiana had been virtually chosen, but were yet held under advisement; a tender had been made to Mr. Cameron of Pennsylvania, and recalled but not declined; and distinctively Southern men, like Gilmer of North Carolina and Scott of Virginia, had not the courage to accept. In addition to these, Mr. Lincoln had

SIMON CAMERON, SECRETARY OF WAR.
(FROM A PHOTOGRAPH BY BRADY.)

by this time practically settled in his own judgment upon Hon. Gideon Welles of Connecticut as the New England member, though no interview had been held nor tender made. But as early as the meeting (November 22d) between the President and Vice-President elect at Chicago, this name had been the subject of special consultation; and a friend had obtained from Mr. Welles the latter's written views upon current political questions, especially the fugitive-slave clause of the Constitution. A great number of letters and formal recommendations since received had but confirmed Mr. Lincoln's first impressions as to his fitness, availability, and representative character.

Washington was thronged with politicians, called there by the proceedings of Congress; by the Peace Convention, just closing; by the secession excitement; and especially by the advent of a new and yet untried party in administration. Willard's, then the principal hotel, was never in its history more busy nor more brilliant. Here Mr. Lincoln and his suite had spacious and accessible rooms, and here during the six or eight working-days which intervened between his arrival and the inauguration was the great political exchange, where politicians, editors, committee-men, delegations, Congressmen, governors, and senators congregated, and besieged the doors of the coming power from morning till midnight.

Mr. Lincoln had a sincere respect for great names in politics and statesmanship, the more so because his own life had in the main been provincial. Nevertheless, he quickly noted that here at the center, as well as in lesser and more distant circles, there was present harmony in the chief party tenets, but that great diversity and cross-purpose, even serious antagonism, as to men and measures in detail were likely to arise in the future; that the powerful cross-lights of the capital only intensified the factional contests, local jealousies, or the national difficulties and dangers he had already viewed more remotely but quite as accurately from Springfield; that the wisdom of trained actors in the political drama was as much beclouded by interest or prejudice as was his own by inexperience and diffidence.

After a week's patient listening he found his well-formed judgment about the composition of his Cabinet unshaken. He had by this time finally determined to place Cameron in the War Department, and Chase was understood to have accepted the Treasury. Hence the East and the West, the great "pivotal States," the Whig and Democratic elements of the Republican party, each by three members were all believed to be fairly and acceptably represented. The slave States too, through Mr. Bates of Missouri, had a voice in the new council; but the charge of sectionalism had been so persistently iterated by the South, that it was thought best to give the single remaining place to Maryland, even then balancing between loyalty and open secession; and the final controversy was whether that choice should fall upon Montgomery Blair, a Democrat, and member of a historic and influential family, or upon Henry Winter Davis, a young Whig of rising fame.

Something of the obstinacy and bitterness of the entire contest was infused into this last struggle over a really minor place. This was partly because so little remained to quarrel about, but mainly because it was supposed to be the casting vote of the new Cabinet, which should decide the dominancy of the Whig Republicans or Democratic Republicans in Mr. Lincoln's administration. In the momentary heat and excitement this phase of the matter expanded beyond any original design, until Mr. Lincoln began to realize that it was

no longer a mere local strife between Blair and Davis in Maryland, but the closing trial of strength and supremacy between Whigs and Democrats of the new party throughout the Union, headed respectively, though perhaps unconsciously, by Seward and Chase. This contingency, too, had been foreseen by the President-elect, and he had long ago determined not to allow himself to be made the football between rival factions. Carrying out, therefore, his motto of "Justice to all," as formulated in his tender to Seward, he now determined to appoint Mr. Blair. When reminded that by this selection he placed four Democrats and only three Whigs in his Cabinet, he promptly replied that "he was himself an old-line Whig, and he should be there to make the parties even." This declaration he repeated, sometimes jocularly, sometimes earnestly, many times afterward. Heated partisans from both factions doubtless found it difficult to persuade themselves that this inexperienced man would persist in attempting to hold an even and just balance between the two. But he had already made up his mind that if the quarrel became irrepressible it should be carried on by both factions outside of his Administration. During the two or three days which elapsed after his selections were finally determined upon and their actual transmission to the Senate for confirmation there were interminable rumors of changes, and, of course, a corresponding rush to influence new combinations. Late one night a friend gained access to him, and in great excitement asked, "Is it true, Mr. Lincoln, as I have just heard, that we are to have a new deal after all, and that you intend to nominate Winter Davis instead of Blair?" "Judd," replied he, "when that slate breaks again, it will break at the top."*

These plottings at last bore mischievous fruit. Superserviceable friends doubtless persuaded Seward that the alleged ascendency of the Chase faction in the Cabinet was real and ominous. Hence, possibly, the subjoined note:

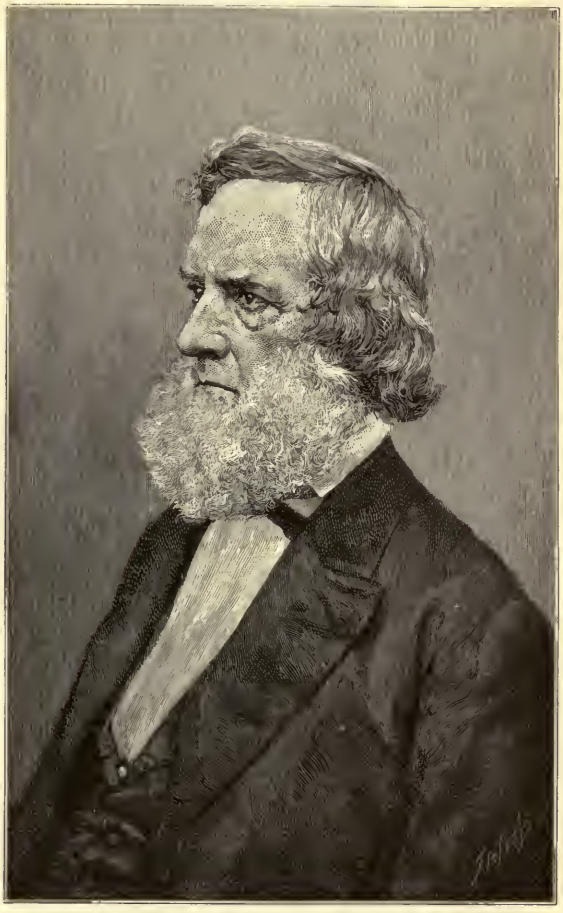
WASHINGTON, March 2d, 1861.

MY DEAR SIR: Circumstances which have occurred since I expressed to you in December last my willingness to accept the office of Secretary of State, seem to me to render it my duty to ask leave to withdraw that consent.

Tendering to you my best wishes for the success of your administration, with my sincere and grateful acknowledgments of all your acts of kindness and confidence towards me, I remain very respectfully and sincerely,

Your obedient servant,
WILLIAM H. SEWARD.

THE HON. ABRAHAM LINCOLN, President-elect. †



GIDEON WELLES, SECRETARY OF THE NAVY.
(FROM A PHOTOGRAPH BY BRADY.)

This, from the man who now for several months had held intimate counsel with him, had taken active part in the formation of the Cabinet, and had read and partly revised the inaugural, was unexpected. Did it mean that he would now withdraw and complain that he was forced out because a preponderating influence was given to his rival? The note was received on Saturday, and Mr. Lincoln pondered the situation till Monday morning. While the inauguration procession was forming in the streets, he wrote the following and handed it to his private secretary to copy, with the remark, "I can't afford to let Seward take the first trick."

* Hon. N. B. Judd, conversation. J. G. N., personal memoranda. MS.

† Unpublished MS.

CALEB B. SMITH, SECRETARY OF THE INTERIOR.
(FROM A PHOTOGRAPH BY BRADY.)

It is dated, for form's sake, at the Executive Mansion, though it was written and copied at Willard's:

EXECUTIVE MANSION, March 4th, 1861.

MY DEAR SIR: Your note of the 2d instant, asking to withdraw your acceptance of my invitation to take charge of the State Department, was duly received. It is the subject of the most painful solicitude with me; and I feel constrained to beg that you will countermand the withdrawal. The public interest, I think, demands that you should; and my personal feelings are deeply enlisted in the same direction. Please consider and answer by 9 o'clock A. M. to-morrow.

Your obedient servant,
A. LINCOLN.

HON. WILLIAM H. SEWARD.*

When the inauguration pageant was ended, and the usual public reception and hand-shaking were concluded, Mr. Seward called upon the President at the Executive Mansion, and the two men once more had a long, frank, and confidential talk, in which Seward's answer, sent the following morning, had, perhaps, already been foreshadowed:

March 5th, 1861.

MY DEAR SIR: Deferring to your opinions and wishes as expressed in your letter of yesterday, and in our conversation of last evening, I withdraw my letter to you of the 2d instant, and remain, with great respect and esteem,

Your most obedient servant,
WILLIAM H. SEWARD.

THE PRESIDENT OF THE UNITED STATES.*

Whereupon, at 12 o'clock, the Senate being convened in extra session, the President sent to that body the names of his proposed Cabinet, as follows:

For Secretary of State, William H. Seward of New York.

For Secretary of the Treasury, Salmon P. Chase of Ohio.

For Secretary of War, Simon Cameron of Pennsylvania.

For Secretary of the Navy, Gideon Welles of Connecticut.

For Secretary of the Interior, Caleb B. Smith of Indiana.

For Attorney-General, Edward Bates of Missouri.

For Postmaster-General, Montgomery Blair of Maryland.

The Senate confirmed all these nominations without delay; and on the day after, March 6th, most of the appointees were formally inducted into office. That evening occurred the first Cabinet meeting, being, however, merely for mutual introduction and acquaintance; and the new President greeted his Cabinet at the Executive Mansion in composition and membership substantially as he had planned and arranged it, on the night of the November election, in the little telegraph office at Springfield.

Carping critics might indeed at the moment have specified defects, incongruities, jealousies, and seeds of possible discord and disaster in the new Cabinet, but we can now understand that they neither comprehended the man who was to dominate and govern it, nor the storms of State which, as captain and crew, he and they were to encounter and outride. He needed advisers, helpers, executive eyes and hands, not alone in department routine, but in the higher qualities of leadership and influence; above all, his principal motive seems to have been representative character, varied talent,—in a word, combination. Statesmanship implies success; success demands coöperation, popular sympathy and support. He wished to combine the experience of Seward, the integrity of Chase, the popularity of Cameron; to hold the West with Bates, attract New England with Welles; please the Whigs through Smith, and convince the Democrats through Blair. Mr. Lincoln possessed a quick intuition of human nature and of the strength or weakness of individual character. His whole life had been a practical study of the details and rivalries of local partisanship. He was, moreover, endowed in yet unsuspected measure with a comprehensive grasp of great causes and results in national politics. He had noted and heralded the alarming portent of the slavery struggle. With more precision than any

* Unpublished MS.

contemporary, he had defined the depth and breadth of the moral issues and rights it involved; he had led the preliminary victory at the November polls. Now that the hydra of secession was raising a threatening head in every cotton-State, his simple logic rose above minor considerations to the peril and the protection of the nation, to the assault on and the defense of the Constitution. He saw but the ominous cloud of civil war in front, and the patriotic faith and enthusiasm of the people behind him. The slogan of a Seward committee, a Chase delegation, or a Cameron clan was but the symbol and promise of a Wide-Awake club to vote for freedom, or of an armed regiment on the battle-field to maintain it. Neither did any one yet suspect his delicate tact in management, strength of will, or firmness of purpose. In weaker hands such a Cabinet would have been a hot-bed of strife; under him it became a tower of strength. He made these selections because he wanted a council of distinctive and diverse, yet able, influential, and representative men, who should be a harmonious group of constitutional advisers and executive lieutenants,—not a confederated board of regents holding the great seal in commission and intriguing for the succession.

EDWARD BATES, ATTORNEY-GENERAL. (FROM A PHOTOGRAPH BY BRADY.)

THE QUESTION OF SUMTER.

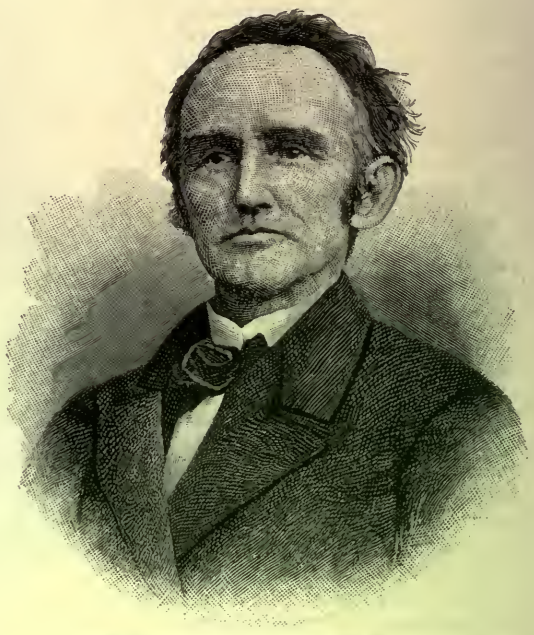
In his letter of January 4th, General Scott had promised Mr. Lincoln that from time to time he would keep him informed of the situation of military affairs. This promise the General failed to keep; probably not through any intentional neglect, but more likely because in the first place Buchanan's policy of delay, indecision, and informal negotiation with the conspirators left everything in uncertainty; and, secondly, because the attention of the Administration (and measurably of the whole country) was turned to the vague hope of compromise, especially through the labors of the Peace Convention. The rebels, on their part, were absorbed in the formation of the provisional government at Montgomery; Lincoln was making his memorable journey from Springfield to Washington by way of the chief cities of the North; the Fort Pickens truce was practically kept a secret; and thus the military status was for the time being lost sight of beyond the immediate neighborhood of Charleston. Since the reorganization of Buchanan's cabinet on December 31st, and the expulsion or defection of traitors from the departments and from Congress, the whole North had breathed somewhat easier. The firing on the *Star of the West* had indeed created a storm of indignation; but this, too, quickly subsided, and by a sort of common consent all parties and sections looked to the incoming Administration as the only power which could solve the national crisis.

The key-note of such a solution was given in the inaugural of the new President. This announced a decided, though not a violent, change of policy. Buchanan's course had been one professedly of conciliation, but practically of ruinous concession. By argument he had almost justified the insurrection; he had acknowledged the doctrine of non-coercion; he had abdicated the rightful authority and power of the Executive; he had parleyed and stipulated with treason; he had withheld reënforcements. Lincoln, receiving from his hands the precious trust of the Government,—not in its original integrity, but humbled, impaired, diminished, and threatened,—announced his purpose of conciliation and not concession,

but conservation and restoration. "The policy chosen," said he, "looked to the exhaustion of all peaceful measures before a resort to any stronger ones. It sought only to hold the public places and property not already wrested from the Government, and to collect the revenue, relying for the rest on time, discussion, and the ballot-box. It promised a continuance of the mails at Government expense to the very people who were resisting the Government, and it gave repeated pledges against any disturbance to any of the people or any of their rights. Of all that which a President might constitutionally and justifiably do in such a case, everything was forborne without which it was believed possible to keep the Government on foot."*

This pacific purpose was now, however, destined to receive a rude shock. When on the morning of the 5th of March Lincoln went to his office and council chamber in the Executive Mansion, he found a letter from Mr. Holt, still acting as Secretary of War, giving him news of vital importance received on the morning of the inauguration,— namely, that Fort Sumter must, in the lapse of a few weeks at most, be strongly reënforced or summarily abandoned. Major Anderson had in the previous week made an examination of his provisions. There was bread for twenty-eight days; pork for a somewhat longer time; beans, rice, coffee, and sugar for different periods from eight to forty days. He had at the same time consulted his officers on the prospects and possibilities of relief and reënforcement. They unanimously reported that before Sumter could be permanently or effectively succored a combined land and naval force must attack and carry the besieging forts and batteries, and hold the secession militia at bay, and that such an undertaking would at once concentrate at Charleston all the volunteers, not alone of South Carolina, but of the adjacent States as well. "I confess," wrote Anderson, transmitting the reports and estimates of his nine officers, "that I would not be willing to risk my reputation on an attempt to throw reënforcements into this harbor within the time for our relief rendered necessary by the limited supply of our provisions, and with a view of holding possession of the same with a force of less than twenty thousand good and well-disciplined men."† Mr. Holt, quoting from previous instructions to and reports from the major, added that this declaration "takes the Department by surprise, as his previous correspondence contained no such intimation."

Retrospective criticism as to why or how such a state of things had been permitted to grow up was, of course, useless. Here was a most portentous complication, not of Lincoln's own creating, but which he must nevertheless meet and overcome. He had counted on the soothing aid of time: time, on the contrary, was in this emergency working in the interest of rebellion. General Scott was at once called into council, but his sagacity and experience could afford neither suggestion nor encouragement. That same night he returned the papers to the President with a somewhat lengthy indorsement reciting the several events which led to, and his own personal efforts to avert, this contingency, but ending with the gloomy conclusion, "Evacuation seems almost inevitable, and in this view our distinguished Chief Engineer (Brigadier Totten) concurs — if indeed the worn-out garrison be not assaulted and carried in the present week."



MONTGOMERY BLAIR, POSTMASTER-GENERAL.
(FROM A PHOTOGRAPH BY BRADY.)

This was a disheartening, almost a disastrous, beginning for the Administration. The Cabinet had only that same day been appointed and confirmed. The presidential advisers had not yet taken their posts — all had not even signified their acceptance. There was an impatient multitude clamoring for audience, and behind these swarmed a hungry army of office-seekers. Everything was urgency and confu-

* Lincoln, Message to Congress, July 4th, 1861.
† Anderson to Cooper, Feb. 28th, 1861. MS. Partly printed in War Records.

sion, everywhere was ignorance of method and routine. Rancor and hatred filled the breasts of political opponents departing from power; suspicion and rivalry possessed partisan adherents seeking advantage and promotion. As yet, Lincoln virtually stood alone, face to face with the appalling problems of the present and the threatening responsibilities of the future. Doubtless in this juncture he remembered and acted upon a biblical precedent which in after days of trouble and despondency he was wont to quote for justification or consolation. When the children of Israel murmured on the shore of the Red Sea, Moses told them to "stand still and see the salvation of the Lord." Here then, at the very threshold of his presidential career, Lincoln had need to practice the virtue of patience,—one of the cardinal elements of his character, acquired in many a personal and political tribulation of his previous life.

He referred the papers back to General Scott to make a more thorough investigation of all the questions involved. At the same time he gave him a verbal order, touching his future general public policy, which a few days later was reduced to writing, and on the installation of the new Secretary of War transmitted by that functionary to the General-in-chief through the regular official channels, as follows:

"I am directed by the President to say he desires you to exercise all possible vigilance for the maintenance of all the places within the military department of the United States, and to promptly call upon all the departments of the Government for the means necessary to that end." *

On the 9th of March, in written questions Lincoln in substance asked General Scott to inform him: 1st. To what point of time can Anderson maintain his position in Sumter? 2d. Can you, with present means, relieve him within that time? 3d. What additional means would enable you to do so? † This was on Saturday following the inauguration. The chiefs of the several departments, with the exception of Cameron, Secretary of War, had been during the week inducted into office. That night the President held his first Cabinet council on the state of the country; and the crisis at Sumter, with the question of relieving the fort, was for the first time communicated to his assembled advisers. The general effect was one of dismay if not consternation. For such a discussion all were unprepared. Naturally all decision must be postponed, and the assistance of professional advice be sought. What followed has been written down by an eye-witness and participant.

"March 9th, 1861, Saturday night.—A Cabinet council upon the state of the country. I was astonished to be informed that Fort Sumter, in Charleston Harbor, must be evacuated, and that General Scott, General Totten, and Major Anderson concur in opinion, that as the place has but twenty-eight days' provision, it must be relieved, if at all, in that time; and that it will take a force of 20,000 men at least, and a bloody battle, to relieve it!

"For several days after this, consultations were held as to the feasibility of relieving Fort Sumter, at which were present, explaining and aiding, General Scott, General Totten, Commodore Stringham, and Mr. Fox, who seems to be *au fait* in both nautical and military matters. The army officers and navy officers differ widely about the degree of danger to rapid-moving vessels passing under the fire of land batteries. The army officers think destruction almost inevitable, where the navy officers think the danger but slight. The one believe that Sumter cannot be relieved—not even provisioned—without an army of twenty thousand men and a bloody battle. The other (the naval) believe that with light, rapid vessels they can cross the bar at high tide of a dark night, run the enemy's forts (Moultrie and Cumming's Point), and reach Sumter with little risk. They say that the greatest danger will be in landing at Sumter, upon which point there may be a concentrated fire. They do not doubt that the place can be and ought to be relieved.

"Mr. Fox is anxious to risk his life in leading the relief, and Commodore Stringham seems equally confident of success.

"The naval men have convinced me fully that the thing can be done, and yet as the doing of it would be almost certain to begin the war, and as Charleston is of little importance as compared with the chief points in the Gulf, I am willing to yield to the military counsel and evacuate Fort Sumter, at the same time strengthening the forts in the Gulf so as to look down opposition, and guarding the coast with all our naval power, if need be, so as to close any port at pleasure.

"And to this effect I gave the President my written opinion on the 16th of March." ‡

This extract from the diary of Edward Bates, the Attorney-General in the new Administration, shows us the drift and scope of the official discussions on the Sumter question. To understand its full bearings, however, we must examine it a little more specifically. The idea of the evacuation and abandonment of the fort was so repugnant that Mr. Lincoln could scarcely bring himself to entertain it: we have his own forcible statement of how the apparently crushing necessity presented itself to his mind. General Scott, on March 11th and 12th, made written replies to the questions the President had propounded, and submitted the draft of an order for evacuation.

He believed Anderson could, in respect to provisions, hold out some forty days without much suffering, but that the assailants, having overpowering numbers, could easily wear out the garrison by a succession of pretended night attacks, and, when ready, take it easily by a single real assault. To supply or reënforce the fort successfully, he should need a fleet of war vessels and transports which it would take

* Cameron to Scott (written by Lincoln). Unpublished MS.

‡ Bates, diary. Unpublished MS.

four months to collect; and, besides, 5000 regulars and 20,000 volunteers, which it would require new acts of Congress to authorize and from six to eight months to raise, organize, and discipline. "It is therefore my opinion and advice," writes Scott, "that Major Anderson be instructed to evacuate the fort so long gallantly held by him and his companions, immediately on procuring suitable water transportation, and that he embark with his command for New York."* "In a purely military point of view," says Lincoln, "this reduced the duty of the Administration in the case to the mere matter of getting the garrison safely out of the fort. It was believed, however, that so to abandon that position, under the circumstances, would be utterly ruinous; that the necessity under which it was to be done would not be fully understood; that by many it would be construed as a part of a voluntary policy; that at home it would discourage the friends of the Union, embolden its adversaries, and go far to insure to the latter a recognition abroad; that in fact it would be our national destruction consummated. This could not be allowed."†

The dire alternative presented caused a thorough reëxamination and discussion of the various plans of relief which had been suggested; and since the army and the navy showed some considerable disagreement in opinions, these discussions were held in the presence of President and Cabinet in the executive council chamber itself. General Scott's first impulse had been to revive and reorganize the Ward expedition, prepared about the middle of February, which was to have consisted of several small Coast Survey steamers. To this end he called Captain Ward to Washington and again discussed the plan. This, however, considering the increase of batteries and channel obstructions, was now by both of them pronounced impracticable. But one other offer seemed worthy of consideration. This was the plan proposed by Gustavus V. Fox, a gentleman thirty-nine years of age, who had been nineteen years in the United States Navy, had been engaged in the survey of the

BUST OF JAMES LOUIS PETIGRU, PRESENTED TO THE CITY OF CHARLESTON BY MAYOR WILLIAM A. COURTENAY.

† Lincoln, Message to Congress, July 4th, 1861.

Southern coast of the United States, had commanded United States mail steamers, and had resigned from the navy in 1856 to engage in civil pursuits. He was a brother-in-law of the new Postmaster-General, Blair, who seconded his project with persistence. He had made his proposal to General Scott early in February, and, backed by prominent New York merchants and shippers, urged it as he best might through the whole of that month.

In his various communications Captain Fox thus described his plan:

"I propose to put the troops on board of a large, comfortable sea-steamer, and hire two [or three] powerful light-draught New York tug-boats, having the necessary stores on board; these to be convoyed by the United States steamer *Pawnee*, now at Philadelphia, and the revenue cutter *Harriet Lane*. . . . Arriving off the bar [at Charleston], I propose to examine by day the naval preparations and obstructions. If their vessels determine to oppose our entrance (and a feint or flag of truce would ascertain this), the armed ships must approach the bar and destroy or drive them on shore. Major Anderson would do the same upon any vessels within the range of his guns, and would also prevent any naval succor being sent down from the city. Having dispersed this force, the only obstacles are the forts on Cumming's Point and Fort Moultrie, and whatever adjacent batteries they may have erected, distant on either hand from mid-channel about three-quarters of a mile. At night, two hours before high water, with half the force on board of each tug, within relieving distance of each other, I should run in to Fort Sumter.*

"These tugs are sea-boats, six feet draught, speed fourteen knots. The boilers are below, with three and a half feet space on each side, to be filled with coal. The machinery comes up between the wheel-houses, with a gangway on either hand of five to six feet, enabling us to pack the machinery with two or three thicknesses of bales of cotton or hay. This renders the vulnerable parts of the steamer proof against grape and fragments of shells, but the momentum of a solid shot would probably move the whole mass and disable the engine. The men are below, entirely protected from grape — provisions on deck. The first tug to lead in empty, to open their [the enemy's] fire. The other two to follow, with the force divided, and towing the large iron boats of the *Baltic*, which would hold the whole force should every tug be disabled, and empty they would not impede the tugs."†

The feasibility of Captain Fox's plan thus rested upon his ability to "run the batteries," and on this point the main discussion now turned. As recorded in the diary we have quoted, the army officers believed destruction almost inevitable, while the naval officers thought a successful passage might be effected. Captain Fox, who had come to Washington, finally argued the question in person before the President, Cabinet, and assembled military officers, adducing the recorded evidence of examples and incidents which had occurred in the Crimean war, and the results of Dahlgren's experiments in firing at stationary targets; maintaining that there was no certainty whatever, and even only a minimum of chance, that land batteries could hit a small object moving rapidly at right angles to their line of fire at a distance of thirteen hundred yards, especially at night.

So far as mere theory could do it, he successfully demonstrated his plan, convincing the President and at least a majority of his Cabinet against all the objections of General Scott and his subordinate officers.

The scheme of Captain Fox presented such favorable chances that the military problem seemed in fair way of solution; nevertheless, as the more important of the two, the political question yet remained to be considered. Resolved on prudent deliberation, President Lincoln now, on March 15th, asked the written answer of his constitutional advisers to the following inquiry:

"Assuming it to be possible to now provision Fort Sumter, under all the circumstances is it wise to attempt it?"

As requested, the members of the Cabinet returned on the next day a somewhat elaborate reply, setting forth their reasons and conclusions. Two of them, Chase and Blair, agreeing with the President's own inclinations, responded in the affirmative; the five others, Seward, Cameron, Welles, Smith, and Bates, advised against the measure.

"I have not reached my own conclusion," wrote Chase, "without much difficulty. If the proposed enterprise will so influence civil war as to involve an immediate necessity for the enlistment of armies and the expenditure of millions, I cannot, in the existing circumstances of the country and in the present condition of the national finances, advise it."‡

He argued, however, that an immediate proclamation of reasons, and the manifestation of a kind and liberal spirit towards the South, would avert such a result, and he would therefore return an affirmative answer.

Blair had been from the first in favor of prompt and vigorous measures against the insurrection. A Democrat of the Jackson school, he would repeat Jackson's policy against nullification. He had brought forward and urged the scheme of Captain Fox. By the connivance of Buchanan's administration, he argued, the rebellion had been permitted unchecked to grow into an organized government in seven States. It had been practically treated as a lawful proceeding; and, if allowed to continue, all Southern people must become reconciled to it. The rebels believe Northern men are deficient in courage to maintain the Government. The evacuation of Sumter will convince them that the Administration lacks firmness. Sumter reënforced becomes invulnerable, and will

* Fox, memorandum, Feb. 6th, 1861. War Records.
† Fox to Blair, Feb. 23d, 1861. War Records.
‡ Chase to Lincoln, March 16th, 1861.

completely demoralize the rebellion. No expense or care should be spared to achieve this result. The appreciation of our stocks would reimburse the most lavish outlay for this purpose.

"You should give no thought for the commander and his comrades in this enterprise. They willingly take the hazard for the sake of the country, and the honor, which, successful or not, they will receive from you and the lovers of free government in all lands."*

Seward, in the negative, argued the political issue at great length. To attempt to provision Sumter would provoke combat and open civil war. A desperate and defeated majority in the South have organized revolutionary government in seven States. The other slave States are balancing between sympathy for the seceders and loyalty to the Union, but indicate a disposition to adhere to the latter. The Union must be maintained, peaceably if it can, forcibly if it must, to every extremity. But civil war is the most uncertain and fearful of all remedies for political disorders. He would save the Union by peaceful policy without civil war. Disunion is without justification. Devotion to the Union is a profound and permanent national sentiment. Silenced by terror it would, if encouraged, rally, and reverse the popular action of the seceding States. The policy of the time is conciliation. Sumter is practically useless.

"I would not provoke war in any way now. I would resort to force to protect the collection of the revenue, because this is a necessary as well as a legitimate Union object. Even then it should be only a naval force that I would employ for that necessary purpose, while I would defer military action on land until a case should arise when we would hold the defense. In that case, we should have the spirit of the country and the approval of mankind on our side."†

Cameron followed the reasoning of the army officers. Captain Fox, he said, did not propose to supply provisions for more than one or two months. The abandonment of Sumter seemed an inevitable necessity, and therefore the sooner the better.‡ Welles thought the public mind was becoming reconciled to the idea of evacuation as a necessity. The strength, dignity, and character of the Government would not be promoted by a successful attempt, while a failure would be disastrous.§ Smith argued that Sumter is not essential to any of the duties imposed on the Government. There are other and more effective means to vindicate its honor, and compel South Carolina to obey the laws.‖ Bates believed the hazard greater than the gain. "True," wrote he, "war already exists by the act of South Carolina — but this Government has thus far magnanimously forborne to retort the outrage. And I am willing to forbear yet longer in the hope of a peaceful solution of our present difficulties." Pickens, Key West, etc., should, on the contrary, be strongly defended, and the whole coast from South Carolina to Texas be guarded by the entire power of the navy.¶

Against the advice of so decided a majority, Lincoln did not deem it prudent to order the proposed expedition. Neither did his own sense of duty permit him entirely to abandon it. Postponing, therefore, a present final decision of the point, he turned his attention to the investigation of the question immediately and vitally connected with it,— the collection of the revenue. On the 18th of March he once more directed written inquiries to three of his Cabinet officers. To the Attorney-General, whether under the Constitution and laws the Executive has power to collect duties on shipboard off shore?** To the Secretary of the Treasury, whether, and where, and for what cause any importations are taking place without payment of duties? Whether vessels off shore could prevent such importations or enforce payment? and what number and description of vessels besides those already in the revenue service?†† To the Secretary of the Navy, what amount of naval force he could place at the control of the revenue service, and how much additional in the future?‡‡

Pending the receipt of replies to these inquiries, Lincoln determined to obtain information on two other points,— the first, as to the present actual condition and feeling of Major Anderson; the second, as to the real temper and intentions of the people of Charleston. Captain Fox had suggested the possibility of obtaining leave to visit Sumter through the influence of Captain Hartstene, then in the rebel service at Charleston, but who had in former years been his intimate friend, and comrade in command of a companion steamer of the California line. By order of the President, General Scott therefore sent him to obtain "accurate information in regard to the command of Major Anderson in Fort Sumter."§§ As he an-

ticipated, Hartstene introduced him to Governor Pickens, to whom he showed his order, and was, after some delay, permitted to go to the fort under Hartstene's escort, having meanwhile had an interview with General Beauregard.

"We reached Fort Sumter after dark" (March 21st), writes Captain Fox, "and remained about two hours. Major Anderson seemed to think it was too late to relieve the fort by any other means than by landing an army on Morris Island. He agreed with General Scott that an entrance from the sea was impossible; but as we looked out upon the water from the parapet, it seemed very feasible, more especially as we heard the oars of a boat near the fort, which the sentry hailed, but we could not see her through the darkness until she almost touched the landing. I found the garrison getting short of supplies, and it was agreed that I might report that the 15th of April, at noon, would be the period beyond which the fort could not be held unless supplies were furnished. I made no arrangements with Major Anderson for reënforcing or supplying the fort, nor did I inform him of my plan." *

Unlike Fox, Anderson was in no wise encouraged by the conversation.

"I have examined the point," wrote he, "alluded to by Captain Fox last night. A vessel lying there will be under the fire of thirteen guns from Fort Moultrie, and Captain Foster says that at the pan-coupé or immediately on its right,— the best place for her to land,— she would require, even at high tide, if drawing ten feet, a staging of forty feet. The department can decide what the chances will be of a safe debarkation and unloading at that point under these circumstances." †

The other point on which the President sought information revealed equally decisive features. It so happened that S. A. Hurlbut of Illinois (afterwards General), an intimate friend of Lincoln, was at the moment in Washington. This gentleman was of Charleston birth, four years a law student of the foremost citizen and jurist of South Carolina, James L. Petigru, and then in frequent correspondence with him. On March 21st the President called Mr. Hurlbut to him, and explaining that Mr. Seward insisted that there was a strong Union party in the South,— even in South Carolina,— asked him to go personally and ascertain the facts. Mr. Hurlbut telegraphed his sister in Charleston that he was coming on a visit, which, in the threatening aspect of affairs, he might not soon be able to repeat. He traveled as a private citizen, though purposely with some show of publicity. Public curiosity, however, centered itself upon his traveling companion, Colonel Ward H. Lamon, who, coming with an ostensible Government mission to examine some post-office matters, was looked upon as the real presidential messenger, was treated to a formal audience with the governor, and permitted to make a visit to Fort Sumter. While Lamon was hobnobbing with the young secessionists at the Charleston Hotel, Hurlbut, quartered at the house of his sister, and thus free from the inquisitive scrutiny of newspaper reporters, was quietly visiting and being visited by his former neighbors and friends,— politicians, lawyers, merchants, and representative citizens in various walks of life. Of greater value than all was his confidential interview with his former legal preceptor. Mr. Petigru was at that time the best lawyer in the South, and the strongest man in the State of South Carolina so far as character, ability, and purity went, and never surrendered nor disguised his Union convictions. Mr. Hurlbut was himself an able lawyer, a man of experience and force in politics, and a shrewd and sagacious judge of human nature. His mission remained entirely unsuspected; and after two days' sojourn, he returned to Washington and made a long written report to the President.

"By appointment," he writes, "I met Mr. Petigru at one P. M. and had a private conversation with him for more than two hours. I was at liberty to state to him that my object was to ascertain and report the actual state of feeling in the city and State. Our conversation was entirely free and confidential. He is now the only man in the city of Charleston who avowedly adheres to the Union. . . . From these sources I have no hesitation in reporting as unquestionable — that separate nationality is a fixed fact, that there is an unanimity of sentiment which is to my mind astonishing, that there is no attachment to the Union. . . . There is positively nothing to appeal to. The sentiment of national patriotism, always feeble in Carolina, has been extinguished and overridden by the acknowledged doctrine of the paramount allegiance to the State. False political economy diligently taught for years has now become an axiom, and merchants and business men believe, and act upon the belief, that great growth of trade and expansion of material prosperity will and must follow the establishment of a Southern republic. They expect a golden era, when Charleston shall be a great commercial emporium and control for the South, as New York does for the North." ‡

These visits to Charleston added two very important factors or known quantities to the problem from which the Cabinet, and chiefly the President, were to deduce the unknown. Very unexpectedly to the latter, and no doubt to all the former as well, a new light, of yet deeper influence, was now suddenly thrown upon the complicated question. The fate of Sumter had been under general discussion nearly three weeks. The Cabinet and the high military and naval officers had divided in opinion and separated into opposing camps. As always happens in such cases, suspicion and criticism of personal motives began to develop themselves, though, at this very beginning, as throughout his whole after-administration, they

† Anderson to Adj. Gen., March 22d, 1861. War Records.

‡ Hurlbut to Lincoln, Report, March 27th, 1861. Unpublished MS.

were held in check by the generous faith and unvarying impartiality of the President. Hitherto the sole issue was the relief or abandonment of Sumter; but now, by an apparent change of advice and attitude on the part of General Scott, the fate of Fort Pickens was also drawn into discussion.

So far as is known, the loyalty and devotion of General Scott never wavered for an instant; but his proneness to mingle political with military considerations had already been twice manifested. The first was when in his memorial entitled "Views," etc., addressed to President Buchanan, October 29th, 1860, he suggested the formation of four new American Unions if the old should be dismembered. The second was more recent. On the day preceding Lincoln's inauguration, the General had written a letter to Seward. In this he advanced the opinion that the new President would have to choose one of four plans or policies: 1st. To adopt the Crittenden compromise, and change the Republican to a Union party; 2d. By closing or blockading rebel ports or collecting the duties on shipboard outside; 3d. Conquer the States by invading armies, which he deprecated; and 4th, Say to the seceded States: "Wayward sisters, depart in peace!"* It must be noted that between three of these alternatives he gives no intimation of preference. The letter was simply a sign of the prevailing political unrest, and therefore remained unnoticed by the President, to whom it was referred.

When Lincoln assumed the duties of government, Scott had among other things briefly pointed out the existing danger at Fort Pickens, and the President by his verbal order of March 5th, directing "all possible vigilance for the maintenance of all the places," had intended that that stronghold should be promptly reënforced. He made inquiries on this head four days later, and to his surprise found nothing yet done.† Hence he put his order in writing, and had it duly sent to the War Department for record March 11th, and once more gave special directions in regard to Pickens, assuming the omission had occurred through preoccupation about Sumter. Upon this reminder, Scott bestirred himself, and at his instance the war steamer *Mohawk* was dispatched March 12th, carrying a messenger with orders to Captain Vogdes to land his company at Fort Pickens and increase the garrison. Both President and Cabinet had since then considered that port disposed of for the moment.

On the evening of March 28th, the first State dinner was given by the new occupants of the Executive Mansion. Just before the hour of leave-taking, Lincoln invited the members of his Cabinet into an adjoining room for an instant's consultation; and when they were alone, he informed them, with evident deep emotion, that General Scott had that day advised the evacuation of Fort Pickens as well as Fort Sumter. The General's recommendation is formulated as follows, in his written memorandum to the Secretary of War:

"It is doubtful, however, according to recent information from the South, whether the voluntary evacuation of Fort Sumter alone would have a decisive effect upon the States now wavering between adherence to the Union and secession. It is known, indeed, that it would be charged to necessity, and the holding of Fort Pickens would be adduced in support of that view. Our Southern friends, however, are clear that the evacuation of both the forts would instantly soothe and give confidence to the eight remaining slave-holding States, and render their cordial adherence to this Union perpetual. The holding of Forts Jefferson and Taylor on the ocean keys depends on entirely different principles, and should never be abandoned; and indeed the giving up of Forts Sumter and Pickens may be best justified by the hope that we should thereby recover the State to which they geographically belong by the liberality of the act, besides retaining the eight doubtful States."‡

A long pause of blank amazement followed the President's recital,§ broken at length by Blair in strong denunciation, not only of this advice, but of Scott's general course regarding Sumter. He charged that Scott was transcending his professional duties and "playing politician." Blair's gestures and remarks, moreover, were understood by those present as being aimed specially at Seward, whose peace policy he had, with his usual impulsive aggressiveness, freely criticised. Without any formal vote, there was a unanimous expression of dissent from Scott's suggestion, and under the President's request to meet in formal council next day, the Cabinet retired. That night Lincoln's eyes did not close in sleep.‖ It was apparent that the time had come when he must meet the nation's crisis. His judgment alone must guide, his sole will determine, his own lips utter the word that should save or lose the most precious inheritance of humanity, the last hope of free government on the earth. Only the imagination may picture that intense and weary vigil.

PECUNIARY ECONOMY OF FOOD.

THE CHEMISTRY OF FOODS AND NUTRITION. V.

"No one can say that I do not give my family the best of flour, the finest sugar, the very best quality of meat."

THE above is the boast of a coal laborer earning seven dollars a week. It illustrates a phenomenon which I would commend to the consideration of either psychologists or students of social science, or both. I refer to the conceit, let us call it, that there is some mysterious virtue in those kinds of foods that have the most delicate appearance and flavor and the highest price; that whatever else one has or does not have he must, if possible, have this sort of food; and that to economize by using anything inferior would be a sacrifice of both dignity and principle.

The quotation, from a description of the life of factory operatives in New England, in an article by Mr. Lee Meriwether, in "Harper's Magazine" for April, 1887, illustrates what I mean.

The cheapest food is that which supplies the most nutriment for the least money. The most economical food is that which is cheapest and best adapted to the wants of the user. But the maxim that "the best is the cheapest" does not apply to food. The best food, in the sense of that which has the finest appearance and flavor and is sold at the highest price, is not generally the cheapest nor the most economical, nor is it always the most healthful. The coal laborer who made it so much an article of faith to give his family "the best of flour, the finest sugar, the very best quality of meat"; who, as Mr. Meriwether tells us, at a time when excellent butter was selling at 25 cents a pound paid 29 cents for an extra quality; who spent $156 a year for the nicest cuts of meat, which his wife had to cook before six in the morning or after half-past six at night because she worked all day in the factory; who spent only $108 for clothing for his family of nine, and only $72 a year for rent in a crowded tenement-house where they slept in rooms without windows or closets; who indulged in this extravagance in food when much cheaper meat and in all probability much less of it, cheaper butter, cheaper flour, and other less costly materials such as come regularly upon the table of many a man of wealth would have been just as wholesome, just as nutritious, and in every way just as good save in its gratification to pride and palate,—this man was innocently committing an immense economical and hygienic blunder. He was doing this because, like the very large class of people of whom he is a type, he was laboring under this conceit of which I speak.

One great difficulty here is the lack of information. Even those who wish and try to economize in the purchase and use of food very often do not understand how. They consult carefully the prices they pay, but have in general very vague ideas about the nutritive values. It is an interesting fact that although the cost of food is the principal item of the living expenses of the large majority of people,—of all, indeed, but a few of the especially well-to-do,*—and although the health and strength of all are so intimately dependent

* In his Report of the Bureau of Statistics of Labor of Massachusetts for 1884, Mr. Carroll D. Wright summarizes the results of investigations into the cost of living of people with different incomes, especially of workingmen's families, in Massachusetts and in Great Britain, and quotes similar results obtained by Dr. Engel in Germany. Dividing expenses into those for subsistence (food), clothing, rent, fuel, and sundries, the percentage of the whole income expended for subsistence averages as in the tabular statement herewith. As incomes increase the relative percentage of outlay for food becomes less and that for "sundries" greater. In the Massachusetts and Great Britain figures (I do not know how it is with the German, but presume that the case is the same) no outlay for intoxicating liquors is included in the allowance for subsistence.

upon their diet, yet even the most intelligent know less of the actual uses and value of their food for fulfilling its purposes than of those of almost any other of the staple necessities of life.

RATIOS OF NUTRITIVE VALUES TO COST.

THE large majority of the families in this country have, I understand, not over $500 a year to live upon. More than half of this goes, and must go, for food. Rent, clothing, the cost of preparing the food for the table, and all other expenses must be provided from the rest. Perhaps these statements apply less accurately to farmers, but of wage-workers in towns statisticians tell me they are correct.

To the man with an income of $5000 a year, it may seem to make little difference whether he pays 20 cents or $2 a pound for the protein of his food; but to the one who can earn only $500 or less a year for the support of his family, the difference is an important one. His wife goes to the dry-goods store to buy a dress for her daughter, and hesitates between a piece of cloth at 40 cents a yard that would please her better and one at 35 that is not so pretty but just as durable, and is very apt to take the cheaper one because she feels that she must. She does not fall into the error of getting more cloth than is needed and using part of the excess for lining and throwing the rest away, nor, if she is wise, does she try to economize by getting poor trimmings and cheap thread. But when she goes to the grocer or to the butcher or to the fish-market for food to build up her children's bodies and give her husband and herself strength to work, she often pays one or two dollars a pound for protein to make muscle when she might obtain it in forms equally wholesome and nutritious for from 15 to 50 cents. The food she buys is apt to supply some of the nutrients in excessive amount as well as at needlessly high cost, while it furnishes others in insufficient quantity or in unfitting forms and in uneconomical ways; and only too often a part of it finds its way into the drain or the garbage barrel instead of being utilized for nourishment.

Of course the good wife and mother does not understand about protein and potential energy and the connection between the nutritive value of food and the price she pays for it, and doubtless she never will. But if the knowledge is obtained and put in print, and diffused among those who have the time and training to get hold of it, the main facts will gradually work their way to the masses, who most need its benefit.

A subject that has received but little attention in this country, though it is one of the many special problems that are being carefully considered by students of social economy in Europe, is the relation of the nutritive value of food to its cost. We purchase our food by gross weight or measure. Part of it consists of nutritive substances, the rest is made up of water and various materials which serve only as ballast. In comparing different food-materials with respect to their cheapness or dearness we are apt to judge them by the prices per pound, quart, or bushel, without much regard to the amounts or kinds of actual nutrients which they contain. Of the different food-materials which the market affords and which are palatable, nutritious, and otherwise fit for nourishment, what ones are pecuniarily the most economical?

In a series of studies, undertaken at the instance of the Smithsonian Institution, I have had occasion to examine into some of these problems. A few of the results of the inquiry are summarized in Diagrams VI. and VII.

There are various ways of comparing food-materials with respect to the relative cheapness or dearness of their nutritive ingredients. The best, perhaps, consists in simply comparing the quantities of nutrients obtained for a given sum, 25 cents for instance, in the food when purchased at market prices. Diagram VI. gives a series of such comparisons. They are based upon the analyses of materials, obtained mostly in markets in New York City and in Middletown, Conn., and upon the retail prices paid for them. Along with the quantities of nutrients which 25 cents will buy are shown the quantities estimated to be appropriate for a day's diet for an ordinary man doing a moderate amount of muscular labor. Two such standards are given,—one proposed by Professor Voit in Germany, and based mainly upon experiments and observations in that country; the other proposed by myself. The diagram shows the quantities of different food-materials which one would get for a quarter of a dollar; the quantities of protein and fats and carbohydrates contained in them; and how these amounts of nutrients compare with what an average man, engaged in moderately hard muscular work, might be expected to need to maintain his body in vigorous condition and supply strength for the work he has to do. Another way of comparing the nutritive value of the food-materials with the cost is by the quantities of potential energy they contain. Diagram VII. shows the estimated quantities of energy in the nutritive ingredients of the materials in Diagram VI.,—that is, the amount which 25 cents would pay for. Still another method of comparing the actual expensiveness of different foods at the prices at which people buy them consists in comparing the cost of

the same nutrient in different food-materials. Of the different nutrients, protein is physiologically the most important, as it is pecuniarily the most expensive. For these reasons the cost of protein in different food-materials may be used as a means of comparing their relative cheapness or dearness, as is done in Diagram VII. The figures represent the ordinary prices per pound and the corresponding costs of protein, due allowance being made for the carbohydrates and fats, the estimated costs of which are, for the sake of brevity, omitted from the table.*

EXPENSIVE VS. ECONOMICAL FOODS.

TAKING the diagrams and tabular statements together, the first thing that strikes one is the cheapness of the vegetable as compared with the animal foods. Note, for instance, Diagram VI. and the accompanying figures, which show how much actually nutritive material one may have for 25 cents in different foods at ordinary prices. The quarter of a dollar invested in flour, meal, or potatoes brings several times the quantity of nutrients that it does if spent for meats, fish, or milk. But it is to be remembered that the animal foods contain more of the protein and fats, which are the most valuable food constituents, while the excess of material obtained in the vegetable foods consists mainly or entirely of sugar, starch, and other carbohydrates, which, though very important for nourishment, are far less valuable, weight for weight, than the protein and fats. Furthermore, the protein of the animal foods is more easily and completely digestible than that of the vegetable foods.

The greater expensiveness of animal foods is brought out with even greater clearness in Diagram VII. and in the accompanying figures. The quantities of potential energy in the nutritive material obtained for 25 cents range, in the animal foods, from 160 calories, in the salmon at a dollar a pound, to 6800, in salt pork at 13 cents a pound; while in the vegetable foods in the tables the range is from about 500, in rice at 8 cents a pound, to 1200, in corn meal at 2 cents a pound. The standards for the diet of an ordinary workingman call for from 3000 to 3600 calories in one day's food.

Estimating the expensiveness by the cost of the protein, we find this to range from 8 to 34 cents a pound in the vegetable and from 18 cents to a little over one dollar in ordinary animal foods,—meats, fish, milk, eggs, etc.,—while in some it is much higher, thus showing the greater expensiveness of animal foods in another way. The reason for this higher cost is, of course, simple enough. Animal foods are made from vegetable, and by a more or less expensive process. The manufacture of beef or milk from grass and grain involves considerable outlay for labor and incidental expenses, and the product is, of course, much less in quantity than the raw material.

If the reader is interested in such statistics he will find considerable food for reflection in the diagrams and figures. He will observe that among animal foods those which rank as delicacies are the costliest. If he uses the protein of oysters to make blood, muscle, and brain, it will cost him from two to three dollars a pound. In salmon, if he is enough of a gormand to buy it at the beginning of the season at one dollar a pound, he will pay at the rate of five dollars a pound for his protein. In beef, mutton, and pork the cost of the protein ranges from a little over a dollar to about 40 cents a pound. (Salt pork, in which its cost is estimated at 25 cents, contains extremely little protein.) In such fish as shad, blue-fish, and halibut (which are not mentioned in the diagrams), when they are cheap, say from 8 to 12 cents a pound, the protein costs about the same as in

* As explained in previous articles, the actually nutritive ingredients of food may be divided into four classes: Protein, Fats, Carbohydrates, and Mineral matters. Leaving water out of account, lean meat, white of eggs, casein (curd) of milk, and gluten of wheat consist mainly of protein compounds. Butter and lard are mostly fats. Sugar and starch are carbohydrates. The nutrients of meat, fish, and other animal foods consist mainly of protein and fats; those of the vegetable foods are largely carbohydrates.

In serving as nutriment, the protein compounds which contain nitrogen form the basis of blood, muscle, tendon, etc., and are transformed into fat, and also serve as fuel to supply the body with heat and muscular strength. The fats of the food are stored as fat in the body and serve as fuel. The carbohydrates are transformed into fats and serve as fuel. The potential energy in calories (colorie is the equivalent of heat which would warm about four pounds of water one degree Fahrenheit) is taken as the measure of the fuel-value of the food. One part by weight of fat is equivalent, in this respect, to about two parts of either protein or carbohydrates. The demands of different people for nourishment vary with age, sex, occupation, and other conditions of life. Health and pecuniary economy alike require that the diet should contain nutrients proportionate to the wants of the user.

Of course the difference in the composition of different specimens of the same kind of food-material, and in the nutritive effect of the same substance with different persons, is such that these calculations are not correct for every case. Furthermore, there are other things besides the proportions of nutrients that affect the nutritive action of food. This topic I hope to discuss later. Meanwhile it will suffice to say that for the staple food-materials these calculations are probably close approximations to the real nutritive values as compared with the costs. The methods by which they are made are too complex to be explained here, but may be found in an article on "Food Consumption" in the Report of the Massachusetts Bureau of Statistics of Labor for 1886, p. 251.

AMOUNTS OF ACTUAL NUTRIENTS (NUTRITIVE INGREDIENTS) OBTAINED FOR TWENTY-FIVE CENTS IN DIFFERENT FOOD-MATERIALS AT ORDINARY PRICES, WITH AMOUNTS APPROPRIATE FOR A DAY'S RATION.

FOOD-MATERIALS.	*Assumed prices per pound.*	*Food-Materials.*
	cents.	lbs.
Beef, sirloin	.25	1.00
Beef, sirloin, at lower price	.20	1.25
Beef, round	.16	1.56
Beef, neck	.08	3.13
Mutton, leg	.22	1.14
Smoked ham	.14	1.79
Salt pork, very fat	.12	2.08
Salmon, early in season	1.00	.25
Salmon, at lower price	.30	.83
Mackerel	.10	2.50
Codfish	.08	3.13
Salt mackerel	.12½	2.00

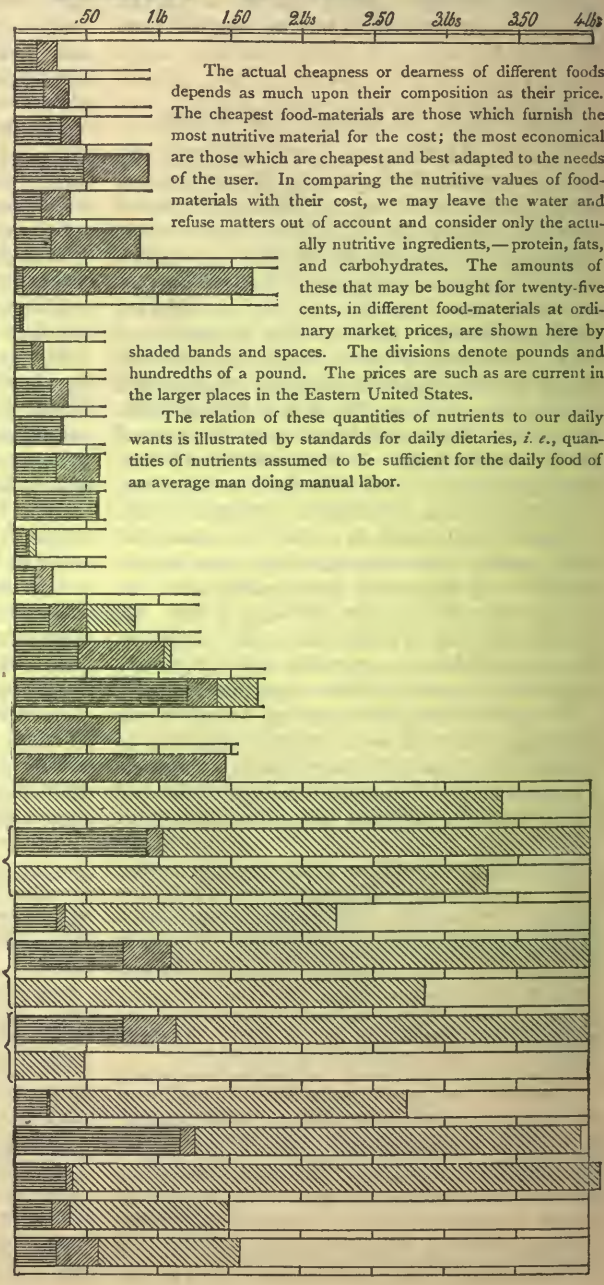
PROTEIN. *"Lean" of meat, gluten of wheat, etc.*

FATS. *Fatty and oily substances.*

CARBOHYDRATES. *Sugar, starch, etc.*



The actual cheapness or dearness of different foods depends as much upon their composition as their price. The cheapest food-materials are those which furnish the most nutritive material for the cost; the most economical are those which are cheapest and best adapted to the needs of the user. In comparing the nutritive values of food-materials with their cost, we may leave the water and refuse matters out of account and consider only the actually nutritive ingredients,—protein, fats, and carbohydrates. The amounts of these that may be bought for twenty-five cents, in different food-materials at ordinary market prices, are shown here by shaded bands and spaces. The divisions denote pounds and hundredths of a pound. The prices are such as are current in the larger places in the Eastern United States.

The relation of these quantities of nutrients to our daily wants is illustrated by standards for daily dietaries, *i. e.*, quantities of nutrients assumed to be sufficient for the daily food of an average man doing manual labor.

COSTS OF A POUND OF PROTEIN AND AMOUNTS OF POTENTIAL ENERGY OBTAINED FOR TWENTY-FIVE CENTS IN DIFFERENT FOOD-MATERIALS AT CURRENT MARKET PRICES.

Kinds of food-materials.	*Assumed prices of food-materials per pound in cents.*	The estimated cost (in cents) of one pound of protein in each food-material, when the latter is bought at the market prices assumed, is expressed by the lengths of the light parallel lines, thus: ═══ The estimated number of calories of potential energy in the nutrients (actually nutritive ingredients) contained in the quantity of each food-material which 25 cents would pay for if the material were bought at the market prices assumed is expressed by dark lines, thus: ▬▬
Beef, sirloin	.25	106 cents .. 870 calories
Beef, sirloin, at lower price	.20	85 cents .. 1114 calories
Beef, round	.16	63 cents .. 1145 calories
Beef, neck	.08	33 cents .. 2793 calories
Mutton, leg	.22	91 cents .. 1076 calories
Smoked ham	.14	40 cents .. 3060 calories
Salt pork, very fat	.12	25 cents .. 6825 calories
Salmon, early in season	1.00	511 cents .. 158 calories
Salmon, at lower price	.30	153 cents .. 519 calories
Mackerel	.10	79 cents .. 929 calories
Codfish	.08	75 cents .. 656 calories
Salt mackerel	.12½	52 cents .. 1807 calories
Salt codfish	.07	43 cents .. 1103 calories
Oysters, at 40 cents per quart	.20	268 cents .. 326 calories
Hens' eggs, at 30 cents per dozen	.21⅜	121 cents .. 768 calories
Milk, at 7 cents per quart	.03½	53 cents .. 2178 calories
Cheese, whole milk	.15	31 cents .. 3403 calories
Cheese, skimmed milk	.08	18 cents .. 3642 calories
Butter	.30	no protein. 3082 calories
Oleomargarine	.15	no protein. 6164 calories
Sugar	.07½	no protein. 6292 calories
Wheat flour	.03	11 cents .. 13782 calories
Wheat bread	.07½	35 cents .. 4255 calories
Corn (maize) meal	.03	12 cents .. 13488 calories
Oatmeal	.05	15 cents .. 9189 calories
Rice	.08	34 cents .. 5068 calories
Beans	.05	14 cents .. 7630 calories
Potatoes, at 75 cents per bushel	.01¼	22 cents .. 7689 calories

beef and mutton; but when the price is from 15 to 25 cents, the cost of the protein is from one to two dollars a pound. In cod and mackerel, fresh and salted, the protein varies from 30 to 80 cents a pound. Salt cod and salt mackerel are generally, fresh cod and fresh mackerel often, and even the choice fish, as blue-fish and shad, when abundant, cheaper sources of protein than any but the cheapest kinds of meat. Among meats, pork is the cheapest; but salt pork or bacon has but very little protein and consists mostly of fat, which, though rich in potential energy, and very useful for people who have hard work to do or are exposed to severe cold, is not so appropriate in warm weather or for those whose time is spent within doors and whose muscular labor is light. The comparative cheapness of cheese is well worth noting, and the great economy of oleomargarine as compared with butter deserves of more than a passing remark.

The comparison between wheat flour and potatoes is especially interesting. The protein in the wheat flour, at $6 a barrel or 3

cents a pound comes to 11 cents, while in potatoes at 50 cents a bushel it costs 15 cents a pound. Estimated in terms of potential energy, 25 cents pays for about 14,000 calories in wheat flour at $6 a barrel, and 12,000 in potatoes at 50 cents a bushel. The potatoes would have to be reduced to 40 cents a bushel to make their nutrients as cheap as those of wheat flour at $6 per barrel. Adding to this the fact that the protein of wheat is the more valuable, weight for weight, because that in the potatoes is apparently less digestible and certainly of inferior chemical constitution, the showing against potatoes, even at this price, is very decided. But in the eastern portions of the United States, at any rate, people are very apt to pay 75 cents or $1 a bushel for their potatoes, while the finest wheat flour now sells at $6 a barrel; and if they are contented with flour of the coarser grades, they can have it for less.*

In the United States the tendency to extravagance, combined with the mistaken notion as to the nutritive value of costly food, causes exceptions to the rule. Taking the world through, however, the poorer communities and classes of people almost universally select those foods which chemical analysis shows to supply the actual nutrients at the lowest cost. But, unfortunately, the proper proportions of the nutrients in their dietaries are often very defective. Thus in portions of India and China rice, in northern Italy maize-meal, in certain districts of Germany and in some regions and seasons in Ireland potatoes, and among the poor whites of the southern United States maize-meal and bacon, make a large part of the sustenance of the people. These foods supply the nutrients in the cheapest forms, but they are all deficient in protein. The people who live upon them are ill-nourished, and suffer physically, intellectually, and morally thereby.

On the other hand, the Scotchman, as shrewd in his diet as in his dealings, finds a most economical supply of protein in oatmeal, haddock, and herring; and the thrifty inhabitants of New England supplement the fat of their pork with the protein of beans and the carbohydrates of potatoes, and supplement maize and wheat flour with the protein of codfish and mackerel; and while subsisting largely upon such frugal but rational diets, are well nourished, physically strong, and distinguished for their intellectual and moral force.

THE FOOD OF THE POOR.

THAT the rich man becomes richer by saving and the poor man poorer by wasting his money is one of the commonest facts in daily experience. It is the poor man's money that is the most un-economically spent in the market, and the poor man's food that is worst cooked and served at home.

I can refer only to a single phase of this subject here, repeating for the purpose a few statements from the article on "Food Consumption" in the Report of the Massachusetts Labor Bureau above mentioned:

"The agents of the Bureau in collecting the statistics of dietaries have made inquiries of tradesmen as to the kinds of food the poor of Boston purchase and the price they pay. . . .

"By poor people is meant those who earn just enough to keep themselves and families from want. When a grocery-man or market-man is asked, 'What is your experience in dealing with your poor customers in regard to the quality of food used by them?' the answer is, in almost every case, 'Oh, they usually want the best and pay for it, and the most fastidious are those who can least afford it.'

"In the matter of beef, for instance, the cuts most used for steak are the face of the round, costing from

* At first thought this cheapness of wheat flour as compared with potatoes is a little surprising. The natural law of supply and demand of such staple materials, in the long run, shapes the price more or less closely to the actual value for use, and we should expect that the price of potatoes and flour would naturally gravitate to points which would make them more nearly equal in actual cheapness. At $10 a barrel, the price of wheat flour a few years ago, its protein would cost not far from 13 cents a pound, which would correspond to potatoes at about 60 cents a bushel. If the price of flour should remain where it now is, we may perhaps expect that of potatoes to come down gradually to a point where the actual expensiveness of the two will be more nearly the same. Of course this is a matter outside of chemistry, but the little study I have given it leaves me with the decided impression that the prices of such staple food-materials tend to adjust themselves to the nutritive values.

This statement is apparently in direct contradiction with a fact which these computations bring out most forcibly, to wit, the wide difference between the prices of foods and their values. But these differences have, really, a very simple explanation. The prices we pay for many of our food-materials are regulated rather by their agreeableness to our palates than their values for nourishing our bodies. The sirloin of beef which we buy for 25 or 30 cents a pound is really no more nourishing than the shoulder which we get for 10 cents, or the neck at 8 cents a pound. In general, only a part, and often a small part, of what we spend for meats and sweetmeats goes for the nutriment they contain. The rest is the price of flavor, tenderness, and other things that make them toothsome. Nor does the disparity between animal and vegetable foods conflict with the principle I have ventured to lay down. Meats, fish, and the like gratify the palate in ways which most vegetable foods do not, and, what is perhaps of still greater weight in regulating the actual usage of communities by whose demand the prices are regulated, they satisfy a real need by supplying protein and fats, which vegetable foods lack. People who can afford it, the world over, will have animal foods and will compete with one another in the prices they give for them. These facts put the choicer animal foods outside the action of the law, if it be a law, that price and nutritive value tend to run parallel.

eighteen to twenty cents per pound; the tip of the sirloin, at from twenty to twenty-five cents; and rib-roast, at from eighteen to twenty cents. They do not use the flank-piece for steak and would feel insulted if it were offered them. The flour they use is the best. For butter they pay from twenty-eight to thirty cents per pound at present prices. All their other groceries are such as are sold to first-class customers."

I took occasion to make some inquiries myself among the Boston market-men, and one very intelligent butcher, in Boylston Market, said:

"Across the street over there is an establishment which employs a good many seamstresses. One of them comes to my place to buy meat, and very frequently gets tenderloin steak. I asked her one time why she did not take round or sirloin, which is a great deal cheaper, and she replied, very indignantly, 'Do you suppose because I don't come here in my carriage I don't want just as good meat as rich folks have?' And when I tried to explain to her that the cheaper meat was just as nutritious, she would not believe me. Now Mr. —— and Mrs. ——, who are among the wealthy and sensible people of this city, buy the cheaper cuts of meat of me. Mr. —— very often comes and gets a soup bone, but I have got through trying to sell these economical meats to that woman and others of her class."

I am told that the people in the poorer parts of New York City buy the highest priced groceries, and that the meat-men say they can sell the coarser cuts of meat to the rich, but that people of moderate means refuse them. I hear the same thing from Washington and other cities. A friend of mine, a man of wealth, who, like his father before him, had long been noted as one of the most generous benefactors of the poor in the city where he lives, and with whom I happened to be talking about these matters, remarked, "For my family I get the cheaper cuts of meat because they are cheaper. My children are satisfied with round steak and shoulder, even if they are not quite as tender and toothsome as sirloin. They are strong and healthy, and understand that such food is good enough for their parents and is good enough for them." I question whether his gardener or his coachman would be so entirely ready to accept such doctrine; and if the poor people to whom in times of stress his money is given without stint are like many others of their class, not a few of them would be ill content with some of the food-materials that appear regularly on his table.

WASTE OF FOOD.

But our popular food-economy is at fault in other ways as well as in the purchasing of needlessly expensive kinds of food. Results of examinations of dietaries, to be given in a subsequent article, will show that, unless the inferences from a very large amount of experimenting are entirely at fault, many people buy a great deal more food than they need. The excess is generally of the most expensive kinds of foods, meats, and sweetmeats. In a number of dietaries that have come to my notice, including those of sensible people who really desired to economize, if half the meat, dairy products, and sugar had been left out, and the rest of the food economically used, it would have supplied considerably more nutriment than accepted standards call for. We buy needless quantities of these things because they taste good, and we have got in the way of thinking we must have them. Part of the excess is eaten, to the great detriment of the health, and the rest simply thrown away.

In the course of some studies in physiological chemistry, Mr. C. S. Videon, a student in this laboratory (Wesleyan University), took occasion to examine the dietary of a students' boarding-club, for which purpose accurate determinations of the quantities of meat consumed were necessary. In a piece of roast beef weighing 16 pounds, the "trimmings," which consisted of the bone and the meat cut out with it, and which were left for the butcher to sell to the soap-man or get rid of as he might otherwise choose, weighed 4½ pounds, so that 11½ pounds of meat went to the customer, who, of course, paid for the whole. The butcher said that he sold this sort of beef largely to the ordinary people of the city,—mechanics, small tradesmen, and laborers; that many of his customers preferred not to take the "trimmings"; and that they were not exceptionally great in this case, either in amount or in proportion of meat and bone, for that "cut" of beef, which was the "rib-roast." Inquiries of other meat-men brought similar information. The 4½ pounds of "trimmings" consisted of (approximately) 2¼ pounds of bone and ½ pound of tendon ("gristle"), which would make a most palatable and nutritious soup, and 1¾ pounds of meat, of which 1 pound was lean and ¾ pounds fat. Mr. Videon estimates that the nutritive materials of meat thus left unused, saying nothing of the bone and tendon, contained some 15 per cent. of the protein and 10 per cent. of the potential energy of the whole. The price of the beef was $2.24. Assuming the nutritive value of the ingredients of the "trimmings" to be 12½ per cent. of the whole, 28 cents' worth of the nutriment, besides the bone and tendon, was left at the butcher's.

Dr. S. A. Lattimore, Professor of Chemistry in the University of Rochester, New York, tells me that, while a member of the Board of

Health of that city, he directed the officer in charge of the collection of garbage to note the character of the waste material gathered. It was ascertained that from the streets inhabited by the well-to-do classes, where the culinary affairs were largely left to the servants, the amount of waste thus collected was enormous, and that a considerable proportion of the food purchased was literally thrown away by careless servants. A surprisingly large amount of this waste consisted of good bread. Among the people in moderate circumstances this waste of food was less.

Still, people of moderate means do not save as they might. A gentleman from Pennsylvania, who has for years been in the way of employing hundreds of mechanics and other laborers, tells me that in passing the houses where his employees live he is constantly pained to notice the evidences of waste of food which would not occur in his own household.

Is not the American, of all civilized men, the most wasteful, and is not his worst wastefulness in his food — and drink?

SHALL WE ECONOMIZE?

THIS brings us back to the theme with which we began,— the American indifference or aversion to food-economizing. I have never observed any special development of this notion on the Continent of Europe, but have heard a good deal about it in England, where it is said, for instance, that the "workingmen with small wages buy the most expensive beef." I judge the disorder to be essentially Anglo-Saxon, quite prevalent in England, and epidemic in the United States. Perhaps it is only part of the more general tendency, inherent in human nature, but dependent upon the opportunity which material prosperity brings for its development. It certainly could not prevail under the straitened conditions of living which exist in most countries of Europe; and the comparative opulence which prevails with us, unrestrained by either habits of saving or understanding of the facts, would naturally tend to its wide development. Possibly part of its explanation lies deeper, and is to be sought in the impression which the older philosophy and theology inculcated in men's thinking, and which is not yet entirely gone. The philosophy which dealt chiefly with abstractions, and the theology which regarded the body as only a burden of earthly clay and concerned itself merely for the soul, both considered the material details of life beneath their notice. I believe it was Hegel who, expressing his dissent from the practical ideas current in England in his time, said, "Socrates brought philosophy from the clouds, but the Englishmen have dragged her into the kitchen." And it is not long since a man in one of our highest educational positions assured me that such studies as those of food and nutrition which have been described in these articles were not in consonance with the intellectual dignity of a university. Is not our impression that attention to the little economies of life is beneath us the natural outgrowth of this same idea,— a weed which the conditions elsewhere have kept down but which here has grown rank?

But whatever may be the genesis of this notion, I am persuaded that, in the form in which we have to deal with it, it represents only a phase of a far more complex problem, the importance of which is coming to be felt in our time as never before, and which the many-sided effort to improve the material condition of the masses is really an effort to work out. We are learning that the best way to help men is to help them to help themselves, and that to help themselves they must be freed from ignorance and prejudice and must understand the principles that underlie the right practice of the arts of life. We are learning that for intellectual and moral elevation improvement of physical condition is necessary; that to improve mind and heart we must look out for the body also; that before people can attain to highest intelligence and righteousness they must be properly clothed and housed and fed. We are learning too that not merely increase of income but husbanding of resources are conditions of better welfare; that people need to save as well as to earn; that wastefulness is the cause of poverty and economy the way to comfort.

While the thoughtful man sees these things and feels their force, the average man does not. In the older countries, with exhausted fertility of soil and overcrowded population, the alternative of partial starvation has made close economizing a necessity. But with us, whom the abundant product of the virgin soil, far in excess of the demand of a still sparse population, and the superadded advantages of wonderful material progress, have placed in comparative affluence, the circumstances of our coal-heaver's family were positively luxurious in comparison with those of the bulk of the population of Europe. With us false pride and wastefulness have far too largely usurped the place of care and saving.

As a people we have not learned the art of getting the most out of what we have. With our larger incomes and better opportunities we often enjoy far less of comfort and contentment than our foreign brethren, who with their limited resources have learned how to husband and to make the best of the little that

falls to their lot. Those who have seen the inside of life in France and Germany know how true this is. I well remember how it impressed me in my first experience in Germany. Living in a private family, my breakfasts, which, though consisting only of the usual rolls and coffee, were nevertheless ample, were always brought to my room. With the coffee there came invariably a little jar of milk and some lumps of sugar. During the whole six months of my stay in that house, the number of lumps was never more nor less than five. An American lady living in another family in the same city was wont to aver her conviction that her landlady counted the grains of coffee for every potful she made. Every scrap of food was utilized. Like economies were manifested everywhere; indeed, they were a part of common education, not only at home but in school, where, for instance, the girls were taught to sew and mend as they were to read and write. And when I went about with the people and saw how they lived; how contentedly and pleasantly they took the affairs of life; how much they made of simple and inexpensive pleasures; how little they were beset with false pride of show and the petty ambition to go ahead of their neighbors, which are such corrosive influences in American and English society; how much of human kindness and home joy and social satisfaction they had with incomes and prices which would make life for average Americans of similar station a torturing struggle with want — I could not avoid the conviction that in their ways was a lesson which it would be a blessing for us to learn.

We waste at the store, at the market, and in the house enough to make us wealthy if we would only save. The fathers and the mothers do not understand the little arts of economizing, and the sons and the daughters do not learn them. We think it incompatible with our dignity as free-born and well-to-do Americans to devote our attention to them.

This is especially true as regards our food. The common saying that "the average American family wastes as much food as a French family would live upon" is a great exaggeration, but I hope to cite statistics in a succeeding article to show that there is a deal of truth in it. We endeavor to make our diet suit our palates by paying high prices in the market rather than by skillful cooking and tasteful serving at home. We buy much more than we need, use part of the excess to the detriment of our health, and throw the rest away. And, what makes the matter worse, it is generally those who most need to save that are the most wasteful.

Things cannot always go on thus. International competition is becoming sharper, our population denser, and the virgin fertility of our soil gradually exhausted. We must reform or retrograde. Unless we mend our ways the future will bring loss instead of gain in material prosperity, and fearful falling away rather than improvement in our morals.

The remedy for the evil, so far as it applies to the chief item of our living expenses, our food, must be sought in two things,— popular understanding of the elementary facts regarding food and nutrition, and the acceptance of the doctrine that economy is respectable. Here, I believe, is an opportunity for a twofold propagandism of incalculable usefulness.

A very large body of people in this country say practically, though not in words, for such principles are not formulated by those who follow them: "To economize closely is beneath us. We do not want to live cheaply; we want to live well."

The true Anti-poverty Society is the Society of "Toil, Thrift, and Temperance." One of the articles of its constitution demands that the principles of intelligent economy shall be learned by patient study and followed in daily life.

Of the many worthy ways in which the charity that we call Christian is being exercised none seems to me more worthy of that appellation than the movement in industrial education, of which teaching the daughters of working-people how to do housework and how to select food and cook it forms a part.

If Christianity is to defend society against socialism must it not make such homely, non-theological teachings as these part of its gospel? If the old dispensation with its somber doctrine makes the earning of man's bread in the sweat of his face part of the primeval curse, does not the newer dispensation of religion and science make the gaining of support by earnest toil, and the economizing of resources by careful study, a substantial joy of life?

It is a happy phase of modern intellectual progress that much of its best work is being done along these lines of material usefulness. The place of the scholar, as of the saint, was once that of the recluse; now they are both busy among their fellow-men and doing their best to help them. The reason why so many of the Hegels of to-day are devoting themselves to the study of the practical problems of ordinary life is not simply nor chiefly for the material recompense it brings, but because they find in it the keenest intellectual stimulus, the opportunity for the profoundest thought, and the deep satisfaction that comes from rendering to their day and generation the best service of which their endowments make them capable. At the fountain-heads of knowledge, the great universities, speculative philosophy

and technology, Sanscrit and sanitation, are studied side by side with equal intellect and ardor. At the University of Cambridge, England, where not only the laboratories but the machine-shop have become parts of the paraphernalia of instruction, Professor Stuart, who works with his students at the forge, told me that his associates in the management of the university affairs showed most cordial sympathy in his department. The French Academy is felt to honor itself in electing Pasteur to its membership. Such a philosopher as Lotze makes the study of the practical details of life a part of his Microcosmus.

Nor is this materialism at all. It is the corollary, or rather the concomitant, of the metaphysics and theology which make matter and energy one, and that a manifestation of Deity. It is the nineteenth-century application of the ancient motto, "*Humani nihil alienum.*" It is the following of the precept and the example of the great Teacher, who made his doctrine dear to men by his deeds of love, and a part of whose work on earth was to feed the hungry and to heal the sick.

It is important that people be taught about their food, but the first requisite is the information to give them. The subject is, however, new. In its investigation we stand upon the borders of a continent of which but a small part has yet been explored. In the great European universities investigation is active. In our own country extremely little is being done, and that little is dependent almost entirely upon private munificence for its support. The opportunity for useful research is a rare one, and the demand for it great and increasing. If the cost of a yacht were invested in appliances for research in this direction, and the annual expense of maintaining it were devoted to carrying on such researches, they would bring fruit of untold value to the world, and, to the donor, the richest reward that a lover of his fellow-men could have.

W. O. Atwater.

A LOVE SONG.

LOVE, the last late snows are failing,
Failing;
Hear'st thou? Spring is nigh;
Love, the banished birds are sailing,
Sailing,
Back along the sky.

Love, O love! — my heart is calling,
Calling;
Haply, it may be,
Thou may'st hear and answer me.
Love, the purple shades are falling,
Falling,
On the greening lea.

Love, O love! — and shall I ever,
Ever,
In the days unknown,
Rest upon thy heart, that never,
Never,
Rested on my own?

Love, my heart is ever saying,
Saying,
Softly, in a dream:
"Hist! — she cometh by yon stream."
Death! — 'Tis but my fancy playing,
Playing,
With the swift sun-beam.

Haply, when the May is turning,
Turning,
Earth from all her woes;
Haply, when the blush is burning,
Burning,
On the summer rose

Then, O love! if thou canst hear me,
Hear me,
When my spirit cries,
Come, before the summer dies;
Come but once, O love, to cheer me,
Cheer me,
Ere my spirit flies.

Love, my love; or dead or waking,
Waking,
Here, or on that shore,
Where the unknown seas are breaking,
Breaking,
Now and evermore;

Here, or there; — alas! — God knoweth,
Knoweth:
He alone, not I.
Love, the days are passing by;
Fast, oh, fast, the river floweth,
Floweth! —
Love me, ere I die.

Robert Burns Wilson.

AN ELK-HUNT ON THE PLAINS.

WITH ILLUSTRATIONS BY GEORGE INNESS, JR., AFTER SKETCHES BY THE AUTHOR.

THOUGH untold numbers of elk, as the American red deer, or wapiti, is generally called, still roam the wild hill-lands of the West or seek refuge in the timber districts of its less mountainous regions, the swift advance of civilization has swept the elk from the plains and has made elk-hunting on those wide and timberless tracts a thing of the past.

But fifteen or sixteen years ago, when the author was stationed as an American cavalry-officer at North Platte barracks, at the junction of the North and the South Platte rivers, it was a different tale. The elk country lay to the north of us, with a slight preponderance of the larger herds towards the east. The herds were generally found along that net-work of streams known as the various forks of the Loup, and the nearer to the head of the Loup one hunted, the more numerous they became, though among the lakes and marshes and high rolling sandhills of Nebraska, just west of the Loup's head-waters, they again disappeared. As a hunting-district this region was almost entirely monopolized by military parties and by such people as were escorted by them; for nearly all of it was on the great Sioux reservation, and, in consequence of the small war parties of Sioux that constantly infested it, was extremely unsafe.

In the fall of 1873 I was told that a number of distinguished and titled people would be at the post in a few days, with the usual papers from high officials that would entitle them to every consideration they could ask for and we could grant. Above all things, they wished to go on an elk-hunt to the northward, and I was asked to take command of the little escort. Hunting and scouting was the principal field duty of the frontier stations, and the former only differed from the latter in that it was volunteer work so long as enough volunteers could be found; but since a hunt for buffalo or elk counted as "a tour of field duty," we never wanted for volunteers.

Our visitors arrived in good time, and we soon made ready for the hunt. With two six-mule teams to haul our ten days' rations and forage, and with other necessary outfits, we got away one fine forenoon in early October, with the air so crisp and clear that half the horses of our troop of thirty or forty danced along as if going to a tournament, and not on a trip that would bring them back with hanging heads. Where we crossed the line of the railroad for the last time — for we had been winding along it for four or five miles — we partly loaded our wagons with discarded railroad ties, to serve us as fuel. On the banks of many of the streams of this part of the country no firewood, not even a twig, can be found; and nothing can be more cheerless and disconsolate to a little troop of cavalry that has marched all day in the cold than to reach, in the bleak evening, a stream where it is evident that camp must be made and find no sign of wood as far as the eye can reach. But add to a soldier's hard-tack and bacon his regulation quart of hot coffee, and he will be satisfied with his repast.

Our course, after leaving the railroad, was over what might be called the semi-sandhills of Nebraska, or the sandhills covered with grass, the only turf or soil being that formed by the grass roots. The longer a road is used through such a country, the worse it gets. Wagon wheels soon cut through the thin turf, and it becomes a road of sand. Another is then started alongside, and so on indefinitely, until the first is once more grown up with grass and fit to be used again. Along these roads sunflower stalks are particularly prone to grow (they really do wherever the ground is stirred up), and from a slight elevation it is often possible to trace by them an old, abandoned road for many miles.

Our first camp was made on the South Loup, so near its head that one could jump across the stream, and in a barren tract of low, flat country, where the grass grew a little higher in the valley than on the hills, and a few willow brakes marked the course of the stream. Three wall tents in a line indicated where the officers and the visitors slept, and twice as many "A," or "wedge," or common tents, twenty or thirty yards away, showed where the men were sheltered. Between the two camps, tied to the picket-line,— a long rope stretched from wagon wheel to wagon wheel,— the horses munched their oats and corn in their nose-bags, with a sentinel walking at each end of the line. One of the greatest pleasures of a frontier camp is a roaring fire, with its flames climbing into the sky;

but with us wood was too scarce for that. Two half-smothered fires for "kitchens" were all we had. If the chances for Indians were good, military hunting parties always placed a picket of a trusty corporal and from three to six men on the hill a half-mile from and overlooking camp; but a party of our size (about thirty-five in number) is avoided by the few war parties prowling around on the confines of civilization trying to get the scalp of a herder or a stray pony or two. Tracks seen early in the evening, just before camping, had shown that wild horses were in the vicinity, and this made us keep our own horses close to the picket-line; otherwise they would be "lariated out." For wild horses snorting near camp in the dead of night are likely to cause a stampede, and few things are more disastrous to a cavalry command. Any trifling thing may cause a stampede when the herd is scattered out to graze,— the howling of a coyote, a keen flash of lightning, the noise of a big weed carried by by the wind, or, as happened in one case, the violent coughing of the sentinel stationed near the horses to keep them quiet.

In a small party like ours, all the stated military calls are laid aside. Even "taps" is omitted; and one by one we dropped asleep, till nothing was left to the ear but the dull pacing of the sentinels or an occasional deep-drawn sigh from some horse at the picket-line. Before dawn the next morning the party was routed out of bed so as to be able to start by sunrise, and the usual preparations for breaking camp were begun,— fortunately by the light of a full moon just sinking in the west. An unfledged recruit, sleepy from having talked too late the night before, dug his fists into his rebellious eyes, and, glinting around, asked for the tenth time if the party were not to start at sunrise. Being gruffly answered in the affirmative by his uncommunicative tent-mate, he gazed listlessly through the tent-flaps to the west, and said, shiveringly, "I 'll be denged if they hain't made a mistake! that 's the moon, and not the sun."

The early sun saw the little caravan moving northward in the chill morning air. The officers and visitors were ahead, with ten or twelve troopers, while from half a mile to a mile behind, with an equal number of soldiers, came the two wagons, the two little parties being within ample supporting distance should anything of a serious nature happen. Small companies of flankers of from one to three men were thrown out on both sides of the road from a quarter of a mile to a mile from it and slightly in advance of the main party. These flankers are always composed of the best hunters and trailers among the soldiers, and the flanking was done because that day's march was supposed to bring us to a possible elk district, and elk are apt to turn back if from an elevation they catch sight of a road ahead of them. Such trails as these retreating herds might make only flankers would be likely to find. Coming near a road in a valley or on a flat plain they are much more likely to cross it; but if a person will take the trouble to study the trail on both sides of the road, he will notice how the elk will fight shy of civilization. The incoming trail may show that they have scattered out over the grassy districts for grazing, and here and there a place will be seen where they have been lying down resting; but as soon as the road is crossed, if it is not an old, abandoned one, the scattered trails converge into one of Indian file, which may be traced at times for three or four miles before the herd shows signs of grazing or being in an easy frame of mind.

That day's march, of from twenty to twenty-five miles, brought us to a picturesque little stream erroneously called the Dismal, which had received this inappropriate title from having been first seen at its mouth, where it empties into the Middle Fork of the Loup in a truly melancholy way. The Indian name of Cedar is much more applicable, however, for its steep banks are here and there covered with patches of cedar, that make it a pleasant-looking stream. It cuts so abruptly through its almost cañon-like bed, that one hardly sees it until it is right under his nose. I remember belonging to the expedition that made the "government road" that cuts across it. It was a hot day in July, and about the hottest part of the day,— 2 or 3 o'clock in the afternoon,— and we had been marching in the sandhills since morning. Our teams were tired out, and stopping the entire command in a hot little hollow between the hills, we sent one of the best guides ahead to find, if it were possible, the best and shortest road to the first stream to the south. He had not disappeared over the crest in that direction twenty seconds, when he was seen coming back, most persons who had heard his orders supposing that he was returning for something he had lost or left behind. But he reported that the Dismal had been found about two hundred yards ahead, and within half an hour we were all engaged in the pleasant occupation of making camp.

Our hunting party also camped on this stream, and a large amount of wood was secured for the night's camp-fire. On mild nights it was always burned in a huge fire in front of the tents, but when it was uncomfortably chilly, the wood was put into the little Sibley stoves inside the tents, which on the very coldest day can be made warm and cozy

if there be plenty of dry wood. A Sibley camp-stove is simply a great sheet-iron funnel, turned upside down, and furnished with enough small stove-pipe at the neck to protrude from the tent. This funnel is about three feet high, and two feet across the bottom, and in its conical sides is cut a door large enough to admit small stove-wood. The hearth is the earth or sand of the tent floor, and a piece of tin or sheet-iron through which the stove-pipe projects is fastened to the tent roof. Thus fixed, it is comfortable in a wall tent even with the thermometer at twenty-five to thirty degrees below zero. Filled with cedar wood, the stove has a most annoying way of dropping sparks on the canvas roof and burning holes through it, although there is but very little danger of the tent catching afire unless a very strong wind is blowing; even then it is hardly worth any great precaution. When the smell of burning cotton is noticed by the occupant of the tent, looking up he will always see a little circle of fire, from a quarter to a third of an inch in diameter, vividly outlined against the black sky outside, and showing where the spark has fallen. It is always put out by inserting the little finger as far as it will go, and then withdrawing it, all being done with a quick thrust and recover that does not burn one's finger.

AROUND THE CAMP-FIRE.

A few tracks of elk had been seen not far from camp, and although they were three or four days old, it was decided to spend one day in giving the vicinity a thorough inspection. An excellent method of beating up a country to determine the presence of game is to send out four parties of two to five hunters each at an angle of forty-five degrees to the direction of the stream, all of them, when reaching a certain distance to be agreed upon, say four, five, or even ten, miles, turning to the left or right at the same angle. This brings two parties on the river who turn and hunt back along it to camp. The other two parties hunt parallel to the river from their turning-points until directly opposite camp, when they turn in directly for it. A diagram of such a plan will show that the country has received a pretty good examination by the time all parties are in camp. Of course such a plan depends somewhat on the kind of game to be hunted, and as I have given it is particularly applicable to elk. If only "white-tailed" deer are wanted, there is no great use in leaving the valleys of the streams or the little partly wooded pockets running out from them. If "black-tailed" or mountain deer are wanted, only the hills need be scoured.

Our first day's regular hunt was planned on this method, and after the other three parties

ON THE LOOKOUT.

had taken their choice, there was left for the doctor and me and our attendant a south-east course of six or seven miles to the right, which would make us hunt parallel to the Dismal, which there runs from west to east. It was understood by all four parties that if any small band of elk were seen it would be given chase by the discoverers, but if large, it would be allowed to rest until the morrow, unless circumstances forced an immediate attack. Any small game that fell in the way, as any kind of deer, antelope, etc., would fall a prey at once, if the hunter were only a good-enough shot. Our course was over rolling hills covered with the autumn's somber colors of brown and drab, a most fortunate hue for the elk, almost the same shade, and we had to watch with keen eyes and good field-glasses to prevent our stumbling on top of our game or getting so close that they would get our "wind." By the time we turned back to hunt parallel to the river we had seen nothing but a few old tracks, and as the breeze was now blowing in our faces, thereby increasing our chances of success, at the doctor's suggestion we separated about four hundred yards apart, hoping that we might pick up a black-tailed deer or antelope, their tracks being fresher and much more numerous than the few elk signs we had found. Our man was placed about half-way between us and a little to the rear, to communicate from one to the other should it be deemed necessary. We had hardly gone a mile on our new course when I discerned a yellowish-brown mass of creatures on the hillside from six to eight hundred yards away. At first I supposed they were elk, but the glass showed them to be a band of eight or ten antelope. Beckoning to the man to approach me cautiously, I dismounted, and, leaving my horse standing, ran forward a couple of hundred yards to a low ridge. Seeing that I could get no closer without considerable manœuvring, and fearing that the doctor might frighten them, I took aim at the most conspicuous fellow in a bunch of them and fired. After a quick scattering dash to the right and then one to the left they seemed to collect their senses and made off through a little gap in the hills, allowing me one more shot "on the wing" as they disappeared. I thought I had been unsuccessful, but the man, looking through the glass, saw a bunch of brown on the ground that "looked mightily like a dead antelope," and we trotted over to find his conjecture true. We dismounted, cut the animal's throat, and bled him by throwing his hindquarters up-hill on the slope, and I was just sending the man after the doctor, when he appeared on the crest, having heard the two shots. There was the usual formula of questions under such circumstances,—"Where is it shot?" "How far did you shoot him?" "How many

were they?" etc., etc. All of these were answered but the first, and the man got down to settle that apparently simple problem. But the longer he looked the more mystified we all became; and when the carcass was thrown behind one of the saddles no one was the wiser, the doctor even going so far as to say that the antelope might have been frightened to death. Reaching camp late that evening, we found that none of the others had seen any game during the day, which made us feel a little more pride about our slight capture. The doctor brought up the subject of the singular killing, which revived in each one a dozen similar instances. We had not finished, when a sharp rap at the tent-flap was heard, and the head of the hunter who had been with us that day appeared. With a grin he said: "Lieutenant, the cook has found out where the antelope was shot." Each one present, in his own eager way, asked for an immediate report, and the hunter continued with the information that the bullet had gone through the gullet, and when he cut it with his hunting-knife to bleed the animal, he had not noticed it. When he started to look it up, the slashed throat precluded all apparent possibility of another wound in the same place.

The most important problem of the chase, however, was what to do as the result of the day's investigations, and we were not long in determining to break camp next morning, and move over to the Middle Fork of the Loup, some twenty miles to the northward, where the prospects were supposed to be better. In fact, this stream was our main objective point in starting out, but the Dismal was always worth giving a fair trial, and in some instances had proved to be better hunting-ground than the main stream. As we approached the Middle Loup the next afternoon, a few scattering snow-flakes were falling softly around us in the gloomy weather, but as a light fall of snow was exactly what we wanted, we saw them more with pleasure than with regret. Too deep a fall, however, was more to be deplored than none at all. Just as camping was nearly completed, an over-zealous flanker, who had pushed his excursions some three or four miles to the westward, put in an appearance, and reported that not only had he seen abundant signs of elk (we ourselves had crossed a small, fresh trail that day), but had seen the animals themselves on the crest of a distant hill. He had made no unusual efforts to ascertain their numbers, for fear of frightening them, but judging from the trail which he had crossed, he had estimated the herd to number from five hundred to a thousand. As he was a trusty trailer and hunter, his statements sent our thermometer of hunting-excitement up to fever heat. All the evening was employed in getting ready and making the most formidable preparations for the next day's chase, and I was appealed to by the novices for information of all kinds, as if I were a Kit Carson or a Daniel Boone. Ordinarily the horses are fed half their forage at night and half in the morning, whether they be on full or reduced forage; but in this case the rule was departed from, and the "elk" horses received three-quarters forage at night and a quarter forage in the morning. As the weather threatened to be stormy, the horses were blanketed so that none would feel stiff and chilly on starting the next day. Even the mules were given extra feed, to prevent these noisy creatures from breaking forth in stentorian brays, as they are very likely to do when a little hungry and there is any semblance of feeding going on around them. Some energetic soldiers get up early in the morning and spend a good while in a thorough grooming of their horses, which no doubt freshens them for a lively dash of a few miles. The question of arms and ammunition was settled by our being armed with the government Springfield carbines, although a far superior weapon for these horseback chases are any of the trustworthy kinds of magazine guns. Even the old Sharp's carbine was better, because when heated by rapid firing to a point where it would no longer eject the cartridge shell by the usual methods, the open guard could be brought down on the pommel of the saddle with a vehemence that brought out the shell or broke the guard, and ninety-nine cases in a hundred it would be the former. With the Springfield carbine, however, the rider was *hors de combat* under the same circumstances. In hunting game on horseback, the cartridges are taken from the belts, given a good cleaning, and the number that it is expected will be used on a single run — from twenty to thirty — are placed in the right-hand side-pocket of a loose-fitting sacque coat. I know of no improvement on this very simple method. With a Sharp's carbine I have in this way used sixty cartridges in a single run after buffaloes. We went to bed early, with good intentions of rising early for the fray, but, as generally happens, we did not get a wink of sleep till well past our usual hours. We were up in good time, however, for the simple reason that the night sentinels had orders to look after that; and although at first many yawned and stretched in the cold night air, fully an hour before daylight, it was not long before all were thoroughly awake and keener than ever for the sport.

We hurried through our breakfast of half-cooked antelope steak and hot coffee, and when daylight streamed through the dark-gray

A HERD OF ELK.

eastern clouds it saw our little party of about a dozen moving up the valley of the Middle Loup, talking in whispers and closely filing after one another in sets of two. The wagons had orders to follow in about an hour, and sooner if they heard firing; and the mules were being watered and hitched up as we "pulled out" of camp. As the wind was in the south, I thought it best to follow the valley of the Loup to a point directly opposite the place where the herd had been "raised" by the sergeant the day before, and then make squarely for it. When we struck the trail, we could follow it up until we overtook the game. The sergeant had seen the herd so late the evening before, and we had started so early, with a dismal, dreary night and a light fall of snow in our favor, that I had but few doubts of finding it soon after we left the river. One amusing incident of our march will show how narrowly our well-arranged plan escaped utter failure. While riding alongside of me when within about a mile of our point of turning out from the valley, the judge, a venerable Nimrod with white hair that had taken nearly sixty winters to bleach, but with an enthusiasm for the sport of a man of half his years, saw a large pair of fine elk-horns in the high valley grass near a clump of willow brake about forty yards away. He expressed a desire to examine them more closely, and I sent a trumpeter back to pick them up. He left the ranks to do so, everything, for reasons that are manifest, being done in as noiseless and subdued a manner as possible. When the trumpeter was within about ten yards of the horns, the owner of them, a noble buck five or six years old, with a snort that startled every one jumped high into the air, and with a bound started for the main herd, leaving us all too astounded to know what to do. Seeing the main column, he wheeled abruptly around, and, dashing across the Loup, made to the northward. Had this animal reached the main herd, as he at first attempted to do, our fun would have been ended for that day. It was a great temptation to shoot at him, and the trumpeter, forgetting all the surroundings, started to pull his pistol and fire; but his rearing horse, half frightened out of his wits, by wheeling and plunging prevented him from doing so.

I remember, on another hunt after elk in the Nebraskan hills, planned on the same method as this, that when nearing the herd

of elk that we had pretty definitely located, and while crossing the "pocket" of a cañon liberally wooded or "brushed" with wild plums and rose-bushes, a couple of white-tailed deer jumped up just beyond the clump, from forty to fifty yards away, and remained in full view bush on the crest of the hill a third of a mile away. The bush proved to be the fine antlers of a young buck, and when we had crept a little higher we saw twenty or thirty other elk about him, some of them lying down and plainly outlined against the white snow. When

THE EXPECTANT HORSES.

until we had ridden by. They were so close that any one of the party could have easily killed them. Not till we had passed did they run away. There were a number of experienced hunters in the party who had often hunted this wary animal, and every one acknowledged it to be the boldest effrontery ever shown by that species of deer. Surely these two must have known how fatal to our success with the elk the sound of a gun-shot would have been at that moment.

After the incident of the elk-horns we advanced up the valley of the Loup for nearly a mile; then turning abruptly southward against the wind, we began to ascend a long winding acclivity up through a little valley where luxuriant grass grew as high as our stirrups. Looking ahead even a couple of hundred yards, we could see stripes of darker green cutting at all angles through this grass, and advancing warily we saw the tracks of elk in the light covering of snow. Our party huddled together in the ravine while two of us dismounted and slowly crawled up the slight ascent. About two-thirds of the way up we saw a moving

we had returned and mounted our horses again there came the difficult feat of winding around through the lowest levels and depressions and gaps, and at the same time making headway towards the game while keeping completely out of their sight. Another ravine was reached, and once more two of us dismounted and crawled forward to the crest to get a view of the situation. It was also necessary to do so rapidly, for it was perfectly evident that the outlying members of the herd were close by, and the snorting and snuffing of a horse might send them away with the speed of the wind. I felt perfectly satisfied, before I got half-way across the slope, that a substratum of sand makes a much better support for a covering of snow for crawling purposes than can ever be found in the thick growth of the prickly-pear of the plains, although on this particular slope Nature seemed to think otherwise. Nearing the crest of the ridge, I secured a "tumble-weed" or "rolling-weed,"—one of those globular perennials of the plains that when dead is pulled up by the wind and goes rolling around over the prairies at the mercy

of the blast,— and, keeping it in front of my face, took a careful view ahead.

Not more than a hundred yards away was a fine grouping of game that would have delighted the heart of Landseer, and certainly delighted mine. Slowly retreating until the friendly ridge once more covered us, we crawled back through the cactus to rejoin our horses and our impatient comrades. As I mounted, I said briefly that our time was at hand and the battle not far off. I believe the horses knew this better than the men, for as I came crawling back through the snow every equine ear in the party followed me as closely as if I had a bushel of oats in my possession; and when I mounted my own little sorrel he was trembling from head to foot, and he lay his nose against my knee as if to gain information in his own peculiar way. Every horse in that platoon knew as well as every man what was ahead of him,—and better, too, for all of them had been in those exciting chases more times than two-thirds of the party. The only noises that broke the hush of the still morning were a few hurried whispers and the ominous clicks of the breech-locks as the cartridges fell home in their chambers. All the horses' ears were as rigidly set towards the crest about a hundred yards away as if they were a charge of fixed bayonets, and the red, dilated nostrils, the fixed eyes, and the heaving breasts showed that they, too, felt all the excitement of their masters. We had arranged our plans the night before, and now we hurried to carry them out. Down the hollow of the ravine the hunters, separated from one another by a space of from three to four yards and facing the ridge that hid us from the unsuspecting elk, were stretched like a skirmish-line, while I rode out in front of the center of the line just far enough to be easily seen by all. Looking hurriedly along the little line, I saw that all were ready, with the loaded carbines pointing in the air, the butts resting on the right thighs, and a couple of spare cartridges in each man's hand. Raising the butt of my carbine high in the air as a signal for starting, I took a half-dozen steps forward at a prancing walk, brought the carbine down to a level, and the line took up a trot for a dozen yards. Then I raised the carbine muzzle up and the party broke into a long, swinging gallop. Half-way

IN THE MAIN HERD.

across the frosted slope, the carbine was raised to full arms-length, and we burst over the ridge at a gait that "Hanover" or "Iroquois" might envy, and with an unbroken line worthy of the *Cent-Gardes*. The swift impetus carried the sweeping crowd half-way from the ridge to the sleepy elk before the latter gained their feet, and by the time the dumfounded brutes had "bunched," — the first act of an affrighted herd,— we were right in among them. Many of the older hunters dropped their carbines across their saddle-bows, and pulling their revolvers delivered a deadly fire at blinding range. Dashing through this little bewildered herd like a gust of wind, the hunting party swung to the left of the slope of the long ridge where, from a hundred and fifty to two hundred yards away, the main herd had "bunched," six to eight hundred, if not a thousand, strong. With all the rough rattle of shots, the hard hitting of horns against horns, and the drum-like clatter of the hoofs, there was a singular silence, incongruous with so much rapidly varying excitement; for orders had been given that not a whisper should be heard till the elk had broken in an organized run in a definite course. As the western wall of elk-horns opened in that direction with a princely buck at the head, there went up from us a yell that clove the very clouds, and scattered the band only to bunch again. That shout delayed them hardly three seconds, but that three seconds made a success of the hunt, and before it ended we were among them, every citizen and soldier now his own individual commander, and responsible for his own success. Far down on my right the marshal's carbine had been knocked from his hand by the horns of a plunging buck, while near me, on the left, a burly Würtemberger corporal, with empty, smoking pistol, brought the barrel down like a club on the head of an elk that was trying, in the crush, to push its way directly over his horse. The elk fell to the ground

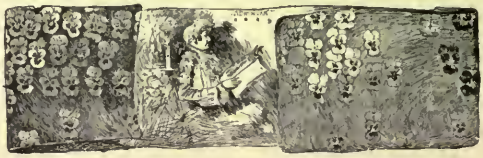
AT CLOSE QUARTERS.

SNOW-BALLED BY THE HERD.

stunned. It was hand to hoof and horns for a brief second or two, and then the great surging mass broke to the westward, and the long chase began. It had been all our way so far, but to the assistance of the herd there now came one of the most unexpected allies that even an old hunter could imagine. It was the soft snow, that up to this time had helped us in tracking them; for, as the herd surged ahead, there came from their feet one of the most persistent showers of snow-balls, of iron-like consistency, that any one was ever called on to face, and was surpassed only by those thrown by the horses themselves, which, strung out in disorder, the men and horses in the rear had to face as well. Every ball that struck a horse delayed him. One man, struck on the head, was disabled from managing his reins, while another, struck full in the face, had his upper lip split open to the teeth. Many followed his example and withdrew from the battle. The chase over, the party slowly assembled near the bodies of the first victims, and the two wagons with a number of men putting in an appearance from camp, we retraced our steps to it, each one recounting his personal adventures.

It was growing dark as the sergeant in charge of the wagon party rapped at my tent and reported: "The wagons are in with the carcasses of nineteen elk, and I am satisfied we have gotten them all, sir." The next day we started for home.

Frederick Schwatka.



THE ARTIST.

SLEEP is an artist of the night,
With moods of mirth or pain,—
Dreams are his pictures dark and bright,
Etched swiftly on the brain!

William H. Hayne.

MEISTERSCHAFT: IN THREE ACTS.

BY MARK TWAIN.

[EXPLANATORY. I regard the idea of this play as a valuable invention. I call it the Patent Universally-Applicable Automatically-Adjustable Language Drama. This indicates that it is adjustable to any tongue, and performable in any tongue. The English portions of the play are to remain just as they are, permanently; but you change the foreign portions to any language you please, at will. Do you see? You at once have the same old play in a new tongue. And you can keep on changing it from language to language, until your private theatrical pupils have become glib and at home in the speech of all nations. *Zum Beispiel*, suppose we wish to adjust the play to the French tongue. First, we give Mrs. Blumenthal and Gretchen French names. Next, we knock the German Meisterschaft sentences out of the first scene, and replace them with sentences from the French Meisterschaft — like this, for instance: "Je voudrais faire des emplettes ce matin; voulez-vous avoir l'obligeance de venir avec moi chez le tailleur français?" And so on. Wherever you find German, replace it with French, leaving the English parts undisturbed. When you come to the long conversation in the second act, turn to any pamphlet of your French Meisterschaft, and shovel in as much French talk on *any* subject as will fill up the gaps left by the expunged German. Example — page 423 French Meisterschaft:

On dirait qu'il va faire chaud.
J'ai chaud.
J'ai extrêmement chaud.
Ah! qu'il fait chaud!
Il fait une chaleur étouffante!
L'air est brûlant.
Je meurs de chaleur.
Il est presque impossible de supporter la chaleur.
Cela vous fait transpirer.
Mettons nous à l'ombre.
Il fait du vent.
Il fait un vent froid.
Il fait un temps très-agréable pour se promener aujourd'hui.

And so on, all the way through. It is very easy to adjust the play to any desired language. Anybody can do it.]

DRAMATIS PERSONÆ:

MR. STEPHENSON. MARGARET STEPHENSON.
GEORGE FRANKLIN. ANNIE STEPHENSON.
WILLIAM JACKSON. MRS. BLUMENTHAL, the Wirthin.
GRETCHEN, Kellnerin.

ACT I.

SCENE I.

Scene of the play, the parlor of a small private dwelling in a village.

MARGARET. *(Discovered crocheting — has a pamphlet.)*

MARGARET. *(Solus.)* Dear, dear! it's dreary enough, to have to study this impossible German tongue: to be exiled from home and all human society except a body's sister in order to do it, is just simply abscheulich. Here 's only three weeks of the three months gone, and it seems like three years. I don't believe I can live through it, and I 'm sure Annie can't. *(Refers to her book, and rattles through, several times, like one memorizing:)* Entschuldigen Sie, mein Herr, können Sie mir vielleicht sagen, um wie viel Uhr der erste Zug nach Dresden abgeht? *(Makes mistakes and corrects them.)* I just hate Meisterschaft! We may see people; we can have society: yes, on condition that the conversation shall be in German, and in German only — every single word of it! Very kind — oh, very! when neither Annie nor I can put two words together, except as they are put together for us in Meisterschaft or that idiotic Ollendorff! *(Refers to book, and memorizes: Mein Bruder hat Ihren Herrn Vater nicht gesehen, als er gestern in dem Laden des deutschen Kaufmannes war.)* Yes, we can have society, provided we talk German. What would such a conversation be like! If you should stick to Meisterschaft, it would change the subject every two minutes; and if you stuck to Ollendorff, it would all be about your sister's mother's good stocking of thread, or your grandfather's aunt's good hammer of the carpenter, and who's got it, and there an end. You could n't keep up your interest in such topics. *(Memorizing: Wenn irgend möglich, — möchte ich noch heute Vormittag dort ankommen, da es mir sehr daran gelegen ist, einen meiner Geschäftsfreunde zu treffen.)* My mind is made up to one thing: I will be an exile, in spirit and in truth: I will see no one during these three months. Father is very ingenious — oh, very! thinks he is, anyway. Thinks he has invented a way to *force* us to learn to speak German. He is a dear good soul, and

all that; but invention is n't his fash'. He will see. *(With eloquent energy.)* Why, nothing in the world shall — Bitte, können Sie mir vielleicht sagen, ob Herr Schmidt mit diesem Zuge angekommen ist? Oh, dear, dear George — three weeks! It seems a whole century since I saw him. I wonder if he suspects that I — that I — care for him ——j—just a wee, wee bit? I believe he does. And I believe Will suspects that Annie cares for *him* a little, that I do. And I know perfectly well that they care for *us*. They agree with all our opinions, no matter what they are; and if they have a prejudice, they change it, as soon as they see how foolish it is. Dear George! at first he just could n't abide cats; but now, why now he 's just all for cats; he fairly welters in cats. I never saw such a reform. And it 's just so with *all* his principles: he has n't got one that he had before. Ah, if all men were like him, this world would —— *(Memorizing: Im Gegentheil, mein Herr, dieser Stoff is sehr billig. Bitte, sehen Sie sich nur die Qualität an.)* Yes, and what did *they* go to studying German for, if it was n't an inspiration of the highest and purest sympathy? Any other explanation is nonsense —— why, they 'd as soon have thought of studying American history. *(Turns her back, buries herself in her pamphlet, first memorizing aloud, until Annie enters, then to herself, rocking to and fro, and rapidly moving her lips without uttering a sound.)*

Enter Annie, absorbed in her pamphlet — does not at first see Margaret.

ANNIE. *(Memorizing: Er liess mich gestern früh rufen, und sagte mir dass er einen sehr unangenehmen Brief von Ihrem Lehrer erhalten hatte. Repeats twice aloud, then to herself, briskly moving her lips.)*

M. *(Still not seeing her sister.)* Wie geht es Ihrem Herrn Schwiegervater? Es freut mich sehr dass Ihre Frau Mutter wieder wohl ist. *(Repeats. Then mouths in silence.)*

(Annie repeats her sentence a couple of times aloud; then looks up, working her lips, and discovers Margaret.) Oh, you here! *(Running to her.)* O lovey-dovey, dovey-lovey, I 've got the gr-reatest news! Guess, guess, guess! You 'll never guess in a hundred thousand million years — and more!

M. Oh, tell me, tell me, dearie; don't keep me in agony.

A. Well, I will. What — do — you — think? *They 're* here!

M. Wh-a-t! Who? When? Which? Speak!

A. Will and George!

M. Annie Alexandra Victoria Stephenson, what *do* you mean!

A. As sure as guns!

M. *(Spasmodically unarming and kissing her.)* 'Sh! don't use such language. O darling, say it again!

A. As sure as guns!

M. I don't mean that! Tell me again, that —

A. *(Springing up and waltzing about the room.)* They 're here — in this very village — to learn German — for three months! Es sollte mich sehr freuen wenn Sie —

M. *(Joining in the dance.)* Oh, it 's just too lovely for anything! *(Unconsciously memorizing:)* Es wäre mir lieb wenn Sie morgen mit mir in die Kirche gehen könnten, aber ich kann selbst nicht gehen, weil ich Sonntags gewöhnlich krank bin. Juckhe!

A. *(Finishing some unconscious memorizing.)* — morgen Mittag bei mir speisen könnten. Juckhe! Sit down and I 'll tell you all I 've heard. *(They sit.)* They 're here, and under that same odious law that fetters us — our tongues, I mean; the metaphor 's faulty, but no matter. They can go out, and see people, only on condition that they hear and speak German, and German only.

M. Is n't — that — too lovely!

A. And they 're coming to see us!

M. Darling! *(Kissing her.)* But are you sure?

A. Sure as guns — Gatling guns!

M. 'Sh! don't child, it 's schrecklich! Darling — you are n't mistaken?

A. As sure as g — batteries!

They jump up and dance a moment — then —

M. *(With distress.)* But, Annie dear! — *we* can't talk German — and neither can they!

A. *(Sorrowfully.)* I did n't think of that.

M. How cruel it is! What can we do?

A. *(After a reflective pause, resolutely.)* Margaret — we 've *got* to.

M. Got to what?

A. Speak German.

M. Why, how, child?

A. *(Contemplating her pamphlet with earnestness.)* I can tell you one thing. Just give me the blessed privilege: just hinsetzen Will Jackson here in front of me and I 'll talk German to him as long as this Meisterschaft holds out to burn.

M. *(Joyously.)* Oh, what an elegant idea! You certainly have got a mind that 's a mine of resources, if ever anybody had one.

A. I 'll skin this Meisterschaft to the last sentence in it!

M. *(With a happy idea.)* Why, Annie, it 's the greatest thing in the world. I 've been all this time struggling and despairing over these few little Meisterschaft primers: but as sure

as you live, I 'll have the whole fifteen by heart before this time day after to-morrow. See if I don't.

A. And so will I; and I 'll trowel-in a layer of Ollendorff mush between every couple of courses of Meisterschaft bricks. Juckhe!

M. Hoch! hoch! hoch!

A. Stoss an!

M. Juckhe! Wir werden gleich gute deutsche Schülerinnen werden! Juck ——

A. — he!

M. Annie, when are they coming to see us? To-night?

A. No.

M. No? Why not? When are they coming? What are they waiting for? The idea! I never heard of such a thing! What do you ——

A. *(Breaking in.)* Wait, wait, wait! give a body a chance. They have their reasons.

M. Reasons? — what reasons?

A. Well, now, when you stop and think, they 're royal good ones. They 've got to talk German when they come, have n't they? Of course. Well, they don't *know* any German but Wie befinden Sie sich, and Haben Sie gut geschlafen, and Vater unser, and Ich trinke lieber Bier als Wasser, and a few little parlor things like that; but when it comes to *talking*, why, they don't know a hundred and fifty German words, put them all together.

M. Oh, I see!

A. So they 're going neither to eat, sleep, smoke, nor speak the truth till they 've crammed home the whole fifteen Meisterschafts auswendig!

M. Noble hearts!

A. They 've given themselves till day after to-morrow, half-past 7 P. M., and then they 'll arrive here, loaded.

M. Oh, how lovely, how gorgeous, how beautiful! Some think this world is made of mud; I think it 's made of rainbows. *(Memorizing.)* Wenn irgend möglich, so möchte ich noch heute Vormittag dort ankommen, da es mir sehr daran gelegen ist,—Annie, I can learn it just like nothing!

A. So can I. Meisterschaft 's mere fun — I don't see how it ever could have seemed difficult. Come! We can be disturbed here: let 's give orders that we don't want anything to eat for two days; and are absent to friends, dead to strangers, and not at home even to nougat-peddlers ——

M. Schön! and we 'll lock ourselves into our rooms, and at the end of two days, whosoever may ask us a Meisterschaft question shall get a Meisterschaft answer — and hot from the bat!

BOTH. *(Reciting in unison.)* Ich habe einen Hut für meinen Sohn, ein Paar Handschuhe für meinen Bruder, und einen Kamm für mich selbst gekauft.

(Exit.)

Enter MRS. BLUMENTHAL, the Wirthin.

WIRTHIN. *(Solus.)* Ach, die armen Mädchen, sie hassen die deutsche Sprache, drum ist es ganz und gar unmöglich dass sie sie je lernen können. Es bricht mir ja mein Herz ihre Kummer über die Studien anzusehen . . . . Warum haben sie den Entchluss gefasst in ihren Zimmern ein Paar Tage zu bleiben? . . . Ja—gewiss—dass versteht sich: sie sind entmuthigt —arme Kinder!

(A knock at the door.) Herein!

Enter Gretchen with card.

G. Er ist schon wieder da, und sagt dass er nur *Sie* sehen will. *(Hands the card.)* Auch—

WIRTHIN. Gott im Himmel — der Vater der Mädchen! *(Puts the card in her pocket.)* Er wünscht die *Töchter* nicht zu treffen? Ganz recht; also, Du schweigst.

G. Zu Befehl.

WIRTHIN. Lass ihn hereinkommen.

G. Ja, Frau Wirthin!

Exit Gretchen.

WIRTHIN. *(Solus.)* Ah—jetzt muss ich ihm die Wahrheit offenbaren.

Enter Mr. Stephenson.

STEPHENSON. Good morning, Mrs. Blumenthal — keep your seat, keep your seat, please. I 'm only here for a moment — merely to get your report, you know. *(Seating himself.)* Don't want to see the girls — poor things, they 'd want to go home with me. I 'm afraid I could n't have the heart to say no. How 's the German getting along?

WIRTHIN. N-not very well; I was afraid you would ask me that. You see, they hate it, they don't take the least interest in it, and there is n't anything to incite them to an interest, you see. And so they can't talk at all.

S. M-m. That 's bad. I had an idea that they 'd get lonesome, and have to seek society; and then, of course, my plan would work, considering the cast-iron conditions of it.

WIRTHIN. But it has n't so far. I 've thrown nice company in their way — I 've done my very best, in every way I could think of — but it 's no use; they won't go out, and they won't receive anybody. And a body can't blame them; they 'd be tongue-tied — could n't do anything with a German conversation. Now when I started to learn German — such poor German as I know — the case was very different: my intended was a German. I was to live among Germans the rest of my life; and so I *had* to learn. Why, bless my heart! I nearly *lost* the man the first time he asked me

— I thought he was talking about the measles. They were very prevalent at the time. Told him I did n't want any in mine. But I found out the mistake, and I was fixed for him next time. . . Oh, yes, Mr. Stephenson, a sweetheart 's a prime incentive!

S. *(Aside.)* Good soul! she does n't suspect that my plan is a double scheme — includes a speaking knowledge of German, which I am bound they shall have, and the keeping them away from those two young fellows — though if I had known that those boys were going off for a year's foreign travel, I — however, the girls would never learn that language at home; they 're here, and I won't relent — they 've got to stick the three months out. *(Aloud.)* So they are making poor progress? Now tell me — will they learn it — after a sort of fashion, I mean — in the three months?

WIRTHIN. Well, now, I 'll tell you the only chance I see. Do what I will, they won't answer my German with anything but English; if that goes on, they 'll stand stock still. Now I 'm willing to do this: I 'll straighten everything up, get matters in smooth running order, and day after to-morrow I 'll go to bed sick, and stay sick three weeks.

S. Good! You are an angel! I see your idea. The servant girl —

WIRTHIN. That 's it; that 's my project. She does n't know a word of English. And Gretchen 's a real good soul, and can talk the slates off a roof. Her tongue 's just a flutter-mill. I 'll keep my room,— just ailing a little,— and they 'll never see my face except when they pay their little duty-visits to me, and then I 'll say English disorders my mind. They 'll be shut up with Gretchen's wind-mill, and she 'll just grind them to powder. Oh, *they 'll* get a start in the language — sort of a one, sure 's you live. You come back in three weeks.

S. Bless you, my Retterin! I 'll be here to the day! Get ye to your sick-room — you shall have treble pay. *(Looking at watch.)* Good! I can just catch my train. Leben Sie wohl! *(Exit.)*

WIRTHIN. Leben Sie wohl! mein Herr!

ACT II.

SCENE I.

Time, a couple of days later.
(The girls discovered with their work and primers.)

ANNIE. Was fehlt der Wirthin?

MARGARET. Dass weiss ich nicht. Sie ist schon vor zwei Tagen ins Bett gegangen —

A. My! how fliessend you speak!

M. Danke schön — und sagte dass sie nicht wohl sei.

A. Good! Oh, no, I don't mean that! No — only lucky for *us* — glücklich, you know I mean because it 'll be so much nicer to have them all to ourselves.

M. Oh, natürlich! Ja! Dass ziehe ich durchaus vor. Do you believe your Meisterschaft will stay with you, Annie?

A. Well, I know it *is* with me — every last sentence of it; and a couple of hods of Ollendorff, too, for emergencies. May be they 'll refuse to deliver,— right off — at first, you know — der Verlegenheit wegen — aber ich will sie später herausholen — when I get my hand in — und vergisst Du dass nicht!

M. Sei nicht grob, Liebste. What shall we talk about first — when they come?

A. We-ll — let me see. There 's shopping — and — all that about the trains, you know,— and going to church — and — buying tickets to London, and Berlin, and all around — and all that subjunctive stuff about the battle in Afghanistan, and where the American was said to be born, and so on — and — and ah — oh, there 's so *many* things — I don't think a body can choose beforehand, because you know the circumstances and the atmosphere always have so much to do in directing a conversation, especially a German conversation, which is only a kind of an insurrection, any way. I believe it 's best to just depend on Prov — *(Glancing at watch, and gasping)* — half past — seven!

M. Oh, dear, I 'm all of a tremble! Let 's get something ready, Annie!

(Both fall nervously to reciting): Entschuldigen Sie, mein Herr, können Sie mir vielleicht sagen wie ich nach dem norddeutchen Bahnhof gehe? *(They repeat it several times, losing their grip and mixing it all up.)*

(A knock.)

BOTH. Herein! Oh, dear! O der heilige —

Enter Gretchen.

GRETCHEN. *(Ruffled and indignant.)* Entschuldigen Sie, meine gnädigsten Fräulein, es sind zwei junge rasende Herren draussen, die herein wollen, aber ich habe ihnen geschworen dass — *(Handing the cards.)*

M. Du liebe Zeit, they 're here! And of course down goes my back hair! Stay and receive them, dear, while I — *(Leaving.)*

A. I — alone? I won't! I 'll go with you! *(To* G.*)* Lass en Sie die Herren näher treten; und sagen Sie ihnen dass wir gleich zurückkommen werden. *(Exit.)*

GR. *(Solus.)* Was! Sie freuen sich darüber? Und ich sollte wirklich diese Blödsinnigen, dies grobe Rindvieh hereinlassen? In den hülflosen Umständen meiner gnädigen jungen Damen? — Unsinn! *(Pause — thinking.)* Wohlan! Ich werde sie mal beschützen! Sollte man nicht glauben, dass sie einen Sparren zu

viel hätten? *(Tapping her skull significantly.)* Was sie mir doch Alles gesagt haben! Der Eine: Guten Morgen! wie geht es Ihrem Herrn Schwiegervater? Du liebe Zeit! Wie sollte ich einen Schwiegervater haben können! Und der Andere: "Es thut mir sehr leid dass Ihrer Herr Vater meinen Bruder nicht gesehen hat, als er doch gestern in dem Laden des deutschen Kaufmannes war!" Potztausendhimmelsdonnerwetter! Oh, ich war ganz rasend! Wie ich aber rief: "Meine Herren, ich kenne Sie nicht, und Sie kennen meinen Vater nicht, wissen Sie, denn er ist schon lange durchgebrannt, und geht nicht beim Tage in einen Laden hinein, wissen Sie,—und ich habe keinen Schwiegervater, Gott sei Dank, werde auch nie einen kriegen, werde ueberhaupt, wissen Sie, ein solches Ding nie haben, nie dulden, nie ausstehen: warum greifen Sie ein Mädchen an, das nur Unschuld kennt, das Ihnen nie Etwas zu Leide gethan hat?" dann haben sie sich beide die Finger in die Ohren gesteckt und gebetet: "Allmächtiger Gott! Erbarme Dich unser!" *(Pauses.)* Nun, ich werde schon diesen Schurken Einlass gönnen, aber ich werde ein Auge mit ihnen haben, damit sie sich nicht wie reine Teufel geberden sollen.

(Exit, grumbling and shaking her head.)

Enter William and George.

W. My land, what a girl! and what an incredible gift of gabble!—kind of patent climate-proof compensation-balance self-acting automatic Meisterschaft—touch her button, and br-r-r! away she goes!

GEO. Never heard anything like it; tongue journaled on ball-bearings! I wonder what she said; seemed to be swearing, mainly.

W. *(After mumbling Meisterschaft awhile.)* Look here, George, this is awful—come to think—this project: *we* can't talk this frantic language.

GEO. I know it, Will, and it *is* awful; but I can't live without seeing Margaret—I 've endured it as long as I can. I should die if I tried to hold out longer—and even German is preferable to death.

W. *(Hesitatingly.)* Well, I don't know; it 's a matter of opinion.

GEO. *(Irritably.)* It is n't a matter of opinion either. German *is* preferable to death.

W. *(Reflectively.)* Well, I don't know—the problem is so sudden—but I think you may be right: some kinds of death. It is more than likely that a slow, lingering—well, now, there in Canada in the early times a couple of centuries ago, the Indians would take a missionary and skin him, and get some hot ashes and boiling water and one thing and another, and by and by, that missionary—well, yes, I can see that, by and by, talking German could be a pleasant change for him.

GEO. Why, of course. Das versteht sich; but *you* have to always think a thing out, or you 're not satisfied. But let 's not go to bothering about thinking out this present business; we 're here, we 're in for it; you are as moribund to see Annie as I am to see Margaret; you know the terms: we 've got to speak German. Now stop your mooning and get at your Meisterschaft; we 've got nothing else in the world.

W. Do you think that 'll see us through?

GEO. Why it 's *got* to. Suppose we wandered out of it and took a chance at the language on our own responsibility, where the nation would we be? Up a stump, that 's where. Our only safety is in sticking like wax to the text.

W. But what can we talk about?

GEO. Why, anything that Meisterschaft talks about. It ain't our affair.

W. I know; but Meisterschaft talks about everything.

GEO. And yet don't talk about anything long enough for it to get embarrassing. Meisterschaft is just splendid for general conversation.

W. Yes, that 's so; but it 's so *blamed* general! Won't it sound foolish?

GEO. Foolish? Why, of course; all German sounds foolish.

W. Well, that is true; I did n't think of that.

GEO. Now, don't fool around any more. Load up; load up; get ready. Fix up some sentences; you 'll need them in two minutes now.

(They walk up and down, moving their lips in dumb-show memorizing.)

W. Look here—when we 've said all that 's in the book on a topic, and want to change the subject, how can we say so?—how would a German say it?

GEO. Well, I don't know. But you know when they mean "Change cars," they say *Umsteigen.* Don't you reckon that will answer?

W. Tip-top! It 's short and goes right to the point; and it 's got a business whang to it that 's almost American. Umsteigen!—change subject!—why, it 's the very thing.

GR. All right, then, *you* umsteigen—for I hear them coming.

Enter the girls.

A. TO W. *(With solemnity.)* Guten morgen, mein Herr, es freut mich sehr, Sie zu sehen.

W. Guten morgen, mein Fräulein, es freut mich sehr Sie zu sehen.

(Margaret and George repeat the same sentences. Then, after an embarrassing silence, Margaret refers to her book and says:)

M. Bitte, meine Herren, setzen Sie sich.

THE GENTLEMEN. Danke schön. *(The four seat themselves in couples, the width of the stage apart, and the two conversations begin. The talk is not flowing — at any rate at first; there are painful silences all along. Each couple worry out a remark and a reply: there is a pause of silent thinking, and then the other couple deliver themselves.)*

W. Haben Sie meinen Vater in dem Laden meines Bruders nicht gesehen?

A. Nein, mein Herr, ich habe Ihren Herrn Vater in dem Laden Ihres Herrn Bruders nicht gesehen.

GEO. Waren Sie gestern Abend im Koncert, oder im Theater?

M. Nein, ich war gestern Abend nicht im Koncert, noch im Theater, ich war gestern Abend zu Hause.

General break-down — long pause.

W. Ich störe doch nicht etwa?

A. Sie stören mich durchaus nicht.

GEO. Bitte, lassen Sie sich nicht von mir stören.

M. Aber ich bitte Sie, Sie stören mich durchaus nicht.

W. *(To both girls.)* Wenn wir Sie stören so gehen wir gleich wieder.

A. O, nein! Gewiss, nein!

M. Im Gegentheil, es freut uns sehr, Sie zu sehen — alle Beide.

W. Schön!

GEO. Gott sei Dank!

M. *(Aside.)* It 's just lovely!

A. *(Aside.)* It 's like a poem.

Pause.

W. Umsteigen!

M. Um — welches?

W. Umsteigen.

GEO. Auf English, change cars — oder subject.

BOTH GIRLS. Wie schön!

W. Wir haben uns die Freiheit genommen, bei Ihnen vorzusprechen.

A. Sie sind sehr gütig.

GEO. Wir wollten uns erkundigen, wie Sie sich befänden.

M. Ich bin Ihnen sehr verbunden — meine Schwester auch.

W. Meine Frau lasst sich Ihnen bestens empfehlen.

A. Ihre *Frau?*

W. *(Examining his book.)* Vielleicht habe ich mich geirrt. *(Shows the place.)* Nein, gerade so sagt das Buch.

A. *(Satisfied.)* Ganz recht. Aber——

W. Bitte empfehlen Sie mich Ihrem Herrn Bruder.

A. Ah, dass ist viel besser — viel besser. *(Aside.)* Wenigstens es wäre viel besser wenn ich einen Bruder hätte.

GEO. Wie ist es Ihnen gegangen, seitdem ich das Vergnügen hatte, Sie anderswo zu sehen?

M. Danke bestens, ich befinde mich gewöhnlich ziemlich wohl.

Gretchen slips in with a gun, and listens.

GEO. *(Still to Margaret.)* Befindet sich Ihre Frau Gemahlin wohl?

GR. *(Raising hands and eyes.)* *Frau Gemahlin* — heiliger Gott! *(Is like to betray herself with her smothered laughter, and glides out.)*

M. Danke sehr, meine Frau ist ganz wohl.

Pause.

W. Dürfen wir vielleicht — umsteigen?

THE OTHERS. Gut!

GEO. *(Aside.)* I feel better, now. I 'm beginning to catch on. *(Aloud.)* Ich möchte gern morgen früh einige Einkäufe machen und würde Ihnen sehr verbunden sein, wenn Sie mir den Gefallen thäten, mir die Namen der besten hiesigen Firmen aufzuschreiben.

M. *(Aside.)* How sweet!

W. *(Aside.)* Hang it, *I* was going to say that! That 's one of the noblest things in the book.

A. Ich möchte Ihnen gern begleiten, aber es ist mir wirklich heute Morgen ganz unmöglich auszugehen. *(Aside.)* It 's getting as easy as 9 times 7 is 46.

M. Sagen Sie dem Brieftäger, wenn's gefällig ist, er möchte Ihnen den eingeschriebenen Brief geben lassen.

W. Ich würde Ihnen sehr verbunden sein, wenn Sie diese Schachtel für mich nach der Post tragen würden, da mir sehr daran liegt einen meiner Geschäftsfreunde in dem Laden des deutchen Kaufmanns heute Abend treffen zu können. *(Aside.)* All down but nine; set 'm up on the other alley!

A. Aber Herr Jackson! Sie haben die Sätze gemischt. Es ist unbegreiflich wie Sie das haben thun können. Zwischen Ihrem ersten Theil und Ihrem letzten Theil haben Sie ganze fünfzig Seiten übergeschlagen! Jetz bin ich ganz verloren. Wie kann man reden, wenn man seinen Platz durchaus nicht wieder finden kann?

W. Oh, bitte, verzeihen Sie; ich habe dass wirklich nicht beabsichtigt.

A. *(Mollified.)* Sehr wohl, lassen Sie gut sein. Aber thun Sie es nicht wieder. Sie müssen ja doch einräumen, dass solche Dinge unerträgliche Verwirrung mit sich führen.

(Gretchen slips in again with her gun.)

W. Unzweifelhaft haben Sie Recht, meine holdselige Landsmännin. . . . . Umsteigen!

(As George gets fairly into the following, Gretchen draws a bead on him, and lets drive at the close, but the gun snaps.)

GEO. Glauben Sie dass ich ein hübsches Wohnzimmer für mich selbst und ein kleines Schlafzimmer für meinen Sohn in diesem Hotel für fünfzehn Mark die Woche bekommen kann, oder würden Sie mir rathen, in einer Privatwohnung Logis zu nehmen? *(Aside.)* That 's a daisy!

GR. *(Aside.)* Schade! *(She draws her charge and reloads.)*

M. Glauben Sie nicht Sie werden besser thun bei diesem Wetter zu Hause zu bleiben?

A. Freilich glaube ich, Herr Franklin, Sie werden sich erkälten, wenn Sie bei diesem unbeständigen Wetter ohne Ueberrock ausgehen.

GR. *(Relieved—aside.)* So? Man redet von Ausgehen. Das klingt schon besser. *(Sits.)*

W. *(To A.)* Wie theuer haben Sie das gekauft? *(Indicating a part of her dress.)*

A. Das hat achtzehn Mark gekostet.

W. Das ist sehr theuer.

GEO. Ja, obgleich dieser Stoff wunderschön ist und das Muster sehr geschmackvoll und auch das Vorzüglichste dass es in dieser Art gibt, so ist es doch furchtbar theuer für einen solchen Artikel.

M. *(Aside.)* How sweet is this communion of soul with soul!

A. Im Gegentheil, mein Herr, das ist sehr billig. Sehen Sie sich nur die Qualität an.

(They all examine it.)

GEO. Möglicherweise ist es das allerneuste dass man in diesem Stoff hat; aber das Muster gefällt mir nicht.

(Pause.)

W. Umsteigen!

A. Welchen Hund haben Sie? Haben Sie den hübschen Hund des Kaufmanns, oder den hässlichen Hund der Urgrossmutter des Lehrlings des bogenbeinigen Zimmermanns?

W. *(Aside.)* Oh, come, she 's ringing in a cold deck on us: that 's Ollendorff.

GEO. Ich habe nicht den Hund des — des —*(Aside.)* Stuck! That 's no Meisterschaft; they don't play fair. *(Aloud.)* Ich habe nicht den Hund des — des — In unserem Buche leider, gibt es keinen Hund; daher, ob ich auch gern von solchen Thieren sprechen möchte, ist es mir doch unmöglich, weil ich nicht vorbereitet bin. Entschuldigen Sie, meine Damen.

GR. *(Aside.)* Beim Teufel, sie sind *alle* blödsinnig geworden. In meinem Leben habe ich nie ein so närrisches, verfluchtes, verdammtes Gespräch gehört!

W. Bitte, umsteigen.

(Run the following rapidly through.)

M. *(Aside.)* Oh, I 've flushed an easy batch! *(Aloud.)* Würden Sie mir erlauben meine Reisetasche hier hinzustellen?

GR. *(Aside.)* Wo ist seine Reisetasche? Ich sehe keine.

W. Bitte sehr.

GEO. Ist meine Reisetasche Ihnen im Wege?

GR. *(Aside.)* Und wo ist *seine* Reisetasche?

A. Erlauben Sie mir Sie von meiner Reisetasche zu befreien.

GR. *(Aside.)* Du Esel!

W. Ganz und gar nicht. *(To Geo.)* Es ist sehr schwül in diesem Coupé.

GR. *(Aside.)* Coupè.

GEO. Sie haben Recht. Erlauben Sie mir, gefälligst, das Fenster zu öffnen. Ein wenig Luft würde uns gut thun.

M. Wir fahren sehr rasch.

A. Haben Sie den Namen jener Station gehört?

W. Wie lange halten wir auf dieser Station an?

GEO. Ich reise nach Dresden, Schaffner. Wo muss ich umsteigen?

A. Sie steigen nicht um, Sie bleiben sitzen.

GR. *(Aside.)* Sie sind ja alle ganz und gar verrückt! Man denke sich sie glauben dass sie auf der Eisenbahn reisen.

GEO. *(Aside, to William.)* Now brace up; pull all your confidence together, my boy, and we 'll try that lovely good-bye business a flutter. I think it 's about the gaudiest thing in the book, if you boom it right along and don't get left on a base. It 'll impress the girls. *(Aloud.)* Lassen Sie uns gehen: es ist schon sehr spät, und ich muss morgen ganz früh aufstehen.

GR. *(Aside—grateful.)* Gott sei Dank dass sie endlich gehen. *(Sets her gun aside.)*

W. *(To Geo.)* Ich danke Ihnen höflichst für die Ehre die sie mir erweisen, aber ich kann nicht länger bleiben.

GEO. *(To W.)* Entschuldigen Sie mich gütigst, aber ich kann wirklich nicht länger bleiben.

Gretchen looks on stupefied.

W. (To Geo.) Ich habe schon eine Einladung angenommen; ich kann wirklich nicht länger bleiben.

Gretchen fingers her gun again.

GEO. *(To W.)* Ich muss gehen.

W. *(To Geo.)* Wie! Sie wollen schon wieder gehen? Sie sind ja eben erst gekommen.

M. *(Aside.)* It 's just music!

A. *(Aside.)* Oh, how lovely they do it!

GEO. *(To W.)* Also denken sie doch noch nicht an's Gehen.

W. *(To Geo.)* Es thut mir unendlich leid,

aber ich muss nach Hause. Meine Frau wird sich wundern, was aus mir geworden ist.

GEO. *(To W.)* Meine Frau hat keine Ahnung wo ich bin: ich muss wirklich jetzt fort.

W. *(To Geo).* Dann will ich Sie nicht länger aufhalten; ich bedaure sehr dass Sie uns einen so kurzen Besuch gemacht haben.

GEO. *(To W.)* Adieu — auf recht baldiges Wiedersehen.

W. UMSTEIGEN!

Great hand-clapping from the girls.

M. *(Aside.)* Oh, how perfect! how elegant!

A. *(Aside.)* Per-fectly enchanting!

JOYOUS CHORUS. *(All.)* Ich habe gehabt, du hast gehabt, er hat gehabt, wir haben gehabt, ihr habet gehabt, sie haben gehabt.

Gretchen faints, and tumbles from her chair, and the gun goes off with a crash. Each girl, frightened, seizes the protecting hand of her sweetheart. Gretchen scrambles up. Tableau.

W. *(Takes out some money — beckons Gretchen to him. George adds money to the pile.)* Hübsches Mädchen *(giving her some of the coins)*, hast Du etwas gesehen?

GR. *(Courtesy — aside.)* Der Engel! *(Aloud — impressively.)* Ich habe nichts gesehen.

W. *(More money.)* Hast Du etwas gehört?

GR. Ich habe nichts gehört.

W. *(More money.)* Und Morgen?

GR. Morgen—wäre es nöthig—bin ich taub und blind.

W. Unvergleichbares Mädchen! Und *(giving the rest of the money)* darnach?

GR. *(Deep courtesy — aside.)* Erzengel! *(Aloud.)* Darnach, mein gnädigster, betrachten Sie mich also *taub — blind — todt!*

ALL. *(In chorus — with reverent joy.)* Ich habe gehabt, du hast gehabt, er hat gehabt, wir haben gehabt, ihr habet gehabt, sie haben gehabt!

ACT III.

Three weeks later.

SCENE I.

Enter Gretchen, and puts her shawl on a chair. Brushing around with the traditional feather-duster of the drama. Smartly dressed, for she is prosperous.

GR. Wie hätte man sich das vorstellen können! In nur drei Wochen bin ich schon reich geworden! *(Gets out of her pocket handful after handful of silver, which she piles on the table, and proceeds to re-pile and count, occasionally ringing or biting a piece to try its quality.)* Oh, dass *(with a sigh)* die Frau Wirthin nur *ewig* krank bliebe! . . . . Diese edlen jungen Männer — sie sind ja so liebenswürdig! Und so fleissig! — und so treu! Jeden Morgen kommen sie gerade um drei Viertel auf neun; und plaudern und schwatzen, und plappern, und schnattern, die jungen Damen auch; um Schlage zwölf nehmen sie Abschied; um Schlage eins kommen sie schon wieder, und plaudern und schwatzen und plappern und schnattern; gerade um sechs Uhr nehmen sie wiederum Abschied; um halb acht kehren sie noch'emal zurück, und plaudern und schwatzen und plappern und schnattern bis zehn Uhr, oder veilleicht ein Viertel nach, falls ihre Uhren nach gehen (und stets gehen sie nach am Ende des Besuchs, aber stets vor Beginn desselben), und zuweilen unterhalten sich die jungen Leute beim Spazierengehen; und jeden Sonntag gehen sie dreimal in die Kirche; und immer plaudern sie, und schwatzen und plappern und schnattern bis ihnen die Zähnen aus dem Munde fallen. Und *ich?* Durch Mangel an Uebung, ist mir die Zunge mit Moos belegt worden! Freilich ist's mir eine dumme Zeit gewesen. Aber — um Gotteswillen, was geht das mir an? Was soll ich daraus machen? Täglich sagt die Frau Wirthin "Gretchen" *(dumb-show of paying a piece of money into her hand)*, "du bist eine der besten Sprach-Lehrerinnen der Welt!" Ach, Gott! Und täglich sagen die edlen jungen Männer, "Gretchen, liebes Kind" *(money-paying again in dumb-show — three coins)*, "bleib' taub—blind—todt!" und so bleibe ich. . . . . Jetzt wird es ungefähr neun Uhr sein; bald kommen sie vom Spaziergehen zurück. Also, es wäre gut dass ich meinem eigenen Schatz einen Besuch abstatte und spazieren gehe. *(Dons her shawl.)*

Exit. L.

Enter Wirthin. R.

WIRTHIN. That was Mr. Stephenson's train that just came in. Evidently the girls are out walking with Gretchen;— can't find *them*, and *she* does n't seem to be around. *(A ring at the door.)* That 's him. I 'll go see.

Exit. R.

Enter Stephenson and Wirthin. R.

S. Well, how does sickness seem to agree with you?

WIRTHIN. So well that I 've never been out of my room since, till I heard your train come in.

S. Thou miracle of fidelity! Now I argue from that, that the new plan is working.

WIRTHIN. Working? Mr. Stephenson, you never saw anything like it in the whole course of your life! It 's absolutely wonderful the way it works.

S. Succeeds? No — you don't mean it.

WIRTHIN. Indeed I do mean it. I tell you, Mr. Stephenson, that plan was just an inspiration — that 's what it was. You could teach a cat German by it.

S. Dear me, this is noble news! Tell me about it.

WIRTHIN. Well, it 's all Gretchen — ev-ery bit of it. I told you she was a jewel. And then the sagacity of that child — why, I never dreamed it was in her. Sh-she, "Never you ask the young ladies a question — never let on — just keep mum — leave the whole thing to me," sh-she.

S. Good! And she justified, did she?

WIRTHIN. Well, sir, the amount of German gabble that that child crammed into those two girls inside the next forty-eight hours — well, *I* was satisfied! So I 've never asked a question — never *wanted* to ask any. I 've just lain curled up there, happy. The little dears! they 've flitted in to see me a moment, every morning and noon and supper-time; and as sure as I 'm sitting here, inside of six days they were clattering German to me like a house afire!

S. Sp-lendid, splendid!

WIRTHIN. Of course it ain't grammatical — the inventor of the language can't talk grammatical; if the Dative didn't fetch him the Accusative would; but it 's German all the same, and don't you forget it!

S. Go on — go on — this is delicious news —

WIRTHIN. Gretchen, she says to me at the start, "Never you mind about company for 'em," sh-she —"I 'm company enough." And I says, "All right — fix it your own way, child"; and that she *was* right is shown by the fact that to this day they don't care a straw for any company but hers.

S. Dear me; why, it 's admirable!

WIRTHIN. Well, I should think so! They just dote on that hussy — can't seem to get enough of her. Gretchen tells me so herself. And the care she takes of them! She tells me that every time there 's a moonlight night she coaxes them out for a walk; and if a body can believe her, she actually bullies them off to church three times every Sunday!

S. Why the little dev — missionary! Really, she 's a genius!

WIRTHIN. She 's a bud, *I* tell you! Dear me, how she 's brought those girls' health up! Cheeks? — just roses. Gait? — they walk on watch-springs! And happy? — by the bliss in their eyes, you 'd think they 're in Paradise! Ah, that Gretchen! Just you imagine *our* trying to achieve these marvels!

S. You 're right — every time. Those girls — why, all they 'd have wanted to know was what we wanted done — and then they would n't have *done* it — the mischievous young rascals!

WIRTHIN. Don't tell *me?* Bless you, I found that out early — when *I* was bossing.

S. Well, I 'm im-mensely pleased. *Now* fetch them down. I 'm not afraid now. They won't want to go home.

WIRTHIN. Home! I don't believe you could drag them away from Gretchen with nine span of horses. But if you want to see them, put on your hat and come along; they 're out somewhere trapsing around with Gretchen. *(Going.)*

S. I 'm with you — lead on.

WIRTHIN. We 'll go out the side door. It 's toward the Anlage.

Exit both. L.

Enter George and Margaret. R.

Her head lies upon his shoulder, his arm is about her waist; they are steeped in sentiment.

M. *(Turning a fond face up at him.)* Du Engel!

G. Liebste! *(Kiss.)*

M. Oh, das Liedchen dass Du mir gewidmet hast — es ist so schön, so wunderschön. Wie hätte ich je geahnt dass Du ein Poët wärest!

G. Mein Schätzchen! — es ist mir lieb wenn Dir die Kleinigkeit gefällt.

M. Ah, es ist mit der zärtlichsten Musik gefüllt — klingt ja so süss und selig — wie das Flüstern des Sommerwindes die Abenddämmerung hindurch. Wieder, — Theuerste! — sag' es wieder.

G. Du bist wie eine Blume! —
So schön und hold und rein —
Ich schau Dich an, und Wehmuth
Schleicht mir ins Herz hinein.
Mir ist als ób ich die Hände
Aufs Haupt Dir legen sollt,
Betend dass Gott Dich erhalte,
So rein und schön und hold.

M. A-ch! *(Dumb-show sentimentalisms.)* Georgie —

G. Kindchen!

M. Warum kommen sie nicht?

G. Dass weiss ich gar nicht. Sie waren —

M. Es wird spät. Wir müssen sie antreiben. Komm!

G. Ich glaube sie werden recht bald ankommen, aber —

Exit both. L.

Enter Gretchen, R., in a state of mind. Slumps into a chair limp with despair.

GR. Ach! was wird jetzt aus mir werden! Zufällig habe ich in der Ferne den verdammten Papa gesehen! — und die Frau Wirthin auch! Oh, diese Erscheinung, — die hat mir beinahe das Leben genommen. Sie suchen die jungen Damen — dass weiss ich wenn sie diese und die jungen Herren zusammen fänden — du heiliger Gott! Wenn das geschieht, wären wir Alle ganz und gar verloren! Ich muss sie gleich finden, und ihr eine Warnung geben!

Exit. L.

Enter Annie and Will. R.

Posed like the former couple, and sentimental.

A. Ich liebe sich schon so sehr — Deiner edlen Natur wegen. Dass du dazu auch ein

Dichter bist! — ach, mein Leben ist uebermässig reich geworden! Wer hätte sich doch einbilden können dass ich einen Mann zu einem so wunderschönen Gedicht hätte begeistern können!

W. Liebste! Es ist nur eine Kleinigkeit.

A. Nein, nein, es ist ein echtes Wunder! Sage es noch einmal — ich flehe Dich an.

W. Du bist wie eine Blume! —
So schön und hold und rein —
Ich schau Dich an, und Wehmuth
Schleicht mir ins Herz hinein.
Mir ist als ob ich die Hände
Aufs Haupt Dir legen sollt,
Betend dass Gott Dich erhalte,
So rein und schön und hold.

A. Ach, es ist himmlisch — einfach himmlisch! *(Kiss.)* Schreibt auch George Gedichte?

W. Oh, ja — zuweilen.

A. Wie schön!

W. *(Aside.)* Smouches 'em, same as I do. It was a noble good idea to play that little thing on her. George would n't ever think of that — somehow he never had any invention.

A. *(Arranging chairs.)* Jetzt will ich bei Dir sitzen bleiben, und Du —

W. *(They sit.)* Ja,— und ich —

A. Du wirst mir die alte Geschichte die immer neu bleibt, noch wieder erzählen.

W. Zum Beispiel, dass ich Dich liebe!

A. Wieder!

W. Ich — sie kommen!

Enter George and Margaret.

A. Das macht nichts. Fortan!

(George unties M.'s bonnet. She re-ties his cravat — interspersings of love-pats, etc., and dumb-show of love-quarrelings.)

W. Ich liebe Dich.

A. Ach! Noch einmal!

W. Ich habe Dich von Herzen lieb.

A. Ach! Abermals!

W. Bist Du denn noch nicht satt?

A. Nein! *(The other couple sit down, and Margaret begins a re-tying of the cravat. Enter the Wirthin and Stephenson, he imposing silence with a sign.)* Mich hungert sehr, ich *ver*hungre!

W. Oh, Du armes Kind! *(Lays her head on his shoulder. Dumb-show between Stephenson and Wirthin.)* Und hungert es nicht mich? Du hast mir nicht einmal gesagt —

A. Dass ich Dich liebe? Mein Eigener! *(Frau Wirthin threatens to faint — is supported by Stephenson.)* Höre mich nur an: Ich liebe Dich, ich liebe Dich —

Enter Gretchen.

Gr. *(Tears her hair.)* Oh, dass ich in der Hölle wäre!

M. Ich liebe Dich, ich liebe Dich! Ah, ich bin so glücklich dass ich nicht schlafen kann, nicht lesen kann, nicht reden kann, nicht —

A. Und ich! Ich bin auch so glücklich dass ich nicht speisen kann, nicht studieren, arbeiten, denken, schreiben —

Stephenson. *(To Wirthin — aside.)* Oh, there is n't any mistake about it — Gretchen 's just a rattling teacher!

Wirthin. *(To Stephenson — aside.)* I 'll skin her alive when I get my hands on her!

M. Komm, alle Verliebte! *(They jump up, join hands, and sing in chorus)* —

Du, Du, wie ich Dich liebe,
Du, Du, liebst auch mich!
Die, die zärtlichsten Triebe —

S. *(Stepping forward.)* Well!

The girls throw themselves upon his neck with enthusiasm.

The Girls. Why, father!

S. My darlings!

The young men hesitate a moment, then they add their embrace, flinging themselves on Stephenson's neck, along with the girls.

The Young Men. Why, father!

S. *(Struggling.)* Oh come, this is too thin! — too quick, I mean. Let go, you rascals!

Geo. We 'll never let go till you put us on the family list.

M. Right! hold to him!

A. Cling to him, Will!

Gretchen rushes in and joins the general embrace, but is snatched away by the Wirthin, crushed up against the wall and threatened with destruction.

S. *(Suffocating.)* All right, all right — have it your own way, you quartette of swindlers!

W. He 's a darling! Three cheers for papa!

Everybody. *(Except Stephenson, who bows with hand on heart.)* Hip — hip — hip; hurrah, hurrah, hurrah!

Gr. Der Tiger — ah-h-h!

Wirthin. Sei ruhig, you hussy!

S. Well, I 've lost a couple of precious daughters, but I 've gained a couple of precious scamps to fill up the gap with; so it 's all right. I 'm satisfied, and everybody 's forgiven — *(With mock threats at Gretchen.)*

W. Oh, wir werden für Dich sorgen — du herrliches Gretchen!

Gr. Danke schön!

M. *(To Wirthin.)* Und für Sie auch; denn wenn Sie nicht so freundlich gewesen wären, krank zu werden, wie wären wir je so glücklich geworden wie jetzt?

Wirthin. Well, dear, I *was* kind, but I did n't mean it. But I ain't sorry — not one bit — that I ain't.

Tableau.

S. Come now, the situation is full of hope,

and grace, and tender sentiment. If I had in the least the poetic gift, I know I could improvise under such an inspiration *(each girl nudges her sweetheart)* something worthy to — to — is there no poet among us?

Each youth turns solemnly his back upon the other and raises his hands in benediction over his sweetheart's bowed head.

Both youths at once.

Mir ist als ob ich die Hände
Aufs Haupt Dir legen sollt —

They turn and look reproachfully at each other — the girls contemplate them with injured surprise.

S. *(Reflectively.)* I think I 've heard that before somewhere.

WIRTHIN. *(Aside.)* Why the very cats in Germany know it!

Curtain.

Mark Twain.

THE LIGHTS OF HOME.

ACROSS the mead, with giant stride,
My shadow lengthens as I go;
The cheery winds of even-tide,
The winds of Eld, begin to blow.

They blow the crimson from the pane;
In ruder gusts, with stronger will,
The sunset from the golden vane
At last they blow, and then are still.

And lo! in twilight's tender mist,
Becalmed above the western bar,
The star that times the lover's tryst! —
The star of eve — the lustrous star!

O pleasant homes and haunts of men,
By which my random journey lies! —
The brooklet babbling down the glen!
The hamlet on the leafy rise!

As one who leans apart from strife,
Towards the peace he longs to know,
I pause to hear the wheels of life
In lane and by-way grinding low.

The shepherd sends his restful call;
Again the windows glimmer red,
From where in cot, or manse, or hall,
The hearth is heaped, the board is spread.

Across the grateful sense is borne
The musky odors of the vine —
The balm of meadows newly shorn,
And clover-laden breath of kine.

I see the tower, cut in jet,
And bordered by the jetty wold,
Upon its ancient hill-top set,
The guardian of farm and fold:

And doors are swung with sudden gleam,
Where laughing children hold carouse;
The shrill cicada by the stream
Is wakeful in the orchard boughs:

While sweetly, coyly, as the bird
That mocks her from the distant vale,
Sings the fair mistress of the herd,
Unseen, above her foaming pail.

She sings: across the world afar,
Now grave, now gay, her carol rings;
Her eyes are fixed upon the star
That trembles o'er her while she sings.

O singer, all unknown to fame,
Too soon thy voice is hush'd again!
O happy hamlet, without name
In all the tales of travel'd men!

Though homeless be the lands we leave,
Yet, whether east or west we roam,
Wherever shines the star of eve,
Beneath it burn the lights of home.

William Young.

"DE VALLEY AN' DE SHADDER."

By the Author of "The Two Runaways," "Sister Todhunter's Heart," "Elder Brown's Backslide," etc.

A LOG hut with a stack chimney, at the foot of a long, low hill where the path that winds around it disappears under a great spreading black-gum; another log hut with a stack chimney, over by a belt of pine woods; and another of like build beyond, where a group of water-oaks marks a bend in the swamp; and others still, right and left in the distance, until the number runs up into the dozens,—this is Black Ankle. But not all of it. Yonder are a shed and a corn-crib, and a leaning stack of fodder, and a blue-stem collard patch, and snake fences, and vehicles that have stood in the weather until sunstruck; a forlorn mule; a cow that all her life has evidently practiced the precept, "It is better to give than to receive"; a stray hen with her little family under a gorgeous sunflower,—this is Black Ankle.

But hold! There are little negroes in single garments that reach to their knees only, and the ten-year-old girl bearing in her arms the infant. There are the clothes fluttering on the knotted lines propped up by fork saplings. There are black women, with tucked-up dresses, scrubbing over the wash-tub, and in the air the marvelously mellow plantation hymn, and on the ground the shadow of the circling hawk, and the grasshopper balancing himself in mid air, and the dipping mocking-bird on the haw-bush. Ah, now indeed is this Black Ankle!

The sun had gone down, and the shadows were creeping out of the swamp, veiling Black Ankle. All the poverty sign-boards were buried in the gloom, and where the cabins stood fiery eyes twinkled through the night. But under the great black-gum, where the spring gushed, a pine-knot fire blazed merrily, piling up the shadows and painting in wavering light the cabin front. The little porch, over which ran the morning-glory and the cypress-vine, stood forth as though projected by the brush of a mighty artist. From every direction, by every path, there came dusky figures, the simple children of the soil, filling the air with songs and laughter, and passed into the light. In a chair upon a table, his back against the black-gum, sat a little wrinkled fiddler with his battered instrument under his chin, the bow twisting and sawing. And by his side, drumming on the strings with a straw, stood a boy, who ever and anon turned his head to laugh at some gay sally from the company gathered upon the smooth and well-trodden ground. A favorite dancer exhibited his skill until breathless, and was turning away amidst the plaudits of the crowd when a young woman forced her way in, crying:

"Git erway, niggers; lemme come!" The crowd shouted, "Lou, Lou!" "Lou 'ill knock de shine off er 'im." "You got ter shuffl' now, Beeswing."

The teeth of the young man who beat with the straw shone whiter and broader as a short, active girl broke into the circle. Beeswing grinned.

"Come back, nigger," she cried. The crowd laughed again, and as the girl's feet began to keep time with the music, a dozen hands patted upon as many thighs, and a voice, to which the chorus replied, added words to the strains of the fiddle, the dancer adapting her steps to the hints given:

"Shuffl', littl' Lou;
Pretty littl' Lou;
Same as you;
Pretty littl' Lou;
My gal too;
Pretty littl' Lou;
Forwood too;
"Pretty littl' Lou;
Come 'long, Lou;
Pretty littl' Lou;
Back step, Lou;
Pretty littl' Lou;
Pretty littl' Lou;
Look at Lou!"

The dancer held her dress back and "walked around," turning her toes in, and the crowd laughed. But the song continued:

"Pretty littl' Lou;
Pretty littl' Lou;
Cross step, Lou;
"Pretty littl' Lou;
Balunce too;
Pretty littl' Lou."

The girl whirled around amidst a cloud of cotton, revealing her ankles, and the leader started the laugh by chiming in, followed by the refrain, again:

"Oom oom oo;
Pretty littl' Lou;
Short dog Lou;
Pretty littl' Lou;
Pidgin wing Lou;
Pretty littl' Lou;
"See yer froo;
Pretty littl' Lou;
Turkey trot Lou;
Pretty littl' Lou;
Shuffl', littl' Lou;
Pretty littl' Lou;"

Beeswing broke out of the circle, and the dance ended amidst the shouts of the company.

The tune changed. Old Morris, the fiddler, began a quaint march, and two by two the dancers promenaded around, the clear voices of the women leading the song:

"Turn 'er high, turn lady, Turn lor'.
Turn dat lady Cymlin;
"Turn 'er high, turn lady, Turn lor'.
Turn dat lady 'roun'."

The men turned their partners with one hand held overhead, and "the lady" spun until her dress swelled out like a balloon. Then she bowed and the men patted quick time, all singing, while their partners sprang to the center and danced:

"Knock candy, Candy gal;
Knock candy, Candy gal;
No harm to knock candy;
Littl' in de wais' an' pretty in de face;
No harm to knock candy;
Two ways to knock Candy gal;
No harm to knock candy."

Again came the quaint song, "Turn 'er high, turn lady"; again the slow march, and again the whirl. This time the men sprang to the center, and old Morris, sweeping his head to his knee, struck up a breakdown, to which the women sang:

"You sif' de meal, you gimme de husk;
You bake de bread, you gimme de crus';
You bile de pot, you gimme de grease;
Ole Kate, git over;
Git over, old Kate;
Git over!"

Several verses followed, first the women dancing, then the men, ever returning to the promenade song.
